The criticism to which the directors of the Carlisle Gold Company were exposed on Thursday was in some respects fair, and in other respects captious—not to use the harsher word, unkind. The head and front of Mr. Bladon's offending "hath this extent, no more"—the quality of the produce has fallen off. If the mine had held in depth as it promised to do when Mr. Bladon spoke before, the shareholders, figuratively, would have embraced their directors, and no pinnacle would have been too high upon which to place the chairman, and no column too imposing for the figure of Mr. Longmaid, the manager. Matters have turned out differently from what was expected, and, consequently, the board have come in for a good deal of blame. Some very pertinent questions were addressed to them by Commander de Hoghton and other shareholders, and replies were forthcoming of a satisfactory nature, except, perhaps, with reference to the investment of some of this company's money in Empire debentures, an investment which we certainly think ought never to have been made. At the same time, the temptation to make it was very great, and human nature was weak. The security seemed absolute, and the interest for five months had already accrued. But no argument that can be adduced can get over the fact that the directors were speculating in another company's shares. At the same time the shareholders should not allow their attention to be diverted from the main point before them, which is the management of the company. Can it be changed with advantage? We think not. It would take a new board of directors months to gather up the threads of the business, and we cannot see that even Mr. Longmaid has in any sense forfeited the confidence of the shareholders. The directors, through Mr. Bladon, made a forcible reply to their critics, and Mr. Longmaid's rejoinder to Prof. Clayton's report must be admitted to be couched in language which is businesslike and moderate. It is not as though the directors had no policy. Mr. Bladon has distinctly said that that policy will be based upon Professor Clayton's recommendations, and we advise the shareholders to allow the board to carry it out. We strongly counsel them to have no fellowship with committees of investigation. It is very easy in the light of present knowledge to criticise methods adopted in dealing with past events—in other words, to be wise after the event. The shareholders are crossing a stream, and the question they have to ask themselves is, will they imperil the whole concern by swopping horses.

A TOUCH OF NATURE.

There is in the letter which Col. Fludyer has addressed to the miners of Violet Seton that touch of nature which makes the whole world kin. Col. Fludyer has been working this mine for years, and it is currently reported that he has spent upon it a moderate fortune. Had the ground landlords met his views years ago it is highly probable that the mine might still have been working. Fifteen months ago a valuable copper lode was discovered just at the time when the colonel was beginning to feel that the burden he had so far sustained alone was becoming too great for one man to bear. He was anxious to have the concern turned into a limited liability company, but the permission of the ground landlords to do so, which it seems they could, and did withhold for some considerable time, came too late. Cornish mines are in general disfavour with the public, who, very properly, think that the leases are almost wholly drawn in the interest of the ground landlords, and that therefore these gentry should be left to work the mines themselves. Hence, when Col. Fludyer appealed to the public to join him "on the bed rock basis," the response was inadequate, whilst if he had appealed for twice the sum for a South African venture it would readily have been forthcoming. He was apparently on the eve of success—at least, so the reports of the experts he called in led him to believe—but he felt that he could not put more money into the concern, and so in a letter to his miners, whom he calls "his dear friends," he uses the following words :—"You can well, I am sure, understand how deeply I feel having to write this letter to you, who have served me so well and faithfully for so many years. I hope, and believe, however, that this stoppage will be but for a very short time, as I cannot but think that such a lode as we have discovered, and which has been so highly reported on by the best authorities of the county, will long remain undeveloped. If I can be of any service to you at any time pray let me know, and anything that is in power I shall only be too happy to do for you." We cannot but think that if there was more of this sort of feeling between employers and employed we should not hear of so many strikes or of the spread of Socialism, which in these latter days is making itself conspicuously felt. Such an epistle does credit alike to the head and to the heart of the gallant colonel. If he ever decides to resume the threads of Violet Seton we hope he will do so under a lease that will leave him a free hand to do what he thinks best in the interests of the capitalists who may join him and of the labourers who may serve him—as well as in those of the ground landlords, whoever they may be. In other words, let there be community of interest, or let Violet Seton remain as it is.

"ACCIDENTS WILL HAPPEN."

No more forceful reminder of this axiom ever comes to the public than in the facts and figures adduced at the annual meeting of the Railway Passengers' Assurance Company. Of this company the chairman is the Hon. Evelyn Ashley, the secretary, Mr. William J. Vian, and the offices, 64, Cornhill. The annual meeting of this company is, in fact, little better than a practical sermon on the text, "In the midst of life we are in death." The most careful, alike with the most careless, have no immunity from sudden death any more than they have from accident. Some of the cases which this company experiences are most remarkable, and yet can perhaps be paralleled in the ordinary experience of many as they pass through the streets. One of the assured in this company's office sought to pass through a low doorway, and in the attempt his hat was forced down upon his head. From this apparently trivial accident resulted concussion of the brain, from which the victim died. A slip on New Year's Eve resulted in death ; and an actress, waiting at the wings of a theatre ready to take her part in a drama, illustrated in her own person an episode of the great drama of life by having a knitting needle forced into her breast, from the effects of which she died. The experience of this company is pregnant with the lesson that no man, no woman, should fail to make provision for the benefits which a policy in this company offers in case of accident or to helpless survivors in case of death.

The company, in respect to fatal accidents, has had a bad year. The dividend of the shareholders has been somewhat reduced, but the money has gone into the pockets of the assured public. Four shillings is the distribution this year, as compared with 5s. last year. There were 64 fatal accidents, as against 52 in the preceding year, and this was not wholly counterbalanced by a lessened number of accidents of a non-fatal character. The fatal accidents, in fact, absorbed 12,000*l.* more than last year, though the non-fatal accidents required 1,000*l.* less. The competition from which the company has suffered has been severe, and not always fair ; but the public who repair to 64, Cornhill, may be certain of two things ; first, that they will be put under the most favoured payment clause, and next, that in the event of death or accident they will get the benefits for which they have assured.

THE SOUTH AFRICAN GOLDFIELDS.—No. 3.

By a Cape Colonist.

If the reader has followed me thus far he will probably be curious to ascertain how these new comers have been received by the Boer population. My reply is that a friction has been the result ; a friction that at present is certainly acrimonious, and it is one which will demand the utmost forbearance on both sides, to prevent anything in the shape of hostility. Had the governing power of the South African Republic, since the retrocession in 1881, been confined entirely to the Africander Dutch Boers, there can be no doubt that much ill-blood would have been avoided ; but, unfortunately, for some time previous to the English taking possession of the country in 1880, and since the retrocession, a Hollander element has been introduced and fostered, and these Hollanders are leaving no stone unturned to stir up ill-feeling between the Transvaal Boers and the English, and even the compatriots of these Boers in the Cape Colony. The consequence is that the present President, Paul Kruger, is a complete tool in the hands of this Africander clique. This was a matter which few intelligent men in South Africa troubled their heads about previous to the discovery of gold. The State was looked upon and treated as an independent Republic, and so long as they confined themselves to their own affairs they were severely let alone. By the time the Volksraad assembled in May last, Barberton and Johannesburg had not only become populous towns, but the capital—Pretoria—only 40 miles from Johannesburg, had doubled the population of two years before. It necessarily followed that the actions of the Volksraad would be narrowly watched and freely discussed. Accustomed to hold the most important of their meetings with closed doors during previous sessions, they were fairly taken by surprise when they found that although they conducted their proceedings in the patois of the country—a barbarous mixture of Dutch, English, and Hottentot—the enterprising proprietors of the many English newspapers which had sprung up in the capital sent their representatives to report their debates and translate them into the English language.

Bnt, notwithstanding that the light of civilization was thns thrown on their doings, it may be fairly stated that the whole of their proceedings during the session were not only characterised by a complcte ignorance of the new era which had set in, bnt their actions were calculated to irritate and annoy the very people who had transformed the conntry, with the stroke of a magician's wand, from a state of dire poverty to one of affluence and power. To prove this I may state that wealth has poured into thc State cxchequer at a rate which has fairly astonished these ignorant Boers. Under most circumstances it would be imagined that these new comers would be welcomed with open arms, and at once admitted to a participation of the deliberations of the Volksraad. Instead of which almost the first thing they did was to pass a law which prohibits a man from becoming an elector nntil he has resided in the State five years, and fnrther prohibits him from representing a constituency in the Volksraad until he has resided there 15 years. Besides that they have also enacted that the whole of the official business of the conntry—from the Volksraad and Snpreme Conrt down to the daily markets—must be conducted in what is called the "Dutch" language ; and to complete the farce, on the last day of the session, now three months ago, a resolution was passed authorising the Government to grant a concession to a certain Dutch and German Syndicate the monopoly of conducting the whole of the financial operations of the State nnder the form of a Government Bank. This was the last straw laid on the camel's back. To understand this properly you must know that since the discovery of gold the banking operations of the State have been conducted by various South African banks, chiefly snpported by British capital. It being admitted that the establishment of the proposed Government Bank wonld in effect close those institutions, the commercial men amongst the new comers at once took steps to remonstrate with the Government on its foolhardiness. Depntations were immediately dispatched to Pretoria, and by means of the cable, capitalists at home, who were interested in the matter, were commnnicated with. Fortnnately there was a document in existence called "the London Convention of 1881," and already we learn that the Crown advisers at home have advised the British Government that the establishment of such a bank wonld be in conflict with an article in that convention. This is how the case stands at present, bnt I need hardly add that the whole qnestion is being watched with considerable interest by capitalists, both in the colony and at home.

It follows as a natural consequence that the enormous extent of these gold discoveries natnrally affect the qnestion of railway extension in South Africa. At present the Great Western Trnnk line of the Cape Colony only runs as far as Kimberley, and the Natal line as far as Newcastle. That a network of railways will very soon cover the whole of the Transvaal is a foregone conclusion, but it so happens that railways and South African politics are so intimately connected, and demand such a detailed consideration, that it will perhaps be as well if I reservc my comments on that snbject for a future paper.

THE BREAK IN THE COPPER RING.

(From a Correspondent.)

Although the liquidation at Paris has so far passed over without serious disaster, as at one time feared, it has shown traces of the strain pnt upon many interested in the copper specnlation. Five dealers have been "executed," besides many smaller operators, bnt the greatest nncasiness was created by the reported suicide of M. Deufert Rochercau, managing director of the Comptoir d'Escompte de Paris. It was at first denied, but has since been confirmed. He is stated to have lost his private fortune of 120,000*l*., but how far this may be reflected in the affairs of the institution is not known. The fact of his death, however caused a temporary rnn npon the establishment, bnt the excitement was easily allayed by the prompt steps taken by the officials and the resnmption of the management by M. Girod, which inspired confidence, as he is known to be opposed to the objects of the syndicate. There is no fear here as regards the position of the Comptoir d'Escompte, which is a powerfnl corporation, bnt some anxiety is felt as to what may follow the fall in prices. It is nnderstood, however, that the Paris Banks will come to the relief of the syndicate, but this wonld only tide over the crisis it is expected for the present. The Bank of France has rendered what help was reqnired.

THE MONEY MARKET.

City, Friday Evening.

Although the Money Market was so firm and so short of snpplies last week at the settlement and the termination of the Consol accounts the loans then obtained from the Bank being only required for those occasions have since been offering and eased the Market this week nntil repayable at the Bank within the last two days. Nearly the whole total borrowed has been repaid, assisted by money let out by the Treasury, but the tone is now firmer, short loans being wanted at 2⅞, 3 per cent., whereas at the close of the day money was often offering as low as even 2 per cent. without snccess. Discount has been easy at 2⅝, 2¾ per cent. for three and two months' bills respectively. This easiness was partly due to the low figure at which three and six months' Treasnry Bills were allotted on Monday, viz., equivalent to under 2½ per cent. The final instalment of the New Victoria Loans of 85 per cent. was paid on Tuesday, and absorbed a large total. The exchanges have moved favourably to this country, and gold has been flowing hither in small amonnts daily, but there have been some large withdrawals, including a quarter of a million on Thnrsday for Lisbon and the Cape. The Bank return, owing to the expansion of the note circulation, shows a decline in the reserve of 68,000, making the proportion to liabilities ¾ per cent. worse, at 42¾ per cent. The pnblic deposits have declined owing to Treasury payments, bnt the private securities have increased 856,000*l*., and the amonnt to the credit of bankers nnder private deposits has increased 615,000*l*.

Money appears to have been well employed to-day, partly because about 70,000*l*. was due in connection with the Buenos Ayres Water and Drainage scheme, and preparations were in progress for settling Treasury Bills to-morrow. Short loans have remained at 2¾, 3 per cent., and the quotation for three months' bills was steadier at 2⅝, while 60 days were quoted at 2¾.

The Bank has purchased 83,000*l*. in gold. The India Council has specially allotted 100,000*l*. in Cable transfers at 1s. 4 17-32d. Bar silver continued flat, and Rupee Paper further declined.

The gloomy feeling prevailing to-day in regard to financial affairs in Paris has not been confined to the Stock Exchange, bnt emanated in no small degree from bankers themselves. For the week the fall in Paris is represented by 500f. in the shares of the Comptoir d'Escompte to 520f., the price to-night ; 155f. in Metaux Shares to 185f., and 42½f. in Rio Tinto Shares to 380f.

Business at the Stock Exchange during the past week has been restricted, dealers in the present state of affairs on the Continent preferring to cnrtail rather than increase their commitments, and the public have been almost conspicuous by their absence. The abdication of King Milan came as a very nnexpected and unpleasant surprise, and considerable uneasiness is felt as to what the final result will be, as it is donbtful whether Anstria will be able to checkmate by peaceful measnres the ascendancy of Russian influences in this small bnt geographically important kingdom. Last night in the House of Commons "the first line of Defence Bill" was read a first time, and although the total required to pnt the Navy on a proper footing looks formidable (21,500,000*l*.), it is comparatively speaking bnt a small snm, as compared with the value of the commerce and interest to be gnarded, for if the naval defence was broken nothing could prevent a capitulation to the enemy who landed npon our shores, or if that did not happen trade and commerce wonld be so driven away, that famine prices would be the order of the day, so that looking at the Bill from all points we must admit that it is a bold and comprehensive measnre. The public have been selling Consols to invest the proceeds in other sonnd securities, but the decline is not serious owing to the action of the Government broker. Foreign Government Bonds were affected by the advices from Paris in connection with the copper syndicate, bnt the alterations are not important. In the Home Railway Market the feature has been the firmness of Chatham Preference, Metropolitan District, and Great Eastern Stocks, the first-mentioned rising 2¼, and the others 1 to 1½. Caledonian gave way, as the dividend, although 1¼ more than for the corresponding period, was ¼ per cent. below the market expectations. American Railways have been listless, with but trifling alterations from day to day. Grand Trunk of Canada Stocks gave way, although the traffic return was very favourable. Mexican Railway Stocks hardened, and in the Miscellaneous department prices fluctnated in sympathy with the leading markets, and on the week the variations are favourable, but not nnimportant.

The markets to-day have been heavy owing to the critical state of affairs in Paris in connection with the copper syndicate. A little tone was given to the quotations when it was announced that the Bank of France had lent 4,000,000*l*. to the Comptoir d'Escompte, bnt the improvement was soon lost, and selling again became the order of the day. The Funds receded ⅛, together with Indian and Colonial Government Securities. Operators for the fall also had the advantage in the Foreign Government Market, the opinion being freely expressed that the present prices had been reached by artificial means. International securities have given way ¾ to 1, with falls of 1¼ to 1½ in Greek, Spanish, and Ottoman Tribnte Loans. An almost correspondingly heavy feeling was shown in the Home Railway Market, and although one or two attempts were made to sustain values the closing was flat, with a loss of ½ to ¾ in the leading lines. American Railways as a rule were steady, Milwaukee Shares closing very firm. Illinois rose 1½, and Texas Pacific 1, while Reading Income Bonds fell 1, and many others ⅛ to ¼. Grand Trunk Stocks were dull in the absence of business, and Mexican also gave way. In Miscellaneous Securities prices were fairly well sustained.

Annexed are the final qnotations to-day :—Consols Account, 97¾, 97⅞xd ; Egyptian Preference, 102¼, 102½ ; Egyptian Unified, 85¾, 86 ; French Four-and-a-Half per Cents., 102¾, 103¼ ; Hnngarian, 83¾, 84 ; Italian, 93⅞, 94⅛ ; Mexican, 93, 93½ ; Pern Five per Cents., 13, 13¼ ; Pern Six per Cents., 14½, 14¾ ; Russian, 1873, 101⅜, 101⅝ ; Portugnese, 6⅛, 6⅝ ; Spanish, 73¾, 74 ; Turkish, 1871, 86¾, 87¼ ; Turkish Defence, 99, 99½ ; Caledonian, 117⅝, 118½ ; Great Eastern, 72¼, 72½ ; Great Western, 153½, 153¾ ; Brighton "A," 140⅛, 140⅜ ; North-Western, 177⅜, 177⅝xd ; Metropolitan, 80, 80½ ; Metropolitan District, 37¼, 37¾ ; Midland, 137⅜, 137⅝ ; North British, 56⅛, 56⅜ ; North-Eastern, 164⅛, 164⅜ ; South-Eastern "A," 109, 109¼ ; Hull and Barnsley, 35¾, 36¼ ; Grand Trunk, 11¾, 11⅞ ; Ditto First Preference, 72⅞, 73⅛ ; Ditto Second, 53, 53¼ ; Ditto Third, 28¾, 29 ; Canadian Pacific, 51⅞, 52⅛ ; Denver, 16⅜, 16⅝ ; Eric, 29¾, 30 ; Milwaukee, 64⅞, 65⅛ ; Lake Shore, 105⅝, 105⅞ ; Lonisville, 62¼, 62½ ; Atlantic First, 34⅛, 34⅜ ; Ontario, 17⅝, 17⅞ ; Ohio, 23½, 23¾ ; Norfolk and Western, 51⅞, 52⅛ ; Reading, 23⅝, 23⅞ ; Reading Bonds Five per Cent., 84¼, 84¾ ; Union Pacific, 67¼, 67½ ; Wabash Preference, 27⅜, 27⅝ ; Ottoman Bank, 11 3/16, 11 5/16 ; Anglo-Telegraph, 49¼, 49¾ ; United Telephone, 14⅞, 15⅛ ; Hudson's Bay, 19⅝, 20⅛ ; Suez Canal, 87¾, 88¼ ; Guinness, 30¾, 31 ; Allsopps Ordinary, 8⅜, 8⅝ ; Bryant and May, 13¼, 13½ ; Bell's Asbestos, 19½, 19¾ ; Leeds Forge, 7⅜, 7⅝ pm. ; Primitiva Nitrate, 31½, 32.

COROMANDEL (22nd Jan.)—The manager concludes the report for month of four weeks, ending 19th inst., thus :—I see no reason to doubt a good future for the company. We must keep steady developing the above points, and carry out our programme before we start stamping.

REPORTS OF MEETINGS.

WITWATERSRANDT "VENTURE SYNDICATE" GOLD MINING CO., LIMITED.

STATUTORY MEETING—WATER RIGHTS SECURED—EXPECTING TO STRIKE THE "JUMPER" REEF.

The first general (statutory) meeting of this company was held at the Offices, 15, Queen Street, London. E.C., on Thursday—Mr. W. B. M. Lysley (chairman of the company) presided.

Mr. Lydstone J. Langmead (secretary) read the notice convening the meeting.

NO DELAY IN GETTING TO WORK.

The Chairman: Gentlemen, this is only a meeting called to comply with the Act of Parliament, and we have no accounts to render, and no business to transact; but possibly you would like me to make a short statement as to the proceedings of the company since its formation. You are all aware that the company was floated successfully in December last. Directly after the shares were allotted the directors took steps to communicate with Mr. Dawe, who was one of the vendors of the property abroad, so as to commence working without delay; and I may take this opportunity of thanking the vendors for the very speedy and proper manner in which they transacted the business in connection with the company. (Hear, hear.) The registration of the company took place forthwith, and working commenced immediately; and not only was the registration of the property properly carried out before actually we, as a company, had performed our part of the contract, but they worked hard in order to get the water-rights secured (which it is needless for me to say form a most important adjunct to the company) and I am glad to be able to state that those water-rights are secured and endorsed by the Government on the documents of registration. (Hear, hear). There is another thing which I must bring to your notice, which is greatly to the advantage of the company, that is, that when we bought the property we bought it as if there were only 40 claims. On a proper survey being made afterwards, the vendors found that there were 43 claims and they handed over the whole of them to us without any charge whatever for the extra three claims. I may say, however, that there was a small outlay—not more than 60*l* or 70*l*—which we handed over to Mr. Dawe for out of pocket expenses in securing these water-rights, and putting us in full possession of the property immediately. I may also tell you that we directly engaged Mr. Dupré, who is considered one of the most eminent mining engineers abroad, and he is at present managing our mine. I cannot tell you what salary we are paying him, or what arrangements we have made, because really from the date we commenced working up to the present, there has scarcely been time for advices by letter to reach us. Being such a distance from our property, and cabliug being so expensive, we can only shadow out to you what our intentions are, and can only tell you what we have done. Our intention is to confirm the engagement with Mr. Dupré, who, I may tell you, is very largely interested in the company. I believe he holds an interest amounting to about 6,000 shares in the company, and, therefore, you may take it for granted that if a man has personally such a large pecuniary interest in a concern he will do his best to make the shares, which represent money, of great value.

VENDORS' CONFIDENCE IN THE PROPERTY.

While on the subject of the purchase, I must tell you that the purchase-money was paid to the vendors entirely in shares, and they have given directions, through the brother of one of the vendors, who is over here acting as their agent (and he will, I believe, confirm what I say), that those shares are to be locked up—that is to say, under no conditions whatever will they part with them, until, as they say, their true value in the market is reached. What that is I do not know; but they put it down—and they ought to know—at about 10*l*. or 12*l*., and until they can get that sum of money properly from the results of the mine, they do not care about parting with one of their shares. I tell you this, because I wish to point out that if the owners of the property had taken the entire value in paper, it is obviously to their interest to make a good return, and thus cause that paper to become valuable. (Hear, hear.) Perhaps it would not be out of place for me at the present moment to point out to you the position of the mine. (The chairman here indicated, by means of a map upon the wall, the exact situation of the property and its near neighbours.) Continuing, he said: Of course, everybody reads the papers nowadays, and you will have noticed that at the present moment there seems to be a very great desire to run down the Witwatersrandt Goldfields.

A FAIR CHANCE OF SUCCESS.

I am not a miner myself, but all I can tell you is this (and nothing is better than facts), that if one can see mines, quite close to ours, paying dividends, and whose 1*l*. shares were up to 17*l*. and 18*l*. a piece, naturally one cannot help thinking we have a very fair chance. (Cheers.) I, as a director of this company, do not wish you to think for one moment that I guarantee gold there; but we firmly believe, and have every hope, that shortly we shall be able to tell you not only that we have discovered the Jumper's reef, but other reefs through our property. I can only say that it is nothiug more than I and my fellow directors believe, and nothing more than gentlemen who are connected with the minc abroad, and who are in a position to know, and from whom we get our information, have told us.

RATHER SIGNIFICANT.

Our representatives on the other side have just arranged with us a new code word, the meaning of which will be, "We have struck the Jumper's reef," and the reason why they anticipate striking that reef at au early date is this—that the miners who are now working in the district, and whose wages are very high, are willing to work on our ground at a smaller rate of pay than they would upon that of some of our neighbours, on the understanding that they get a good bonus if they strike the Jumper's reef. I do not say that we are going to strike it; I only tell you what we hear. Mining, of course, is only a chance, and anybody who puts his money into a mine and expects to take up dividends like Consols must be a fool; and a man who puts more money into a miue than he can afford is another fool. (Laughter.) At the same time, a man who puts down 1*l*., and gets a fair chance—like those who put their money in the Robinson, and got 60*l*. or 70*l*. a share in the market—are not quite such fools as the gentlemen who write to the papers, and say it is a very silly thing to go in for mining there. (Hear, hear.) It is a speculation, and if it does not come off "trumps" it is not the fault of the directors. You can judge for yourselves. We tell you we have every hope and belief that we shall strike this reef, and we can go no further.

43 CLAIMS AT ABOUT 1,200*l*. EACH.

Now, gentlemen, as to the claims. We have 43, and upon calculation I think you will find they cost us about 1,200*l*. apiece. I think Mr. Dawe, who is here, will tell you that claims are selling there now at from 10,000*l*. to 20,000*l*. each, and if we were purchasing our property at the present moment in the market we should never get it at the price we did. It is a very low-priced mine—65,000*l*. of capital; but if we were in the market again to-morrow it would probably be worth 150,000*l*. We were fortunate in having the contract agreed to as to the price at which it was to be brought out in England before this "boom" took place in the Witwatersrandt district. If it is successful, it will be a very great success; and that is the way you must look at it. As to the future, we sent out a circular to the shareholders with regard to the option we had of selling part of our land. Well, we had an offer, and it was under consideration, and to tell you the truth I am afraid I was the guilty party if we have lost anything by it; but at any rate we have deferred consideration for this reason—that I think we can get better terms by waiting until we know more than we do at present.

A DIRECTOR TO VISIT THE PROPERTY.

One of your directors is going out to the mines shortly, and we shall look forward with a great deal of anxiety, and at the same time with great hope and confidence, to the report he will make to us. Hardly anything at the present moment is settled, owing to the short time we have been at work. We do not know what we are paying Mr. Duprè. We have engaged him virtually for three months until a settlement can be made, and we have no doubt an arrangement can be come to with him which will be for the benefit of the company. We do not intend to put up any machinery or go to any expense of that kind until we have opened out the mine and found the stuff that we have got to crush. Nothing could be more ruinous, in my opinion, than to order machinery and go to great expense in that direction before we have got the actual stuff to work upon; and I hope the shareholders will agree with me that that is a proper course to take. We intend only to develop the mine and we shall have no difficulty in paying for machinery directly we have got the stuff.

SHARES IN RESERVE.

We have got some shares that we have not issued and do not intend to at the present price. Directly we find gold I have not the slightest doubt in the world that those shares will realise a premium with which we will be able to pay for the machinery, instead of with the money represeuting the shares. Now, as to the money we have called up. We are only able to call up half-a-crown a month. Our list of shareholders is as good as any we could have, and directly we make a call the money is forthcoming. We have a great deal of money in hand now for the call due on the 15th. What we propose to do is to call up half-a-crown every month, because mining is very expensive there. We shall have to pay 43*l*. a month, independently of mining, to the Government; and to conduct our operations we must always have a good balance at our bank. The reason why I think we shall make a call every month is for the benefit of the shareholders quite as much as the directors. We have had so many shareholders wanting to pay up their shares in full, thinking that because the shares are quoted at 3*l*. in the market fully paid up, that they can pay the shares and deliver the scrip. That is a mistake. We take the money from the shareholders and give them a certificate as paid-up shares; but we can take the money in advance, and in the event of the company paying dividends, we are enabled by our articles of association to pay the same dividend on the whole of the capital that is paid up. For market purposes, however, I presume it would not be of the same value, but that we have nothing to do with. In the event of the shareholders choosing to pay up their money in full they have no more bother, they are not served with call letters, and the advantages are greatly in their favour, presuming we are able to pay dividends.

SINKING A SHAFT.

We are beginning to sink a shaft about 200 ft. from the tunnels driven north and south at present. We have for our neighbours the Stanhope, Geldenhuis, Simmer, and Jack and others; so that we have every chance of being successful. And now, gentlemen, I have given you a short summary. I hope when we meet at our next ordinary meeting, we shall have good returns and a larger attendance of shareholders. I have often heard it said that whenever you get a small attendance of shareholders it shows that they are coutented, and as far as the directors are concerned, possibly they are very pleased not to see the shareholders; but I, as chairman of this company, shall always be pleased to see them and give every information I can, and if I have left out anything on the present occasion that any shareholder wishes to ask about, although I now sit down I am quite prepared to rise again and answer any questions that may be addressed to me. (Cheers.)

THE REPRESENTATIVE OF THE VENDORS.

Mr. Dawe; As the representative of the vendors' syndicate in Johannesberg I can bear out all you have said Mr. Chairman, because from correspondence I have had with my brother almost daily by cable or letter, he has thoroughly confirmed all the information you have been able to give the shareholders. I may say it is the opinion of Mr. Knox, the engineer who reported upon the property, and also the opinion of Mr. Duprè, your present manager, that the Jumper's reef undoubtedly traverses through our property, and also that we have other rich reefs. It is perfectly correct what you have said about the vendors' shares being entirely locked up. I know that there is a tunnel being driven north and south on the property, in order to prove this report, and I have already received a code from my brother, which will inform me, when I receive the telegram, that the Jumper's reef has been struck. This evidently shows that they anticipate striking it in the near future. (Cheers.)

Mr. Henderson proposed a vote of thanks to the chairman.
Mr. Parminter seconded the motion, which was carried.
The Chairman briefly replied, aud said if he were a betting man he would consider it was 10 to 1 that they would get gold very shortly. (Laughter.)
The proceedings then terminated.

THE GOLDFIELDS OF SOUTH AFRICA, LIMITED.

120,000 NEW SHARES TO BE ISSUED PRO RATA AT PAR TO PROVIDE CAPITAL TO DEVELOP THE MATABELE CONCESSION.

An extraordinary general meeting of the shareholders of the Goldfields of South Africa, Limited, was held at the Cannon Street Hotel, yesterday, when the following resolution, which was passed at the extraordinary general meeting held on the 21st February, was submitted for confirmation as a special resolution :—" That the capital of the company be increased to 370,000*l*. by the creation of 120,000 shares of 1*l*. each."

At the extraordinary general meeting, held on the 21st ult., the following rider was added by the shareholders as a direction to the board :—" That a future meeting shall be called to approve of the price at which the shares shall be allotted to the shareholders pro rata."

Thos. Rudd, Esq. (chairman of the company), presided.

Mr. Herbert E. M. Davies (secretary) read the uotice convening the meeting.

THE CHAIRMAN REMOVES MISAPPREHENSIONS.

The Chairman : Gentlemen, the only business before us to-day is to confirm the resolution passed, with the rider, at the last meeting. I may add that there seems to have been a misapprehension about the founders' shares—that the London directors either have, or ever had, any of those founders' shares. I beg to state distinctly that they have not, and that the whole of the founders' shares from the first have beeu held by the managing directors, who were the founders of the company. (Cheers.) With regard to the proxies—they were, it is true, obtained, but solely for the purpose of making sure that the meeting would not collapse, and not with the intention of carrying any resolutions contrary to the wishes of the shareholders present at the meeting. The board have thought it better since the last meeting —the question having arisen as to whether, if the premium on the shares were treated as profits, the founders' shares might take a proportion of them—in order to avoid that difficulty, and also in compliance with what appeared to be the manifest wish of the shareholders on the last occasion of our meeting the board have thought it better that the issue of the shares should take place, pro rata, at par to the present shareholders. (Loud applause.) The chairman concluded by moving the resolution as above.

Sir Richard Pollock seconded the motion.

A LEGAL QUESTION TO WHICH THE SOLICITOR REPLIES.

Sir Donald Currie, M.P. : What is the legal mode by which this resolution is to be carried—what are to be the words added to the articles of association ? I venture to hold that the resolution as put from the chair, and as stated in the circular, is not in conformity with the wishes of the last meeting ; and, therefore, it may not be legal if carried. (Hear, hear.)

Mr. Stewart (solicitor) : Sir Donald Currie has asked a legal question, and perhaps I, as solicitor to the company, shall not be trespassing if I take upon myself to answer it. I trust that even should my answer not prove satisfactory to Sir Donald Currie, he may think it, as a matter of judgment and expediency, not desirable to press any objection to the passing of this resolution, and the issuing of the capital on the terms announced by the chairman. That, however, will be for himself to judge ; but in answer to the question he has put, I beg to say that the resolution which was put to the meeting on the 21st February, and which will be put for confirmation to-day, is as follows : " That the capital of the company be increased to 370,000*l*. by the creation of 120,000 shares of 1*l*. each." Sir Donald Currie reminds us—which, however, the board well remembered—that there was added to this resolution at the last meeting a rider as follows : " That a future meeting——"

Sir Donald Currie : "And that——"

Mr. Stewart : " And that a future meeting should be called to approve of the price at which the shares shall be allotted to the shareholders pro rata." I beg to say that I, as solicitor to the company, am solely responsible for arrangiug the resolution in this manner for a reason which I think will be satisfactory to you. A special resolution such as this, increasing the capital of the company, has to be registered and added to the articles of association, and I think you will see that it would be out of order to let such a rider as this go into the articles of association. (Hear, hear.)

DIRECTORS LOYALLY CARRY OUT THE SHAREHOLDERS' WISHES.

This was merely a direction—perfectly binding upon the directors, and which the directors loyally accepted as binding upon them—that the terms upon which the shares were to be issued should be at the discretion of the shareholders, and that a future meeting should be called in order that the directors might receive their instructions. The future meeting is now being held, and the directors are announcing the terms upon which they propose to make the issue, and which they trust will be acceptable to the shareholders. I think I need say no more to show that the inclusion of such a rider as that in the articles of association permanently would be to deface the articles. (Cheers.) The wishes of the shareholders are being loyally carried out by the directors in the manuer which their solicitor advises them is the correct one. (Cheers.)

HAVE THE DIRECTORS CHANGED THEIR OPINION ?

Sir Donald Currie : I asked at the last meeting whether it was possible to postpone for a fortnight or so the consideration of the question as to the amount of capital required for the development of the Matabele Concession, and I offered to pay my share, and to induce others to pay their share, of any premium at which the directors might issue the shares. The resolution passed at the last meeting was a distinct resolution—that a future meetiug should be called, and not a postponed special meeting. This is the question I wish to ask the directors—Do we uuderstand, as shareholders, that the board have altered their opinion as to the amount necessary for the development of this Matabele Concession ? We were told that more than 300,000*l*. was required, and the directors now seem to have come to the conclusion that 120,000*l*. is suffieient. If they have changed their opinion perhaps they will explaiu the reason, aud we will then understaud our position before voting upon this matter. (Cheers.) I venture to say this, because Mr. Cecil Rhodes, who is one of the most distinguished men in South Africa, and for whom all of us have a very high respect, and who is manager of this company, and largely interested in the development of South Africa—he is on his way to this country now, having left South Africa two days ago. I will presently have a suggestion to make to the meeting with regard to that.

AN EXPLANATION.

The Chairman : It is perfectly true that the managing director advised us that a considerably larger amount than 120,000*l*. would be required, but it cannot be utilised all at once. It is no use having large sums of money lying idle. Therefore, we thought it much better to raise this money now, and whenever additional capital is necessary we can raise it in a similar way. (Cheers.)

Mr. Bate : The question has been raised by Mr. Rhodes and by Mr. Rudd, your managing directors, and they have, I think, asked you to fix the increase of capital at 120,000*l*., knowing at the time that such issue would be made if the shareholders were not willing to take their pro rata proportion, at something like 3*l*. premium. It is very evident the managing directors consider that a large amount of capital is required to develop the resources of Matabeleland, I think the directors ought to have sold these shares at the best possible price. They should, however, certainly be offered to the shareholders first, and failing their being taken up they might then be offered to a syndicate. But I do not see the reason for increasing your capital by half its present value, simply to get 120,000*l*. in cash, which you can get at any moment upon debentures or upon other terms. I think, as Mr. Cecil Rhodes is now coming over, and he knows more than the directors here, that it would be advisable to postpone this meeting, and hear what he has to say on the matter. I only speak out what I feel in this matter, and I think those who know much about South Africa will agree with me. To raise the capital simply to get 120,000*l*. in cash is to my mind simply ridiculous when you see your shares standing at 4*l*. in the market, and I say it is

NOTHING BUT A MARKET MOVE

on the part of speculators, who want to make the best of it. (No.) I again repeat it—it is nothing but a market move. You have raised a question as to the directors sharing in the profit as founders, but I was also given to understand that the managing directors had clearly said that they would not share in such a profit ; and further, that your articles of association are perfectly clear upon the point. The question now before us, however, is—shall we throw away 120,000 shares and receive quite an inadequate amount of money for the purpose for which we want it ? Would it not be better to offer these shares at something like 3*l*. to the shareholders ? (No.) Would it not be much better in that way to do justice to your managing directors, who have so far managed your property in such a splendid way.

A MISUNDERSTANDING.

Mr. Harold Smith : Sir Donald Currie stated at the last meeting that he had received a note from the secretary to say that the shares would be offered at par. Now I find him bringing forward a motion objecting to the very thing that he theu proposed.

Sir Donald Currie : No.

Mr. Stewart : Sir Donald has made no amendment.

Mr. Harold Smith : I only know that his remarks conveyed to my mind the impression that he had altered his opinion, and that he did not wish the directors to issue these shares at par—that, in fact, he wished to upset it.

Sir Donald Currie : No, I do not wish to do anything of the kind. I stated distinctly that if the directors could tell us that issuing these shares at par would supply them with the funds I would support them. But I wish to know why the directors said that 360,000*l*. was required when last we met, and only one-third of it is required now. I have not made any proposal, but simply asked the question. If we are prepared to water our capital with 120,000 shares, I, as a large shareholder, am quite willing to take my proportion of them. I only remarked that your managing director, who seemed to know the business, was on his way to this country ; and I venture to think that a resolution passed, as proposed from the chair, will not be legal. The gentleman is not entitled to state that I have changed my opinion since the last meeting. (Cheers.)

AN ORIGINAL SHAREHOLDER'S VIEW.

Mr. Harold Smith : That is the only conclusion that I had come to. I was an original shareholder in this company, and am now the holder of 1,000 shares, for which I paid a considerable sum of money, but as a holder of 1,000 shares I think I am entitled to make my remarks, and I contend that the last meeting was called for the purpose of placing before us, as shareholders, the precise position in which we stood, and to receive the advice of our directors. I advocated strongly that an original shareholder should not be called upon to subscribe for additional shares at more than par on principle. My reason for taking that view was this—you already have a capital of 250,000*l*., and you ask for 120,000*l*. more ; that makes 370,000*l*. If a ten per cent. dividend was earned upon the 250,000*l*, you would have to take so much less in proportion if you increased the capital by half as much again. The original shareholder, I contend, has a right, in any issue like this, to have the shares at par; and we have to cousider the original shareholder. We have nothing whatever to do with the price other shareholders may have given for their shares. We must consider that the original shareholder has his shares still, and that he is now called upon to find additional capital, and I am glad that the directors have decided to issue these shares at par. (Cheers.)

The Chairman : In answer to Sir Donald Currie, we have not changed our opinion, but we think that for the present the 120,000*l*

will enable us to do what is necessary. It is evidently in accordance with the feeling of the shareholders expressed at the last meeting.

A SERIES OF QUESTIONS.

Mr. Davies: I wish to ask one or two questions before you put the resolution. In the first place, are the directors prepared to place in the hands of the shareholders the terms of the concession? Secondly, are the shareholders to understand that the money now asked for in the new issue of shares is to be dispensed solely for the development of the company's one-half of the concession? Thirdly, are the shareholders to understand that the parties who have the other half are to be bound to expend an equal amount in the development of this property? Fourthly, upon what principle do the managing directors give away one-half of the concession when by their agreement they are bound to give all the rights, concessions and advantages which they can obtain for the company in consideration of the commission on the working profits of the company which is secured to them? And, fifthly, in order to remove misapprehension, will the directors inform the shareholders that the managing directors, or the directors of the company itself, are not in any way interested in the other half of the concession?

The Chairman: We consider that it would be very much against the interests of the company to go into matters connected with the Matabele concession at present. We are perfectly satisfied with the assurances received from the managing directors. Everything is in a perfectly good position in spite of all the false reports that are going about in the papers, and which are utter rubbish. (Cheers).

The motion was then put, and carried.

On the motion of Mr. John Edwards, a vote of thanks was passed to the chairman, and the proceedings then terminated.

THE "JOE'S LUCK" AND "BON ACCCORD" (SHEBA) GOLD MINING CO., LIMITED.

DIRECTORS LET SHAREHOLDERS KNOW EVERYTHING—DEVELOPMENTS ENCOURAGING, BUT MORE MONEY NEEDED TO UTILISE THEM—INCREASE OF CAPITAL.

An extraordinary general meeting of the company was held at Winchester House, Old Broad Street, on Thursday, 28th February, when the subjoined resolutions were proposed:—

RESOLUTIONS.

(1.) "That the capital of the company be increased to 80,000*l.* by the creation of 20,000 new shares of 1*l.* each, which shares may be issued from time to time, in such sums, and at such price as the board shall decide." (2.) "That the directors be at liberty to accept transfers (for once only) of shares Nos. 18,531 to 19,280 and 10,101 to 12,100 from the person or persons or corporations in whose names such shares at present stand to such person or persons as the directors may approve, notwithstanding article 30 of the articles of association of the company, and the fact that such shares be not fully paid, and that the said article shall be deemed to be modified so as to allow such transfers but for no other purpose."

W. J. Thompson, Esq., chairman of the company, presided.

Mr. F. W. Sellick, (secretary) read the notice calling the meeting.

RAND SHARES FLAT.

The Chairman: Gentlemen, it is unfortunate somewhat that we should have called you together on a day when, from the change in the Stock Exchange quotation, the Rand shares should be so extremely flat, but, happily, as regards this company, we do not rest upon Stock Exchange fluctuations, but, as the directors have reason to believe, upon a solid foundation that we have been steadily endeavouring to work out in the end, which we had before us when we brought the company to your notice. As we told you at that time, the directors would keep you fully informed of every step in our progress—we have steadily done so, and I think you will agree with me that we have placed before you information from time to time as we received it, which, on the whole, and especially latterly, would have been satisfactory to you as shareholders in this company. (Hear, hear.) But we have been all this time spending money—of course, as economically as we could—but at the rate of some 300*l.* or 400*l.* per week, which is a matter of necessity, and we feel that as we are now trenching upon the reserve capital, leaving us only with about 3,000*l.*, that for the proper development of the mine we must necessarily ask you to entrust us with more capital if you desire to go on with it.

MONEY REQUIRED TO BRING THE MINES TO A SUCCESS.

On 11th January we laid before you the copy of a very full letter received from Mr. Bell, which we looked upon as satisfactory, and I believe that you did then, and do so now, as our subsequent information confirms that letter and shows that we have been steadily progressing, and have reached the very point in the mine originally indicated by Mr. Woodhouse as the most likely spot where we should strike a shoot of gold. It speaks very well for the technical skill of Mr. Woodhouse that we should have struck this rich shoot at the precise angle where he indicated we should in all probability do it. The advices have confirmed this news, but we had then a difficulty with ventilation. The dynamite explosions have kept back the men, but we know now we have reached the point from the winze from the 90 to the 210 level, and that we have ventilation through the mine, whilst all the difficulties from the want of it have passed away. Our last advices have been before you. Each telegram, as we have received it, has been published, and

YOU KNOW AS MUCH ABOUT THE MINE AS THE DIRECTORS.

It now simply comes to a question whether, as shareholders, you think we may be entrusted with more of your money to continue the development of this mine. We think we may be trusted, but that is for you to decide, and for that purpose we have called you together. We have laid before you these resolutions, and in another paper have submitted a full explanation, in order that you might not come to this meeting unprepared to express any opinions you might have. You know the reasons why we make the call, how we propose to make it, and to put forward at par

ONLY 10,000 SHARES,

hoping that if the mines develop, as we have reason to believe they will, the gold remittances will give us those returns which will render further capital unnecessary. I will move the first of the resolutions (as above), which our secretary has read.

Mr. Hale (director) seconded the motion.

Genl. Barclay: It appears there are a good many shares not fully paid-up, and why do the directors want to raise more capital when they might make a call?

The Chairman: We might call up the shares in full and obtain another 3,000*l.*, but our information is to the effect that they will not be sufficient to develop the mine, and, as men of business, it is not expedient to wait until our funds are exhausted before we take steps to replenish them.

Mr. C. Van Buch pointed out from a plan the nature of the developments that had taken place, which he dwelt upon as being very important, and in reply to a question, said that they knew the thickness of the reef but not the thickness of the shoot.

The first resolution was then carried with one dissentient.

The Chairman proposed the second resolution, and pointed out that the shares referred to were reserved for subscribers in South Africa, but for the purposes of convenience they were placed at once in the names of certain persons as trustees for the South African subscribers. These shares have now been subscribed for, but are not fully paid-up, and as Article No. 30 prevents any transfer until the shares are fully paid, the trustees cannot at present transfer the shares to the persons really entitled to them. To obviate this difficulty the directors propose that they should be allowed to accept a transfer of such shares for once only. This course would not in any way prejudice the interests of the other shareholders.

Mr. Hale (director) said that the South African shareholders would not be allowed to sell their shares unless they paid them up in full. In fact they would not otherwise be transferred.

DOUBT AS TO THE GOOD FAITH OF THE SOUTH AFRICAN SHAREHOLDERS.

A Shareholder: Assuming that the mine does not go on satisfactorily, you will find it almost impossible to recover the calls due in South Africa.

Mr. Hale: The best answer to that is that they have kept paying their calls, notwithstanding they have not received their scrip.

The Chairman: We do not wish to put the South African shareholders in a position different from those in London. They have paid 15s. a share, and they ought to have what they have paid for.

General Barclay raised the question of the final call of 5s., and the chairman in substance gave the same answer as he had done before.

Mr. Morrison cordially commended the prudence of the directors in raising capital before they were absolutely in need.

A SHAREHOLDER WHO RECEIVES PRIVATE ADVICES.

Mr. Parker said the action of the board was unlooked for in creating new capital when there was a liability upon the old capital. He had bought his shares at a premium, and therefore they were fully-paid. He had the greatest confidence in the mine, and that confidence was enhanced by private advices he was in the habit of receiving. No injustice would be done to anybody by making the original shares fully-paid.

The Chairman: We merely want by the resolution to enable the trustees to hand over the scrip certificates to those gentlemen who have paid the 15s. a share, as everybody has done who hold original shares. Whenever they want to sell they will have to pay up the remainder.

Mr. Parker said he wanted the shares to be fully paid.

The Chairman said he was very pleased to hear the nature of Mr. Parker's advices, but was sorry to find him in opposition to the board.

Mr. Parker disclaimed any idea of opposition.

The resolution was again carried with one dissentient.

AT THE BOTTOM OF THE BOX.

Mr. Morrison, in proposing a vote of thanks, said his advices were to the same effect as those of Mr. Parker. He was told by his friend, a merchant of experience who had lately been in South Africa, to keep his Joe's Luck shares at the bottom of his box and they would turn up trumps. He was a pretty large shareholder, and meant to follow that advice.

Mr. Hill secouded the motion, and expressed the hope that the directors would give more information to the shareholders.

The motion was carried and the proceedings closed

THE SOUTH AFRICAN PROSPECTING AND MORTGAGE CORPORATION, LIMITED.

THE CHAIRMAN THINKS THERE IS "A FAIR CHANCE" FOR THE COMPANY—A MEETING WITH A DESPONDENT TONE—ALL THE CAPITAL ALLOTTED.

The statutory general meeting was held at Winchester House on Monday—Archibald Parker, Esq., chairman of the company, in the chair.

Mr. T. Watkin Davies (secretary) read the notice calling the meeting.

80,000 SHARES PLACED HERE, AND 20,000 IN SOUTH AFRICA.

The Chairman: Gentlemen, this meeting, as you are no doubt aware, is merely a formal one, held in accordance with the statute, which requires that we should have a meeting within four months of the registration of the company. We are very glad of an opportunity of meeting with the shareholders, and giving them any information we possess. The first issue of shares agreed upon was 100,000, and of these we allotted on the 10th November 80,000. It was considered very desirable that some of our South African friends should have an opportunity of becoming shareholders, so, although more could have been placed here than 80,000, 20,000 were reserved to be offered in Natal and the Transvaal—in fact, for Maritzburg and Johannesberg. These, we are informed by cable of the 28th February, have been placed, and as soon as all is complete it is our intention to apply for a Stock Exchange quotation. Some of the shareholders may be impatient to see results, and the directors are equally anxious, but no time has been lost unnecessarily. The company was registered on the

5th November, and the allotment here took place on the 10th, and within three weeks one of your directors, Mr. Percy B. Tod, left for South Africa. He arrived in Natal on the 24th December, and unfortunately found Mr. Raw, one of our local directors, with whom he was anxious to confer, absent, and whilst awaiting his return he had an attack of fever which delayed him for a short time.

MR. TOD'S PROCEEDINGS.

Still, whilst in Natal he secured a considerable interest in the "ground floor," as it is termed, of the Dundee Coal Mining Company, which has been started under most promising auspices. We have not full particulars, but he has taken 7,000*l.* interest in it for which he gets 10,500*l.* in shares. He has also joined with some of the most successful Maritzburg men in a prospecting syndicate on the Roodeport Farm, and the property they have in hand is said to have been reported upon favourably. Mr. Tod arrives in Johannesberg the first week of February, and by cable on the 28th—you will see there was not much time lost—we were advised that he has invested in a property, which has been successfully floated—receiving 11,250 shares, and that he has also further properties- one for floatation and the other for development. Of these we shall not have the particulars for some time, but the last words of the cablegram are these :—"Prospects very good." As there is a likelihood of our finding profitable employment for the money, we made a call of 5s., which has been fairly well met.

THIS MAKES THE SHARES 10S. PAID-UP

on the 80,000 shares issued, and we shall now get the 20,000*l.* which we have placed in South Africa into the same position. I think there is nothing else upon which we can inform you, but if any shareholder wishes to ask me questions I shall be happy to answer them to the best of my ability.

A SHAREHOLDER : Where is the Dundee Coal Mine situated ?

The CHAIRMAN : In Natal—very near the Transvaal. It is 6 or 7 miles off the main line of railway, and the Government have undertaken to bring the railway to it. I may also say that there are other matters which we have been talking over, but there is nothing of a definite character which we can put before you. The opinion of the directors is that things look pretty well, and that there is a fair chance of the company being a success.

A SHAREHOLDER : Has the company acquired the 60 claims spoken of in the prospectus ?

The CHAIRMAN : No ; because the report was not favourable. Mr. Tod evidently is proceeding with caution. We have received to-day a letter from Mr. Raw, who is one of the local directors, and from the way in which he writes

I AM VERY HOPEFUL THAT SOMETHING GOOD WILL COME OUT OF THE COMPANY,

As there are no questions I will now declare the business to be at an end.

Mr. NEWALL : I beg to propose a vote of thanks to the chairman.

Mr. MORGAN seconded the motion, which was carried.

The CHAIRMAN : We shall do our best to make the company a success.

The meeting then closed.

THE NEW PIERREFITTE MINING CO., LIMITED.

A DIVIDEND OF 15 PER CENT.—GOOD OUTLOOK.

THE second annual general meeting of this company was held on Wednesday, 27th February, at the Offices, No. 14, Great Winchester Street—W. G. Ashby, Esq., presided.

Mr. J. R. COOMBS (secretary) read the notice calling the meeting, and the report and accounts were taken as read.

A SATISFACTORY STATEMENT.

The CHAIRMAN : I am quite sure you, as shareholders, have equal pleasure with us, as directors, in receiving the report we have been able to send out, together with the statement of accounts. The result of the year's work has been most gratifying, not only in the profit obtained, but also in the better price resulting from the sale of our various ores. This you will find fully set forth in the report, showing that whilst silver-lead in 1887 averaged 10*l.* 10s. 2¾d., during last year it averaged 12*l.* 4s. per ton. That, of course, is a very large increase. We have every reason to expect that the output in times to come will be largely in excess of what it has hitherto been. This will arise principally from the fact that the rock-drills will be at work. Owing to bad weather and other circumstances we have not been able to get them all put up—only one being at work, but we hope to receive a telegram very shortly to say they are at work. In the accounts you will see that we have carried out the same policy during the past year as we have previously done—that is of charging against revenue all outlay required for the improvement of the dressing floors. Although this may come heavy on the year, we shall derive considerable advantage from it in years to come. I think, therefore, we may rely upon your support and acquiescence in having placed this amount to revenue account rather than to capital account. The rock-drill machinery has also been charged to revenue, as was decided at the last meeting. The development work has also been entirely charged to revenue. Of course, in all mining operations, if you do not keep up the development work—after having picked the best ore out you have little or nothing left, and you would very soon come to the end of your work. You will see we make a remark as to the other parts of the concession, which embrace 47 known lodes. These we have not thought it wise, at present, to further expend money upon, but in the coming year I hope we shall in one or two cases open them out, and see whether they are valuable or not. It will then become a question whether the New Pierrefitte Company shall work them, or whether other companies shall be formed to do so. We have decided to present our manager (Mr. Jeffree) with a bonus of 100*l.* in recognition of his services to the company, and I am sure no man could study the interests of his employers more than he does. We have also, as we are so successful, resolved to present our secretary with a gratuity of 50*l.*, and our clerk at the mines with 25*l.* I am sure everyone who knows Mr. Coombs knows he works with heart and soul. (Cheers.) I am glad to say the works and the machinery are in most perfect order. We will shortly send out some new stone-breakers, which will enable us to break up a great deal more than we can do at present. There is a certain amount of interest on capital paid in advance of calls which appears as a debit in the account. We propose to merge this into the general fund, and to allow those shareholders who paid up in full at the first to participate equally in the dividend. Gentlemen, I beg to move "That the directors' report, balance-sheet and accounts for the year ending 31st December, 1888, be, and are hereby received and adopted." (Cheers.)

Mr. SHILLITOE, in seconding the motion, said he had visited the mines during the year, and was thoroughly satisfied with everything that was being done. Since he had left the mine they had made several very valuable discoveries. From one lode they had taken samples which had averaged 70 per cent. of lead and 40 ozs. of silver to the ton.

The report was unanimously adopted.

The CHAIRMAN then proposed a dividend at the rate of 15 per cent., free of income-tax.

Mr. BULLIVANT seconded the motion, which was carried.

The chairman was re-elected a director, and the auditors were also re-elected.

A vote of thanks to the chairman closed the proceedings.

MINING IN CORNWALL.

(FROM OUR CORRESPONDENT.)

MORE activity has been shown in the Cornish mine share market during the past week, and many shares have changed hands, East Pools, Carn Brea, Cook's Kitchens, and Tincroft being most in demand. The event of last week was, undoubtedly, the Wheal Agar meeting, and although a heavy loss was anticipated, few shareholders supposed it would reach the large amount of 2,785*l.* The executive at Wheal Agar are losing no time in repairing the damage done by the recent serious breakage of the bob, and a new bob has been cast by Messrs. Harvey and Co., Hayle. The first part arrived on the mine last week, and has been erected ; the second part has now been taken to the mine and is in course of erection. Both the sides are very successful specimens of castings, and are 1½ ins. thicker in the weaker parts than the former bob. The shares in Wheal Agar have been very little dealt in, and prices have declined to 10½ to 11. At the close of last week Carn Brea shares rose from 14 to 15 and to 15¾ for the meeting, and this week they have again been very largely dealt in, and have further advanced to 16¼ for the meeting. They leave off steady at 15⅜ to 15⅞ cash, and 15⅞ to 16⅛ for the meeting. The report of Capt. Teague, manager of this mine, is very encouraging. He states that the lode in Highburrow West shaft is very large and producing some very good work for tin. The lode in the 274-fm. level west of shaft is improving, and is now worth for tin 20*l.* per fm. The agents of Dolcoath have this week presented a very satisfactory report, and although Dolcoath shares have been little enquired after prices have recovered from 100½ to 101 to 101⅛ to 102. A report has been issued by the managers of South Wheal Crofty, from which it appears that the winze under the 245 is holed to the 260, and a good piece of ground laid open for stoping, and which it is intended to commence working on immediately. They also intend opening up a large quantity of new ground. Shares in this mine remain quiet and inactive at about 8. Cook's Kitchens have been more inquired after, and prices have improved to 11¾, 12. With regard to East Pools, the fear of Wheal Agar act upon these shares very materially, but after having fallen from 35 to 33, they again recovered to 33½. Killifreths have become slightly easier at 24s. 6d., 25s. 6d. As to Wheal Agar the breakage at this mine has caused the water to rise to a considerable extent, and it is expected that quite a fortnight will elapse before the breakage is repaired. The consequence is shares can be bought at a very low figure, less than 10s., or not one quarter part of what they were a few months ago. Those holding shares, however, need not lose heart yet, for the mine is being driven westwards towards West Kitty, and should anything be discovered in this part of the mine, shares would quickly rise again, and would probably fetch four times their present value. North Levant meeting was held on Tuesday, when a balance was shown against the mine of 87*l.*, but 7 tons of unsold tin on the mine, estimated to produce 400*l.*, reduced the balance to 47*l.* The committee recommended vigorous prosecution of the bottom levels, and a further consideration of the continued working of the mine, or otherwise will be considered at the regular meeting to be held two months hence. The report of the agents was not of a highly hopeful character. Several levels in the mine are being driven as rapidly as possible, and the agents are evidently doing all in their power to bring the mine into a more satisfactory condition. A call of 10s. per share was made. Wheal Uny meeting will be held on the mine on Tuesday, and a call will be made. There has been no alteration in the prices obtained last week for Phœnix United shares, and they remain at 2*l.* 18s. 9d. to 3*l.* 1s. 3d. South Frances also remain unaltered at 7. Tinerofts, after advancing from 11⅛ to 11⅝, receded to 11¼, 11⅜. West Kitty have been slightly inquired for at 7⅛, 7⅜. Prices of other shares :—West Seton, 5½, 6 ; Wheal Basset, 7¼, 7¾ ; Wheal Grenville, 13, 13½ ; West Basset, 1¾, 2 ; West Frances, 9, 9¼ ; South Condurrow, 7⅝, 8⅛ ; Blue Hills neglected, 20s. to 25s. ; Pednandreas, ⅜ to ½.

THE ASIA MINOR MINING CO., LIMITED.

DIRECTORS' REPORT.

1st March.—The accounts for 1888 show a profit of 2,234*l.* 5s. 6d. As reported at the last half-yearly meeting, the reduction of capital has been duly accomplished, and the balance-sheet will show how the amount to be written off has been dealt with. The reports of the mine managers and underground agents show that every branch of the undertaking is in excellent order, and working steadily. The strictest economy consistent with efficiency has continued to be exercised in all directions. It being absolutely necessary to increase the working capital of the company, the directors have decided to offer the balance (10,500*l.*) of the debentures for subscription.

MONICA OPHIR MINING COMPANY, LIMITED.—The prospectus of this company will be ready on Tuesday, and applications for shares can be received on Thursday. This company requires a sub-concession from "The Ophir Territory Concessions, Limited."

CORRESPONDENCE.

[We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.]

D'ERESBY MINING CO.

To the Editor of the Mining World and Engineering Record.

Sir,—In perusing your report of the meeting of the above company, held on the 26th ult., I find several statements which require correction in regard to my connection with the D'Eresby Mine.

Mr. Barge wanted to know how many times I had visited the mine since my appointment.

On the 12th July last I received my appointment as consulting engineer, and to visit the mine (as the Rev. J. B. Fenwick stated) *once a month*. Between July 12th and February 12th (seven months) I visited the mine *eleven times*, as follows :—July 18th, 19th, and 20th ; August 8th visited the mine ; August 9th attended the meeting of directors in London ; August 22nd and 23rd at the mine ; September 5th and 6th ; September 21st ; October 5th and 6th ; November 3rd; December 13th ; January 2nd ; February 2nd ; February 23rd.

Now, I ask, is this *once a month*, or is it not ?

Then, again, as to reports, I find upon reference to my report book that for the seven months I have sent to the London office seven full reports of the mine. How many of these have been published for the benefit of the shareholders ?

I am not at all surprised at the dissatisfaction expressed by Mr. Barge and others, for were I a shareholder in a mine paying a consulting engineer six guineas per month, who only visited the property about "*once every six weeks*," and furnished only a couple of reports in some seven months time (as *I* am wrongly reported to have done), I would be the first man to propose that he be sent about his business.

Just a word again before I close. What have been the results of my connection with the mine ? Simply these, that non-paying expenditure has been abolished ; every bargain is now working upon paying ground, and the monthly cost reduced from the average sum of about 305*l*. per month to about 225*l*., and the mine looking better as to future prospects than ever.

In concluding I must object to being styled either "captain" or "manager" of D'Eresby Mine. My connection with the concern was that of "consulting engineer," as can be proved from my correspondence, but for the present I content myself with making the foregoing explanations in order to clear my own reputation.

I would just add another word for the encouragement of the shareholders, and to show that I write in no vindictive spirit. You have a good and valuable property, which, if properly managed and developed, especially north of Gors shaft, ought very shortly to turn up "trumps."—I am, &c.,

W. H. Williams,
Mining and Consulting Engineer.

Greenfield, near Van Mines,
Llanidloes,
March 6th, 1889.

P.S.—I beg to add that finding the D'Eresby Company to be "a house divided against itself," I have this day resigned the appointment, inasmuch as no man can please "two masters."—W.H.W.

OCEANA TRANSVAAL LAND COMPANY, LIMITED.

Sir,—In your issue of the 2nd inst., you kindly alluded to my remarks made at the meeting of the Oceana Company's shareholders, held at the Cannon Street Hotel, on the 25th ult.

Would you allow me to suggest, however, that one point of the greatest importance appears to have escaped your attention, and which needs a reference, when the people are anxious as to the security of their possessions, viz. : that of the Government and the laws of the country.

The following is what I said on this subject, if you care to insert it in your current number.—I am, &c.,

J. C. A. Henderson.

34, Nicholas Lane, London, E.C.,
8th March, 1889.

You might like to hear a few words with regard to the people, the Government, and the land in which your property is situated, and as to the security of your position.

With respect to the people themselves, they are kindly, very hospitable, and very generous. They are law-abiding, of physique considerably in excess of ordinary Europeans, of great strength, and of good brain, their lads in our universities standing second to none, either in brain or muscle.

With regard to the Government, the President himself is an astute diplomatist, who would be a credit to any European Goverment. His sole desire has been, and is, for the welfare of his people, and the recent laws enacted by him, through the Volksraad speak for themselves. Remember that a little more than 15 years ago, there was a penalty of 500*l*. for any man finding gold, because it was known that the finding of gold would bring in the "Cursed English Government, whose domineering injustice had forced them into voluntary exile from their old homesteads in the old colony." The President, seeing that the country was ripe for throwing open as regards the gold industry, issued instructions that a commission should be formed of men of different nationalities, from Europe, America, Australia, and elsewhere, versed in and acquainted with gold mining, and the gold laws of other countries, and instructed them to draw up a fair and equitable gold law. That law is now the law of the Transvaal, and one highly satisfactory to diggers. Moreover, this same man has instituted what you have not in England—a mining minister—and if a grievance requires rectification, a deputation can wait upon the President, show him the right or the wrong of the case, and in six hours the law can be rectified. Contrast this with the time it takes to get a grievance put right in England. Our Government is slow and ponderous. It took 14 years before it decided on Snider's rifle, and then the inventor died.

On the subject of the Land Laws, allow me to read you an extract from a letter replying to an inquiry I made some years ago.

"2A. We consider that the titles to property are as secure, and the registration as strict, as simple, as it well can be. The Government, through the Registrar of Deeds Office, is most particular and strict in regard to the registration and transfer of properties. We would refer you to the Hon. J. S. Merriman's L.M.A. remarks with regard to 'Tenure,' at the first ordinary general meeting of the session at the Royal Colonial Institute, London, held on the 11th November, 1884, when the Right Hon. W. E. Foster, M.P., presided. Mr. Merriman read his paper, and, in his reply to the discussion, said 'Tenure!" I only wish I had time to go into that question. We have the most perfect tenure in the whole world. Sir Robert Torrens' Act, excellent as it may be, falls very short of the system of tenure which exists in the Cape Colony, and which we have had for 200 years."

"Mr. Merriman is a member of the Cape House of Assembly, at present in opposition. He has twice held the important position of Commissioner of Public Works and Crown Lands, and may be considered one of the best authorities on tenure of land in the Cape Colony. The words he applies to the Cape apply to the Transvaal on this point, as our land laws of tenure and registration are precisely the same."

THE YURUARI COMPANY, LIMITED.

The assistant secretary advises receipt of mail from the mines, dated Chile, 6th February. In it the manager regrets to report that he is still short of miners. He adds :—A few days ago we struck some good rock in the No. 12 east, from which Capt. Rogers, after one of the blasts, brought up some of the finest stones I have ever seen. The quartz in the western levels looks about the same as last month, but at any moment we may also come across some good pay-rock here. Meantime we are vigourously pushing on, driving the different levels. The mill was started on the 1st inst. with 40 stamps, but unless more miners turn up we shall not be able to run right through the month. The neglect, during my absence, to continue driving and drilling operations is the principal cause of the difficulty we are now experiencing in keeping the mill fully supplied. The quartz we are crushing at present has a good appearance, carrying free gold, but a considerable amount of pyrites, so that we are compelled to crush finer than any mill in the couutry. We annex mine report :—

MINE REPORT.

February 6th.—During the past month I have mined and hoisted 1,400 tons of quartz, which have been broken from the following stopes :—Rise back of No. 8 west : 286 ft. from centre of shaft ; length 74 ft. ; progress during the month, 3 ft. 6 ins. The lode averages 2 ft. 8 ins. in width, and is much mixed up with bluestone. For the time being I have, in accordance with your instructions, discontinued working here, as, owing to the want of air, the men were working at a great disadvantage. I should advise air drills being used in this rise in future. Stope back No. 10 drift east : East corner 275 ft., and west corner 221 ft. from the centre of the shaft ; progress during the month, 14 ft. 6 ins. eastwards, and 24 ft. 6 ins. westward. Average width of the lode, 4 ft. 9 ins. Stope back No. 11 drift east : 390 ft. from centre of shaft : progress during the month, 5 ft. 6 ins. ; average width of lode, 4 ft. 7 ins. The lode in this stope does not look so well now as it has formerly done. Stope back No. 12 drift east : 201 ft. from centre of shaft ; progress made during the month, 15 ft. ; average width of lode, 3 ft. 3 ins. I have found in this stope from time to time during the month stones showing visible gold freely. My not having been able to raise a larger quantity of quartz this month has been owing to the scarcity of miners. When the stopes from which I am at present breaking quartz are worked out there will be no ground open on which to put men to work, with the exception of the ground opened out by the winze between drifts Nos. 9 and 10 west. I should therefore advise the driving of some of the drifts without delay in order to open up and explore new ground. In some of the levels which we are now using, and in the other parts of the mine which it is necessary to keep open, I find that many of the timbers have become so rotten that in order to secure the safety of that part of the mine they must be removed and their places supplied by new ones.—W. Rogers.

The manager reports, with reference to the water shaft, that preparations are now complete for starting this, but men, specially qualified by experience for sinking purposes, are not immediately available. The manager intends proceeding to Callao, where, he has no doubt, he will be able to pick up some white corporals and also miners, when operations will be started immediately.

The directors have decided upon renewing the debentures taken over from the New Chile Company and payable by this company on 30th June next, for five years, maturing 30th June, 1894, and are now prepared to offer to shareholders the balance requiring to be paid off. The directors are limited to a maximum issue of 75,000*l*. value of debentures. These debentures, which constitute a first charge upon all the assets of the company, were originally issued by the Chile Gold Mining Company, Limited, upon the property, plant, and other assets of the company in Venezuela, now belonging to this company. Since the original issue the New Chile Company and this company have expended a sum exceeding 50,000*l*. in new plant, machinery, &c., upon the mines. There is further as collateral security the amount of uncalled capital in this company, of 2*s*. per share, equal to 100,000*l*.

Holloway's Pills.—Factory Operatives and Workers in Manufactories.—The remarkable remedies which have been discovered and perfected by Thomas Holloway, and which have for more than 40 years been successfully used in every quarter of the globe, are especially useful in all the manifold ailments which afflict those who by reason of their occupations are confined for years, or all their lives, in crowded buildings and workshops. Holloway's Pills and Ointment are associated remedies, the former restoring the vital powers when diminished, and always acting as an efficient blood purifier, whilst the latter relieves local maladies, checks inflammation, and acts as a cleansing and healing agent in cases of bad legs, bad breasts, ulcers and unhealthy sores of all kinds.

SOUTH AFRICAN NOTES.

LATEST TELEGRAMS, &c.

Luipaards Vlei.—Cablegram: "Income for the month of February, 1,000*l*."

Salisbury.—The crushings of the Salisbury Gold Mining Company for last month yielded 986 ozs. A dividend has been declared for last month of 12½ per cent.

Swaziland Gold Exploration and Land.—Certificates for shares are now ready to be exchanged, against allotment letters and bankers' receipts, at the company's offices, 17 and 18, Basinghall Street.

South African.—The following particulars of work relate to the week ending February 2nd:—Blue ground hauled, 3,900 loads; blue ground and lumps washed, 4,495 loads; diamonds obtained, 827 carats; estimated value, 827*l*.; reef hauled, 25 loads.

Great Sheba.—The directors give notice that, by the permission of the Inland Revenue, they have compounded all stamp duties on transfers, share warrants, &c. Transfers must be sent in to the company's office on unstamped forms, together with the amount of the usual stamp duty.

Moodie's Gold and Exploration.—A cablegram from their secretary in Pietermaritzburg yesterday gives the result of crushings for the month of February: "Claims rented or leased, 632; claims rented or leased which are producing returns, 9; 1,370 tons crushed by shareholders yielded 1,503 ozs."

Transvaal Gold Exploration and Land.—Cablegram received yesterday: "Crushed 525 tons in 18 days (of 24 hours), yielding 950 ozs. Treatment of tailings in the pans yielded 180 ozs." Total for February, 1,130 ozs. The above return includes the trial crushing of 120 tons from Theta vein previously advised.

Wemmer and Wolsingham.—Robert Whyte and Co. advise the receipt, ex Grantully Castle s.s., from Cape, of four boxes native gold, weighing 1,637 ozs., on account of the Wemmer Gold Mining Company, Limited; also, one box ditto weighing 278½ ozs., on account of the Wolsingham Gold Mining Company, Limited.

Durban-Roodepoort.—A cablegram from the mines dated 2nd inst. states:—"Since our last cable (22nd ult.) we have crushed 390 tons of quartz producing 859 ozs. of retorted gold, six days having been lost by reason of various causes, to be explained by letter." This, with the crushings already announced on the 23rd ult, will make the following total for February (or, say, from 5th February to 2nd March):—750 tons crushed; result, 1,582 ozs."

Edwin Bray.—The company give notice that they have compounded with the Board of Inland Revenue in respect of all stamp duties payable upon the transfer of their shares. They also give notice that they intend making no charge in respect of such stamp duties to shareholders upon transfer of shares. Cablegram received, through the Bank of Africa, from Barberton:—"Title ropeway Grant Edwin Bray Gold Mining Company, Limited, in order."

African Gold Share Investment. — This company announce that they have secured premises at No. 8, Old Jewry, lately occupied by the English Bank of the River Plate, also that they have been appointed the London agents for the following companies, the offices of all of which will be removed to 8, Old Jewry, during the present month:—1. Moodie's Gold Mining and Exploration Company, Limited. 2. Moodie's Golden Hill Gold Mining Company, Limited. 3. George Walker (Moodie's) Gold Mining Company, Limited. 4. Welteueden Estate and Gold Mining Company, Limited. 5. Jubilee Gold Company, Limited. 6. West Battery Reef Gold Mining Company, Limited. 7. Mynpachts (Luipaards Vlei) Gold Mining Company, Limited.

Nooitgedacht Estate.—The following report has been received from the manager:—Water-race: We have excavated 1,997 ft., and there remains 820 ft. more to complete the work to the mill site. No. 3 level, Button's reef: The pinch here is only local. We have cut into the side of the level 3 ft. back from the end; we find the lode 2 ft. thick, and rich for gold. During the week rapid progress has been made at all points of the mine. The various drives have been extended by an aggregate distance of 277 ft., the veins maintaining their average width and yield. The cross-drive west from No. 3 on Button's is giviug 6 tons per fm. of 1½-oz. ore. The main drive No. 4 is giving 9 tons per fm. of 4-oz. ore. New reef: No. 2 level, 6 tons per fm. of ¾-oz. ore; cross-drives east and west, 6 tons per fm. of 1½-oz. ore; No. 3 level, cross-drive west, 6 tons per fm. of 1½-oz. ore.

Great She.—The timbering of the large shaft on the Magnet block has been completed, and sinking resumed, with double shifts. The present depth is 59 ft. A small, rich leader has been passed through this last week, and the quartz now being sunk iuto is of a very promising character. This shaft is arranged for double hoisting ways—a pump and air way. The Sheba steam tram passes within 5 ft. o the loading bank. On the Syndicate blocks the 50-fm. low level drive is going forward; the quartz now carries good gold. This level will intersect the rich gold shoot proved in the C shaft to the west of the quarry. On the Standard block active work is to be resumed this week. The arrangements have been completed. I anticipate striking the gold shoot in the east drive very shortly, which passes through this ground into the adjoining property of the Sheba.—J. Valentine, Mining Superintendent.

Transvaal Gold Exploration.—The following particulars are from the manager's advices, dated February 4th:—Mines—Theta vein: During week 60 tons have been extracted, assaying 7 ozs. 6 dwts. gold, and 4 ozs. 16 dwts. silver per ton. The vein continues without material alteration. Figures for month: Ore extracted, 275 tons; average assay value, 7 ozs. 8 dwts. gold, and 5 ozs. 9 dwts. silver per ton. Transport of this ore to the battery began on Friday, February 1st. Columbian Hill: Bore-hole No. 3 has been sunk 61 ft. during week, all through a formation of hard dark blue slate. Beta vein (Peach Tree Creek): The vein has now been reached, and during week 10 tons were extracted, assaying 1 oz. 2 dwts. per ton. Brown's Hill mill—battery: The battery was at work for 78 hours during week, and crushed 91 tons of Delta and Eta reefs ore, assaying 1 oz. 4 dwts. per ton. Figures for January: Weight crushed, 501 tons; gold produced, 215½ ozs., equal to 8 dwts. 15 grs. per ton. Pans: The pans ran for 78 hours during week, and treated 24 tons of concentrates, assaying 1 oz. 2 dwts. per ton. Clean-up yielded 103½ ozs. of amalgam. Figures for January: Weight treated, 176 tons; gold produced, 63½ ozs., equal to 7 dwts. 5 grs. per ton.

Jumpers.—The capital is 50,000*l*. in 50,000 shares of 1*l*., of which 3,000 are held in reserve. A circular from Johannesburg, dated February, gives a summary of operations and result for same for January:—Quartz won, 1,850 tons; quartz milled, 1,530 tons; yielding gold, 1,509 ozs. 11 dwts.; taken at 3*l*. 10s. per oz., 5,283*l*. 8s. 6d. Cost of winning same, mining and milling, also legal, office, and all other expenses of every nature, together with 348*l*. 15s. for quartz won prospecting permanent works, and 161*l*. 10s., being 2s. 6d. per ton for every ton of quartz stoped, credited permanent works redemption account, 2,338*l*. 14s. 3d.; profits on month's operations, 2,944*l*. 14s. 3d.; expended upon permanent works, construction of buildings, &c., during month from capital account. 1,730*l*. 2s. 3d. driven in main reef 104 ft; driven in north reef 454½ ft; cross-cut from first level to north reef, 30 ft.: total, 588½ ft.; east main shaft sunk and timbered during month (making same 161 ft. deep), 29-ft. Mine: North reef: Have now driven over 1,000 ft. upon this reef. She runs very true and regular and maintains her gold-yielding qualities. The erection of head gear over east main shaft is completed, and the house covering same and engine (a huge structure) nearly completed. A small hauling engine has been erected at western main shaft. Battery: Nothing particular to report. Our milling operations are still hindered through faulty engine, preventing the increase in output of gold, which otherwise would be made. General: Eastern main shaft will reach the second level in a few weeks. New Battery: Excavations for same well in hand; portion of the foundation timbers have arrived. Boilers and other machinery in transit from Kimberley. Dividend: A 10 per cent. divided was payable on 20th February to all shareholders in the register on the 8th January.—R. R. Hollins, Managing Director.

Vogelstruis.—The superintendent (Mr. Charles Rowe) writes under date February 7th, as follows:—"South reef—No. 2 shaft, Rosewarne's winze, and Maddock's winze: The drivings in the two winzes were only started a few days ago, consequently not much can yet be said regarding the practical value of the reef. In each, as well as in No. 2 shaft (altogether six drifts on the south reef), the thickness is about the same 4 ins. to 12 ins. wide. In quality the ore is fair, as the assay values herewith show. Driving in No. 2 shaft is temporarily suspended during erection of pumping and hoisting engines, &c. Drainage level: The main level is still in heavy ground, consequently progress is slow. The mud dyke is the worst we have yet encountered; still, I hope during this month to communicate with No. 6 winze, in which latter the reef is strong and solid. Nos. 1 and 2 winzes at the 40-ft. level have been communicated. Stopes, main reef: We have started opening out stopes between Nos. 4 and 5 winzes, also between Nos. 1 and 2 winzes, 40-ft. level. Battery: The mining engine bearing referred to in previous reports has been received, and erection of battery is so far advanced that we commence crushing the first week in March. As much of the ore now on the surface has been obtained from the drives on main reef it may prove in the crushing only low grade. In the drives, as well as in the opening out of the stopes, the reef and sandstones have been blasted down together, and the latter and former being of a friable nature no selection can be made. The richer quality of south reef ore, excepting the few tons obtained in the drivings, will not be available for milling for a month or two. The gold values of the various working places referred to, please obtain from Mr. Feldtmann's assays herewith for January." Under the same date the manager (Mr. W. R. Feldtmann) writes as follows:—"Below I beg to hand you results of assays for the month of January. The samples were taken in my presence by the mine overman, Hy. Sampson, from the following places:—Sample No. 15, from main reef between winzes Nos. 1 and 2; No. 16, from south reef east and west of Maddock's winzes; No. 17, from south reef east and west of Rosewarne's winze; No. 18, from main reef stope (centre of reef) between winzes No. 4 and 5; No. 19, from main reef stope (hanging-wall lead) winzes 4 and 5; No. 20, from south reef east aud west of No. 2 shaft; No. 21, from south reef west of No. 2 shaft. The results in gold per ton of 20 cwts. are as follows:—No. 15, 4 dwts. 13 grs.; No. 16, 1 oz. 12 dwts.; No. 17, 19 dwts. 12 grs.; No. 18, 7 dwts. 5 grs.; No. 19, 3 ozs. 0 dwts. 12 grs.; No. 20, 3 ozs. 5 dwts. 8 grs.; No. 21, 2 ozs. 17 dwts. 12 grs." A cable, dated 2nd March, states that the mill was stopped for repairs on 2nd March, and will start work again on 10th March.

THE ETHERIDGE UNITED GOLD MINING CO., LIMITED.

ENCOURAGING ASSAYS—THE NEW MANAGER.

7th March.—The board beg to announce to the shareholders that the samples of ore recently received from the several properties on the mines have been assayed by Messrs. Johnson, Matthey and Co., with the following results:—

Mark of Sample.	Produce of Gold. ozs.	dwts.	grs.	Silver. ozs.	dwts.	grs.
Lady Franklin	7	15	0	3	10	0
Elektron Mount	2	19	0	2	10	0
Etheridge Reefs	2	9	0	0	10	0

Per ton of 2,240 lbs. of mineral.

From other sources the board have learned that crushing has been going on at the mine, and they are expecting daily to receive the results. The information has been probably delayed owing to the drought and the change of managers, the late manager having retired through ill-health, but as the drought has now given place to seasonable rainfall, and the new manager has been some time on the spot, it is reasonable to believe that the result will be wired very shortly. The new manager, Mr. Ferguson, is well known in Gympie as a practical miner of great experisnce. He was specially selected for the office by Mr. William Smyth, member for Gympie, and can be thoroughly relied upon. It is believed that the "Rope Walk" is even richer than the lodes above referred to, but no samples from it have as yet come to hand.—L. J. Woodman (Secretary).

COMMERCIAL NOTES.

Railways.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year: — Increases: — Caledonian, 2,450*l.*; Eastern and Midlands, 209*l.*; Great Northern, 4,029*l.*; Great Western, 8,580*l.*; Hull and Barnsley, 1,160*l.*; London and North-Western, 12,003*l.*; London and Sonth-Western, 3,978*l.*; London, Chatham and Dover, 1,023*l.*; Manchester and Sheffield, 2,489*l.*; Metropolitan, 729*l.*; Midland, 9,644*l.*; North British, 3,136*l.*; North-Eastern, 9,914*l.*; and North Staffordshire, 1,025*l.*

The traffic receipts of the Nitrate Railways Co., from the 16th to the 28th February, were 32,607*l.*, compared with 23,375*l.* from 16th to 29th of February last year.

The approximate gross earnings of the Denver and Rio Grande Railroad Co. for the 4th week of February were $131,600, showing an increase of $22,100 over 1888.

The Mexican Railway traffic receipts, for the week ended March 2nd, were 16,300*l.*, against 16,400*l.* last year. For the seven days ended February 28th the Canadian Pacific Railway receipts were $227,000, against $244,000 (eight days) last year. The Lima Railway receipts for the two weeks ended Jannary 28th amounted to 2,705*l.*, compared with 2,148*l.* in 1888.

Tramways.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increascs:—London Street, 45*l.*; Provincial, 554*l.*; London, 252*l.*; North Metropolitan, 708*l.*; Belfast, 223*l.*; Southampton, 1*l.*; London Southern, 7*l.*; Sheffield, 83*l.*; Calcutta, 114*l.*; Continental Metropolitan, 249*l.*; Glasgow, 113*l.*; South London, 12*l.*; Bristol, 164*l.*; German, 105*l.*; Calais, 11*l.*; Gothenburg, 13*l.*; Imperial, 16*l.*; Sunderland, 21*l.*; and Swansea, 31*l.* Decreases:—Hull, 1*l.*

Miscellaneous.

The Crown Agents for the Colonies notify the numbers of Jamaica and Western Australia Four-and-a-Half per Cent. debentures drawn for payment.

REPORTS OF MEETINGS.

THE CARLISLE GOLD MINING CO., LIMITED.

THE ORE FALLS OFF IN VALUE—PROF. CLAYTON'S VIEWS—MR. LONGMAID'S REJOINDER—POLICY OF THE BOARD—MEETING ADJOURNED.

THE ordiuary general meeting of the shareholders was held at the City Terminus Hotel, Cannon Street, London, E.C., on Thursday, "to receive the directors' report and accounts for the period ending 31st December, 1888, and for the election of directors and auditors, and the transaction of the ordinary business of the eompany"—Francis Joseph Bladon, Esq. (chairman of the company), presided.

Mr. H. CAMERON RICHARDSON (secretary) read the notiee calling the meeting, and the report of the directors was taken as read.

THE ORE FALLS OFF.

The CHAIRMAN: Gentlemen, we are very glad indeed that the time has arrived when we can meet you prepared to enter fully into all details as regards mining operations and other matters which have occurred since our last meeting. To have called you together before we were ready to enter into full details, could, in the opiuion of the directors, have answered no good purpose, because you could not have arrived at any definite conelusion—in other words, we must have gone on in the way we had resolved upon until we had before us the matters we are able to bring to your notice to-day. At the time of the last meeting nothing could be more satisfactory than the progress we had then made, and our future seemed to be one which we could contemplate with perfect satisfaction, as the results then being obtained from the number of stamps actually running were in excess of those indicated in the prospectus. This continued for some months subsequent to that meeting, but, unfortunately, further developments produced ore of a lower grade, and up to the present time, apart from some minor fluctuations, the average raised and milled has been so redueed, and has so varied that the net profits have been considerably smaller. The inerease in zinc has also affected the concentrates, so that smelting has, in eonsequence, produced little or no profit. That, stated shortly, is the situation in which we find ourselves to-day. I have always said that a good mine may be spoiled by bad management. (Hear, hear.) But when the grade of ore falls off in value, the best manager in the world cannot alter results; and I am eonfident that no body of shareholders will, on ealm reflection, consider that either a manager or directors can be blamed for matters entirely beyond their control. (Cheers and uproar).

AN APPEAL TO FAIR PLAY.

I trust you will hear me calmly, and you will give me that attention I have a right to claim. (Cheers). Every shareholder on the register shall have a fair hearing, but what I am prepared to allow to others I claim equally for myself. We considered ourselves extremely fortunate in securing the services of Mr. Longmaid, and we did so in the first instanee as temporary manager, because he had reported upon the minc and had indicated that certain results could be secured therefrom. I told you on a former occasion that it was for this reason we had appoiuted him manager.

THE MANAGER AND HIS SON.

You then applauded that statement, and if the mine had remained to-day as it was then, no word that you could have uttered would have been too good for Mr. Longmaid. (Laughter). He was successful at the outset, and we were anxious to make a further engagement with him, but for reasons, already stated in a eireular, he could not continue at the mine, but left it in charge of his son, pending any other appointment the directors thought proper to make. Now is it likely that he would have done this and allowed his son to bear the odium of disgrace, of failure and responsibility, together with the possibility of being eharged with bad management, if he thought that at so early a period the grade of ore would, on further development, fall off so seriously? I do not think, gentlemen, that any father would have left his son in such a position. He could have appointed any other manager temporarily, and we temporarily would have been bound to keep him in that position until sueh time as we could have given the matter consideration. The report says:—

"The accounts presented herewith show a balance of net revenue amounting to 7,430*l*. 10s. 2d., after payment of interim dividends amounting to 2s. per share free of tax out of the profits realised during the past year, being equivalent to 10 per cent, net on the capital of the company. This result would have been much more favourable but for a considerable decrease in the amount realised by sale of eoncentrates, as compared with the estimated value, this shrinkage being due to the increased amount of zinc, &e., as alluded to in the manager's report annexed hereto."

Now, gentlemen, before proceeding to Prof. Clayton's report and other matters, I should like to disabuse the minds of any shareholders who may have been influenced by the letters Capt. Richards has addressed to the papers, and by the circulars seut out, from false impressions. One of the circulars eneloses a communieation from Mr. Paul Eustiee, and a further eircular has been sent out, a copy of which I reeeived this morning. I am prepared to give definite replies to all matters which ean iuterest you as shareholders, or which any shareholder can reasonably expect from a body of direetors. (Oh, and uproar.) If you are not satisfied with my replies it is within the power of any of you to get up and ask for further information. All I say is hear me patiently, and then judge of the case from what has been said. (Hear, hear.) I appeal to the good sense of this meeting of Englishmen to allow me on the part of the directors to give fair and candid replies to the charges that have been made.

CAPT. RICHARDS' LETTERS.

I am not going to inflict upon you the reading of the mass of eorrespondence, but I have picked out some salient points to which I will call your attention. First of all, I wish to know if Capt. Richards is present to-day.

Capt. RICHARDS: I am, sir.

The CHAIRMAN: I am very glad to make your personal acqaintance. I am not going to be personal, but simply to reply to your eharges.

Capt. RICHARDS: All I have done is as a matter of business.

The CHAIRMAN: I only say to you Capt. Richards, that had you come to the office and eonsulted me personally before writing those letters the company would have been better served, and those letters in all probability would not have been written. (Cheers.) Any shareholder knows I am to be found at the office daily, and at a particular time. I have nothing to conceal, and where Capt. Richards has fairly asked for information (apart from persoualities) he shall have it. In his letter he says "Large dividends were assured this year," and he attributes that statemeut to me. That was in his first letter, and in his second, dated October 9th, he asserts "The board by their silence had given consent to their share of the confidence trick (mark the expression) by which the shareholders were grossly victimised. I now ask the board when they allotted the shares how much of the 200,000*l*. the public had subscribed?" I have said in a letter, which I am now almost sorry I wrote, that neither Capt. Richards nor any other shareholder must assume that because I do not notice letters in the publie Press I admit in any shape or way the truth of the statements they may contain.

MR. BLADON WILL NOT ANSWER LETTERS IN THE PUBLIC PRESS.

I want that to be clearly understood once for all. (Hear, hear.) I never will notice correspondents in that way, but it must not be assumed that because I do not do so that statements made are correct. As regards the subscriptions for the 200,000*l*. eapital, it appeared in the report that 200,000*l*. capital was subscribed, and I should have thought that that was a sufficient answer, but now you shall have it in chapter and in verse. When the prospeetus was issued I think I told you at the first meeting we held that originally the vendors wished us to have a eapital of 175,000*l*. only, which would have left a working capital of but 25,000*l*., but the directors were so satisfied that it would not be sufficient that they declined to put their names to the prospectus uuless it was made 200,000*l*. Capt. Richards asked how it was allotted.

ORIGINAL ALLOTMENT.

At the time the prospectus was issued it was stated that 100,000 shares had already been applied for, that 20,000 more would be issued as fully-paid up as part payment of the purehase-money, and the balance of 80,000 shares were then offered for subscription by the public. The public responded to the number of a very few shares over 60,000 out of 80,000. Small numbers were applied for, but I persoually will never agree to allot originally a number under five shares. We were thus left with a balance of 20,000 shares unapplied for by the public. There was no premium attaching to them, and it was the duty of the directors to find subscribers for those 20,000 shares, and thus to complete the capital of the eompany, and make the financial position of the company, particularly as regards working capital, strong. Very greatly to their credit, on an application being made to them, the promoters, having perfeet eonfidence in the value of the property, consented to take this balance from them, and pay their cash for it. In that way the hands of the directors were strengthened, and they were able to say very fairly and properly that the entire capital had been subscribed. Then Capt. Richards asks, "Was there enough to meet the working capital of 50,000*l*.?" Of course there was. How could 200,000*l*. be subscribed, of which only 150,000*l*. had to be paid for the property, without leaving 50,000*l*. working capital. Of course we had it, and still have it in one form or another. Then we are asked about the unpaid calls, amounting to 13,337*l*. on December 31st. I explained

that at the previous meeting. I said we had made arrangements with certain people to postpone the payment for a certain time, and in the meantime the money was to carry interest. The fact that that was a wise thing to do is shown in this way—that we have got the money. Not a farthing of it is unpaid, and we could not have got the same rate of interest in any other way. Then Capt. Richards says, "At this meeting Mr. Bladon said that large dividends were assured for this year. It seems to me if he had said were arranged for this year he would have been equally truthful." It is to that sort of language that I raise the strongest objection—(cheers)—but I pass it by. With this remark that I have no right to wound the feelings of any shareholder and no shareholder has a right to wound mine. But the words I used on that occasion were not mine, but those of Mr. Longmaid, as you will see by a refereuce to his report. (Hear, hear.)

I AM CALLED A SANGUINE CHAIRMAN.

but if I am not sanguine, I am not fit to be the chairman of a miuing company, for it is positively the fact that in nine cases out of ten a considerable amouut of pluck is necessary to hold the reins, and to keep anything like a proper and hopeful spirit in the presence of the shareholders. If I am despondent at the time I ought to sustain their courage, I am not fit to be a director of a mining company, much less its chairman. (Cheers.) Every word I have uttered respecting this or any other company of which I am a director I have been more than justified in using—placing my utterance entirely upon the report of my managers. Capt. Richards asks "Are not the board aware that Mr. Longmaid was interested in the sale of the property?" We are not, and the same remark applies to a director who had 10,000 of the shares, and of whom it is said he unloaded upon the public 9,800. Mr. Crick denies that he was interested in the sale of this property in any way whatever, but at the time the prospectus was issued it was close upon Christmas, and it was necessary that applications should come in rapidly. Mr. Crick knew that some of his friends wanted shares, and he made himself responsible for 10,000 of them, which he transferred to them in due course. (Cheers.) Capt. Richards asks "What became of the profits of last year—there was no dividend?" That is not quite correct for we paid 1s. out of the profits of that year. He asks "What has become of the 50,000*l.* subscribed for as working capital?" If Capt. Richards will turn to the capital account he will find it fully accounted for in the expenditure on the smelter improvements, the mill and development works, leaving a balance carried to statement C of 12,400*l.* Statement C being debited with 12,400*l.* shows a credit, as against that of stores on hand of 10,000*l.* and cash in hand at the bank, 8,000*l.* Then he goes on to make

LIBELLOUS STATEMENTS AND INSINUATIONS,

which it will only weary you were I to condescend to notice, and he asks: "What is there to show for the 50,000*l.*?" When Mr. Longmaid left the mine and put his son in charge, it would have been absolutely suicidal to have re-called him, and for the time being we could not have helped ourselves. Capt. Richards was a speculator in the shares, and because they have gone down he has no right to hold the directors responsible. On the 26th October he asks "I have twice asked in vain the chairman of this company a very important question, and I would only come to the conclusion that he is unable to deny that when the prospectus was advertised the public would not respond sufficiently to cover the working capital of 50,000*l.*, and yet, notwithstanding this, the board allotted the shares. That point I have explained already. Capt. Richards has made other allegations, and he has sent a circular enclosing one from a Mr. Paul Eustice. He objects to our trying to get news from the mine first, and says we ought not to gag people at the mine, but we are being blamed because we do gag them, and because information reaches outsiders first. That is a matter of weekly complaint. "Mr. Eustice's letter bears the stamp of being written by a practical and able man, and one better qualified to manage a mine than those who hold that position." Let me tell you that Mr. Paul Eustice's position at that mine was that of blacksmith's assistant and tool sharpener. (Laughter.) He had no right in the mine at all, and was not supposed to know anything about it, and by his own admission he corresponded with his father and sent him intelligence. Mr. Eustice says "This letter is the first and only one in which I have mentioned the affairs of the mine save to my father." You see he sent information to his father, and that is what we objected to. The Chairman then went on to quote from the prolific literature to which Carlisle affairs have given birth.

A PROTEST.

Sir E. Galsworthy: I came here to gain information about the Carlisle mine, but the course which the Chairman has taken is extremely unusual. I know nothing about Capt. Richards, and if possible care less for his opinions, but I do want to know what you have to say about the business really in hand. (Hear, hear.) I trust that circulars, letters, and anonymous commuuications will be dropped and that we shall deal with the report.

The Chairman: You have materially lightened my labours. We will come at once to Professor Clayton's report. Professor Clayton says, "Go through certain development works, and if that is not successful you may as well abandon the mine." That development work will cost roundly $25,000. Now we have $25,000 at the mine, and we are not asking you for any money. (Cheers). On page 26 of his report he says:—

"There are no physical or chemical causes indicated by the facts observed that would have prevented the formation of other large bodies of good ore to much greater depths than the lowest explorations made up to the present time."

That is the pith of his report. He tells you to do certain development works and if you do not succeed you may as well give up the mine. On the other hand there is no apparent reason why you should not find ore which will well repay you. We asked Mr. Longmaid to send us his views upon Prof. Clayton's report, and I have a letter here from him which, in justice to him and in justice to the mine, you shall hear read.

MR. LONGMAID'S REPLY TO PROF. CLAYTON.

"4th March.—As requested, I now hand you a few remarks on Prof. Clayton's report. It contains many inaccuracies, some of which I will endeavour to explain briefly, but before doing so I would call attention to the well-known fact, that it is always an easy matter to say what ought to have been done after a mine has been so thoroughly developed as the Carlisle. We can all look back and set the past to rights without difficulty. The mine has been opened iu first-class style, reducing the cost of extraction to a minimum. The only trouble has been that the large ore body failed in quality, both in height and depth. No one could have foreseen that this immeuse body of high grade ore would suddenly become poor, and in some parts absolutely of no value. Iu the western part this good ore did not last out 10ft. in height or depth. The professor states there are now 300,000 tons of low grade ore in sight, which proves that my original estimate was under the actual quantity. This is at present cut up by levels, winzes, cross-cuts, &c., so that it can be seen and examined thoroughly. Nevertheless, Prof. Clayton remarks, "It is a hazardous business to estimate the tonnage of irregular and bunchy ore bodies," and adds that his estimates even now are not absolutely reliable. It can readily be understood how much more difficult it was to form estimates before these numerous workings had opened up the lode and given him every facility for taking measurements and making his calculations. As to the mistake he alleges was made in putting up more stamps without making sure of the water to run them, the fact is, when the stamps were ordered we had ample water for 60 stamps, but in consequence of very long continued drought and other causes, the water diminished one-half, but even then by introducing various economies in regard to the use of water, the 60 stamps have been run with merely occasioual hindrances, and I believe for several months past there has been no shortage of water at all. Smelting: Prof. Clayton, never having been engaged in the smelting busiuess, his opinion is of no practical value, and contrary to his statement the concentrates carry abundance of lead for smelting. The only difficulty has been the excessive quantity of zinc they contained. When we first proposed smelting the concentrates contained about 14 per cent. of zinc, but before the works were finished it rose to over 25 per cent. zinc, and whilst I could readily smelt material with 14 per ceut. zinc, it could not be profitably smelted when it carried over 25 per cent. His proposition to mill the concentrates is a simple absurdity outside all other considerations, the fact that the concentrates contain several per cent. of copper renders milling out of the question.

THE FUTURE.

I will now pass to his suggestion for future explorations. These were discussed at Carlisle more than a year ago. The lode has beeu so extensively explored in length without success that it seems almost useless to extend them further, and therefore exploration in depth is the only remaining course. The best way to do this would be to sink a new shaft one or two hundred feet below the existing workings, and at that level to thoroughly explore by driviug on the lode and by cross-cutting. Should anything be found you would then have a good and ready means of extracting the ore, which would not be the case if you sink wiuzes, and after the proposed winzes had been sunk and discoveries made, the shaft must be sunk before the ore could be profitably extracted. Sinking winzes in the bottom of the mine will be both slow and expensive, for all the water in the mine will certainly find its way to the lowest point, and must be pumped out of the winze as sunk. However, the plan has the advantage of requiring less expenditure and less time prior to the developments being made. The cost of sinking a new shaft will be about $25,000; engine, hoisting works, &c., $30,000; total, $55,000; or say 11,000*l.* Sinking the proposed winzes will probably take about six or eight months. Boarding House.—I do not remember actual figures and dates in this connection, but I know the boarding house was leased for several months after the Carlisle Co. took possession, and that they all failed, although some had it without rent. Finally, it became an absolute necessity for the company to supply the men with board, some of our best men having left on account of the poor food supplied to them. At this time the building was in ruins and filthy in the extreme, the utensils, furniture, &c., nearly all destroyed. To put the concern into a decent condition, and supply utensils for 100 men cost about $1,500. We did not start the house for the sake of making any large profit, but as an absolute necessity, and it was only when the business assumed important proportions that it was separated from the store accounts. As regards the charges of dishonesty made by some of the shareholders, I would suggest that in a mine where the miuing, pumping, hoisting, milling, and all other charges do not exceed $3 35-100 per ton of quartz on the year's output, whilst wages average 11s. per day, and the rate of supplies of every kind very high, it would require a microscope to find any margin for stealing. To the best of my knowledge there is not a gold mine owned in London, and worked under similar circumstauces, where the cost is not double.—J. Longmaid."

I will now refer to the accounts, and if I did not do so there are two special items upon which you would be sure to ask for information. They are in the case of the reserve funds—the investment of 1,000*l.* out of 4,000*l.* in Empire debentures, and on the other side of the accouuts the directors' extra remuneratiou. At the time we took

THE EMPIRE DEBENTURES,

nearly six months' interest was due upon them, which interest has been received in cash. In this connection you must be guided by things as they were then and not as they are now. At that time Empire shares were about par, and the directors had every reason to know that very valuable discoveries were pending apparently in the Whipper-will lode, because immediately after that shares of the Empire Company rose to 50 per cent. premium, and we hoped to have sold the debentures at a profit, so that they would never have appeared in this account at all. We knew we were right, but we took legal advice first about the matter. The directors' extra remuneration we were bound to put into the accounts, because it is aecorded to us by the articles. We have not drawn one farthing of it, aud do not intend to do, but consider that it should remain there temporarily as a special reserve against the Empire debentures. (Cheers.) The Empire Company will undergo re-construction, but any scheme must consider the interests of the debenture-holders.

A Shareholder: I wish to ask when and from whom those debentures were bought.

The Chairman said: The debentures were bought and transferred to the company by Mr. Chadburn, but he asked us to give him power to recall them at 5 per cent. premium within a limited time.

Mr. Davis: Do you consider investing in debeutures of that character is a proper iuvestment for directors of a company to make?

The Chairman: We bought them at par and paid for them, and they appear in the accounts. One inducement was that six months' interest had nearly run out, to which the company would be entitled. We bought them on no one's recommendation, and only after general discussion of the board as to what we should do with the proposed investment of 4,000*l*. I will now read you the latest news we have from the mine. The mill run has already been published.

GRATIFYING FACTS AND FIGURES.

This cable was received on the 26th of February :—"On closing the accounts for January at the mine the bank balance was $16,550 ; the gold bullion nett was $17,500 ; the base bullion $5,000 ; cash on hand, $2,750 ; making a total at the mine of $118,000, or say, 8,360*l*." He says, "I have telegraphed to the bankers to remit by telegram to London $4,100." That money has now been received, and will be invested in Two and Three Quarter per Cent. Consols, leaving a profit for the month of February, and ample funds for the new developments proposed by Prof. Clayton. (Cheers.) The total milling and mining supplies and stores on hand on the 1st of January were $56,000, and on the 1st of February $47,450. The nett cash received from the sale of concentrates during January was $55,000, and February probably $15,000. There are 300 tons of concentrates on hand, of the estimated value of $3,000. Then we received a cable with the mill run, and he adds, "I have sunk on the vein 80 ft. from A 6 on the plan, and prove the continuance of the ore body from G 6 of equal or better grade. Have driven in the east 75 ft. from K 13 to meet winze from surface, the last 20 ft. proving better grade." It now becomes my duty to move the reception and adoption of the directors' report.

Mr. Cavendish (director) seconded the motion.

VIEWS OF A CRITIC.

Capt. Richards : I labour under a great disadvantage in speaking. I came prepared to hear about the Carlisle mine, but have been excessively flattered to find that I was the topic of discussion, and not the Carlisle Company. (Laughter.) What I have done has been openly, and honestly, and simply as a matter of business. Every particle of information I have received about the mine has been given to the shareholders, and I have never sold a share to the present time. I hold 1,600 shares. I regard the report of Prof. Clayton as alarming, in the face of the statement made by Mr. Longmaid, in the hope that there was enough ore to keep 100 stamps employed for over four years. After you had learnt to cool down from that statement, you are further told in the language of the directors, "These facts have been proved beyond doubt by actual workings." Then it states, "The early difficulties inseparable from all mining enterprises are here out of the question, and profits will commence within a month of the completion of the purchase." These are very positive statements, but the directors are so full of mining that they have sprung a mine upon us. I have no personal animosity towards them, and come here without having had time to examine the report upon this occasion. That gentleman tells you that you have a certain amount of pay ore, about 6,000*l*. worth, all told, and we are also informed that if we sink something and do not find something we must abandon the mine. (Laughter.) It is simply preposterous after the statements in the original prospectus. A prospectus issued by these gentlemen in the future should be published in the comic papers and not in those devoted to serious finance.

WHEN MR. LONGMAID CAME HOME HE SOLD 4,000 SHARES,

and on the 18th July the board published the most long-winded statement you ever read in your life from that gentleman in which he regretted to find that the sale of some of his shares had affected the market, but he wanted the money, and—you understand the rest—he did not want the shares. (Laughter.) What was the effect of that circular ? It lulled all the outside shareholders to sleep, and then I wrote to one of the financial papers asking whether I should make a purchase of 16s. or 17s., and was told that if I waited I would get them cheaper, as the vendor was selling his shares, and they had not yet been digested. (Laughter.) When the directors allowed this circular to go out the transfer for the whole of Mr. Longmaid's shares was before them, I did not go to the office for information, because I considered that the interests of the vendors were not identical with my own. I have explained the situation, and I leave the matter entirely to you. I have shown you why I have not confidence in the board, and you must now decide upon the whole question.

Mr. Price : I should like to know whether your confidential friends —(Oh)—who did not pay for their shares have paid 10 per cent. interest.

The Chairman : The money was paid before they received any dividend. (Cheers.)

Mr. Price : Do you intend to retain Mr. Longmaid as manager ?

The Chairman : I will pursue the usual course, and answer all the questions at once. (Hear, hear.)

Mr. Price : Mr. Longmaid's reports have been contradicted, and we have a right to demand information.

The Chairman : No information shall be withheld.

Mr. Price : We have not had from the directors a definite statement of their policy—whether they intend to act upon the advice of Prof. Clayton or not. The shareholders demand from you some explanation why the shares have fallen in value. (Laughter.)

Mr. Hindley : Did the promoters pay 20s. for each of the shares they took ?

The Chairman : I have already specifically stated that they did.

ADVICE.

Major Cotton : No notice has been taken of an anonymous circular that has just come to hand, and which is calculated to prejudice those who do not know the board. It tends to weaken their case, because it has attempted to influence the shareholders. In this case we must put on one side all personal matter between the board and Capt. Richards, and let us really attend to the business. (Cheers.) I wish to leave one instruction with the board with reference to Empire debentures. I believe there is reason to suppose the Empire Company will re-construct, in which case the debentures will become due, and they should be repaid to the Carlisle Company in cash. We ought not one moment more than is necessary to keep our money locked up in Empire debentures.

Sir E. Galsworthy : I know nothing of the Carlisle Company beyond what I have read. (Uproar.) I have not the slightest intention of sitting down because of the uproar that is going on. I have listened to every statement made to-day, and am going to make one or two remarks on the practical points before the meeting. If I think the chairman has done wrong I shall tell him so to his face, and I think he has done wrong on two points. First, in going into any question outside of the report, and next, in not distinctly and openly and at once answering the question about the debentures. It is true that that question has been answered since, and the substance of it is that you have made an investment in the Empire Mine. Perhaps the circumstances were such as to justify it at the time, but I think it a bad investment, and one that ought not to have been made. Let me say that I took debentures myself at that time, and would not have done so if I had been as wise then as I am now. The gravamen of Capt. Richard's speech was that there were statements in the prospectus entirely unwarranted by the facts. The question is whether that is true or not. If true, the whole of the board ought to be blamed and changed at once. But what does the prospectus say ?

THE WHOLE MATTER IS CONCENTRATED INTO THESE THREE LINES :—

"The directors consider that his (Mr. Longmaid's) extensive experience entitles his opinion to special weight, and they have confined their statements in this prospectus respecting the property to the statements and estimates obtained from his report, except where other authority is quoted." I say that there is nothing in that prospectus to justify what Capt. Richards says upon that point. The question before the meeting is that of receiving the report and deciding whether you will spend money in sinking deeper. That is a question for the board, and upon that question we ought to have a distinct statement from the chairman in his closing observations.

WAS HE REASONABLE ?

Mr. Davis : Why did you proceed to allotment with only an application of 60,000 shares from the public, and why did you put the rest into the hands of people who could unload them on the market, and knock down the price of the shares ? No matter what answer the chairman may give — it is positively disgraceful. (Oh, oh, and laughter.) It is positively disgraceful to go to allotment on 60,000 shares. The effect was to depress the market, and the shares have gone gradually down until they have reached their present level. What are Prof. Clayton's antecedents ? Is he a mining engineer ? (Laughter.) What has become of the immense quantities of ore said to be in reserve ?

IMPORTANT QUESTIONS.

Commander De Hoghton : Was the refractory character of the concentrates known before we bought the mine ? Surely Mr. Longmaid could not have been ignorant of this. If Prof. Clayton's statements are correct and the concentrates are refractory, that fact should have appeared in the prospectus, and its omission would entitled us to call that document misleading. By how much did Mr. Longmaid, senr., over estimate the concentrates. I believe he did so very seriously. I have lost all confidence in his management, because the reports of the Messrs. Longmaid, senr. and junr., are not borne out by facts. Prof. Clayton could estimate the value of the ore because it was broken and lying in the stopes, and he has done so in the case of the 3,000 tons.

Mr. Forbes : The future is what we have to look to, and what are the directors going to do now ?

Mr. Lyster suggested that communications from the office should be sent by the halfpenny post which would effect a slight economy.

BOARD'S POLICY.

The Chairman : I am a shareholder in Montana, and they have 3,000 or 4,000 shareholders, and they send out their reports as we do. We find our shareholders as a body object to receiving mining intelligence except in closed envelopes. I am a holder of Empire debentures myself, and shall not part with them under par. We intend to carry out strictly Professor Clayton's recommendation, for what is the use of sending out a man if we do not sustain his report. Why did we send him ? Because we found the shareholders preferred him to anyone else. We were trying to negotiate with two gentlemen, who could have attended the meeting, and given a personal explanation—both men of eminence—but their fee would have been considerably more, and they could not have gone till January. Then there came a little discovery, and if it had continued we should not have employed an expert at all, because we should all have been in good spirits.

PROF. CLAYTON.

I thought everyone knew about Prof. Clayton. (Hear, hear.) He reported on the Montana Mine, and the Montana shareholders were so delighted with what he said that those of them who are with us were most anxious to secure his services. We did so, and paid his fee in advance. I was asked by Mr. Hindley as to whether the promoters paid 20s. for their shares—undoubtedly they did, and we have it in hard cash. Then he asked about the reserves, and whether they realised $280,000. No, they did not, and Mr. Longmaid has told you so. Managers always estimate, but I am connected with a mine where we have an exception, for the manager says he will not estimate, but he will judge by the results. Mr. Longmaid estimated certain reserves by measurement, because by assay they had produced given results. Those results were utterly erroneous, and no one regrets the fact more than I do. Anonymous circulars have been alluded to, but I despise them and will have nothing to do with them ; like anonymous letters I put them into the fire. I hope from to-day personal feeling will subside. I am a greater sufferer than Capt. Richards, for I hold a very large number of shares. I hold my qualification and 1,000 shares beyond. I had the tip to sell but did not do so, and I hold those shares at the present time. Had I not been a director I should have done so, but I have never been able to see the justice of shareholders being allowed to do as they liked with their shares and the directors be sharply criticised if they attempt to deal with any they may hold beyond their qualifications. We allotted 160,000 shares as the first allotment, and the money was at the bankers before even the prospectus was advertised. One gentleman throws a slur upon Prof. Clayton because he does not know him, but Commander de Hoghton is much better informed, and very rightly he commends Prof. Clayton. As regards refractory concentrates they were not known to be refractory, and Mr. Longmaid says that but for the increase in the amount of zinc he could have treated them at a profit. With regard to the debentures, it is the intention of the board to take every possible

means to secure the re-payment of that money. We were prepared with a new manager to send out had Prof. Clayton recommended that course; but in the face of his report we have no right to do other than we are doing at present.

Commander DE HOGHTON: By how much did Mr. Longmaid over-estimate the concentrates?

The CHAIRMAN: 20,000*l.*; it was an under-estimate as to the cost of realisation. I am quite sure that the general body of the shareholders will support us in the course we propose to adopt. (Cheers.)

AN ADJOURNMENT AGREED TO.

Mr. NELSON proposed "That this meeting stand adjourned for a fortnight, in order to enable the shareholders to consider the advisability of appointing a committee of investigation." He thought the matters before the meeting too involved to be decided to-day.

Mr. R. W. FORBES concurred in this view, and seconded the amendment.

A motion by Mr. DAVIES at once to appoint a committee met with no support. In fact, this gentleman appeared to mix up Mr. Longmaid with Prof. Clayton, and to get into a state of confusion with regard to Carlisle affairs generally.

The motion for the adjournment was carried, and the meeting accordingly stood adjourned for a fortnight.

LATEST TELEGRAM AND REPORT.

The secretary announces the following cablegram received from the manager at the mine, March 5th :—"During February the mill worked 27 days, and the yield was as follows :—Bullion, $18,150; concentrates, &c., $1,200; total, $19,350. The working expenses for the month were $13,000."

REPORT FOR JANUARY, 1889.

12th February.—Mill: Lost time due to general repairs, and principally to our having to handle some very dirty surface ores, necessitating more frequent shut downs to clean out our settling tanks. As the ore decreases in value, I am endeavouring by every means possible to increase our crushing capacity, and so materially reduce the working cost per ton. Mine—First level: The new stope east of the main shaft having averaged very fairly during the month, I have decided to commence sinking the working winze from the surface to-morrow, and complete it under contract as fast as possible. Though the vein of pay ore here is very narrow, 3 to 4 ft., there is a block of ground, 170 ft. in depth, which will insure us a large quantity of ore. In No. 1 winze, below this level, we are stoping both east and west below point marked ×. In the east stope the ore has become very low grade, but in the west stope the grade still keeps up, and the vein for the past week has opened out considerably. In No. 2 winze we are stoping both east and west, obtaining a good grade ore. Westwardly toward No. 3 winze the vein has been widening, and the assays steadily increasing in value. Above the level we have stoped about 1,500 tons of footwall ore, but this is so mixed with porphyry and clay that it is very low grade. This month the ore stoped there will be of a far better grade. 3rd level: Two men have been working in the breast of the east stope, hoping to find better ore, but with no favourable result. I have therefore stopped this work until necessary developments can be completed. Fourth level: No work has been done here during the month, except that undertaken by Prof. Clayton. Having carefully considered with Prof. Clayton the proposed exploration of the mine in depth, I am prepared to commence operations as soon as possible after receiving instructions from the directors, and I would urge that this work be undertaken with the least delay. Concentrates: I am obtaining better prices, as well as lower rates of freight on our product, and have to-day made arrangements by which the R.R. Co. rebate us a sum of about $300 on ore already shipped. During the month the balance of concentrates account, $8,000, has been reduced to $3,000, and by 1st March I hope to have this also realised, and thereafter be able to carry monthly a considerable sum to revenue. Our financial standing is good, and our credit in both the Eastern and Western markets is A1, enabling us to buy all goods at lowest prices. I hope shortly to be able to make you another remittance.—J. H. LONGMAID, General Manager.

RAILWAY PASSENGERS' ASSURANCE CO.

ACCIDENTS WILL HAPPEN—A LARGE NUMBER OF CLAIMS PAID—YEAR'S INCOME £248,920.

THE fortieth annual general meeting of the shareholders in this company was held at the Offices, No. 64, Cornhill, E.C., on Monday—the Hon. Evelyn Ashley (chairman of the company) presiding.

Mr. WM. J. VIAN (secretary) read the notice convening the meeting, and the report was taken as read.

THE COMPANY HAS HAD AN EVEN JOURNEY.

The CHAIRMAN: Gentlemen, it now becomes my duty to move the adoption of the report. This is the fortieth general meeting that this company has held, and, as usual, we have given you in the report the detailed figures, together with the comparison with the previous year; and that element of comparison, which is really a very important element in the history of an insurance company, is so completely given in the report, that there is no necessity for the chairman enlarging upon it. During the latter portion of this long period of our existence we have had more or less an even journey. We are like the Mediterranean Sea—we have had no great flood tide and no great ebb tide; but I daresay you will all have noticed that on this occasion there is a slight ebb, and we are proposing to recommend to you on this occasion a dividend of 4s. per share for the past year, instead of 5s. per share, the sum we have paid for some years past. Now, gentlemen, you may ask, why is it that we have not been able to recommend the same dividend as last half-year? Well, you will observe, upon looking into the accounts, that it entirely depends upon the amount that we have paid for compensation. The rest of the accounts will show you that virtually our income has been the same as last year. There is a slight diminution in income received from the policies. That, however, has been made up by the profit on investments sold, but virtually, as far as the income from our policies is concerned, we have been at a standstill.

EFFECT OF DEPRESSION IN TRADE.

The new policies certainly have diminished rather considerably, but I cannot help attributing that not so much to the want of activity on the part of our agents as to the undoubted depression that has existed—particularly in the agricultural districts. I am informed that station masters at the different stations in the eastern counties when asked why they did not send up as many policies as heretofore, have replied that people have not a pound to spare. Well, it is impossible to fight against that; we must only wait until the turn of the tide, and we may congratulate ourselves that in spite of undoubted depression both in trade and agriculture—of which we see the prospect of cessation—that we have undoubtedly held our own as far as the number of policies is concerned, and also as regards the income from the policies. (Cheers.)

HEAVY COMPENSATIONS FOR FATAL ACCIDENTS.

But the point where we have been hit very hard during the past year is in compensations—not in respect of non-fatal accidents, because you will see, upon reference to the accounts, that we have disbursed 105,000*l.* upon non-fatal accidents, as against 106,000*l.* last year; so that we are a little to the good there. But for fatal accidents we have paid no less than 12,000*l.* more than we did last year. Now, I stated from this chair last year that in 1887 the number of fatal accidents was below the average that we might have expected according to the table of averages; this year, however, it is considerably above. Putting the two together it is just a little more than the average. Therefore, during the past year undoubtedly we have been hit very hard by having our fatal accidents no less than 64, as against 52 in the previous year. Still, we may hope that by the doctrine of averages the thing will rectify itself. At the same time I have to tell you honestly that we have to regard the current year so far badly in that respect. Our claims up to the present time exceed those of 1888 and 1887; but doubtless the tide will turn, and by the latter part of the year our average will compare favourably with its predecessors. The large sum that we have paid in respect of fatal accidents, however, is the reason why we are obliged to reduce our dividend.

COMPETITION.

The increase of policies that we had hoped and expected to obtain has been, no doubt, very greatly checked by the enormous competition that we are exposed to now. There are, I believe, 20 accident companies now competing with us for business; and although I should be the last person to wish to say anything disrespectful of, or disobliging to, our colleagues in the insurance business, still I am bound to say, and am justified in making the statement, that some of the companies descend to all sorts of means and measures to obtain business. They are very pressing to our agents to get away our business, and very often they offer terms lower than any other offices in the field. I do not think myself that we should follow suit. I think we should hold on the even tenour of our way, and adhere to the terms we have commanded hitherto.

LOSS OF EYES AND LIMBS.

The loss of eyes and limbs accounts for no less a sum than 3,000*l.* The diminution in the number of policies may be partly explained by the fact that large firms like Carter, Paterson and Co. have taken away their insurance from us, in order to adopt a system of insuring amongst themselves. Now, gentlemen, this being the bald business, but short aspect of affairs, that I have to lay before you, I would say this—that although I notice that on the share market our shares have fallen during the last few days, owing I suppose to the idea that our dividend was to be less than heretofore, I do not see why the value of our shares should be intrinsically any less than it was. You must remember this with reference to the 1s. diminution in dividend—that represents exactly 5,000*l.* on our capital. Well, we are compelled by our Act of Parliament, annually, to put by 5,000*l.* to paid-up capital, as a first charge, before any dividend is declared. Next year, however, will be the last payment on that account. Our paid-up capital will then be 200,000*l.*; and after that we shall be able to apply all that money, if we choose, in dividends.

THE PROFITS ON INSURANCE BUSINESS.

A great deal of what I may call the reckless competition that we are being exposed to is due to the belief that we are making an enormous sum of money at the present moment by our business; but I think if gentlemen will look at the accounts they will see that we are only virtually making about 10 per cent. upon the business that we transact, which, considering the trouble and risk, is not an over-high remuneration for an insurance company's business. (Hear, hear.) The rest of our profit is made up by interest on investments which we have made from time to time in the past, and of which we are reaping the benefit now. I have nothing to announce to you as to what we, as a board, have done during the past year in the way of bonuses or modifications or advantages offered to the public, and the reason is this—that at present we have reached the end of the concessions and bonuses that we can give to our insurers. Annually, no less a sum than 15,000*l.* is paid back by us to our insurers after a certain date. It is usual sometimes to mention some of the cases which come before us, and which we have dealt with, as showing the variety of accidents with which we have to deal. I can only mention one or two which strike me as very remarkable.

EXTRAORDINARY ACCIDENTS.

One case was that of a gentleman who was insured in this office, and who was going through a low doorway when he hit his hat, and forced it upon his head. An ordinary person would imagine that to be a trifling affair, and that it would lead to no evil consequences, but it brought on concussion of the brain, from the effects of which the poor man died, and his representatives received compensation from us. Another case was that of a person who, going out on New Year's Eve to keep up a provincial custom of welcoming in the New Year, slipped, and welcomed the New Year in by his death. But of all the curious accidents that ever came before me was that which happened to an actress only two days ago. She was sitting by the wings of the theatre, waiting to take her part, and, being thrifty and industrious, she was busy with her knitting needle, when an excited actor rushed past her, and in doing so drove the needle into her breast, and the poor woman died. I only quote these cases to show how accidents occur where they are least expected. I may mention that at the last meeting the only thing our attention was drawn to was certain of our investments

—the Chinese Land, and the Auckland Harbour Debentures—which some of our shareholders objected to. The Chinese Land Securities have since been sold at a premium, and we have diminished by one-half the loan upon Auckland Harbour Debentures. I shall now be glad to answer any questions, and in the meantime beg to move the adoption of this report. (Cheers.

HEAVY CLAIMS NOT AN UNMIXED EVIL.

Mr. James Mitchell (deputy-chairman), in seconding the motion, said that while they regretted, as a company, in a pecuniary sense, the amount paid in respect of claims for fatal accidents, and also the grievious affliction that must have been brought into many families, yet there were two sides to the question. The compensations had, no doubt, been a welcome relief in much distress, occasioned by these unfortunate accidents ; but so far as they themselves were concerned, it was not an unmixed evil. They were a company whose business was to insure against accidents, and were those accidents few and far between, he was afraid their customers would also be very few indeed. It was, however, a matter of satisfaction to them to feel that were those fatalities doubled or trebled they were quite strong enough to bear the strain. (Cheers.)

SUGGESTIONS.

Mr. Reid suggested, as a means of arresting the apparent decline in the company's business, the appointment of additional inspectors, and the reduction of rates. The business, he considered, was not falling off, but it was being diverted into other channels. He questioned the advisability of advertising to such an extent as they were doing.

A Shareholder strongly protested against anything in the nature of finality in regard to their terms for insurance. As they saw certain advantages given by their opponents, he thought they should give the same.

The Chairman said he quite agreed that if a company of this sort was to maintain its position there must be elasticity, and no conservatism saying, "This is right and we will not change it." Although they had gone back in their dividends, their business had not receded—it was stationary. They had seven inspectors who were constantly travelling over the country. As to the lowering of the terms of their policies—they would take it into careful consideration. The majority, and certainly the more prosperous of the companies in the field were charging the same rates as this company, and it was only some of the smaller men who under-cut the rates. The policy of making a great sacrifice, in order to get rid of competition, was one that he was not prepared to say anything about at present. It had been a fatal policy to some of the railway and carrying companies, and it had not been successful to the fire insurance companies.

The motion was carried unanimously.

The dividend of 4s. per share was then sanctioned, and the retiring directors, Messrs. Thomas Charles Bates, Richard Dickinson, and Richard Yeats, were re-appointed, as were also the auditors, and the proceedings closed with a vote of thanks to the chairman.

THE PRINCE OF WALES MINE.

ENERGETIC MANAGEMENT—A MORE CHEERFUL MEETING THAN THE COMPANY HAS YET KNOWN—MINE TO MAKE RETURNS BEFORE NEXT MEETING.

A general meeting of the shareholders was held at the Office of the company, Gracechurch Buildings, Gracechurch Street, on Wednesday : "To examine and audit the accounts, to make a call, and to transact the ordinary business of the company." Notice was also given that "all shares upon which there shall still remain a call due and unpaid at the aforesaid general meeting will be forfeited, in accordance with Clause 17 of the Stannaries Act, 1869."—Alfred Thomas, Esq. (chairman of the company), presided.

Mr. C. B. Parry (secretary) read the notice calling the meeting, and also the minutes of the ordinary and special meetings previously held.

AGENTS' REPORT.

2nd March.—We beg to hand you our report of progress and prospects for the consideration of the meeting to be held on the 6th inst. Since the last meeting there has been a very large amount of work accomplished in the engine shaft in cutting ground where necessary for changing the angle or underlie, and receiving the new and large pitwork, cutting cistern plat and cross-cutting through the flat lode, 10 ft. wide, fixed bearers and cistern at the 155, changed the whole of the pitwork to that level by replacing it with larger and more permanent work, which is now in good order for sinking shaft (which is now down 5 fms. below the 155), to any reasonable depth. This sinking is in the main lode, which is 6 ft. wide, of a very congenial character in spar, peach, prian, mundic, and tinny throughout, and worth 16*l*. per fm. for length of shaft. The flat lode still standing to the north. The 155 east end is driven 8 fms. 3 ft., which makes the distance from engine shaft 36½ fms. on a lode 3 ft. to 6 ft. wide, worth from 8*l*. to 10*l*. per fm. The present end is showing a lode 5 ft. wide, worth 10*l*. per fm. Stope in roof of this level is showing a lode 5 ft. wide, and worth 10*l*. per fm. The 135 east end is extended 7 fms. on a lode 4 to 5 ft. wide, and worth from 10*l*. to 15*l*. per fm. ; lode in present end 5 ft. wide, with a value of 10*l*. per fm. Stope in roof of this level is 7 ft. wide, worth 8*l*. per fm. The 115 is communicated with the 102 near the end by a rise, which has ventilated these levels and laid open a large section of profitable stoping ground. Since the holing of this rise those men have been stoping the back, from the rise, on a lode 4 to 6 ft. wide, and worth from 8*l*. to 12*l*. per fm. We may here remark that the 102 passed through a rich run of ground over this stope for several fathoms in length. The 90 east has been driven about 10 fms. (which makes the distance, from cross-cut from shaft, 102 fms.) on a lode of a very promising character, from 1 to 3 ft. wide, and worth from 6*l*. to 8*l*. per fm. for tin and copper ores. The copper being of high percentage and the ground easy, we consider the prospects in the eastern ground to be very good indeed. In concluding our remarks upon the underground department, we consider the prospects fully warrant our recommending a most vigorous and spirited development, which we believe will bring the mine to a successful issue. Surface : A great amount of work has been accomplished at surface by way of removing ground for calciner house, quarrying stone for same, the removal of ground for tin cleaning department and tin house, attached to which there has been a great deal of carting. We need scarcely inform you that a whole new surface plant is being laid out, which, when complete, we think will be equal to any in the county. All the above works are well forward, and every effort will be made to complete the same, together with the completion of an additional 16 heads of stamps, at the earliest possible date.—S. Roberts, R. Knott.

TIN THE FIRST CONSIDERATION.

The Chairman: Gentlemen, I have now to ask you to receive and adopt the report and accounts placed before you. With regard to the accounts, I have simply to repeat what I said last time respecting the expenditure, viz., that the whole of the 1,800*l*. odd, which we show as a loss, has been expended in machinery, materials, and labour, but which expenditure we hope hereafter will prove remunerative. On the other side of the accounts you will see that we have a credit for copper of 440*l*. This is simply the proceeds of copper raised by tributers. Copper in this mine must now be looked upon as quite a secondary consideration. Our object is to mine for tin and mine for tin in depth. But while, at the same time, the copper that does exist in this mine is of a high percentage, and the ground in which the copper is disseminated is favourable for driving, we have thought it desirable to continue a pioneer level, so that we may lay open more ground from the tributers. That operation so far has proved successful, and, therefore, we intend to continue it. Now, gentlemen, with regard to our surface work—you will remember that at the meeting in July you, upon our recommendation, agreed to take an entirely new departure in the working of this mine. We pointed out that it was necessary to

RE-MODEL ALMOST THE WHOLE OF OUR SURFACE OPERATIONS,

and I can report to you that these works have been carried out satisfactorily considering the difficulties we have had to contend with. You will remember that throughout the whole of July and August we had very wet weather. In September and the beginning of October we had very good weather. Afterwards we had an almost unprecedented quantity of rain through the latter part of October and November, and the beginning of December. Since then we have had bad weather, in the shape of frost and snow, and yesterday there were 2 ft. of snow upon the ground. Therefore, you can easily understand the hindrances we have had to contend with in the surface operations. Again, we have found it very difficult to obtain, not ordinary, but skilled labour—carpenters and masons in particular. Consequently that has been another drawback to us ; at the same time, I am pleased to tell you that we have had 24 heads of stamps running now for a considerable time engaged in crushing a large accumulation of low-quality tinstuff which we had at surface.

ORE READY FOR CALCINING.

That has been reduced to whits, of which we have 30 or 40 tons, containing, I believe, about 3 cwt. of tin to the ton of stuff. Consequently, we have some three or four tons of tin partly prepared, but this cannot be finished for the market until we have the means of calcining it or burning it. The lode at Prince of Wales is known as a "foul" lode—that is, it contains sulphur and arsenical mundic, and the only way to get rid of these products is by burning or calcining. The last time I was at the mine I went thoroughly into this matter, and found that the burning-house, existing upon the mine, was of almost an antideluvian construction, and so dilapidated, that it would have cost more to repair than it was worth ; and in addition, I found that even if it were repaired, it would not be adequate to our wants in the immediate future. I found that it would not burn more than 5 cwt. per day, and we calculate that in the immediate future we shall require to calcine 5 tons per day. Fortunately for us, on the Drakewalls Mine near us they had gone to the expense of putting up a calciner of the most modern construction. I thought we could not do better than have a similar calciner, and I thereupon took the bull by the horns and ordered one right off, and it has since been brought to the mine, the building erected, and it is now in a forward state towards being made available. We still have the flues and the chimney stack to build to carry off the fumes, but, owing to the scarcity of masons, those we have already have been engaged on the calciner works, but we shall do what remains and get to work as soon as possible, but I cannot say we shall be actually ready to return the tin for six weeks or two months. Underground we have carried out the programme we laid before you in July.

UNDERGROUND WORK.

If you will refer to the section you will find that we have throughly ventilated the mine from the 102 to the 155—that is the portion of the mine where the tin, before referred to, exists and remains to be taken away. We have, by sundry winzes and rises, ventilated the whole of this section. In addition we have steadily pushed on the 135 and 155 ends in each of which you will see by the reports the lode has ranged from 8*l*. to 12*l*. per fm. We have driven a considerable distance, and I can now report that we have

ALMOST AN UNLIMITED QUANTITY OF GROUND READY FOR STOPERS,

and we can put on as many stopers as we like to break this ground. (Cheers.) As I told you in my remarks last July, we shall be able to stope the ground at a much less cost. The result is this—that we are now stoping the same ground for 4*l*. 10*s*. per fm. that we used to pay 6*l*. for, and I think eventually we shall be able to reduce the cost to 4*l*. Therefore we have made a move in the right direction. We have also completed the re-modelling of the whole of our pitwork, and it is now working in the most satisfactory way. At the same time I am sorry to say we had two severe accidents. One was very severe, and cost us a great deal of time and money—I refer to the breakage which took place of the main rod at surface. This caused the wrecking of the whole of the timber work inside the engine house, but, notwithstanding the seriousness of this breakage, the engine was only idle six days ; and here a word of praise is due to Capt. Roberts for the admirable and energetic manner in which he repaired this breakage, for not only was the timber wrecked, but the distant rods (the rods which connect the piston and the main bob) were all bent up, but, fortunately, neither piston nor cylinder were hurt in the least. Since then everything has worked smoothly. We have sunk the shaft below the 155, and it is now 5 fms. below that level, and what seems to be gratifying to us,

as it must be to you, is that the shaft is now sinking upon the main lode, and was worth, by the last report, about 16*l.* per fm. This is the first occasion on which the shaft in Prince of Wales has ever been sunk in a profitable lode.

HOPE OF THE MINE IN DEPTH.

With regard to the sinking of the shaft—it is there that our hopes lie for a rich mine. It is very gratifying to us to see that as the shaft increases in depth so the lode increases in richness, and if it goes on as now I think we may reasonably expect in another 10 fms. to have a lode producing 40 lbs. to the ton of stuff instead of our present average of 25 lbs. Of course, gentlemen can easily understand that a difference in the produce between 40 lbs. and 25 lbs. will be that a lode of the former value will enable us to show a very fine profit. But, gentlemen, we have been working as the lode is, and the only way to make the mine pay is to have a large output. Therefore, all our energies have been directed to increase the output, and in the course of two and three months' time we shall have the whole of our stamps working, and then you will see

WE SHALL HAVE A VERY DIFFERENT TALE TO TELL.

I do not know that I have anything else to add, but I shall be most happy to answer any questions that may be addressed to me, and in the meantime will propose that the report and accounts be received and adopted.

A DIRECTOR WHO VISITS THE MINE.

Mr. Wagstaff: Mr. Chairman and Gentlemen, I have great pleasure in seconding this motion, and in doing so must tell you that I visited the mine myself within the past month. I have very little to say referring to the mine, after the exhaustive description that our worthy chairman has given you, but I have at least one pleasing fact to mention. When I was on the mine I met Capt. Richards, the Duchy agent, whom I believe to be one of the best experts in Cornwall. I had a long conversation with him. He had been down the mine the previous day, and I asked him particularly if he considered the mine as being worked in a satisfactory way. He said, "Mr. Wagstaff, I think you are doing everything that can possibly be done, and not only that, but I must say I am more than pleased with what is being done.

GRATIFYING OPINION OF THE DUCHY AGENT.

As to your underground workings, they are carried out in a most masterly and minerlike manner, and not only that, but I believe you have one of the finest mines in the county." (Cheers.) With that expression of opinion you may be sure I was very pleased, and also with different other remarks he made about the mine. I then asked him with regard to the surface, and what he thought of the works. I may tell you that we are having new buddles and dressing-floors put up. Capt. Richards said:—"I think, take it altogether, you are doing what ought to have been done years ago, and I consider you have done more during the last few months than I have seen done at this mine for years." (Cheers.) Of course that was very pleasing for me to hear. Now, although I do not profess to be a miner, I yet do know something about machinery, and I consider there is no machinery better laid out in the county. Now, with regard to the machinery, I went over the mine with Mr. Matthews, our engineer, and thoroughly looked into it, and can say that

WHAT MR. MATTHEWS HAS DONE WITH RESPECT TO THE MACHINERY

I feel perfectly satisfied. Everything has been done in a substantial and satisfactory manner. (Cheers.)

MR. ALFRED THOMAS CONGRATULATED.

Mr. Moorman: This is the first time I have been present at a meeting since you, sir, have been in the chair, and I am very pleased to congratulate you on occupying that position. The last time I was here you were an outsider, and you criticised the mine in such a way as showed to all present that you were a practical man, and understood the matter thoroughly. Those of us who take the trouble to attend mine meetings like to be repaid in some form or other by getting information of the fullest kind. We ought to learn about the mine, and especially about a mine conducted on the cost-book principle. (Hear, hear.) It was said a few days ago in the leading mining paper—the Mining World—that the cost-book system is not only dead, but dead and buried. I know an attempt was made a few months ago to turn this mine into a limited company, and I was one of those who objected to it, principally because I knew from personal experience that a large portion of the capital of limited companies is swallowed up in office expenses and directors' fees, but you, Mr. Chairman, made the remark that the only difference between that and a cost-book mine was, that in the former case there were directors and in the latter there was a committee. I do not know whether that is correct or not, but I feel that, in regard to London and the country generally,

THE COST-BOOK SYSTEM IS ON ITS TRIAL,

and that everything ought to be done to work it in the most efficient way. I am certain you cannot get an improvement upon it if it is worked well, but there is a great objection to it, because it has been so terribly abused. (Hear, hear.) With regard to the statement of accounts, I think they might be much more fully rendered, and that it might be modelled upon the system of Carn Brea, where everything is put forward in the most explicit manner. You should have the labour cost and the agency set down apart, and all the items dissected, with the number of men employed on the mine, the total amount paid to them, the merchants' bills, and the expenses in the office.

The Chairman: If we put everything into the accounts, I am afraid they would be very voluminous.

Mr. Moorman: They do it at Carn Brea.

A SUGGESTION.

The Chairman: If it is the wish of the shareholders we will do it here.

Mr. Moorman: The notice states that the meeting is called to examine and audit the accounts, and in order that that may be a reality, I suggest that the accounts should be laid on the table half an hour before the meeting, because every shareholder who is sufficiently interested could then know what money is spent, and how it is spent. I believe the more you ventilate matters the better. I know the cost-book was never worked as efficiently in Cornwall as it is now.

Mr. Parry: You can always see the cost-book and the accounts at any time and on any day.

Mr. Moorman: I am very pleased to hear the statement of the chairman, and to know that a new spirit has been infused into the whole affair. I observe that Mr. Wagstaff has said in regard to Capt. Richards, that the work done now ought to have been done years ago.

COMMITTEEMEN WHO WORK.

Mr. Wagstaff: That is so. The members of the committee are not only men who give you a statement of accounts, but who go to the mines to verify what is told them. I know nothing about underground work, but having met Capt. Richards upon the spot I was indebted to him for much information, and he answered all the questions I put to him. I am better pleased with the Prince of Wales Mine now than during the 17 years I have been connected with it.

The Chairman: I quite agree with every word that has been said with respect to cost-book accounts. I think the cost-book system ought to be carried out in its integrity, and had that been done we should not have found people so shy in joining mines worked on that principle. There is no doubt the meeting is called to audit and examine the accounts thoroughly, but how many people, like our friend, ever take the trouble to look at the accounts? They delegate that duty to the committee, but I think it is a very good suggestion that the books should be available half-an-hour before the meeting, so that the shareholders might inspect them. So long as I am connected with the company and hold the position in which you have placed me, this shall be done, and I am sure my friend, Mr. Parry, can have no objection.

Mr. Parry: Certainly not, and I may add the accounts are very carefully kept, and made up in the most correct manner. The committee see them every month and check every item.

The report was then unanimously adopted.

THE CALL.

The Chairman: I am sure that it is the wish of everyone to keep the company on a sound financial basis. Our debts, in round figures, are 1,896*l.* Some of our friends have written, expressing the hope that the call will not be greater than last time, but they will understand, I am sure, that all this dead work cannot be done without spending money, and, therefore, you must be asked to provide that which is necessary, and your committee cannot do otherwise than recommend a call of 3s. per share. This is a heavier demand than we should have liked to make, but, as I said just now, we must work fully up to the cost-book system, and unless we do make a call to liquidate our liabilities, we shall stand very badly before the public. I therefore propose that a call of 3s. be made, payable within one month, and that the usual discount of 5 per cent. be allowed on all those who pay by that date.

Mr. Timothy: What are the probabilities of the next call?

THE CHAIRMAN NO PROPHET.

The Chairman: We hope by the next meeting to be making returns of tin—that is, in two or three months time, and, of course, we are accumulating lots of whits that we can soon return when we have our burning-house ready. When we once begin making the returns we shall not stop, but it is no use sending our whits to be treated a long way off at great cost—what we want to do is when we commence our returns to keep on increasing them.

Mr. Timothy: This call of 3s. then is exceptional?

The Chairman: I do not anticipate that the next call will be so much, but beyond that I cannot say. Much will depend upon the weather, and, as I said, I anticipate that we shall be making sales before the next meeting.

MR. PARRY COMPLIMENTED.

Mr. Timothy: I shall be pleased, under these circumstances, to second the proposition, and I take this opportunity of saying that I have attended a good many meetings of this company, but not one with so much pleasure as that at which I have been present to-day. First of all, the chairman is a gentleman in whom I have the most implicit confidence, and the way in which he has handled the subject of the mine to-day has, if possible, increased that confidence. As regards the suggestion about all things being paid for—I have every confidence that every mine in this office has all its charges brought up to date. (Cheers.) Of that I am fully satisfied. (Hear, hear.) In fact, a gentleman was asking me about going into a cost-book mine. I said, "Where is the office of the mine?" He said, "It is in the office of Mr. Parry, of Gracechurch Buildings." Then I said, "By all means go into it, for you may depend upon it the accounts will be kept charged up, and you will exactly know your liabilities, without the fear of having surprises later on. You can stay in or go out just as you please." (Cheers.)

The motion was carried unanimously.

The Chairman: There is one matter I ought to mention. Our largest shareholder has written me a letter, but I will not mention his name, as he has not given me liberty to publish it.

Mr. Moorman: I think you are the largest shareholder.

VIEWS OF THE LARGEST SHAREHOLDER.

The Chairman: I hold 1,350 shares, but am only the second largest shareholder. This gentleman whom I asked to attend this meeting writes, "It would give me great pleasure to attend Prince of Wales meeting if I could be of any service. I fully believe we have a good mine, and when we can get the dressing appliances and stamps to work it will wear a much more cheerful aspect. I can do no good by attending the meeting, nor further the completion of our surface work by one day. There seems to me every reason to expect that in three months time we shall be in a better position at Prince of Wales than ever before. The sinking of the shaft may any day open up something good, and if we can get our stamps to work and return tin to market, it will be very acceptable." That is a very satisfactory letter from the largest shareholder, and it has also been very gratifying for me to hear the remarks that Mr. Timothy made just now. I am certainly urging matters forward now.

Mr. Parry: In regard to the accounts, I can assure you that the cost-sheets are checked every month, and I do not know that it is possible to supervise them with greater care. They are submitted also

to the committee and checked by them. I have to thank Mr. Timothy for the very kind remarks he has made about my office, and I can assure both him and the shareholders generally, that as long as I am connected with the company the business will be carried out in the same way that has hitherto met with his approval.

After a short discussion, it was decided to call a special meeting within 14 days from date for the purpose of forfeiting shares upon which there remained more than one call in arrear.

THANKS TO THE CHAIRMAN.

Mr. Moorman, in moving a vote of thanks to the chairman, said: I do not care to move a mere formal vote of thanks, but I do think our chairman has done his duty and will continue to do it. (Cheers.) Whilst you see he holds such a large stake in the company you can understand that it is his interest as well as ours to keep down the expenses and have the mine worked in the most efficient way possible.

Mr. Timothy seconded the motion, which was carried unanimously.

The Chairman: I am very much obliged to you for your expression of confidence. I have done all I can since you have placed me in the position I hold, and can assure you that my co-directors have done the same. The more I see of the mine the more confidence I have in it. I increase my interest whenever a favourable opportunity occurs, and I think some of you may do the same with advantage.

The proceedings then closed.

WHEAL CREBOR.

MINE LOOKING BETTER—SHAREHOLDERS MUCH ENCOURAGED.

A general meeting was held at the Offices of the company, Gracechurch Buildings, Gracechurch Street, on Wednesday "to examine and audit the accounts, and to transact the ordinary business of the company." Notice was also given that "all shares upon which there shall still remain a call due and unpaid at the aforesaid general meeting, will be forfeited, in accordance with clause 17 of the Stannaries Act, 1869, and that, notwithstanding such forfeiture, the defaulting shareholder will be liable to pay the calls in arrear."

John Schofield, Esq., chairman of the company, presided.

Mr. C. B. Parry (secretary) read the notice calling the meeting and minutes of the last meeting, which were confirmed.

COMMITTEE'S REPORT.

5th March.—In rendering the accounts for the 16 weeks' working of the mine ending January 25th, 1889, the committee would remind the shareholders that the chairman stated at the meeting held on 7th November last there were good grounds for anticipating that, at the then next ensuing meeting, the accounts would show little or no loss, and it will therefore be gratifying to the shareholders to find that, notwithstanding the copper standard has fallen during the past four months 7*l.* or 8*l.*, the loss is only 27*l.* 16s. 2d. after charging against the returns 38*l.* 2s. 6d. paid to the Duke of Bedford for land destroyed, and 49*l.* 11s. 6d. for the purchase of a new steel wire hoisting rope 250 fms. long; and notwithstanding there are on hand 50 tons of coppery mundic and arsenic, and 230 tons of mundic of No. 1 and No. 2 qualities, valued at 350*l.*, a sale of which, though it was ready for the market, could not be effected in time for the proceeds being credited in the accompanying statement of accounts, but this is not a subject for regret, as the proceeds of this mineral will be credited in the current 16 weeks' accounts. The quantity of copper ore sold and credited during the 16 weeks embraced in the accounts is 583 tons 19 cwt. 2 qrs., which realised 1,664*l.* 4s. 8d., an average of 2*l.* 17s. per ton, as against 394 tons sold in the 16 weeks ending the 5th October last, which realised 1,310*l.* 19s. 5d., an average of 3*l.* 6s. 6d. per ton; the decline in the tonnage value is attributable partly to the lesser copper contents of the ore, and mainly to the fall in the copper standard. The sales of mundic have only realised 528*l.* 5s., owing to the non-sale of the 50 tons of coppery mundic, and the 230 tons of No. 1 and 2 mundic before mentioned.

A SMALL LOSS.

The total expenditure amounts to 2,220*l.* 5s. 10d., and the total credits to 2,192*l.* 2s. 8d., thus leaving a balance loss of 27*l.* 16s. 2d., as before stated. It will be gathered from the latest report of the manager, which is annexed, that no important discovery has been made since the last meeting, although at the 200-fm. level drifts have been extended on the lode eastward 4 fms., and westward 5 fms., the lode in the eastern end being 4½ ft., and in the western end 4 ft. wide, the western end having a fine appearance and yielding good quality copper ore. The driving of both these ends will be pushed on with all possible despatch, and as the indications are highly favourable it is to be hoped they will open profitable ground. The 170-fm. level west also presents very favourable indications of soon meeting with the ore gone down in the bottom of the 156-fm. level above it, where there are three stopes working, which yield in the aggregate 8 tons of copper ore and 9 tons of mundic per fm. With regard to the current returns being maintained, the manager writes, under date 27th February last, as follows:—"At the last general meeting it was stated that in the absence of discoveries in any of the drivages it was possible to keep up the (then) present returns for a year, since that time nothing has happened to show any good reason why that cannot be done." This statement cannot be considered otherwise than most satisfactory. The call made at the last meeting has been so promptly paid that the total in arrear is only 76*l.* 18s., and the committee trust that the reference in the notice convening the meeting to the probable forfeiture of the shares in arrear will cause the defaulters to pay up without recourse to forfeiture at the next meeting, or legal proceedings being necessary in the interim. It will be seen the balance of assets over liabilities is 1,355*l.* 5s. 2d., and the balance at the bankers on the 28th of February last was 441*l.* 17s. 8d., out of which a fortnight's labour cost, amounting to 162*l.*, has been paid.

AGENT'S REPORT.

March 1st.—Since the last general meeting we have completed the sinking of the new shaft, and have opened out east and west of the shaft at the 200-fm. level as follows, viz.:—East, a distance of 4 fms., where the lode is 4 ft. 6 ins. wide, composed principally of friable spar and capel, yielding small quantities of arsenical mundic, and west, for a distance of 5 fms., where the lode, which has a fine appearance, and is 4 ft. wide, yielding stones of good quality copper ore. The 170-fm. level is now 50 fms. west of the shaft. Thus far, we regret to say, that we have not met with that success we could have wished, but looking at the appearance of the lode now in the end, and seeing that there is a large and productive lode gone down in the bottom of the 156, we have great hopes that we shall yet be successful in laying open profitable ground at this level. At the 156-fm. level west of shaft we have lately driven 12 fms. on a lode 11 ft. wide, which has averaged 6 tons of arsenical mundic per fm. At present the lode in the end is not yielding so much mundic, but is showing more copper than it has for some time past. In the back of the 156 we have three stopes working by 11 men, which will yield, in the aggregate, 8 tons of copper ore and 9 tons of mundic per fm. In different parts of the mine we have 15 pitches working by 40 men, at a tribute varying from 9s. to 13s. 4d. in the £.—P. D. Holman.

AN EXPERT SURPRISED AT THE IMPROVEMENT THAT HAS TAKEN PLACE.

The Chairman: I have but little to say in regard to our prospects beyond what is stated in the report. Of course we cannot tell what the result may be of the working of the next four months, but the indications in the 200-fm. level west are very promising indeed, and such as, if they do not result in a valuable discovery, will disappoint everyone who knows anything about mining. The mine has been inspected by Capt. Paul, the agent of the Duke of Bedford, who expressed himself greatly surprised at the substantial improvement that has taken place. He stated that he had never seen finer stones of copper than those he took from this mine at the depth reached at the time of his visit. This is particularly encouraging coming from Capt. Paul, because he has hitherto had a very bad opinion of our prospects. I trust that the expectations we entertain, in consequence of his remarks, will be realised. (Hear, hear.) The report of Capt. George was read at the last meeting, and it was equally as encouraging as the opinion expressed by Capt. Paul. Capt. Paul has seen the mine since Capt. George made his report, and, therefore, his testimony is all the more valuable.

PRESENT STATE OF THE LODE.

The lode is now, in the 200, 4 ft. wide, yielding good quality of copper ore throughout, so that at any moment we may cut into a solid body of concentrated copper ore. If we do this, we shall not only be able to keep up our returns, but have ore of a very much better quality. Another very satisfactory feature is, that the manager writes on the 27th February that he will be able to keep up the present returns for, say, 8 months longer without any new discoveries, so I apprehend that we may be able to meet the shareholders four months hence with a statement of accounts certainly no worse than that we present to-day. The loss of 27*l.* would have been turned into a profit if we had sold the whole quantity of arsenic and mundic we have; but we could not get the price we wanted, and as we did not require the money, we decided to hold the stock rather than attempt to make the accounts look better by its precipitate sale.

MUNDIC READY FOR SALE.

The fall of copper will not affect the price of mundic, and it will prove a valuable aid towards paying our fifth month's cost, which will fall due in the next quarter. That will be about 600*l.* extra, and the unsold mundic will pay over one-half of it. I believe the machinery is in excellent order, and we have reason to congratulate ourselves upon that fact, when we see the position of the mines west in the neighbourhood of Redruth and Camborne, whose bottom levels have been submerged, and whose returns have been diminished. We have been fortunate enough to work all through the winter without interruption, and keep our mine clear of water. This shows that the machinery must be very efficient and well looked after; otherwise we should probably have had some disaster. Therefore the captain deserves some recognition of his services on that account. I now beg leave to move the reception and adoption of the report and accounts.

Mr. John Brittain seconded the motion, which was carried without discussion.

MR. SCHOFIELD'S SERVICES.

Mr. Parry said the indefatigable manner in which Mr. Schofield conducted the affairs of the company was most praiseworthy, and he thought they ought to express their thanks to him for the great interest he took in Wheal Crebor, and for the energy he devoted to its affairs.

Mr. Brittain said he wished to supplement what Mr. Parry had said, because he felt that the chairman was doing all he could in the interests of the shareholders, and he carried on the work most satisfactorily.

The motion was carried unanimously.

The Chairman: I am very much obliged to you for this mark of your confidence. I will not appropriate the whole of your approbation, for my colleague, Lieut.-Col. Cragg, also gives his best attention to your affairs. Whatever may be the result of the company, we, as committeemen, have very little to do with it. All we can do is to see that the company's business is administered in an efficient manner. We cannot put an ounce more ore into the mine than it contains, and we cannot extract an ounce more than is to be found in it. We look sharply after your affairs, and any credit we deserve for that we may accept at your hands if you give it to us. I do feel, after all we have gone through, that

THERE IS A CHANCE FOR CREBOR.

—(hear, hear)—and particularly in the face of what I have been able to report to you to-day.

Lieut.-Col. Cragg expressed his great faith in the developments at the 156 west.

The meeting then terminated.

Bratsberg Smelting and Refining Works, Limited.—More than the required capital has already been applied for. The lists close on the 12th inst., when letters of allotment will be immediately posted.

A General Court of the Bank of England will be held on 14th March, for the declaration of a dividend.

PRESS OPINIONS OF THIS CIRCULAR.

"Life," 21st February.

"Colon Gold Mine shares are likely to rise."

"Fair Trade," 15th February.

"The Tetuan Gold shares, which we recommended as a mining investment some week or two ago, have thoroughly fulfilled our prognostication. Colons can be had for 2s. 6d. to 3s. There ought to be a big rush to be in this swim."

"Society Herald," 26th February.

"The interest which has been displayed of late in Colombian Hydraulic Mines continues. The favourite of the hour appears to be the Colon Mines, which are in the immediate vicinity of the Tetuan, Orita, Maravilla, and other famous Colombian mines worked by the hydraulic process. I am assured, on the same good authority which aided me in predicting so accurately the course of Tetuans months ago, that the advance in the price of Colon shares has only just made a beginning, and that they may be expected to cross 20s. within a very short time. Be it observed, I by no means mean to imply that they will not go very much higher than the figure mentioned, but my policy is to advise my readers step by step, so that those who have bought at low prices may turn out their shares whenever they have a good, respectable profit."

"Society," 2nd March.

"Colon Gold shares are likely to have a considerable rise. It is even wise to buy these shares and carry them over from account day to account day. They should, however, be acquired and put by until they show dividends—a time not far distant. The Colon Mines are situated in Colombia, a district now where the mines are significantly productive. All those who are investors should read the report of Mr. Welton, the engineer of the Colombian Hydraulic and Orita Mines. He is a great authority, and in his conscientious statement exhibits what this really legitimate property should produce to the Colon shareholders."

"Stock Exchange Times," 2nd March.

"COLON.—None should stop buying these shares."

"The Hawk," 19th February.

"Colon Gold shares have come with a rush in the last few days. The mine is undoubtedly one of the richest in the gold-paved district of Colombia, consisting of auriferous gravel deposits which are worked on the hydraulic system. It is a near neighbour of the celebrated Orita Mine, already cleaning up to the tune of £1,200 a month. Major Ross, a director of the Orita Mine, has just joined the board of the Colon, and his presence signifies that the works will go forward with redoubled energy."

"Country Gentleman," 2nd March.

"It will be remembered that last week and the week before last I had a good deal to say about Colon Gold mines, and stated that it would not be long before a report, which would astonish even those who believed most firmly in the mine, would be forthcoming. This report is now to hand, and, reading it, it really appears as if the engineer, Mr. W. S. Welton, who is responsible for it, had been drawing upon his imagination; but I am assured that this is far from being the case, and that Mr. Welton has underrated the brilliant prospects of the mine. One thing should be remembered, and that is that Mr. Welton is a well-known and highly-respected gentleman, and anything that emanates from him should be received with the respect that it deserves. Mr. Welton can lay claim to having seen his reports regarding other mines fully borne out by actual results."

"Country Gentleman," 23rd February.

"I can but repeat the advice I gave last week regarding Colon Gold mining shares, and that is to buy them at once. Since I first mentioned them they have risen from 3s. to 11s. 6d., and it is highly probable that they will go as high as 15s. and over. The property, which has only recently come into such great prominence, is situated quite near the famous Colombian Hydraulic and the Orita. It is stated by thoroughly competent authorities that the deposits cover over 1,000 acres, the property really consisting not of one mine only, but of five mines equally rich and promising."

"Country Gentleman," 16th February.

"COLONS.—The jump has been as smart as I prophesied, and I hear that the top has by no means been reached. The mine has suddenly been found to be far richer than was ever believed, and consequently the shares, of which there are not very many about, are in the most active demand. An enormous amount of business has been done in them during the week, and they close to-day very hard and firm. In fact, the movement in Colons has been *the* feature of the week."

"Country Gentleman," 9th February.

"Rumour says strong financial combination has wrought a change in the management of a mine for some time before the public, and that the shares, now at 3s., will have a large and smart rise. My readers will do well to watch for this. I may not mention the name at present, but next week shall be able to give full particulars."

"Financial Chronicle," 20th February.

"Colon Gold shares promise a further advance."

"Financial Chronicle," 23rd February.

"COLONS.—The rise has only begun."

"Rialto," 16th February.

"Colons seem to be good for a big rise in price."

"Bullionist," 2nd March.

"COLONS.—Investors and operators should buy at present prices An excellent report has been received upon the Colon Mines from Mr. W. S. Welton, one of the most experienced hydraulic miners of the day."

"Bullionist," 2nd March.

"Colons are steady, and should be bought. From all we can learn regarding this property, there is no doubt as to its great value, and when the results of the operations now being carried out under the new management become known, we quite anticipate the present price to quickly double itself."

"Stock Exchange."

"Colons will soon be better. Those who should know are buying the shares again quietly. Our readers might do worse than follow this example."

"Stock Exchange," 16th February.

"The feature of this market during the past week has been a great rise in Colon Gold shares. Early on Wednesday morning these shares—then only at 3s. 6d.—began to spring away by leaps and bounds, and in but a few minutes a rise of 5s. was to be recorded. Judging by the prospects of this undertaking, now that some important changes have been effected in the management, the shares ought to have a much further rise, and doubtless but a few days will see them several shillings higher than now."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Stock Exchange," 23rd February.

"Colon Gold shares have met with great demand during the current week. The reports from the mine are of a very satisfactory character, and, we consider, justify a further advance. Reports say that these shares will go a good deal higher."

"Investors' Guardian," 23rd February.

"Colon Gold shares are very firm, and there are many indications of a further advance in price. It would not surprise us to see them go to double the present quotation."

"London and Brighton," 17th February.

"The Colar Mines are of the same nature as the Tetuan, being hydraulic, and comprise something over 1,000 acres close to the well-known Colombian Hydraulic and Orita Gold Mines. The advantage these cheap-priced shares present to the mining speculator is that there is plenty of room for a rise, while the possible fall is very limited, and at the worst the loss is infinitesimal compared with high-priced shares which, if they have a chance of a rise of one or two points, have also the probable contingency of a drop of four, five, or perhaps more, at any time."

"London and Brighton," 20th February.

"Colon Gold shares are certainly good to buy for a rise."

"Mining News," 2nd March.

"In the case of Colons, one of the popular speculations, we feel sure prices will advance, and these shares offer an excellent investment medium at their current price. Colons will go much higher than now selling."

"Stock Exchange Times," 2nd March.

"We are confident that the shares will yet see from £3 to £4 each."

"Court Circular," 2nd March.

"Things speculative have been more or less depressed during the last few days, and even the shares of the Colon Gold Mines have had a slightly backward tendency, in common with the rest of mining investments. This is, however, not a bad thing for those who want to speculate, since the report from the mines would show Colons to be very good business, and, if they are a shilling or two cheaper, all the better for the buyer, seeing that they can be so thoroughly recommended."

"Financial World," 16th February.

"Colon.—A pleasant surprise awaited those connected with this hitherto unknown enterprise last week. Very little has been heard of this modest placer mine, until a demand sprang up in the middle of the week for the shares, which forced them upon the attention of the market, and, as a consequence, the shares rose in one day from the insignificant price of 2s. 6d. to 8s., an advance equally as important as some which have had to be recorded with respect to the Witwatersrand properties, when we consider how little has been done to bring them into prominence. As a thread of the gossamer will show the direction of the wind, the results which have lately been made by several well-known placer properties may be taken as giving in some degree an indication of what is yet in store for those whose faith is pinned to properties of this description, in preference to those of the quartz mines. A company whose shares can advance in one day 6s. ought to possess a property destined to make some flutter in mining circles."

"Financial World," 2nd March.

"Colons.—These shares, we believe, have now reached their lowest ebb, and those who want to secure an interest in this ought to do so when the price stands at something reasonable. The decline in the price was due to indiscriminate selling by speculators who desired to realise."

"Mining World," 16th February.

"We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulations. We look for a steady advance in the returns in the near future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are managed with honesty and ability."

"Mining World," 16th February."

"Hydraulic mines have been to the fore, and particularly the share of the 'Colon,' of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, began to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success."

"The Capitalist."

"The most remarkable has been Colon Gold shares, which are now quoted 10s. to 11s., with every prospect of a still further rise."

"Financial News," 14th February.

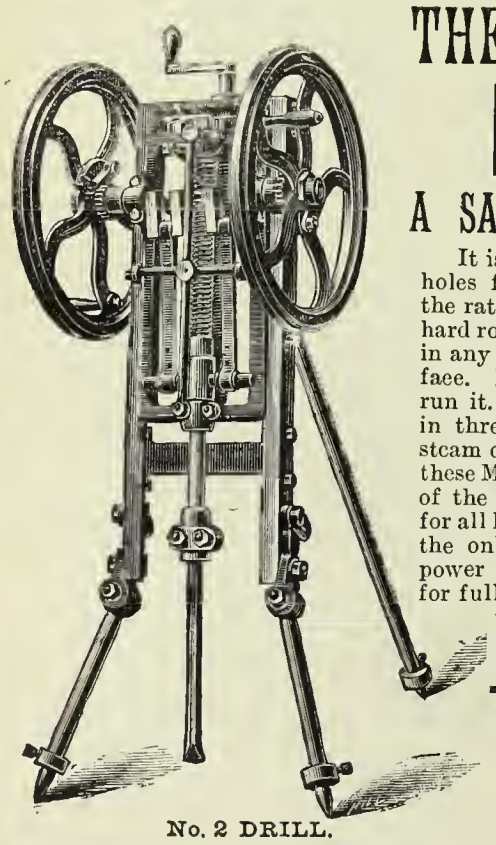
"The feature of the mining market yesterday was the rise in Colon Gold shares. The Colon Gold property is a close neighbour of the Colombian Hydraulic, the Orita, and the Tetuan, and, if we may judge from the reports, a worthy competitor with them. Among the directors of the undertaking we notice Mr. Sankey, of the Colombian Hydraulic, and Major Ross, of the Orita—an ample guarantee that the management will not be lacking in enterprise or intelligence."

"Financial News," 15th February.

"In another column will be found the report of Mr. B. Anderson, a well-known American hydraulic mine engineer, upon the Colon mines, which we had occasion to mention in our yesterday's issue. According to Mr. Anderson, a sampling of the gravel gave, under hand washing, a profit of $1,351 the amount of water used being only 4 to 6 miner's inches. The mine, we understand, has been worked more or less systematically under the hand process, or sluicing, and always with results similar to the above. The new directors of the company have determined to work the mines in a more energetic manner, and have already entered into a contract for the construction of the works necessary to bring 500 miner's inches of water on to the mines at a cost of £14,000, this sum being only half the amount of working capital still remaining intact with the company."

"Financial Chronicle," 2nd March.

"Colons.—We may shortly expect to commence moving again."



No. 2 DRILL.

THE INGERSOLL DUPLEX HAND-POWER
ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND LABOUR.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in three sizes, and can be worked by steam or air if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made. Send for full description, testimonials, &c., to

REPORT.

THE directors have to submit the following report on the Company's operations during the past year.

The income of the Company for the year was £248,920 4s. 9d., comprising £236,050 3s. 5d. for premiums of insurance, £12,033 14s. 1d. for interest on investments, and £836 7s. 3d. profit on sale of securities. This compares with £248,901 14s. in the year 1887, when the premiums were £236,722 17s. 6d., and the interest £12,178 16s. 6d.

The number of new general accident policies issued in the year 1888 was 7,875, on which the premiums amounted to £22,501 0s. 11d. In the previous year the number of new policies was 8,789, for an amount of £23,838 15s. 7d. in premiums.

The following is a comparative statement of the number of policies and tickets issued in the respective years.

GENERAL ACCIDENT POLICIES.

1887			76,115
1888	New Policies	7,875	
	Renewals	67,746	
			75,621

RAILWAY ACCIDENT POLICIES AND TICKETS.
Policies for Terms of Years, or for Life by Single Payments, or by Annual Payments on a Decreasing Scale.

1887	4,121
1888	4,176

	Single Journey Tickets.			Double Journey Tickets.		
	1st Class.	2nd Class.	3rd Class.	1st Class.	2nd Class.	3rd Class.
1887	28,993	18,771	395,397	20,669	15,591	224,636
1888	27,175	15,782	365,903	20,449	14,503	204,046

EMPLOYERS' LIABILITY AND COLLECTIVE WORKMEN'S POLICIES.

1887	1,398
1888	1,529

The claims for compensation during the year have been unusually heavy, amounting to £144,440 5s. 1d., or at the rate of 61.19 per cent. on the premium income, as against 55.74 per cent. in the previous year. The number of fatal accidents, which was below the expected average in 1887, has considerably exceeded it in 1888, and with the claims for loss of eyes or limbs has raised the proportion of compensation to the highest rate yet borne by the receipts. The number and amount of claims is as follows :—

64	Fatal Accidents	36,244	18 0
8	Loss of Eyes or Limbs	3,000	0 0
7,641	Non-Fatal Accidents	105,195	7 1
		£144,440	5 1

The proprietors will have seen, from the detailed statement of accounts already in their hands, that after payment of the above amount of compensation, and the bonus in reduction of premiums to policy holders of five years standing £15,069 4s. 11d., together with the working expenses and transfer of £5,000 to capital account, a balance of £108,701 5s. 10d. is shown to the credit of the revenue account. In view of the heavy losses during the year, and the necessity of retaining a large reserve to meet the unexpired risks on current policies, the directors regret that they are unable to declare a dividend of more than 4s. per share on the present occasion.

The directors who retire in rotation at this meeting are Sir Edward Birkbeck, Bart., M.P., Major-Genl. Clive, the Right Hon. Lord Kinnaird, and Meredith Meredith-Brown, Esq., all of whom, being eligible, offer themselves for re-election.

The auditors, Thomas Charles Bates, Esq., Richard Dickinson, Esq., and Richard Yeats, Esq., also retire, and offer themselves for re-election.

By order of the board,
WILLIAM J. VIAN,
Secretary.

The List of Applications will Close on or before MONDAY next, at Noon, for Town and Country.

The Central Bank of London, Limited, 52, Cornhill, E.C., and Branches, are authorised by the Directors to receive Subscriptions for 93,334 Shares of £1 each.

THE RANDT COAL MINING AND LAND COMPANY, LIMITED.

TRANSVAAL, SOUTH AFRICA

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1886.

CAPITAL, £140,000, in 140,000 Shares of £1 each.

ISSUE OF 93,334 SHARES, Payable 2s. 6d. on Application ; 5s. on Allotment. One Month's notice will be given of subsequent calls, which will not exceed 5s. each.

ABRIDGED PROSPECTUS.

THIS Company has been formed to acquire and work the property known as Van Dyks Drift, situated 18 miles south-west of Middleburg, and equi-distant from Pretoria and Johannesburg, the Township of the Witwatersrandt Goldfields.

This property covers an area of about 6,700 English acres.

The following statements quoted in this prospectus are taken from the report of the well-known engineers, Messrs. Lennox Canning and Goad, Johannesburg, the original of which can be seen at the solicitor's offices. (See full prospectus).

Taking into consideration the large number of mines now working in the district (which should employ at least 4,000 stamps) from this source alone, a steady income is looked for, but beyond this the consumption of the projected Delagoa Bay, Pretoria, Johannesburg Railway should be very considerable. An output of only 70,000 tons per annum at a profit of 14s. per ton, delivered at Johannesburg, which the directors are informed is but a moderate estimate, would yield the Company a revenue of £49,000 per annum, or nearly 35 per cent. on the capital of the Company.

Mr. A. J. Dawe, of Johannesberg, writes stating that he has received some of the coal from Mr. Meyer de Kock, the manager of the Van Dyks Drift Property, and that he has forwarded it. Mr. E. N. Dawe, who received these samples, sent them to Mr. E. Riley, F.C.S., for assay, a copy of whose report is here set out :

Laboratory and Assay Offices, 2, City Road (14A, Finsbury Square), London, 30th January, 1889.

E. F. Dawe, Esq.

Sir,—I enclose herewith my analysis of your coal. I consider it an excellent coal both for household and steam purposes. The sulphur is rather high, but not unusually so, and for metallurgical purposes much of this (it exists as iron pyrites) might be removed by washing. I remain yours, faithfully,

EDWARD RILEY.

ANALYSIS.

E. N. Dawe, Esq.

Sir,—Herewith I beg to forward you the results of my examination of the sample of coal received from you yesterday. The sample gave :—

Volatile matter	29.49
Coke	70.51
	100.00
Sulphur per cent....	1.51
Ash ,, ...	6.57
Moisture ,, ...	3.10

Colour of ash—light pink.

Believe me to remain, yours very faithfully,
EDWARD RILEY, F.C.S., Metallurgist, Analytical and Consulting Chemist.

"The duty on foreign coal is 16 guineas per ton, the cost of wood fuel is 40s. and 50s. per 100 cubic ft., and the supply is very limited."—Vide report in "Financial News," 22nd December, 1888.

The price to be paid for the property has been fixed by the vendors at £80,000, payable as to £33,334 in cash, and the balance in fully-paid shares.

The following contracts have been entered into. (See full prospectus.)

The directors are informed that the Government of the Transvaal has sent at their own expense a quantity of coal from this mine to the forthcoming Paris Exhibition. Samples of the coal can also be seen at the Company's offices.

NOTICE.

THE

MONICA OPHIR MINING COMPANY,

LIMITED.

OPHIR TERRITORY SUB-CONCESSION.

The Public is respectfully informed that the publication of the Prospectus of the above Company is unavoidably

POSTPONED UNTIL NEXT WEEK.

It is, however, hoped a supply of Prospectuses will be ready by

TUESDAY NEXT

at the Company's Bankers, and at the Offices of the Company,

3, BROAD STREET BUILDINGS, E.C.

THE MINING MARKET.

City, Friday Evening.

COPPER THE THEME OF THE WEEK—LATEST FACTS—STEPS TO PREVENT A COLLAPSE—MUTUAL CONCESSIONS NEEDED—SOUTH AFRICANS DOWN—INDIANS GOOD—OTHER DEPARTMENTS UNEVENTFUL.

The theme of discourse on the Mining market during the week has been, not so much the position of the Copper Syndicate as what the copper companies will do. All that they can do, unless they determine resolutely to kill the French geese, who, for the last 18 months, have been laying at their doors so many golden eggs, is to reduce the output so as to afford a chance of the heavy accumulated stocks being worked off. This point cannot be determined until next week, when, it is believed, a conference of representatives of the leadiug mines in the United States, Spain, and the Cape will be held, and a reduction of the output is expected to be the issue. It is so manifestly the interest of all parties concerned, at least in copper production, to maintain fair prices for this metal that the general view is that some basis of agreement will be arrived at. The French people are interested in averting the total collapse of the market, for the reason that they do not wish to imperil the success of their exhibition, which holds them by the heart strings, and the mines in like manner will have a bad time of it should no arrangement be come to, for the syndicate will simply say, "Gentlemen, we are very sorry—we cannot pay," in which case copper might be expected to drop to 40, or below it. That is the position as we go to press, and we are able to state that no arrangement has been made with the Messrs. Matheson other than that they act purely and simply as agents for the sale of the immense stocks on hand.

What would have become of the South African market but for the help once more rendered by Hatton Garden no man can tell, though every mother's son can predict. Prices close decidedly above the worst touched during the week.

The Indian market has been good, and, intrinsically, is sound. The striking facts we publish in our leader columns are eloquent as to a goldfield of proved wealth, and of a value that grows month by month.

The other markets really call for no special comment. The changes are set forth below :—

Africans.

Again we have to record a busy week in this market. Many thousands of shares have changed hands. Quotations at the close last Friday left off somewhat weak, but on Monday there was an incipient panic, and shares fell from $\frac{1}{8}$ to 5*l.* each on the day; Crown Reefs changed hands at as low as $6\frac{1}{8}$, but towards the evening prices generally improved, and made up on Tuesday at $7\frac{3}{8}$, while Jumpers, after having been offered at 12, made up at 13, and close this evening at $15\frac{3}{8}$ to $15\frac{5}{8}$; Salisburys again made up at 20, and are now 21 to 23.

The following shares have fallen :—Edwin Bray, $\frac{1}{8}$; French Bob, $\frac{1}{8}$; Imperials, $\frac{1}{8}$; Orientals, $\frac{1}{8}$; Pigg's Peak, $\frac{1}{8}$; Republics, 1s.; Revolver, $\frac{1}{16}$; Shebas, $\frac{1}{16}$; Thomas, $\frac{1}{8}$; Ditto pref., $\frac{1}{8}$; Aurora, $\frac{1}{8}$; Bankets, $\frac{1}{8}$; Bantjes, $\frac{1}{4}$; Bixley, $\frac{1}{8}$; Blackreef, $\frac{1}{8}$; Cornucopia, $\frac{1}{4}$; De Villiers (Robinson), 4*l.*; Geldenhuis, $\frac{1}{4}$; Goldfields of South Africa, $\frac{1}{8}$; Golden Kopje, $\frac{1}{4}$; Great Britain, $\frac{1}{4}$; Kleinfontein, $\frac{1}{2}$; Mainreef United Roodeport, $\frac{1}{2}$; Spes Bona, $\frac{1}{2}$; Star, $\frac{1}{4}$; United Langlaates, $\frac{1}{2}$; Van Ryn, $\frac{1}{8}$; Vogelstruis, $\frac{1}{4}$; and Wolhuters, $\frac{1}{2}$. The rise being, in Shebas, $\frac{1}{18}$; Moodies, partly and fully paid, $\frac{1}{16}$; Central Langlaates, $\frac{3}{8}$; Ditto Roodeport, $\frac{1}{8}$; Crown Reef, $\frac{1}{4}$; Henry Nourse, $\frac{1}{2}$; Jumpers, $1\frac{1}{4}$; Langlaates, $\frac{1}{4}$; Morkel, $\frac{1}{16}$; Moss Rose, 20s.; Nabob, $\frac{1}{8}$; Randfontein, $\frac{1}{16}$; Simmer and Jack, $\frac{3}{4}$; Stanhope, $\frac{1}{2}$; Western Langlaates, $\frac{1}{8}$; and Wemmers, $\frac{1}{4}$;

Diamonds.

The market for diamond shares has been very unsettled during the week. At one time, on Monday last, De Beers, as we foreshadowed, fell as low as 14½. They afterwards recovered, and made up on Tuesday at 15¾, but close weak this evening at 15, 15¼, or a fall of 1¼ on the week. A fall has taken place in Bultfontein of ¼; De Beers, 1¼; Griqualand West, ⅜; New Consolidated, 6d.; New Jagersfontein, 20s.; Spes Bona, 1/16; United, ⅛; United Jagersfontein, 1s.; London and Orange Free State Exploration, ¼; London and South African Exploration, ¼; and Read's Drift, ⅛. The only improvement being in Anglo-Africans, which show a rise of ⅛; and Burma Ruby Mines of 1/16.

The following are the closing quotations :—

Anglo-African	5	—	5¼
Bultfontein, new shares—	3⅝	—	3 7/16
Central Dorsfontein	8	—	10
De Beers Consolidated	15	—	15⅛
Gordon Diamond	19/	—	21/
Griqualand West	6⅛	—	6⅜
New Consolidated	23/	—	24/
New Jagersfontein	14½	—	14¾
South African (Pullinger)	15/	—	17/
Spes Bona (Bultfontein)	4/	—	5/
United	2⅛	—	2⅜
United Jagersfontein	16/	—	18/
London and Orange Free State Explor.	4¾	—	5¼
London and South African Exploration	16½	—	17
Read's Drift Land Co.	2½	—	2¾
Burma Ruby Mines	1 11/16	—	1 13/16pm.

Australians.

There has been little or nothing doing in this market during the week, and prices are in consequence lower or without change.

A fall is shown in British Broken Hill of ⅛; Gympie Great Eastern. 6d.; and Mount Morgan, 6d.

Indians.

Dulness has been the feature of this market since we last wrote, and the disturbance of the Copper Market has affected these as well as other shares. We cannot record a single rise on the week, but a fall has taken place in Balaghat (17s. 6d. paid) of 1s.; Balaghat (fully paid), 1s. 6d.; Devala Moyar, 6d.; Glenrock, 6d.; Goldfields of Mysore, 1/16; Indian Consolidated, 1s.; Mysore, ⅛; Mysore Reefs, 6d.; Mysore Wynaad, 6d.; Nine Reefs, 2s.; and South-East Mysore 6d. No other changes to note.

Foreign Mines.

Business in low-priced shares has been somewhat restricted, since last Friday. A considerable number of speculative transactions have been recorded, but the shares have not been freely taken off the market. If only a tenth part of the business done was lifted, quotations would greatly improve. The fact is that the public generally do not take up the stock they purchase. The following have risen :—Coromandel, 1s. 6d.; Montana, 1/16; Palmarejo, 2s.; St. John Del Rey, 6d.; and Transvaal Gold 3s.; whilst the following have receded :—Balkis, 6d.; Callao Bis, 1s. 6d.; Carlisle, 6d.; Colon, 6d.; Don Pedro, 1/16; Garfield, ⅛; La Trinidad, 1s.; Monte de Oro, 6d.; Orita, ⅛; Viola, 6d.; Viso, 1/16; and West Argentine, 1s.

Copper.

The cry of the Copper market is ever downward, and so far as one can see into the future there appears to be not much hope for immediate improvement. There cannot be a shadow of a doubt that this market is in a very unhealthy condition. It is only necessary for us to quote prices of one stock—viz., Rio Tinto—for the past few weeks to prove this. On February 16th, Rio Tinto stock closed at 20¼, February 23rd, at 19⅛; March 2nd, at 16 11/16 to 16 13/16; March 9th, at 14 7/16 to 14 9/16, and this evening at 12⅝ to 12 7/8, and the shares have even been lower than this. Of course, as a natural consequence, all copper shares have suffered proportionately to the same extent, and hence we are unable to record a single rise. The following have fallen :—Bratsberg, 6d.; Cape Copper, ⅛; Copiapo, ⅜; Libiola, ¼; Linares, ½; Mason and Barry, 1/16; Rio Tinto, 1 13/16; and Tharsis, 7/16.

The following list shows the principal changes which have taken place :—

	Last Week.			This Week.	
Carn Brea	15½	16½		18¼	18½
Dolcoath	100	101		101	102

LATEST FROM THE MINES.

Indian Mines.

Balaghat-Mysore.—The directors have sold the gold produced during January for 707*l.* 0s. 7d.

Colonial Mines.

Coromandel.—A cable message from the manager states :—"There is an improvement in the 80 ft. rise on Venus lode, rich picked quartz."

Livingstone.—Cablegram from the mine, March 13 :—"Have sunk 19 ft. since last cable. The width of the vein two feet, second class quality."

Midas.—Cable from the mines :—"Yield for week 64 ozs. (262*l.*) will improve next month."

Mosman.—A cablegram from their manager in Charters Towers, Queensland, dated 9th March, states :—"North Australian Mine : Mine is improving. Have crushed 107 tons of quarts, and obtained 287 ozs. of gold. Eastward Ho ! Mine : This mine is looking well. —Holliman." Note.—The above crushing gives an average yield of 2 ozs. 13 dwts. 15¼ grs. of gold per ton of quartz crushed. Approximate value, 1,000*l.*

Mount Leyshon.—Cable was received on 11th March :—"Crushed, 91 tons ; yield, 39 ozs. gold ; 10 heads of stamps worked 91 hours."

Mount Perry.—A cablegram from the resident manager at the mines which reads as follows :—"Nine tons of matte 24 tons of copper, value 1,750*l.*, per Jumna, at the rate of 60 (tons per month) means to infer will increase next month."

Foreign Mines.

Alamillos.—Dividend : 1s. 9d. per share.

Fortuna.—Dividend : 4s. 3d. per share.

Garfield.—A cablegram from Mr. Hooper, the superintendent at the mines, shows the results for the month of February :—Production, $7,400 ; revenue expenses, $8,100 ; capital and development expenditure, $1,400. Tons crushed 300.

Linares.—Dividend : 4s. 3d. per share.

New Emma.—The following cablegram has been received :—"Prospects are improving in cross-cut from No. 1 level ; nothing fresh to report at other points.—Cullins."

Ouro Preto.—Last month's return of gold is as follows :—2,170 tons of quartz produced 7,257 oits. of gold (837 ozs.).

Pinos Altos Bullion.—Telegraphic advices state that the outturn for the week ending 9th March was $11,000.

Rio Tinto.—Payment is announced of the drawn bonds of the 5 per cent. issue of 1880, and coupons on the 5 per cent. issues of 1880 and 1884, due 1st prox.

Zaruma.—A telegram from the manager, under date 14th March, states that the first 100 tons stamped yielded 100 ozs. This result gives a much better return per ton than has been obtained from any previous crushing.

Home Mines.

Devon United.—The company has made a call of 2s. 6d., making the shares 10s. paid.

West Wheal Bostrase.—A meeting of shareholders of this mine, recently started on the Balleswidden (St. Just) sett, was held on Saturday, when a balance in favour of the adventurers of 185*l*. was shown. As the license expires in about two months' time, the leases of the sett are to be ordered, so that a larger company may be formed, or the mine offered as a going concern, as may be decided on at a future meeting.

Wheal Uny.—A call of 5s. was made towards the liquidation of a debit balance of 3,380*l*.

(*Commercial Notes, Metals, &c., see page 455.*)

SOUTH AFRICAN NEWS.

LATEST TELEGRAMS, &c.

The Johannesburg Chamber of Mines reports that the amount of gold deposited in the banks for January was 34,986 ozs.

A Transvaal letter states that whisky on sale at the goldfields is 62s. a bottle, champagne 25s. and beer 4s. a bottle. This is bad news for the bibulous emigrants from the mining market here.

A correspondent, who signs himself "Investor," considers the article in the *Pall Mall Gazette*, to which we referred last week, "to have been written by some disappointed speculator, who vents his spleen for his ill-success by seeking to injure the property of the more intelligent persons who have discovered the wealth of the Witwatersrandt Gold Fields." Mr. Edmund Meck Slatter writes from Torquay, "with the view of removing the stigma cast on the various companies now legitimately at work." From his concluding remarks, however, it will be seen that the British investor has every need for caution. He says—"I fear that some companies are floated on this side on nothing more tangible than the delusive results of a chemical assay of a few pounds weight of quartz, when the facilities for obtaining a fair result by by milling, say, 100 tons of quartz was anywhere available on the spot, and which, had it been done, would have proved beyond a doubt the real value of the mine. It would, I think, be more satisfactory to the British iuvestor, who is tempted by attractively worded prospectuses, promising comfortable dividends, to enter into all and every kind of business with which he knows practically nothing, if the promoters would guarantee not to sell any of their own shares until the company had paid, out of profits, aud after paying all expenses, a satisfactory and given divideud. This would show to some degree that the promoters believed in the soundness of the venture, and were willing to run some risk themselves. I think we should then hear less of bogus companies."

Pondoland Exploration.—The offices have been removed from Winchester House to 34, Walbrook, E.C.

Robinson.—The following is the return for February :—499 tons, 2,357 ozs. ; nine stamps working 23 days.

West Battery Reef.—The certificates for shares are now prepared and ready for delivery at the company's offices, 2 Gresham Buildings, E.C.

London and South African Exploration.—The books of this company will be closed for dividend purposes from the 20th to the 31st March (both iuclusive).

Gordon Diamond.—Return of work done at mine for week ending 9th inst. :—Loads blue hauled, 8,700 ; loads blue washed, 5,500 ; diamonds produced valued 1,700*l*.

Essaman.—The company have sold, through Messrs. Johnson, Matthey and Co., 181½ ozs. gold, being produee of January crushings, realising 708*l*. 10s. 6d., or at the rate of 3*l*. 18s. 1d. per oz. A telegram advises February crushing :—"175 ozs."

South African.—The following particulars of work relate to the week ending February 9th : Blue ground hauled, 4,795 loads ; blue ground washed, 1,523 loads ; sumps washed, 2,646 loads ; diamonds obtained, 778 carats ; estimated value, 778*l*.

Jumpers.—The secretary has received the following cablegram from Johannesburg :—"Crushings for last month amounted to 1,630 tons, which produeed 1,615 ozs., net profit 3,134*l*. Meeting highly satisfactory, havo declared a dividend of 10 per cent., payable 25th April. Close register 18th March for seven days."

Wassau (Gold Coast).—The remittances of gold for the month of January last wero 141·40 oz., of the nett value of 530*l*. 9s. During that month the mill ran 27 days 7 hours, and crushed 401 tons of ore, the yield of gold per ton being 0·36 ozs. Searcity of water for reduction purposes materially affected the yield of this month.

De Kaap.—The secretary reports that Mr. Arthur Bowden, who has been appointed general manager and miuing engineer to the above company, sailed by the Pembroke Castlo last week, to take up his position at the mines. An accountant, carpenter, blacksmith, timberman, and mining foreman, also left by the e vesmsael.

Kruisrivier ("Whitehead's.")—The last report states that the cobalt bloom, together with copper, nickel, antimony, and other metals, oxtend throughout the range on the property, and from the assays made independently by the assayer to the Bank of South Africa, yielded, in one instance, 30 per cent. of eobalt, aud in another 23 per eent. These facts, together with the 25,000*l*. worth of eobalt and gold ores already sold from one mine alone, prove it to be the richest cobalt property in the world, exclusive of its other mineral value in gold, copper, nickel and antimony.

Great She.—The shaft ou the Magnet block has been sunk to a depth of 66 ft. ; rate of progress being 1 ft. per day. The 50-fm. low level drive on Syudicate block is pushed forward by night and day shifts, rate of progress being 2 ft. per day. The quartz becomes richer as the work goes forward. On the Standard block, adjoiuing the Sheba, considerable work has been accomplished during the past week, and a high level drive east will be commenced in a few days. The ground for the Sheba steam tram is now pegged out over most of the blocks, ready for active work ; some of the cuttings will effectually prospect portions of the property.

Wemmer.—W. J. B. Ablett (chairman) writes : A statement having appeared in the prospectus of the Wemmer, Ferreira, and Worcester Deep Level Developing and Gold Mining Co. to the effect that the reef of the Wemmer Co. will be struek in the deep level of about 800 or 1,000 ft., the directors of the Wemmer Co. do not feel justified in allowing such a misleading statement to pass uncontradicted, as it might lead to misapprehension and doubt in the minds both of the public and of this company's shareholders in respect to the limits of the Wemmer reefs. In disproof of the statement referred to, I beg to hand you a letter froun the consulting engineer of the company, addressed to our inspecting director (Mr. Goeh) and shall feel obliged by your kindly inserting it in your next issue :—"Johannesburg, February 1st, 1889.—In reply to your enquiry, I have the honour to inforn you that the dip of the reef knowu as the Wemmer leader in the Wemmer Company's ground is as near as possible 80 degs. to the south. The actual distance from the outcrop to the southern boundary is 640 ft. ; this is at the main shaft, about the nearest point to the boundary. Where we are working on the reef she makes 20 ft. to the south, in a depth of 123 ft., so that to strike this reef on your southern boundary it would be necessary to sink a shaft 3,936 ft. deep. I may mention that there is no perceptible change in the dip from the surface to the 123-ft. level ; aud, further, that this is the most southern reef we are working upon, the other reefs from which we are extracting are lying to the north of it.—J. Butler, A.M.I.C.E., Consulting Engineer."

Transvaal Gold Exploration and Land.—Owing to an error in transmitting one of the code words of the telegram received on Friday last, the message in question should read as follows : "Crushed, 525 tons in 18 days (of 24 hours), yielding 775 ozs. Treatment of tailings in the pans yielded 180 ozs. ; total for February, 955 ozs., instead of 1,130 ozs., as previously advised. The following particulars are from the manager's advices 11th February :—Bullion—On 5th February a shipment of four bars melted gold, weighing 283 ozs. 11 dwts., value 1,025*l*., was forwarded through the Standard Bank. Mines—Theta Vein :—During week we have extracted 60 tons, assaying 5 ozs. 4 dwts. of gold, and 2 oz. 18 dwts. silver per ton. The vein continues to look well, and without material change. Transport was being well maintained, six waggons having been at work all week. Columbian Hill—Borehole No. 3 has been sunk 28 ft. through a very hard slate formation ; total depth to date, 89 ft. Beta Vein—The weight extracted here was 10 tons, assaying 16 dwts. per ton. We have commenced to strip a new paddock. Brown's Hill Mill Battery—The battery was at work for 115 hours during week, and crushed 122 tons from the newly-discovered Theta vein ;the ore assayed 7 ozs. 10 dwts. of gold per ton. A clean-up of the plates and mortar-boxes yielded 1,054 ozs. of amalgam. The return of gold will be given next week. The battery was to be restarted on 11th February on the small parcel of Zeta vein ore lying at the mill (about 180 tons), and thereafter crushing of ore from Theta vein would be resumed. Pans—The pans were at work for 116 hours, and treated 39 tons of blanketings from Delta and Eta ores, assaying 2 ozs. 7 dwts. per ton. Clean-up yielded 231½ ozs. of amalgam."

Nooitgedacht Estate.—Extract from Mr. Sweet's report, Feb. 12th. New reef : No. 3 level is in 100 ft., and has a lode 3 ft. thick composed of 2 ft. of rich quartz, and 1 ft. of stuff much mixed with country rock. The whole will afford at the mill at least 20 ozs. per ton. The drive going east of No. 3 end has considerably improved both in quality and thickness of ore, and is now yielding fully 1½ tons of quartz per foot, worth 30 ozs. per ton. The westeru drive is carrying rich quartz, filled out with water-worn pieces of iron matter besmeared with gold, a small specimen of which I herewith enelose. The vein is soluble, about 1 ft. thick, and inasmuch as I have made no assay of it, I would be afraid to give its value, still I can with safety put it at 4 ozs. per ton. The drivages east and west of No. 2 are opening up good stoping ground, the vein arranging iu thickness 2½ ft. ; No. 5 is poor, but I have great confidence, we shall see a chauge here for the better as soon as we reach the run of ore iu No. 2 and No. 3 levels. Button's reef, No. 3 section : The diorite dyke is eoming into the end very slowly, and some time will elapse before we shall be able to report a change. In the cross drive west the lode holds fairly well, averaging 2 ft. in thickness, and worth 1½ oz. per ton. The eastern cross-drive is goiug forth rapidly, and will soon be in far enough to eommence driving backwards to hole to No. 1 level east. In No. 1 level east the ore has widened to 5 ft., but it continues of a low grade. No. 4 section. The lode shows no falling in value ; on the other hand the pyrites and the milky-white quartz look richer. In both cross-drives the reef has increased in width, averages now 4 ft., and will yield of free gold 10 ozs. per ton. Reserves : You will be pleased to learu that the cross-drives are more than confirming the estimate I made of the ore in sight at the end of October. The only break in the lodes we have hitherto come across is the dyke in the eastern eross-drive from No. 3 sectiou main level, and so far as I am eoncerned I look upon these faults as a means of good, as it is near thero the lodes make richest. Race : I have taken on a few extra hands. and hope by the end of February to get this piece of work out of hand.

YURUARI CO., LIMITED.

LATEST CRUSHING.

We are advised by the assistant secretary that the following telegram has been received from the mines :—"February, crushed 1,750 tons, obtained 450 ozs. of gold, 15 days, 50 stamps. Commeneed stoping water shaft."

It is annonneed that Mr. Lewis Chave has joined the board of George Neal and Co., Limited.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (13th March).—The lode in the 40-fm. level east of junction and west of old engine shaft is from 3 to 4 ft. wide, and will produce 7 tons of mixed ores per fm. In the 40-fm. level, west of Haley's winze, the lode produces 4 tons of mundic and copper per fm. There is no important change to notice in the stopes in back of the 40 east, which are producing their usual quantities of ores. Cook's stopes below the 30-fm. level east are somewhat disordered by a crossing of capel and quartz. The large lode, near the junction, west of old engine shaft below the 30-fm. level is producing very well for copper and mundic ores. No change in any other part of the mine to notice.—T. Gregory.

BULLER AND BASSET (12th March).—Copper Hill, main shaft: The shaftmen, during the past fortnight, have cleared and timbered a further distance of 8 fms. 3 ft. at the 84-fm. level. They are now through the choke previously reported. and the level for 10 fms. eastward from the present point will only require some timber being put in.—J. H. James.

CARPUAN (11th March).—During the past week we have squared down the shaft upon the lode which is presenting a fine appearance, being fully 5 ft. wide, and worth 20*l*. per fm. We have also hauled a few tons of the lode to surface, which is rich in tin. I have instructed the men to collar up the shaft with all possible force, after which we shall commence sinking on the course of the lode.—R. Knott.

DRAKEWALLS (14th March).—In consequence of the very heavy floods, and so much water going down throughout the mine, but very little has been done at the bottom or 147-fms. level since last advised. I am, however, pleased to say that the water is again in fork, and hope to get on without further hiudrance. I have suspended the driving of the 132 east for the time, and put the men to stope down a piece of the lode on the north side of the drivage, for the purpose of ascertaining if there is a more productive part standing in this direction. There is no change worthy of notice in the 132 driving west. The lode in the winze sinking below the 132 west continues to yield 8 tons of copper and mundic ores per fm. for the length 9 ft., and is exceedingly promising. The stope in the north side of the 132 west is producing fully 5 tons of copper and mundic ores per fm. In the rise in the back of the 117 west the ground is favourable for exploration. All the surface work is being got on with very satisfactorily.—H. Rodda.

EAST BLUE HILLS.—The operations are proceeding satisfactorily, and the monthly returns of tin are about meeting the cost. The drivage on the Pink lode is being pushed on as fast as circumstances will permit.

GREAT FORTUNE.—The general meeting of shareholders was held on Thursday last. The accounts for the four months showed a small loss, to meet which a call of sixpence per share was made. The agent's report of the prospect was exceedingly satisfactory. During the coming spring the old mine will be drained 10 fms., from which it is believed the increased area of tin ground on the several branches will enable the mine to be worked at a profit. The tin is of the richest quality in the county, and the ground increases its productiveness in depth.

MID-DEVON.—Report for week ending 9th March.—Surface: From 9 to 10 ins. of snow fell here on Monday last, attended by a high wind and causing large drifts, impeding all surface work. In the first three days, and yesterday, we had a very heavy fall of rain, which continued 12 hours. The machinery, except stopping 5½ hours on Wednesday to repair a breakage in surface rods, has done good duty, and speed kept as nearly as possible to five revolutions per minute. A shaft: The water is 9 ft. below the 80. The influx to shaft has not yet abated. C shaft: A contract has been set to six men to sink shaft 9 ft. below depth on Monday last, and it has been sunk 3 ft. A trip-plat below the 60 is also to be taken out; this work will be proceeded with all speed, it is being done for the more expeditious removal of attle from present and future workings at this level. The 60 east has been driven by nine men 1 fm. 1 ft. 6 ins.; total distance from shaft, 32 fms. 6 ins. The strata is much harder, being principally composed of capel and compact garnet, carrying a little ore and arsenical mundic; apparently it is a bar of capel which is occasionally met with in our drivages. The 50 east stopes No. 2, 3, and extreme point of drivage worked on by six, six, and two men, are respectively worth 10*l*. 10s., 16*l*., and 9*l*. 10s. per cubic fm. for copper ore.—J. Neill.

PRINCE OF WALES.—The engine shaft is going down in the main lode, which is 6 ft. wide, maintaining its dip or underlie against the Flat lode, and is valued at 16*l*. per fm. All other points underground are without change. The present favourable weather enables the surface work to be carried on with greater speed.

ROMAN GRAVELS (14th March).—The lode at the 125 is now worth 1¼ ton per fm. We have not yet seen the footwall, where we expect to find the main course of ore. There is no change in the lode at the 110 south since last week. The 80 north-west has improved during the last two days, and is now worth quite 2 tons per fm. The main Cornish pumping engine was stopped working on Tuesday, and we are now taking out the old pitwork from the engine shaft and putting in the new. The old work is all out from the 125-fm. level to the 65, and the new 15-in. drawing lift in place from the 125 to the 110. We shall fix the bottom of No. 1 new plunger lift to-morrow. We are pushing this work with all possible speed, and nothing will be left undone to bring about an early finish. We have to-day sold 100 tons of lead ore for 858*l*. 15s.—A. Waters and Son.

SOUTH CONDURROW (13th March).—The lode in the bottom of Marshall's shaft carries a little tin. The 108 end west is worth 5*l*. per fm. The rise in the back of this level carries low quality tinstone. We are making room in the 66 end west preparatory to rising towards Pendarvis's shaft. The lode in the 40 end east of engine shaft is worth 9*l*. per fm. Three stopes in the back of the 40 are worth 10*l*. per fm. each. The 50 end east is worth 10*l*. per fm. The stopes in the back of this level are worth in the aggregate 35*l*. per fm. The 60 end east is worth 12*l*. per fm. The north part of the lode in the back of the 70 is worth 20*l*. per fm. The 93 east of King's is worth 9*l*. per fm.—W. Rich. W. Williams, H. King.

SOUTH DARREN (14th March).—The 142 end east is without change. The 142 west is still in a big lode, a part of which is being left standing; the part carried is worth 2 tons of silver-lead ore per fm. The stripping has not been extended east much this week, the men having been cutting the lode down to the bottom. In the eastern end it is still worth 1 ton silver-lead ore per fm. The cross-cut in this level seems to be now through the lode which is 12 ft. wide and leady throughout; worth 12 to 15 cwt. of silver-lead ore per cubic fm. The branch of lead we have in the stripping holds back this length, but is not so solid. We think there is no doubt but that this large lode must hold back to the cross-course, and we intend to follow it in that direction. The ground opened in this level this month has greatly imdroved the prospects of the mine, a finer lode than is now in the end has very seldom been seen in the mine. The lode in the 110 end east is large and leady. The 100 end west is worth 12 cwt. of silver-lead ore per fm.—J. Mitchell.

TIN ERA (12th March.)—I am pleased to report that the deep adit cross-cut north is showing indications of important change taking place. The joints all over the end to-day are highly charged with lode-stuff, and the ground appears to be touching better, which, I hope, will prove that we are in near approach to the second lode which we shall open out on by this cross-cut.—R. Knott.

TREGURTHA DOWNS.—Sold for the month, on the 9th inst., 8 tons 7 cwt. of tin ore, at 56*l*. 7s. 6d. per ton, realising net 459*l*. 17s. 6d. Only three out of the four heads of stamps were at work, owing to the breakage of a girder.

VAN (14th March).—The cross-cut south at the 135 is driven 39 fms. south of main lode. The present end of the cross-cut has intersected a lode worth fully 3 tons (or, say, 30*l*.) per cubic fm. On Saturday last the lode seemed so poor that I thought of stopping it. but since then we have cut another very fine rib of lead ore, and to-day we have intersected a joint which seems very much like a hanging-wall; but I intend to go a couple of yards through and beyond it before I promise it to be such. The 120 east is hardly so good-looking to-day as it has been; but we do not mind daily changes so very much, especially in this case, where we only carry about 5 ft. of a 60-ft. wide lode. Were it not for the discovery of another valuable rib of ore in the 135 cross-cut should have put the drilling machine to cross in this level next month, but for the present I must make the best of my resources. The report which I gave at the meeting will still serve for this end of the mine. The only change to notice in the various stopes for better or for worse is the stope in the back of the 120 west, which is rather disappointing, but I have reason to believe that the next cut will show an acceptable improvement. Van Hill: I cannot yet say what the width of the lode is here. We are still crossing, but have not yet seen what we may safely say is pure killas (or country). The ground still contains ribs of quartz and patches of mundic. I am preparing the samples of quartz for trial as rapidly as we can bring the stuff down from the Van Hill to Van, but the weather being at present favourable for farming I am pushing on the ploughing and sowing business so as to prepare fodder for our teams for the next winter. We sampled yesterday 100 tons of lead ore for sale on the 20th.—W. H. Williams,

WEST CARZISE.—During the week some very rich stones of tin have been sent to the office from the supposed junction of the engine and Janie lodes in the 30-fm. level, from which the manager is expecting great things. All the points in operation are producing tin, and a small quantity only of the stuff now being broken would pay the cost of the mine.

WEST WHEAL GRENVILLE (12th March).—Hitches have been cut and bearers fixed for forking lift, and said lift dropped and water drained to 5 fms. 2 ft. below the 80-fm. level. Windlass has been fixed at the 80 for drawing attle, &c., found in shaft to this level, and the shaftmen are now engaged in this work preparatory to again dropping lift. Bearers, &c., have been taken out at the 60, pumpers sent down and plunger lift made good from the 70 to the 50-fm. level, and one of the bucket lifts dispensed with. Poppet heads for Harvey's shaft will be ready for hoisting in position on Thursday.—J. Hodge, J. Skeat.

WHEAL CREBOR.—The various points are progressing satisfactorily, and the 170-fm. level is reported to be improving. No other change.

WHEAL GRENVILLE.—(14th March.)—The water is now seven fms. below the 190-fm. level, and I am looking forward if no let occurs to have the bottom level drained by Monday or Tuesday next, when every man will go to his place to work. The 178 east end is worth about 8*l*. per fm. The 165 east is worth 9*l*. per fm. The stopes are without any change to notice. The 150 and 165 ends west produce low price tin stone. No other change.—J. Hodge.

WHEAL METAL AND FLOW.—The fourth monthly meeting of shareholders was held on Thursday last, and the accounts showed a loss of 90*l*. 11s. 8d. The tin sold during that period, over 16 tons, realised 739*l*., the last sale being 6 tons for the month. The manager gave a very satisfactory description of the metal lode on which they are now operating. It produces, in places, stones of tin of 5 per cent. assay, and it seems very probable that the extension on it of the 35-fm. level east will open into a bunch of ore. The returns from the "flow" will be increased by the additional supply of water for dressing and the contemplated improvements in the dressing arrangements.

WHEAL UNY.—The general meeting was held on the mine on Tuesday last, and was well attended. The accounts showed a loss of 2,979*l*., to meet which a call of 5s. per share was made. The manager in his explanatory remarks, drew attention to the 180-fm. level west, where the lode was 18 ft. wide and productive throughout, and the 190-fm. level was now only 10 fms. behind this point. The general opinion was that the mine had passed through its darkest hour, and that there was a prosperous future before it.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (12th Feb.)—Mine: The north-east drive at 50 advanced last week 17.3 ft. by the machine-drills; total length from shaft, 205 ft. The lode in the present face has a more favourable appearance than for some days past, containing more quartz and less spar. The north-east drive at the 24, San Jose, was driven 5.7 ft. It is producing about 4 tons of black ore per lineal fm. The sinking of the Balvanera shaft was resumed this week under favourable circumstances, and we expect to be able to sink it now much more cheaply than before.—Sanchez.

ANDALUSIAN (6th March).—Barytes lode: The sulphate of baryta has increased in width to above 44 metres, and continues with specks of galena. The adit is 48 metres long. We drove 25.60 metres last month, and hope to do as much this month. Panadera adit: We are driving as fast as we can, as both the Belgian and Guindo on the

same lode further south are good mines, but we must get deeper into the hill. Saturno mine: We have weighed in our first ore, 60 quintals (say 3 tons) for last month from No. 1 shaft. The rain obliged us to stop our end east of said shaft. It then carried 2½ in. of pure galena and looked if anything better in the bottom. We shall resume working to-morrow, as our No. 2 trial shaft has also cut ore, if anything, better than we at first met with at No. 1 shaft. The two shafts will help each other to master the water. I have marked out the place for No. 3 trial shaft further east; we shall sink this altogether on the lode, following its underlie from surface, and thereby see how close to grass it makes ore. These trial shafts are small, and will help us to open out the upper part of the mine quickly, paying for themselves and teaching us where we ought to sink an engine shaft. The Imediata, the Spanish mine west of Saturno, has a foot of galena in a level at a shaft about 140 metres west of our No. 1 trial shaft, and at a depth of 50 metres. This level they are driving towards us.—H. A. HASELDEN.

BALAGHAT-MYSORE.—Report for fortnight ending 19th February is as follows:—North engine shaft: We are continuing to make fairly satisfactory progress with the sinking of this shaft below the 410-ft. level, and with the cutting of the ground necessary for cistern plat, &c. I hope in the course of a few days to have this work so far advanced as to enable us to push forward the driving of the 410-ft. level north. The 330-ft. level north has been advanced 14 ft., or 343 ft. 6 ins. from the shaft. The quartz is about 14 ins. wide, and, as anticipated in my last, has considerably improved, its present value being 2 ozs. 12 dwts. 6 grs. of gold per ton. We have started to sink No. 1 winze in the bottom of this level (300 ft. from shaft), now down 4 ft. below the level. The quartz is about 1 ft. wide, and assays 1 oz. 4 dwts. 19 grs. of gold per ton. (Capt. Pryor, in a separate letter, states that an assay from the bottom stopes of this level gives 18 ozs. 0 dwts. 5 grs. per ton. He has not included this in his report, as he had not been working these stopes during the fortnight). The stopes in the back of this level yield quartz of from 9 ins. to 1 ft. wide, and assay from 1 oz. to 5¼ ozs. of gold per ton. The No. 3 winze in the bottom of the 270-ft. level north has been sunk 16 ft. 11 ins., or 41 ft. 9ins. below the level; it produces a little quartz, viz., about 6 ins. wide, and assays 7 dwts. 20 grs. of gold per ton. The No. 2 cross-cut east has been advanced 5 ft. 7 ins., or 22 ft. 7 ins. from the level. The No. 3 cross-cut west has been driven 4 ft. 6 ins., or 67 ft. 6 ins. from the level. The stopes in the back of the 270-ft. level north yield quartz from 1 ft. to 15 ins. wide, and assay from 9 dwts. 3 grs. to 3 ozs. 5 dwts. 8 grs. of gold per ton. The 165-ft. level north has been advanced 4 ft. 9 ins., or 460 ft. 9 ins. from the shaft; the quartz is about 2½ ft. wide, but this week it only gives a trace of gold. Air shaft: The driving from the bottom of the winze at the 95-ft. level north has been extended south in the old workings to where they were met with in the stopes, in the back of the 165-ft. level, with the result that the ventilation is much improved, this being the object of the work; this drive will now be suspended. Surface: All the general work is progressing satisfactorily.—Capt. PRYOR.

BARANCANNES (7th March).—Monthly report.—Erection of new machinery: The past month has been entirely devoted to this work, which we have been pushing on with all possible speed. In my last monthly report I stated we had cut a tip-plat at the 44-fm. level, fixed bearers and cistern at that level, and had just commenced to fix the new 12-in. pitwork. Since then we have reared up the column to the 24-fm. level. At this level we have cut hitches, put in bearers for cistern, cut ground for cistern plat and pole connection, put in the cistern, fixed the plunger lift, which is reared up to the surface, and we are now busily engaged fixing the main rods, catches, and stays, &c. Surface work: In the past month we have finished the engine-house walls and put on the roof, and the new engine is just now on the point of completion. The wrought iron balance bob and box has been completed and connected by sweep rod to the disc crank of the engine. The boiler has been completed and the boiler flues all built. The boiler-house walls are nearly finished and the roof is now being put on. I calculate the work will be completed and the engine working about the middle part of present month. Immediately the above work is completed, we have to remove all the old pit work, &c., from the shaft, and put in a new skip road. This work, however, will not take a great deal of time, and will be got ready with all possible speed. In consequence of the above work going on during the past month, all other mining operations have had to be suspended. But the sinking of the shaft and work in all the various stopes and levels will be immediately resumed on completion of the new machinery. This machinery will enable us to develop the mine to at least the 120-fm. level, and as we have always found the lode improving in depth, we may reasonably expect good results at deeper levels. At the 44, over present bottom level, we have about 50 fms. of good stoping ground opened up, which we are now about to stope away, and which, I think, will turn out a good deal of rich ore. In past month we have forwarded a parcel of 40 tons of ore, which is now en route to England.—D. BRAY.

BATTERY REEF.—Report:—No. 1 shaft drive north at 200-ft. level advanced 65 ft.; drive south at same level advanced 43 ft.; average sample of reef gave 4 ozs. 3 dwts. 12 grs. per ton. No. 2 shaft is now down 240 ft., and drive commenced towards No. 1 at the 200-ft. level and driven 38 ft.; average assay across the reef, 1 oz. 17 dwts. per ton. A sample selected from the rich leader in the reef in this level gave 12 ozs. 13 dwts. 4 grs. per ton. The ventilation of this level is now good, and the shafts will be connected in two or three weeks. No. 4 shaft sunk to a depth of 70 ft.; adit to No. 4 shaft driven 130 ft. The battery is complete, most of the machinery for driving it has arrived, and the rest is close at hand.

BONNIE DUNDEE.—Extract from mine manager's report for fortnight ending 19th January. Have raised 160 tons of quartz for the fortnight. No. 3 straight shaft: The contractors have sunk the shaft a further depth of 13 ft., and timbered up 87 ft.; total depth of shaft from surface, 700 ft. A great change has taken place in the shaft during the last few feet, and I expect to break through to the formation in a few feet.

BRATSBERG (4th March).—Hoffnung Mine: No. 2 adit level is worth ½ ton per fm., and looking likely to improve. The winze and the rise in this level are unchanged. No. 3 adit level is yielding ¾ ton per fm., and the rise in this level is worth ½ ton per fm. The mid level at Ball's continues to produce small quantities of ore. The rise in the back of No. 4 level is worth 1 ton per fm. No. 5 level west is unchanged, but No. 5 east is improving, now worth ½ ton per fm. The mid level at Murchison's is worth 1 ton per fm., and the rise in the shallow workings ½ ton per fm. Johannes Mine: The cross-cut is still advancing satisfactorily, and the lode in the winze has further improved since last report. Nærmark Mine: No change worthy of remark. Surface work and remarks: We presume that the Ebenezer, with the last cargo of ore, has been loaded, but we have no information per last post in reference to this.—J. D. HOLMAN.

CHONTALES.—Manager's report:—The Consuelito main level was driven during the past month 13 varas, and rise put up 7 varas; the lode is not yet of any value, and in the end of the main level is again split up, and mixed with the country rock. The cost at the mines for January was 135*l*.

CONSOLIDATED ESMERALDA.—The superintendent states by cablegram that the mill was re-started on Wednesday last, 13th inst. The ore to be crushed is of good quality. Writing under dates February 19th and 26th he reports:—The ore streak in the Durand ledge varies in width from 1½ ft. to 2 ft. with some very rich ore, several small pieces giving extraordinarily high assays; the vein continues well in place, and is about 4 ft. wide. The south drift on 325-ft. level shows a marked improvement both in character of ground and size of ledge. A drift north on the lowest level (375 ft.) has been started; the ledge is 7 ft. wide, looks well, and shows bunches of milling ore.

CORTEZ (16th Feb.)—Work at the mines for the week ending this day was as follows:—The Boss tunnel advanced 24 ft.; formation continues unchanged. Main tunnel: East drift advanced 5 ft. Middle tunnel: West drift stoped 10 tons of ore, of an average value of $50 per ton. Upper tunnel: West drift stoped 8 tons of ore, of an average value of $50 per ton. North-East upraise: Extracted 70 tons of ore, of an average value of $100 per ton. North-west upraise: Stoped 78 tons of ore, of an average value of $150 per ton. Ore hauled to mill, 203 tons; ore treated at mill, 128 tons, containing 83 ozs. silver per ton. We have not shipped any bullion during the week, but have on hand 13,000 ozs. fine silver, which is to be shipped on first outgoing team.—WELSH.

CORTEZ.—The directors have received the following report from Mr. Welsh, the superintendent at the mines, under date of February 24th.—Ore hauled to mill 208 tons. Ore treated at mill 120 tons of an average value of $72 per ton. Bullion shipped, 13,000 ozs. fine silver.

DAY DAWN BLOCK AND WYNDHAM.—Extract from mine manager's report for fortnight ending 21st January.—No. 1 shaft—Underlie: This shaft has been sunk a further depth of 6 ft. for the fortnight, making total depth below No. 7 plat 41 ft. The formation is 7 ft. between the walls with 1 ft. of stone. I expect the reef to make larger in a few days more. No. 7 level east: The contractors have driven 13 ft., making a total distance of 29 ft. from the shaft. The reef is 5 ft. thick, of medium quality. No. 6 level west: The contractors have driven this level a further distance of 14 ft., making total distance from shaft 204 ft. The stopes above this level are looking fairly well. The reef will average 4 ft. thick, and worth 22 dwts. per ton. No. 6 level east: Stoping is being carried on with eight men on a reef, averaging 3½ ft. thick, valued at 22 dwts. per ton. No. 5 level west: The reef will average 18 ins. thick of payable quality. No. 4 level west: Stoping is carried on above this level. On the hanging-wall reef the stone is 3 ft. thick, worth 1 oz. per ton, and on the footwall reef 4 ft. wide, worth 30 dwts. per ton. No. 3 shaft: The contractors have sunk this shaft a further depth of 17 ft., making total depth from surface 439 ft. Ground is still hard granite.

DAY DAWN P.C. (19th Jan.)—Fortnightly report.—The output of quartz is 1,815 trucks, estimated at 876 tons. The amount of stone hauled from No. 1 shaft, and each level is as follows:—Shaft, 135 trucks; No. 10 level, 721 trucks; No. 9 level, 318 trucks; No. 8 level, 309 trucks; Nos. 6 and 7 levels, 254 trucks; No. 5 level, 78 trucks; total, 1,815 trucks. No. 2 underlie shaft has been sunk a further depth of 6 ft., making a total depth of 186 ft.; ground still very hard and bad for tearing. The air compressor and rock-drills have arrived, and will be placed in position as soon as possible. Machinery in good working order.—T. LESTER.

DEVALA-MOYAR (18th Feb.)—The pyrite winze is now 31 ft. below the deep tunnel. The lode has widened in the west end to 5 ft., and in the east to 3½ ft. It will yield 3 tons pyrites to the fathom, and washes better for free gold than I have hitherto seen it. The tunnel east of cross-cut to communicate with the winze has been driven 21 ft. The lode is larger than the tunnel, and will yield 2 tons pyrites to the fathom. The tunnel west of cross-cut has been driven 6 ft., and is of the same value. The stopes in the back of the deep tunnel are likewise of the same value.—J. WILLIAMS.

EASTERN MYSORE.—Under date of February 19th, the mining superintendent writes:—Northern Boundary: Hodgson shaft—Sunk during the past week 5 ft. We have numerous branches of quartz throughout the lode, and a better strata of ground could not be seen, An improvement may be expected here shortly. The lode matter is full width of the shaft. New shaft sunk in the past week 15 ft.; lode somewhat pinched; slight improvement apparent.

GARFIELD (16th Feb.)—The mill has been working as usual. Yesterday we made a shipment of four bars bullion of the estimated net value $3,341.48 (silver at 92 c.), weighing 509 lbs. (avoir.)—HOOPER.

GOLDFIELDS OF MYSORE (19th Feb.)—Fortnightly report.—The west cross-cut at 165-ft. in Bridge shaft has been driven 5 ft.; total length, 10 ft. The end is in country. The west cross-cut from the south level 105 ft. has been advanced 3¼ ft.; total distance 11 ft.; three branches of quartz have been intersected, amounting to about 2 ft., of poor quality. The east cross-cut from the south level 105 ft. has been driven 2½ ft.; total 6 ft.; the end in country. The north level 105 ft. has been driven 4¼ ft.; total distance from shaft, 67 ft.; there is a small stringer of quartz in the end of low grade. Driving north of middle shaft at 175 ft., an advance of 5¾ ft. has been made; total distance from shaft, 66¼ ft.; the lode in the end, 3½ ft. wide, is mixed with country, but is worth by assay 4 dwts. The south level at 175 ft. has been driven 5 ft.; total, 62½ ft.; about 4 ins. of low grade ore in the end. The north level at 108 ft. has been advanced 3¼ ft.; total distance from shaft, 132¾ ft.; there is about 15 ins. of lode in the end, worth by assay 2 dwts. The south level at 108 ft. has been driven 6 ft.; total distance, 297½ ft.; at present there are no old works in the end. They have gone up in the back of the level, and may come in again. The new shaft south of middle shaft has been sunk 8¾ ft.; total depth, 98¼ ft.; the bottom is

in country. We have to-day started a cross-cut east at 94 ft. to interseet the lode ; we shall then drive north on the lode, and communicate with the 108 ft. south of middle shaft. The new shaft south of Bridge shaft has been advanced 3 ft.; total depth, 70½ ft. ; the bottom is in couutry. Champiou lode : Coromandel shaft has been sunk 2¼ ft. ; total depth, 171½ ft. ; the bottom is in a hard band of country. This is one week's measurement only, as the siuking has been stopped for the last week, as the pitman has been putting in the eistern and fixing the pluuger pole. I hope this will be finished by the end of the week, when sinking will be resumed. Driving south from the west cross-cut at 150 ft., an advance of 16 ft. has been made ; total, 80 ft. ; there is a small branch of low grade quartz in the end. Driving south at 100 ft., an advanee of 29½ ft. has been made ; total distance. 73 ft. The old works are eonsiderably wider than the end, and from a few stringers of quartz left by the ancients, we have had fair shows of free gold. New prospect shaft has been suuk 5 ft. ; total depth, 199 ft. ; the bottom is in country. The small branch of quartz mentioned in my last has dipped out of the shaft to the north, and is probably a leader from the lode. We have 5 ft. more to sink for a sump, and then shall drive north at 200 ft. about probably the beginning of next month. The new shaft near Balaghat is now down 40 ft., an advance of 10 ft. having been commenced—the west one has beeu driven 2¾ ft., and the east 2½ ft. Nothiug of importanee has been iutersected yet.—J. Samborne.

MONTE CHRISTO.—The manager writes under date, 14th Jan., that his usual fortnightly report had not been sent owing to his having been down to Cooktown to fetch the pumps sent out by the company. The pump is now in position so that his anxiety on this head is at rest. On account of Christmas holidays the main shaft has been sunk ouly 12½ ft. during the four weeks ; total depth 269 ft. 6 ins. aud no improvement. The lode in the bottom has pinched to about 5 ins. of poor quality ; the stone is of good eharacter and highly mineralised, the surrounding country being black slate ; in fact just the ground in whieh one would expect to find payable gold. The cast-drive has been driven 28½ ft. ; total length 148½ ft. ; no ehange to report. West Monte : Quantity raised from shaft about 36 tons, which will be crushed as soon as possible. Endeavour shaft has been cut down and timbered the whole way. Poppet heads are to be erected, as also one of the boilers and winding engines sent out by the company, which have arrived on the spot. Norton : A shaft has been commenced on this reef ; stoue at present is in broken up leaders carrying little gold ; good stone has been obtained close at hand, and will probably make again in a few feet.

MONTE DEL ORO (5th March).—Fortnightly report :—Taylor's engine shaft : Since my last report the 186-ft. level south of the eross-cut has been extended 16 ft., its total length being 176½ ft. Although it is somewhat smaller than formerly the lode still carries a good-looking vein of quartz from 12 ins. to 18 ins. wide. In the cross-cut west of the engine shaft no more quartz has been met with since passing the vein I reported ou a fortnight ago. If after driving a few feet further no other lode is encountered, I shall suspend this work and put the men to drive on the branch, intersected at a distance of 40½ ft. from the shaft. Shaft No. 6 : Considering the nature of the work very fair progress has been made in cleaning out the old workings north, the total length from the shaft now being 66 ft., of which 26 ft. were eleaned out in the last fortnight, and as yet there are no signs of being through them. Operations here were suspended yesterday. aud the men set to clean out iu the bottom of the level, a short distanee from the shaft, so as to reach, if possible, the bottom of the old workings. Shaft No. 5 : The ground we were driving through in the end north of the shaft proved to be only a pillar left standing by the ancients, so that now we are again in old workings. Occasional braneches of quartz, varying in width from 12 ins. to 18 ins., aud whieh give a fair show of free gold by panning, are being eneountered in the footwall. Winze No. 1 : On Friday last this winze was communieated with a rise started the previous week from the back of the 186-ft. level south of the cross-cut. The total depth of the winze from the bottom of the 76-ft. level to the back of the 186-ft. level is 211½ ft. Dnring the month the lode, which is composed principally of a soft flookan, has averaged in width from 6 ins. to 12 ins. The men who were sinking the winze have now commenced to drive a level north of it, at about 60 ft. below the 76-ft. level, on a lode of quartz 5 ft wide. In fnture reports this will be called the intermediate level. —J. Roberts.

MONTE DEL ORO.—The following are the results received of assays made in Londou of eight samples taken from different parts of the mine, viz. :—No. 1 sample of quartz from footwall north of shaft No. 6, assayed 6 dwts. 13 grs. gold per ton ; No. 2 sample from south end assayed 3 dwts. 22 grs. gold per ton ; No. 3 sample from No. 1 winze assayed 3 dwts. 22 grs. gold per ton ; No. 4 sample of quartz, 1½ ft. wide, from footwall north of shaft No. 5 assayed 1 oz. 17 dwts. 21 grs. gold per ton ; No. 5 sample from north of No. 6 shaft assayed 6 dwts. 6 grs. gold per ton ; No. 6 sample from south end assayed 4 dwts. 8 grs. gold per ton ; No. 7 sample from north of No. 5 shaft assayed 1 oz. 3 dwts. 21 grs. gold per ton ; No. 8 sample from wiuze No. 1 assayed 3 dwts. gold per ton.

MYSORE (19th Feb.)—Mining operations : The mine generally is looking very well, and we are still opening out large reserves of ore. The 466-ft. level north of Taylor's shaft was driveu in the last fortnight 29 ft. 6 ins., making a total of 499 ft. 3 ins. ; the lode in the present forehead is 4 ft. wide, assaying 4 ozs. 18 dwts. The 400-ft. level north of Taylor's shaft was driven 31 ft. 2 ins. ; total, 588 ft. 4 ins. ; the lode eontinues to hold on strong and rich ; it is 5 ft. wide, assaying 3 ozs. 16 dwts. 16 grs. The 296-ft. level has not been driven in the last fortnight ; the men are rising in the baek towards the new shaft, which has been put up 19 ft. 6 ins. ; total, 32 ft. 6 ins. ; the lode is 5 ft. wide. assaying 5 ozs. 14 dwts. 17 grs. The 236 level north of Taylor's shaft was driven 28 ft. ; total, 418 ft. 9 ins. ; the lode is 15 ins. wide, assaying 2 ozs. 12 dwts. 6 grs. The 296-ft. level south of Plummer's shaft was driven on the west branch 4 ft. ; total, 81 ft. 10 ins. ; the lode is 4 ft. wide ; no assay was made. The 236 ft. south of Plnmmer's shaft, and the 173 ft. south of Williams' shaft continue to be in barren rock. McTaggart's shaft : The 152 south of McTaggart's was driven 17 ft. 10 ins. ; total, 314 ft. 8 ins. ; the lode is 4 ft. 6 ins. wide, assaying 13 dwts. 1 gr. The 220 south of Schaw's was driven 4 ft. 5 ins. ; total, 52 ft. 9 ins. ; the lode is 3 ft. wide, assaying 5 dwts. 5 grs. The cross-cut in the 160 ft. south of Sehaw's shaft is so hard that we cannot get men to work it, and I do not fancy we can do mneh more there until the rock-drills are set to work. Teunant's shaft : The 180 ft. south end was driven 3 ft. 4 ins. ; total, 62 ft. ; the lode is 1 ft. wide, assaying 1 oz. 12 dwts. 16 grs. The 180 ft. north was driven 5 ft. 2 ins. ; total, 60 ft. ; the lode is 1 ft. wide, assaying 18 dwts. 7 grs. Stopes : These are generally looking well to the north of Taylor's shaft ; the stope in the back of the 466 on the wide lode is 3 ft. 6 ins. wide, assaying 7 dwts. 20 grs. Over the 466 on the eastern part the lode is 3 ft. wide, assaying 2 ozs. 5 dwts. 17 grs. In the bottom of the 400 it is 3 ft. wide, assaying 9 dwts. 19 grs. In the bottom of the 296 it is 3 ft. 6 ins. wide, assaying 2 ozs. 9 dwts. In No. 1 stope, in the back of the 400, the lode is 3 ft. wide, assaying 2 ozs. 3 dwts. 22 grs., and in No. 2 in the back of the 400 it is 2 ft. 6 ins. wide, assaying 2 ozs. 12 dwts. 6 grs. The stopes to the south of Taylor's shaft are for the present idle, but will be resumed as soon as the labour gets more settled. Sinking in the bottom of the 466 ft. uorth of Taylor's shaft on the west lode, and sinking a winze in the bottom of the 466 on the east lode ; the vein in the former is 6 ft. wide, iu the latter 3 ft. wide ; no assays were made. Rowse's shaft (late new air shaft) north of Taylor's has been sunk 10 ft., making a depth of 79 ft. Last week the men have been engaged putting on poppet heads, &c. ; now they are employed putting down the skip-road. When this is completed the stuff will be lifted out with a small steam engine, and we hope the progress will be better. Sinking Schaw's shaft below the 220 ft., 8 ft. 9 ins. were cut ; total, 50 ft. 3 ins. ; the lode is 4 ft. wide, assaying 3 dwts. 6 grs. Tennant's shaft was sunk 5 ft. ; total, 212 ft. ; the lode is 14 ins. wide, assaying 2 dwts. 14 grs. Samples from old mill, 3rd February, 1 oz. 19 dwts. 3 grs. ; ditto, 9th February, 1 oz. 15 dwts. 22 grs. Sample from the new mill, 9th February, 2 ozs. 1 dwt. 18 grs. ; ditto, 18th February, 2 ozs. 7 dwts. Sample from the old mill, 18th February, 2 ozs. 1 dwt. 18 grs.—B. D. Plummer.

MYSORE WEST.—Report for fortnight ending February 19th :—Walker's shaft: The pumping engine and new pitwork are working exceedingly well, and with the greatest economy. We got the water out, and resumed the rock-drills in the bottom level on the Saturday following my last report. The 300 north : This heading has advanced 4 ft., making 10 ft. 4 ins. from cross-eut. Here we are still on the fault without any quartz. The 300 sonth : This heading has advanced 4 ft. 3 ins., making 14 ft. 8 ins. from cross-cut. We have struck reef here, 18 ins. thick, of fair-looking quartz, but as yet giving no result in the assay. The 225 north : This heading has advanced 3 ft. 3 ins., making 115 ft. 4 ins. from shaft : the reef has also been cross-cut 3 ft. into the west wall, showing quartz 9 ft. thick, produeing an occasional trace of gold in the assay. The 225 south : This heading has advanced 3 ft., making 103 ft. 9 ins. from eross-cut ; the reef here is 2½ ft. thick, producing a trace of gold in the assay. The 159 north : This heading has been advaneed 15 ft. 3 ins., making 367 ft. 4 ins. from the eross-cut at Walker's ; the reef here is 2 ft. thiek, produciug at present a trace of gold only in the assay, but this reef is very ehangeable, and is in changeable rock, and may improve at any moment.—Capt. Tregay.

MYSORE-WYNAAD CONSOLIDATED (19th Feb.)—Fortnightly report.—Engine shaft, 100 north : This heading has been advanced 11 ft. 9 ins., making 87 ft. 9 ins. from shaft. The reef here is 4 ft. thick, of ferruginous vein matter, but very little quartz. The water is very quick. Machinery : Since reeeiving the pumping engine and boiler from Mysore West on the 1st inst., we have put both into thorough repair and fixed them in their positions on the mine ; fixed balance-bob, rods, &c., and are to-day fixing pumps in the shaft. In a few days we shall have all this pumping gear at work. The winding engine is working well.—Capt. Tregay.

NEW CALIFORNIA.—Manager's mine report for the first half of February.—Returns for the month of January : 792.50 tons, averaging $10.12 per ton, $8,025 ; receipts from custom milling, $1,129 ; Total, $9,154. The eleau up eomprises shipments from the 14th January to 7th February, ineluslve, and resulted largely from new discoveries in the drifts, stoping having only been in operation a part of this time. Cheques have been given out for $9,114.29, including year's taxes. Deducting taxes and receipts for eustom milling, together $2,250, leaves net eost $6,864.29, of which $2,072 was spent on development aecount, leaving $4,791 for ordinary miue costs. On this basis there would be a profit of about 640/. on the ordinary mining operations for the month. The usual activity has been displayed underground, and the works have beeu carried on satisfactorily. The mill has been pretty well supplied with ore and the full number of heads, 75, have been in operation, 45 on company's ore, and the remainder ou custom.—A. Rickard.

NEW EBERHARDT. — The mine manager reports under date 16th Febrnary as follows :—South drift : There has been assorted and put on the ore dump 7 tons ; assay value of same, $52.00 per ton. Ore body or seam in this drift does not change but very little, we still have the seam of ore, and are in hopes that it may open out larger. North shaft No. 1 drift south from bottom of this shaft has been advanced for the week 8 ft. ; total length, 31 ft. As was stated in my last, there was no change, and I now have put the force in this shaft to sink. North shaft No. 2 drift westerly from bottom of this shaft has been extended 5 ft.; total length, 47 ft. No change to report since last week., North shaft No. 3 drift southerly from bottom of this shaft has been extended 5 ft. for the week ; total length 22 ft. No change to note. East drift from bottom Gore incline has been advanced 7 ft. ; total length, 143 ft. The lime in the face of this drift still contiuucs very hard.

NEW EBERHARDT.—The mine manager reports as follows :—(Feb. 23rd)—South drift: There has been assorted and put on the ore dump 7½ tons for the week, assay value of same $50.28 per ton. No change to note since my last in this place. North shaft, No. 1 : The sinking of this drift has been advanced 7 ft. for the week, and the bottom is in hard black lime ; total depth, 57 ft. North shaft, No. 2 : Drift westerly from bottom of this shaft has been extended 5 ft. ; total length, 52 ft. The face of this drift is now in liue with some quartz. The quartz is of low grade, select sample $11. North shaft, No. 3 : Drift southerly from bottom of this shaft has been extended 4 ft. ; total length 26 ft. The face of this drift is in very hard black lime. East drift from bottom gore incline has beeu advanced 13 ft. ; total length, 156 ft. At 146 ft. we came into porphyry, which is quite hard, but still we can make good headway. As to the thiekness, or what may be in it, or on the other side, we can ouly wait and see, but as it is a change we are anxiously watching it.

NEW HOOVER HILL.—Report for February. Briol's shaft : Driving north at the 230 advanced for the month 8¼ ft. ; the vein of quartz is about 10 ins. wide, and pans $4 per ton. We have driven south-west 7¾ ft. As the ore is split up into small stringers, I have

taken the men from here and put them back in the north drift. The 170 north drift advanced 9¼ ft. There is a small streak in the end about 1 in. thick, which pans $5 per ton. The winze below this level sunk 9 ft. There is a good deal of quartz in the bottom which pans $5 per ton. In the stope below the 130 there is no change to note. Drift south is advanced 6¾ ft. There is a small stringer of quartz coming in from the east, which pans a few colours of gold to-day. The 70 stope continues in fair ore. Mill ran for the month 17½ days, crushed 356 tons of ore, yielding 180.341 ozs. of gold.

NEW LA PLATA.—Report for month ending January:—The output from La Plata Mine during January is about the same as that for December month, notwithstanding the lower value of lead and silver during the past month. Slag dump: The lessees have kept 12 men steadily at work. The royalty to La Plata Company was $141.22.

NINE REEFS (18th Feb.)—Mining operations—Malleson lode, main shaft: The 310-ft. level north advanced 3 ft. 6 ins., a total distance from shaft of 88 ft. 6 ins.; width of vein, 6 ft.; assay, 5 dwts. 5 grs. gold per ton. Morrison's shaft: Sinking under the 185-ft. level has advanced 4 ft. 2 ins.; the total distance below the 185-ft. level now being 27 ft. 6 ins., the part of the vein carried being 6 ft. wide; the assay, 6 dwts. 12 grs. gold per ton. Baynard shaft: The 310-ft. level north has been temporarily suspended, and the men engaged in driving this level are employed in putting a stope over the bottom of the level, in order to meet an intended level south from the main shaft. This work is advisable, as it will, when finished, greatly facilitate the removal of quartz from Baynard's shaft and surrounding parts. The 310-ft. level south has also been temporarily suspended, and the men employed in assisting to stope in the bottom of this level to make it correspond in levels with the 310 north. Stopes: No. 1 stope in the back of the 185-ft. level north of main shaft: Vein, 6 ft. wide; assay, 2 dwts. 14 grs. gold per ton. No. 2 stope in the back of the 185-ft. level north of main shaft: Vein, 6 ft. wide; assay, 7 dwts. 19 grs. gold per ton. No. 3 stope, in the bottom of the 185-ft. level south of Baynard's shaft: Vein 5 ft. wide; assay, 11 dwts. 17 grs. gold per ton. No. 4 stope in the bottom of the 185-ft. level, south of main shaft: Vein 4 ft. 6 ins. wide; assay, 2 dwts. 14 grs. gold per ton. No. 5 stope in the bottom of the 185-ft. level, north of main shaft: Vein 6 ft. wide; assay, 17 dwts. gold per ton. No. 6 stope in the back of the 310-ft. level, north of main shaft: Vein 6 ft. wide; assay 4 dwts. 13 grs. gold per ton. Champion lode, Vyvian shaft: Cross-cut east at the 145-ft. level south of Vyvian shaft has advanced 4 ft. 6 ins., a total distance of 8 ft. The vein has not been intersected, the ground is changing, and we are apparently near the vein. The 95-ft. level north and south of the cross-cut south of Vyvyan shaft on No. 2 vein has advanced 7 ft., a total distance on the No. 2 vein of 17 ft.; the vein is 3 ft. wide: the assay, 2 dwts. 14 grs. gold per ton. Stopes:—North end of south stope in the back of the 145-ft. level south of Vyvyan shaft: Vein, 1 ft. 6 ins. wide; assay, 2 dwts. 14 grs. gold per ton. South end of south stope in the back of the 145-ft. level south of Vyvyan shaft: Vein, 1 ft. 8 ins. wide; assay, 13 dwts. 1 gr. gold per ton. North stope in the back of the 145-ft. level north of Vyvyan shaft: Vein, 1 ft. 4 ins. wide; assay, 1 oz. 0 dwt. 21 grs. gold per ton. In additiou to the above work, we are making preparations to rise in the back of the 145-ft. level south of Vyvyan shaft, and are also continuing the sinking of the new shaft on the Champion lode. The following telegram has been received from Capt. Bennetts, dated March 9th:—"Crushed during the month of February, 660 tons quartz; melted, 91 ozs. gold. A portion of the yield remaining in the blanket sands estimated to contain 30 ozs."—Capt. Bennetts.

NORTH MEXICAN (15th Feb.)—The shaft cannot be sunk at the bottom yet until everything is secured and put in shape above. I had to make a ditch on the rock above the San Nicolas' shaft, so that the water will not trouble us any more, but run away from the shaft on the other side to the creek. That was finished last Tuesday, and next day I started to blast the bluff near the shaft to grade for the whim. I expect to have that graded very soon. The timberman is timbering as quick as possible. I am trying to begin sinking, so as to send you some assays of the ores below, but the lode is so soft that it has to be timbered all through before trying to work below, and it is better to do it at once, and not have any drawback afterwards.—R. S. Carlisle.

NUNDYDROOG (10th Feb.)—Mining operations: One rock-drill is employed in sinking Taylor's shaft; it is down from surface 353 ft. 8 ins.; the rock is hard and barren. One drill is employed sinking Webb's shaft; the depth from surface is 396 ft. 6 ins.; the rock is barren and spare for working. One drill is employed in driving a cross-cut west in the 370-ft. level north of Webb's shaft, 8 ft. were cut; the rock is hard and barren. One drill is employed in a stope in the bottom of the 300 south of Webb's shaft; the lode is 3 ft. wide, assaying 3 ozs. 16 dwts. 12 grs. The stope in the bottom of the 370 ft. contains a lode 3 ft. wide, assaying 2 ozs. 6 grs. The intermediate level south of Webb's shaft contains a lode 2 ft. wide, assaying 9 dwts. 12 grs. In the stope in the bottom of the intermediate level the lode is 2 ft. wide, assaying 2 ozs. 14 dwts. 6 grs., and in the stope in the bottom of the 230 it is 2 ft. wide, assaying 1 oz. 11 dwts. 12 grs. In the middle level the lode is 1 ft. 8 ins. wide, assaying 3 ozs. 1 dwt. The rise in the back of the 230 north of Webb's shaft, the lode is 2 ft. wide, assaying 2 ozs. 5 dwts. 6 grs., and in the stope in the bottom of the 166 there is a small rib of quartz, assaying 1 oz. 0 dwts. 18 grs. There has been a scarcity of labour, and now there is a Hindoo feast, and we expect to be shorthanded all this week. Assay of weekly samples from the mill:—Rough quartz, 2 ozs. 4 dwts. 6 grs.; smalls, 1 oz. 2 dwts. 18 grs.—B. D. Plummer.

OSCAR (8th March).—Below we hand you the monthly report for February:—Oscar lode: The shaft has been sunk 15 ft., and is 72 ft. below the bottom or so-called 400-ft. level. The lode is full of small strings of quartz and calcite, which are impregnated with iron pyrites, representing about 10 per cent. of the whole mass. We were unfortunately, owing to the severe weather, unable to pick it thoroughly, hence had to crush about three times as much rubbish as quartz. Should these strings at a greater depth concentrate into a more compact mass our results will be far more satisfactory, and as the lode has considerably improved during the last 50 ft. we anticipate an important improvement shortly. The 400-ft. level west has been driven 18 ft., and is now 69 ft. from shaft. The No. 3 lode in cross-cut has been driven 27 ft. We are glad to say a very decided improvement has taken place this week. A few more stones with visible gold have been found, and we believe we shall now get some good stuff from this lode. Daw's lode: The shaft has been sunk 20 ft., and is now nearly 59 ft. below the bottom level. The decomposed referred to in last report has been replaced by quartz in the south end, and a similar change is taking place in the northern end. The general appearance in the bottom of the shaft is most encouraging, and we think will continue to improve, thereby increasing our crushing material and the monthly return for gold. Crushed 12 tons of a mixture of quartz and rubbish, which gave 3 dwts. to the ton, or of quartz alone would be 6 dwts. per ton. In the bottom level south the quartz is about 6 ins. wide. Quartz broken and sent to mill gave 6 dwts. per ton. The same level has been driven north 16 ft. Hitherto our levels in this direction have scarcely shown any quartz. This level is an exception, as the whole face is covered with strings of quartz. We passed about one third of the whole through the stamps, or 12 tons, result 3 dwts. per ton. If quartz alone the actual result would be 5 dwts. Rise and stope in back of bottom level: The ground broken produced about 7 dwts. per ton. The winze in the 300-ft. level, which is 3 metres long, has been sunk nearly 11 ft. further. We hope to effect a communication with the bottom level by the end of this or early in next week. From the stope in the bottom of the 300-ft. level the quartz has given a mill result of 5 dwts. to the ton. The stopes above gave a result of nearly ¼ oz. per ton. In the 170-ft. level north the quartz milled about 3 dwts. to the ton. We are now stoping north of the rise, and think it will mill a little better. Mill returns—Oscar Mine: Shaft cross-cut, stope, and small level, crushed 60 tons, result, 3 ozs. 18 dwts.; 400 level west, crushed 10 tons, result, 9 dwts.; No. 3 lode, crushed 10 tons, result, 15 dwts. Daws Mine: Shaft, crushed 12 tons, result, 1 oz. 15 dwts.; bottom level south, crushed 6 tons, result, 1 oz. 16 dwts.; bottom level north, crushed 12 tons, result, 1 oz. 14 dwts.; rise and stopes south, crushed 6 tons, result, 2 ozs.; winze in 300-ft. level, crushed 5 tons, result, 8 ozs. 2 dwts.; stope bottom of 300-ft. level, crushed 27 tons, result, 8 ozs. 2 dwts.; stope back of 300-ft. level, crushed 70 tons, result, 15 ozs. 18 dwts.; rise in 170-ft. level, crushed 12 tons, result, 1 oz. 11 dwts.; totals, 230 tons; 37 ozs. 18 dwts.; which we mail you to-day.—J. DAW.

OOREGUM (19th Feb).—Fortnightly report:—Main shaft: The 250-ft. level driving south on course of lode, 17 ft. 6 ins. have been driven, or 181 ft. 1 in. from cross-cut west; the lode is 3 ft. wide and yields, as per assay, 1 oz. 1 dwt. 19 grs. of gold per ton of quartz. The 250-ft. level driving north on course of lode, 10 ft. 6 ins. have been driven, or 121 ft. 10 ins. from cross-cut west; the lode is at present small; a sample taken from it gives an assay of 1 dwt. 2 grs. of gold per ton of quartz. We are stoping the back of the 250-ft. level south of cross-cut west with one machine; the lode is 1 ft. wide and yields, as per assay, 1 oz. 7 dwts. 5 grs. of gold per ton of quartz. Low's shaft: The 270-ft. level south, south of shaft, the men have been blasting down the side of level where there are some branches of quartz, which give an assay of 2 dwts. 4 grs. of gold per ton of quartz. The 270-ft. level driving north on course of lode south of shaft, 3 ft. 3 ins. have been done, or 5 ft. 3 ins. from cross-cut west; the lode is 1 ft. wide, and gives an assay of 3 ozs. 22 grs. of gold per ton of quartz. This level has communicated with the winze sunk in bottom of the 200-ft. level, and has given us good ventilation for this part of the mine. The 270-ft. level driving north of shaft, 4 ft. 6 ins. have been done, or 100 ft. 11 ins. from shaft; the lode here is widening out; is now 8 ins. wide, and yields, as per assay, 1 oz. 17 grs. of gold per ton of quartz; as we drive on it it will further improve. The 200-ft. level driving north of shaft 4 ft. 6 ins. have been done, or 277 ft. 8 ins. from shaft; this drivage is without change, letting out a little water. The winze sinking in bottom of the 200-ft. level north of shaft, 4 ft. 3 ins. have been sunk, or 42 ft. 6 ins. below the level; there is a little quartz coming in the winze from the footwall. The 200-ft. level driving south on course of lode, south of shaft, 7 ft. 6 ins. have been driven, or 135 ft. 1 in. from cross-cut west; the lode is 2 ft. wide, and gives an assay of 2 ozs. 10 dwts. 2 grs. of gold per ton of quartz. The stope in bottom of the 200-ft. level at the end of cross-cut west, south of shaft, the lode is 2 ft. wide; an assay made from it gives 2 ozs. 7 dwts. 21 grs. of gold per ton of quartz. Probyn's shaft has been sunk 5 ft., or 23 ft. below the bottom of the 300-ft. level; the lode is 4 ft. wide, and gives an assay of 5 ozs. 19 dwts. 8 grs. of gold per ton of quartz; the lode here has improved in appearance since my last report, being now more regular. The 300-ft. level driving north of shaft, 3 ft. have been done, or 12 ft. from shaft; the lode is 4 ft. wide, and yields, as per assay, 1 oz. 14 dwts. 20 grs. of gold per ton of quartz. The 300-ft. level driving south of shaft, 4 ft. 9 ins. have been driven, or 13 ft. 9 ins. from shaft; the lode is 3 ft. 6 ins. wide, and yields, as per assay, 1 oz. 8 dwts. 7 grs. of gold per ton of quartz. The 230-ft. level driving south of shaft, 3 ft. have been done, or 91 ft. 10 ins. from shaft; the lode is 2 ft. 9 ins. wide, and gives an assay of 8 dwts. 17 grs. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level south of shaft, 5 ft. 3 ins. have been sunk, or 18 ft. 9 ins. below the level; the lode, for width of winze carried, is 4 ft. 6 ins. wide, and yields, as per assay, 1 oz. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level north of shaft, 2 ft. 9 ins. have been sunk, or 38 ft. 6 ins. below the level; the lode is 1 ft. 9 ins. wide, and yields 17 dwts. 10 grs. of gold per ton of quartz. The 166-ft. level driving south from shaft, 4 ft. 6 ins. have been driven, or 197 ft. 1 in. from shaft; the lode is 4 ft. wide, letting out a little water, and yields as per assay 6 ozs. 9 dwts. 14 grs. of gold per ton of quartz. The No. 2 rise in back of the 166-ft. level south of shaft, 2 ft. have been done; the lode is 2 ft. 6 ins. wide; no assay was taken from it the past week. All the stopes in the different parts of the mine are looking well, and yielding the usual quantity of quartz. The stamps are working well; the same remark will also apply to all our pitwork and machinery.—W. Martin.

PERSEVERANCE.—Assay report to 14th February:—Battery, 2 ozs. 14 dwts. 11 grs.; Duncan concentrate, 13 dwts. 1 gr.; Duncan tailings, trace only; hand buddle concentrate, 10 dwts. 18 grs.; pyrites new slope B level, 2 ozs. 4 dwts. 16 grs.; No. 1 prospect shaft end in level, 1 oz. 1 dwt. 19 grs.; A level south in B tunnel, 9 dwts. 19 grs.; end B level in B tunnel, 9 ozs. 5 dwts. 3 grs.; B north, 7 dwts. 16 grs.; No. A workings end going into Big Hill, 1 oz. 5 dwts. 10 grs.; A workings, quartz with iron, 5 dwts. 14 grs.; ditto, 8 dwts. 17 grs.; A workings, porphyry, 13 dwts. 2 grs.; A workings, ironstone, 8 dwts. 4 grs.

RUBY AND DUNDERBERG CONSOLIDATED.—Report upon the mines for the week ending 17th February:—Dunderberg: Little change to note since my last communication with you, except that there is a slight improvement between the 600 and 500 levels, where

the ore body up to now has been very small, but has opened out the last three days to 3 or 4 ft. in thickness. We have about 180 tons of ore broken in the mine ready for shipment. The Eagle's drift : The ground in the upraise has been very hard during the last week, and we have only made an advance of 7 ft. during the week, making a total of 125 ft. raised. We have six contractors and 28 tributers at work in the mine. Lord Byron: We have eight tributers at work in this mine ; no change since my last report.

SOUTH-EAST MYSORE (19th Feb.)—Mining operation—Lavelle's shaft, end north : During the past week we have driven 11 ft. 6 ins. ; distance from shaft, 155 ft. Within the last two days the lode has improved ; it is now fully 4 ft. wide, of solid quartz. It is a good-looking lode. We have at this level a length of stoping ground 140 ft. long, in a lode averaging at least 2½ ft. Stope : Nothing has been done here since my last. I do not think the old works will follow on ahead very much farther. As soon as the coolies arrive we shall commence stoping at once. The quartz lately has been rather of a better quality. Rogers's shaft sunk during the past day or two 2 ft. ; depth from surface, 274 ft. Owing to the present state of the ground we cannot put the drill at work, it being far too risky. Owing to the cholera scare labour is somewhat disorganised. If we had our full pare of coolies we should be able to sink at least 4 ft. per week. Should the ground change to enable us to put the drills in, I shall not lose a moment. The lode is still very much mixed up; nothing solid as yet. I find the lode has nearly as great a dip north as it has an angle west ; therefore, we shall have to sink deeper at this shaft before meetiug with the solid lode. The distance remaiuing to be driven before any communication be effected is about 85 ft., and at our rate of driving we shall accomplish it in about seven weeks. This will be a magnificent piece of ground when laid open, more especially if the lode continues as it now is. No assays this week, our assayer having met with an accident. Stamps : Everything connected with the vanners is now almost completed, and we shall re-commence crushing this week.—J. M. Rogers.

VOGELSTRUIS (14th Feb.)—The stopes on main reef are opening out fairly well ; the sides require considerable timber. The drifts on south reef (four being driven) are not looking as well as when last reported on. The reef in three of them is a little tangled ; it, however, calls for only passing notice. No. 3 shaft : We have recently started a new shaft. It is 1,600 ft. west of No. 2 shaft, and about 150 ft. southerly at the main reef outcrop. Its location is not marked on the plan we recently sent, but you can determine and mark in position with above data. We purpose sinking it (water permitting) to the plane of drainage level, or 90 ft. vertical. It is now down 60 ft., and has just passed through the south reef. The latter in the shaft is about 16 ins. wide. The pannings give a fair show of gold, but more extended reference will be made if we are able to cross-cut in at the 90-ft. point and cut the reef.

WEST BATTERY REEF.—January report :—Nos. 1 and 2 shafts are now connected at the 120-ft. level, and the ground between them ready for stoping. No. 1 shaft sunk below the 120-ft. level 17 ft. ; reef in both shafts looks well. Stope south of No. 2 yielded 200 tons of ore. Main vertical shaft sunk to 95 ft., and timbered 72 ft. Yield of gold for the month, 201 ozs. 7 dwts. The battery reef has just been opened at the extreme west boundary of the property, some 3,000 ft. west of the present workings, and is reported to be looking splendid.

WEST INDIAN.—The manager, Mr. Fieux, under date of 12th February, 1889, reports as follows upon the alluvial deposits on the property :—In that part where I have put up the sluice for the purpose of proving the alluvials, I find them not only rich, but they appear to improve more and more every day. In certain parts even the vegetable earth covering the auriferous gravel contains gold enough to pay well for washing. I attribute this phenomenon to the gold carried down by the winter floods. I can assure you that the entire border of the River Jaina, as far up as San Miguel itself, have enormous masses of auriferous alluvials. I have not yet been able to study and assay them all, as they cover such an immense area. They are in close proximity to the water, and are certainly of very great value (d'une importance sérieuse). Every day I receive reports from numerous distant parts of the property, and although they may to a certain extent be exaggerated, I feel sure from the details given that they are not unworthy of credit. From this I form my opinion that there is an enormous area open to us for gold washing, of which up to the present I feel persuaded I have seen but a small corner. I can, however, positively state that the deposits in which I have made small trials with the sluice have in the poorest parts fair contents of gold, and in some parts the contents are extremely rich.

REPORT OF MEETING.

THE BLUE SPUR AND GABRIEL'S GULLY CONSOLIDATED GOLD CO., LIMITED.

A CHAIRMAN WHO WORKS FOR THE INTERESTS OF THE COMPANY—SHAREHOLDERS TAKEN INTO THE FULLEST CONFIDENCE OF THE BOARD—DEBENTURES TO BE ISSUED.

A special meeting of the shareholders of this company, was held at the Cannon Street Hotel yesterday for the purpose of considering and taking action upon a telegram of vital importance received from Sir Robert Stout in relation to the affairs of the company in New Zealand—Sir Walter Buller, K.C.M.G. (chairman of the company), presided.

Mr. W. B. Fabian (the secretary) read the notice calling the meeting.

The Chairman stated that the meeting was called in order that the the directors might take the shareholders into their confidence and consult with them as to the advisability of providing for the urgent needs of the company, and laying before them particulars of the present state of things in New Zealand. The board had the power to issue debentures without consulting the shareholders, but they had felt it better that the matter should be decided by a meeting of shareholders. At the statutory meeting he stated :—"Our position at the present moment is this : The vendors have received in cash, 25,655*l.*, and in fully paid-up vendors' shares, 49,363*l.* ; and the company is under engagement to pay, 12 months after taking possession, a further sum, in cash, of 17,825*l.* Out of the reserve fund a sum of 1,000*l.* has been remitted to Sir Robert Stout for working expenses. The following claims, as shown on the map on the wall, have been purchased outright and transferred to the company, viz. :—1, Otago ; 2, Perseverance ; 3, Nelson ; 4, Great Extended ; 5, tailings ; and, 6, Tuapeka water-race. Options have been secured, and the deposit paid, on the following properties, viz. :—1, Blue Duck ; 2, Morrison's : 3, North of Ireland ; and 4, Waipouri water-race." He (the chairman) regretted that the hopes then expressed by telegraph from Sir Rober Stout were uot realised, and he decided a few months ago to send out to Sir Robert Stout pointing out the absolute necessity of an arrangement being arrived at with the vendors for an extension of the arrangements with them for 12 months.

ENERGETIC MANAGEMENT.

Referring to further communications with the colony, he read the following telegram, which had been received from Sir Robert Stout, on February 21st, in answer to a number of communications he (the chairman) had written on the subject :—"Find great difficulty in arranging extension. Can arrange if you remit 3,000*l.* before the end of March." To this he (the chairman) replied next day :—"No funds ; shares unsaleable till better returns ; rent not paid ; salaries also." On the 5th of March another telegram was received from the colony, which stated, "Mortgagees will sell unless you make some arrangement." To this he replied : "Unless extension obtained collapse inevitable." But, of course, the shareholders could readily understand that they could not allow the thing to collapse, and the directors advised that they should raise the necessary amount of money—3,000*l.*—to forward to Sir Robert Stout, and 2,000*l.* to carry on the works until better returns could be obtained.

DEBENTURES TO BE ISSUED.

They felt that the best way to raise this money would be by the issue of debentures—of course at a discount. The board asked for authority to issue 20,000*l.* of debentures, and they advocated that the price of issue should be 25 per cent. discount. Several shareholders, who had called upon him at the offices of the company, advocated the issue at a discount of 50 per cent., but that would be for the meeting to decide. Having referred to the fact that the company's property was in the same position as at the time of their last meeting, and that the only work done had been some sluicing of tailings, he expressed great indignation at the fact that the board on this side had been kept so long without information, notwithstanding the frequent urgent demands they made for it. He then read three lengthy letters that he had received by the last mail, one from Sir Robert Stout, dated the 14th of January ; one from Mr. J. C. Browne, the vendor, dated 21st of the same month ; and one from Mr. Howard Jackson, the newly-appointed inspector of the company, dated 23rd January, the latter gentleman stating that the shareholders would have to

EXERCISE PATIENCE

for some time longer before they could expect to receive a dividend. He (the chairman) stated, in conclusion, that the shareholders were now in possession of exactly the same amount of information as the directors themselves. He would be happy to answer any questions that the shareholders might like to ask, and commended to their approval the scheme of the directors, or was ready to receive from them any alternative proposal. (Cheers.)

Mr. Cameron, M.P., expressed regret at the present position of the company, and stated that the reason he had joined it was the high standing of the gentlemen whose names had appeared on the prospectus. He referred in detail to certain statements that had appeared in the New Zealand press, and read a letter that he had received from a private individual in New Zealand, making a variety of allegations against the vendor.

The Chairman stated that he was not the apologist of Mr. J. C. Brown in any way. As regarded the amount of money won from the treatment of the tailings, it had been spent on the improvement of the property, and not one farthing had reached England.

DIRECTORS UNPAID.

The directors had not received any remuneration for their services for some time past, and he (the chairman) had spent money for telegrams, salaries, &c., out of his own pocket since October last. (Cheers.) The directors could not be responsible for newspaper reports, and official verbatim report of the proceedings at the statutory meeting was circulated amongst shareholders.

Mr. Cameron said he would be sorry to stand in the way of the raising of debentures, but he would prefer to recover the money the vendors had already received.

AN ANONYMOUS LETTER.

The Chairman asked who had written the letter that Mr. Cameron had read.

Mr. Cameron refused the name.

The Chairman demanded the date.

Mr. Cameron said November 1st.

The Chairman said that the duty of Mr. Cameron was at once, as a shareholder, to have made known the receipt of that letter to the directors, and to have asked them to institute inquiries. (Hear, hear.) He (the chairman) did not think it "fair, reasonable, decent, or honourable to pit an anonymous letter against the statements of Sir Robert Stout." It was most un-English. (Applause.) Sir Robert Stout had been under the fierce light of public opinion for over 20 years, and had held the highest political office (Premier) in New Zealand. Even his bitterest political opponent would not breathe a word to his dishonour.

Mr. Cameron denied that he had ever impugned Sir Robert Stout.

The Chairman said that he challenged Mr. Cameron to give the name of his correspondent. (Hear, hear, and cheers.)

Sir John Stokes said Mr. Cameron had thought fit to attack the directors. He (Mr. Cameron) had faith enough to subscribe for his shares in the Blue Spur, and then accused the directors of gullibility. The Agent-General for New Zealand had spoken in the highest terms of the gentlemen on the other side as would be seen from an extract from that gentleman's letter in the prospectus. He appealed to the meeting to proceed with the business for which it was called.

After further remarks from Mr. Cameron quoting again his correspondent, and questions from Mr. Alford, which were answered by the chairman and the solicitor (Mr. Greenip, of the firm of Snell, Son, & Greenip),

Mr. Alford advocated the pushing forward of the scheme propounded by the directors, as he thought it the only course to pursue.

The CHAIRMAN stated that the consensus of opinion was, as he had already stated, in favour of the issue of 20,000*l.* 7½ per cent. debentures, of which 10,000*l.* should be issued, the terms of issue being 25 per cent. on application, and the balance on allotment. He would himself help liberally if the scheme were approved. The only other question was, whether the issue should be at

25 PER CENT. OR 50 PER CENT. DISCOUNT,

redeemable at par. He thought the wisest course would be to raise the full amount at once, and get the property in their own hands.

Mr. HAUGHTON said he believed at the present time they had about 39,000 shares unissued.

The CHAIRMAN said more than that—over 40,000 shares.

Mr. HAUGHTON advocated the issue of the whole of the shares at a discount.

The CHAIRMAN said it was against the law of the country.

The SOLICITOR concurred.

THE PROMOTERS APPEALED TO.

Mr. HAUGHTON thought the discount should be 90 per cent. (Laughter.) He wanted to know what the promoters were prepared to do, who must already have made a good profit out of the company.

Some further discussion took place, in which Mr. Henderson and other gentlemen took part.

Mr. HAUGHTON said he was prepared to support the proposal of the board.

MR. HUME WEBSTER'S ATTITUDE.

Mr. HUME WEBSTER said he was not the promoter, but he issued the prospectus for the promoter, and had subscribed for one-fourth of the capital of the company. He issued the prospectus for a certain amount in fully-paid up shares.

Although the meeting had up to this period lasted over an hour and a half, Mr. CAMERON again rose, and amid signs of impatience, and shareholders leaving the room, reiterated his previous arguments.

THE ANONYMOUS LETTER INACCURATE.

Mr. BIGLAND stated that he knew several of the assertions contained in Mr. Cameron's friend's letter were perfectly untrue. (Cheers.)

Mr. HUME WEBSTER said he could prove by correspondence that there was nothing against the property, and

MR. RAWLINGS,

a mining inspector, well known in Australia, who used, 20 years ago, to work on the Blue Spur property, and who was in England four months ago stated that it was a mathematical certainty that with the company at work and the water race all right they would get a certain amount of gold for every yard worked.

The CHAIRMAN stated that the last two speeches corroborated his remarks as against such miserable things as anonymous letters.

Mr. ALFORD was very pleased to propose that the debentures should be issued on the terms advocated by the directors, viz., at 25 per cent. discount.

The CHAIRMAN said it was essential they should have the money within seven days. He advocated that they should expand their proposal and issue 25,000*l.* of 7½ per cent. debentures, which would give them the money they required.

Mr. BARKER was very pleased to second the motion.

It was made an instruction to the board that they should not go to allotment under 4,000*l.* debentures applied for. That was the minimum that would give 3,000*l.*, all of which would go to the colony. He would not stop at 1,000*l.* or so himself to keep the thing going. (Cheers.)

The resolution was carried unanimously.

The CHAIRMAN stated that friends of shareholders would also be permitted to subscribe.

THANKS.

On the motion of Mr. HUME WEBSTER, seconded by a SHAREHOLDER, a cordial vote of thanks to the chairman closed a meeting which had lasted two hours.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE Money Market has been firmer this week under the influence of the state of affairs in Paris, to which we have referred elsewhere, and the occurrence of the Stock Exchange settlement. The rate for the discount of two and three months' bills has advanced to 2⅞, 3 per cent., and short loans have been in demand at 3 per cent., both at the Bank and outside, many paying 3½ per cent. to avoid taking seven day loans from the Bank. Exchanges, generally, have been in good demand, and bills were scarce, but French remittances were more offered, and the rate moved more in our favour, the "cheque" being dealt in at 25.32, .33. The Bank return shows an increase of 442,000*l.* in the reserve, to 15,259,000*l.*, through a reflux of coin and notes from circulation, and the proportion has declined ¾, to 42 per cent. of the liabilities. The private deposits have increased over a million. Money has been in demand throughout the day at 2½, ¾ per cent. for short dates, chiefly owing to calls falling due to the amount of a million-and-a-half—including 500,000*l.* on the last issue of Local Loans Stock. Three months' bills have been taken at 2⅞, but the Bank again did the principal discount business. No bullion operations occurred at the Bank to-day, bar silver was nominal, Rupee Paper firm, and the Indian Council alloted in bills on Calcutta, about 35,000*l.* at 1s. 4 13/32d. and 1s. 4 7/16d.

The attention of dealers and others at the Stock Exchange during the past week has been largely engrossed by the arrangement of the fortnightly settlement, which was concluded yesterday without the announcement of any failures. The rates for carrying over speculative bargains until the 28th were about the same as on the previous occasion, loans having been available at 3½, 4 per cent., and ranged from 2 to 4 per cent. on Foreign Government Bonds, and from 3 to 5 per cent. on American Railway Securities. Considerable anxiety has been felt as to the financial crisis in Paris, and rumours of all kinds have been freely circulated, and according to the nature of these, so the Foreign market here has fluctuated; the movements in this department have dominated those in the other markets, and prices nearly throughout record adverse balances on the week. Rumours have been current that another syndicate has been formed to assist the present one, and the copper companies are going to reduce the terms of their contracts, anyhow the break in the ring has had most disastrous effects upon the Comptoir d'Escompte, and although the action of the Bank of France in lending four millions sterling allayed the excitement it was only momentary, and the run on the Comptoir continued, and now it is announced that at least one of the directors of the Bank of France has resigned his position. It is very unfortunate for French credit that the collapse of the copper ring should so quickly follow the collapse of the Panama Canal Company. The state of affairs in Servia is causing considerable anxiety in political circles, and that cloud will have to be closely watched, as it may be the forerunner of the storm, although at the same time it may pass over, as previous clouds have done. The Funds have receded ⅛ to ¾, and Inscribed Stocks about ¼. International Securities in the Foreign market, after numerous fluctuations, have lost ¼ to ½ per cent., but Spanish and Russian Bonds were very firm. In the Home Railway market the chief alterations were a rise of 1 in Brighton Deferred, and a fall of 1 to 1½ in Caledonian, Great Northern "A," Great Western, Midland, and Hull and Barnsley—the latter on the prospect of further dissensions amongst the shareholders. The dividend on North British Deferred at the rate of 3 per cent. caused a strong rally in the price. In American Railway Securities there has been an all round reduction, the most active declining $1 to $2. Grank Trunk Stocks rallied on an excellent traffic return, 11,500*l.* increase, but subsequently gave way. Mexican Stocks closed higher on the week, and Miscellaneous Securities have fluctuated in accordance with the variations in the more important markets.

Business to-day has been very restricted, dealers being thoroughly disinclined to increase their commitments while the public have been conspicuous by their absence, this feeling of hesitation is not at all surprising considering the political situation in Servia, and the uncertain state of the Paris Bourse. After various fluctuations the prices in the different markets closed below those of yesterday. The Funds were unchanged, together with Indian Government and Colonial Inscribed Stocks. Foreign Government Bonds were steady at the opening owing to the closing of some accounts open for the fall; but this firmness was not long maintained, and prices in the end closed ¼ to ½ down, Greek, Egyptian Unified, and Spanish being chiefly offered. Home Railways were fairly steady, but beyond a rise of nearly 1 in Caledonian (on Scotch demand), ½ in Metropolitan, and ⅜ in North-Western, and a fall of ½ in Lancashire and Yorkshire, South-Western, and ⅜ in North British Preferred, the changes were unimportant. American Railways opened lower, and continued dull throughout the day, closing without recovery, with an average loss of ¼ to ½. Grand Trunk Stocks were easier, in sympathy with the prevailing dulness, but Mexicans were steady. Dealings in Miscellaneous Securities were on a very small scale, and yesterday's levels were but barely maintained, the Nitrate group, in particular, receded ¼ to ¾.

Annexed are the final quotations to-day:—Consols Account, 97⅜, 97½; Egyptian Preference, 102¾, 103; Egyptian Unified, 86⅛, 8 5/16; French Four-and-a-Half per Cents., 103, 103½; Hungarian, 83¼, 85¾; Italian, 94⅜, 94⅝; Mexican, 93¼, 93¾; Peru Five per Cents., 13, 13½; Peru Six per Cents., 14⅜, 14⅝; Russian, 1873, 101⅜, 101⅝; Spanish, 74, 74¼; Turkish, 1871, 87¼, 87¾; Turkish Defence, 98¼, 99½; Caledonian, 117⅝, 118⅝; Great Eastern, 72⅜, 72⅝; Great Western, 152¼, 152½; Brighton "A," 141⅛, 141⅜; North-Western, 177, 177¼; Metropolitan, 80½, 80¾; Metropolitan District, 36¾, 37¼; Midland, 136¼, 13 7/16; North British, 56½, 56¾; North-Eastern, 163⅞, 164⅛; South-Eastern "A," 109, 109¼; Hull and Barnsley, 34½, 34¾; Grand Trunk, 11 1/16, 11⅛; Ditto First Preference 72⅞, 7 ⅛; Ditto Second, 53⅛, 53⅜; Ditto Third, 28⅞, 29⅛; Canadian Pacific, 50, 50¼; Denver, 16⅜, 16⅞; Erie, 28⅜, 28⅝; Milwaukee, 63½, 63¾; Lake Shore, 103⅛, 103⅜; Louisville, 60⅜, 60⅝; Atlantic First, 33, 33¼; Ontario, 16⅜, 16⅝; Ohio, 21½, 22; Norfolk and Western, 49¾, 50; Reading, 22¼, 2½; Reading Bonds, 82½, 83½; Union Pacific, 65, 65¼; Wabash Preference, 26½, 26¾; Ottoman Bank, 11¼, 11⅜; Anglo-Telegraph, 48½, 49½; United Telephone, 14⅞, 15⅛; Hudson's Bay, 19⅝, 2 1/16; Suez Canal, 88, 88½; Guinness, 3 7/16, 3 1/16; Bryant and May, 13¼, 13⅜; Nitrate Railway, 26⅜, 26½; Hyderabad (Deccans), 8 7/16, 9⅛; Salt Union, 13, 13⅛; Lee's Forge, 7⅛, 7⅜ pm.

MR. THOS. THOMPSON'S MINING AND INVESTMENT CIRCULAR.

THE March issue of this production is mainly from the facile pen of Mr. Thos. Thompson himself, and will be read with great interest, for it embodies much shrewd advice at a time when investors have special need of careful guidance and sound information. Mr. Thompson cannot be charged with the error of withholding information. Every page of his circular—we had almost said every line—is utilized to give news upon the subject of mining in general and hydraulic ventures in particular. He reproduces the interview our representative had with him at the Hotel Métropole three weeks ago, and acknowledges the source from which he has taken it. In so doing we must credit him with a degree of fairness which must be denied to those of our contemporaries who have used our information without naming the spring from which they drank it. The circular embodies the views of Mr. Thompson upon the present ticklish situation, and he is quite right in assuming that mining share business, like the scapegoat of old, has gone into the wilderness of inactivity, bearing with it the transgressions, alike of the Copper Syndicate and the Hatton Garden clique. His strong point is, of course, hydraulic mines, and of these he speaks in high terms, principally as regards Colon and Tetuan, which he, in conjunction with most persons on the market, thinks will have a substantial rise ere long. On the subject of South African Mines he is able to take rank, not with the false, but amongst the true prophets. In fact, he claims this as his right, for he says:—"Had the writer been gifted with powers of prophecy, it is hardly possible that he could have been more correct than has been the case in the forecasts which he has published from time to time respecting this market. He was one of the first to perceive the value of South Africa as a field for mining enterprise, among the first to obtain and publish information upon the subject, and the only one, he thinks, to foretell the end of the first part of the African 'boom.'" The production, as a whole, is most interesting from the mining point of view, and most useful from that of the investor.

TALTAL CHILE NITRATE CO., LIMITED.

INSPECTING THE MACHINERY.

The rapidly growing importance of the nitrate industry, and the profitable field of investment it appears to open up to investors, must render any information with respect to it both desirable and acceptable. At the outset the knowledge of the public in regard to nitrate was of the negative rather than of the positive kind. The communications of brokers with their clients about nitrate would form an amusing article if the correspondence could be sorted. At the time when nitrates first began to be known upon the market, a client came to London to consult his broker, and seriously asked him if nitrate was anything to eat! The broker could not tell him; in fact, he felt that his answers betrayed his ignorance as much as did his silence. During the remainder of the day the broker in question catechised his confrères on the market—not so much as to the price of the shares as upon the nature of the substance itself. The evasive answers he received, and the disposition to change the topic of conversation that everywhere prevailed led him to the conclusion that as to ignorance of nitrate he had by no means the monopoly. The public know more about it now. They know that nitrate of soda occurs abundantly on the surface soil of Chili and Peru; that in most of its properties it resembles ordinary nitre; and that it is used mainly for agricultural purposes, but chiefly as a top dressing for wheat and oats. It is a great fertilizer, and now that the guano deposits are practically exhausted, it comes to redress nature's balance, and to give the agriculturalist a chance of obtaining the greatest return for his labour and his expenditure. The nitrate fields already discovered are believed to be of great value, but those of the Taltal Company emphatically yield the palm to none.

It was at the invitation of the directors of this company that a large and influential company of gentlemen repaired on Tuesday last to the engineering works of Messrs. Westwood, Baillie and Co., at Poplar, for the purpose of inspecting the nitrate of soda plant which that firm has manufactured for the company from designs elaborated in conjunction with, and under the supervision of, Mr. Archibald Fairlie, C.E. Amongst those present were Sir William Arbuthnot (chairman of the company), Mr. Hume Webster, who has been its sponsor from the beginning, Mr. H. T. Walker, Mr. Henry Wilson (chairman of Mount Morgan Extended Gold Company), Mr. Richard F. Jenkins (chairman of East Arevalo Company), Mr. Archibald J. Smyth, of Tokenhouse Yard, Mr. Baillie, sen., Mr. Baillie, jun., Mr. Archibald Fairlie, sen., Mr. Fairlie, jun., Major Hume, and many others.

The plant, now nearly complete, embraces all the requirements which experience has proved to be necessary for the economical and efficient working of a nitrate oficina: but the principal difference between the plant already in use, and that which is being prepared for the Taltal Company is this—that recourse has been had to the introduction of superheated steam for the purpose of boiling the caliche, or raw nitrate, at a high temperature, and also for heating the contents of the mother liquor tank to a temperature of 210 degs., thereby effecting a large saving in time. This is the chief improvement which the ingenuity of Mr. Fairlie has introduced, but there are others which also tend to the production of the prepared article at the lowest possible cost.

In the first place, the visitors were shown the horizontal cylinder engine of 20 h.-p., made on the twin principle, which can be worked in duplicate or singly at pleasure. If singly, one engine is kept ready in case of accident, so that there should be no delay in continuing the manufacture of nitrate.

The party next proceeded to visit the two large boilers, which are made on the most approved Galloway double-flue type, the 20 large cooling tanks and the cachuchos, of which there will be eight. The ingenious internal arrangement of the latter, after the similitude of a still, excited general attention and admiration. They seem, indeed, to call for special notice in this connection. Before conveying the steam from the boilers to the cachuchos, it is passed through a superheater so placed that the temperature of the steam is increased from 310 degs. to about 450 degs. or 500 degs.; this, in conjunction with the high temperature of the mother-liquor, will the more rapidly boil up the caliche in the cachuchos, by which means the productive capacity of the plant is very largely increased, and a considerable savinge ffected. All contingencies seem to have been thought of and provided for. The cachuchos ordinarily are made without covers, but those manufactured for the Taltal Company have covers, which can be closed or opened at will. "The usual method (says Mr. Fairlie in a circular on the subject) adopted in manufacturing nitrate of soda is, in the first place, to have a well placed and conveniently arranged oficina with the cachuchos, and the various requisite tanks distributed so as to make it as snug as possible, and not scattered. This desideratum has been obtained in the plan adopted for the Taltal plant. In this case the caliche is brought in from the grounds in waggons on a narrow gauge line, and run over a conveniently arranged hopper, the waggon bottom is opened downwards, the caliche, if soft, falls directly through a shoot to where it is picked up by the buckets of an elevator, and thence carried up for charging the cachuchos. Should, on the other hand, the caliche be of a harder nature, it is dropped down through another shoot, at the bottom of which is a powerful Blake stone crusher which reduces the stuff to about the size of road metal, after which it is carried up by the elevator to charge the cachuchos as in the other case. The arraugement devised for charging the boiling tanks is one of a very simple but effective character, and consists of a central swivelling or revolving shoot, by which the whole of the cachuchos can be charged automatically, one man only being required to adjust the shoot for the accommodation of the various cachuchos. Indeed, only one man would be wanted to attend to the charging and dischargiug of the boiling tanks when in operation, and the operation can go on continuously." The cost of conveying the machinery into the interior, which would have been heavy, has been obviated by the wise arrangements of Mr. Baker, the manager, which were described by the chairman in the remarks we report below. It is not too much to say that, thanks to the skill of Mr. Archibald Fairlie, and to the admirable manner in which his views have been carried out by Messrs. Westwood, Baillie and Co., the Taltal Company possess the most complete nitrate of soda plant now in existence. The dual idea which these gentlemen have never lost sight of has been to create a plant which will produce the desired result with the minimum of cost, and the maximum of efficiency. Success in a marked degree appears to have crowned their efforts.

A few short speeches were delivered, chiefly in relation to the plans of the directors and the prospects of the company. That the hopeful tone indulged by the speakers pervaded the meeting will be seen by the sympathetic applause which greated their more salient observations.

SHORT SPEECHES, AND TO THE POINT.

Major Martin A. S. Hume: 17 years ago I went over many of the nitrate oficinas, and practically have seen them all; but to-day I have wituessed a very marked improvement upon the best of them, in the construction of machinery which could produce nitrate, and I have no doubt that the Taltal, having adopted this new system of superheated steam so that the caliche may be reduced in about half the time as compared with the old process, has achieved a great step in advance. We must acknowledge that much as machinery has improved of recent years the agricultural labourer has changed even more in that period. The old worn-out adage, that "You must not take too much out of the land," is now knocked on the head, and the scientific farmer thinks that the more he takes out of the land the better it will be for him, on the condition only that he puts back again the equivalent of what he takes out. It has been found by experienced chemists that the best way to put back the strength you take out of land is to put in as much nitrate of soda as will equalise what you take out. I think the fear of a falling off in the demand for nitrate is unfounded. I have not the remotest doubt that

THE DEMAND FOR NITRATE WILL ENORMOUSLY INCREASE,

and must do so. It has been my pleasure to be the guest of the Taltal Company to-day, and from the knowledge I have of the nitrate industry, I am sure that the company has a most valuable and promising property of its own. I have not the slightest doubt that the result will be a very brilliant one for both shareholders and directors. Towards that result, the chairman of the company, Sir William Arbuthnot, must contribute, and we have great pleasure in seeing him here. The composition of the board also gives to him valuable colleagues, and I should like to mention the names of Mr. Carter, and Mr. Anderson, who are both connected with important commercial firms.

ACTIVITY OF THE BOARD AND MANAGER.

Sir William Arbuthnot: Gentlemen, I can only express the hope that the inspection you have made has given you satisfaction. I think very satisfactory progress has been made by the firm of Messrs. Westwood and Baillie during the short time that has elapsed since the order to make this machinery has been given them. (Hear, hear.) As far as I can see, the machinery seems well calculated for accomplishing the work it is intended to carry out, and especially we may thank Mr. Fairlie for the improvements he has introduced into the original machinery, by which a very great saving will be effected, not only in time, but also in power, and in the quality of the nitrate that will be manufactured. The machinery is almost automatic. Very little labour will be required, and if all things go well I think we ought in July or August next to be in a very fair way of being at work. but a great deal will depend on the facilities found for erecting the machinery at Taltal. Arrangements have, however, been made by Mr. Baker, the manager, who has lately gone out, and it has been decided to erect the oficina at Taltal itself instead of on the company's property. The saving will almost be incalculable. In the first place, there will be an economy of two months in time, and we shall save the carriage of machinery to the company's property. Near Taltal there are much greater facilities for finding labour, and the water supply is much better, whilst in many other respects there will be a great economy. We have made an arrangement with the Taltal railway to carry our nitrates down to Taltal at a satisfactory price, as will be seen when it comes to a question of dividend.

A CONFIDENT PREDICTION.

I have no doubt that we shall in the future pay better dividends than any other nitrate company in existence. (Cheers.) You all saw the remarks of Col. North before he left this country, but I think, from the views we have heard expressed from the other side, and particularly from Mr. Baker's report, there is no reason to fear that the land which belongs to the company is in any way inferior to the very best land in the Taltal district. Of course there are many things that will tend to the prosperity of the company. Some people say there is a chance of nitrate falling in price; at present, however, the demand seems to be much greater than the supply, and as long as that continues, it does not matter what else happens, because the price of nitrate is sure to keep up.

A STOCK BROKER AND AN ENGINEER.

Mr. Archibald J. Smyth, of the Stock Exchange: After the most cheering and encouraging words you have had from Sir William Arbuthnot I feel bound to rise and to direct attention to the invaluable services which have been rendered to this company by Mr. Archibald Fairlie and by Messrs. Westwood, Baillie & Co.—the former being the engineer of the company, under whose supervision the machinery has been made, and the latter being the firm to whom its construction was committed. We have to-day seen the combined result of their labour in the machinery, which is of so extensive a nature that it has taken us some time to inspect it. Many of the absent shareholders would be surprised if they were here to-day to see the amount of work that has been done in so short a time, and the amount of machinery we are about to send to Taltal. All this machinery has been constructed under

THE ABLE OVERSIGHT OF MR. ARCHIBALD FAIRLIE,

who has had great experience in nitrate machinery, for he has been resident for a long time in the proviuce of Tarapaca. When there he had plenty of opportunity of ascertaining the proper sort of machinery that was wanted, aud what I have seen to-day strikes me, who am but a simple amateur mechanic, although a man who can make a steam engine—(cheers)—that this machiuery is well adapted to the purposes to which it is to be applied. (Renewed cheers.) I hope that it will shortly be at work, and that the results which Sir William Arbuthnot anticipates will be realised.

Mr. Richard J. Jenkins (chairman of the East Arevalo Company): As a shareholder in the Taltal Company I claim a little indulgence while offering a few remarks, and also for the reason that I am practically acquaiuted with the making of machinery. My observations are to be directed chiefly to the contractors, Messrs. Westwood, Baillie and Co. This task affords me still greater pleasure than it might otherwise have brought me, from the fact that it carries me back a period of 25 years, during which I have known this firm as contractors for the makiug of all classes of machinery. It is a curious coincidence that 25 years ago I framed a specification for Sir Daniel Gooch for the tanks, which were then designed for, and ultimately used by, the Atlantic Cable Company. Those tanks were let by contract to Messrs. Westwood, Baillie and Co. I had the superintendence of them in regard to making, and also of placing them in the Great Eastern steamship, and, as we know, the Great Eastern did her duty. That work was done as this firm do all their work—in the best possible style; and it gives me the greatest pleasure to reuew now the acquaintance I formed with them a quarter of a century ago, during which interval we have not met.

VIEWS OF A PRACTICAL ENGINEER.

As a mechanical engineer, I may be allowed to offer an opinion with respect to the machinery. I think the machinery is as efficient as could be possibly designed. Had the work to be gone over again I fail to see any improvements that could be made. It has been supervised by Mr. Archibald Fairlie, whom I have known for more than 25 years, aud who was associated with me in one of the most important works of the kingdom—the Great Western Works at Swindon, which employ about 6,000 men. We were associated as quite young men, aud have always been the very best of friends. I feel that in his hands you have been perfectly safe in regard to the machinery which you require for this property. (Cheers.)

IMPORTANT IMPROVEMENTS IN NITRATE MACHINERY.

Mr. Archibald Fairlie, who was heartily received, said: Sir William, and gentlemeu, when I undertook the supervision of your machinery I had no idea that it involved the additional task of making a speech. (Laughter.) It is quite true, as has been said, that I have been out in the Tarapaca district, and when there uoticed the different systems for the manufacture of nitrate, but it occurred to me, as being highly desirable, that many improvements should be introduced so as to bring down the cost of production to the lowest sum possible. When I came home from Peru I had the inspection of three plants which were to go out, and they were of a very different character from what we have seen in the yard to-day. That plant I believed at the time was the perfection of nitrate machinery, but since then I have learned that I was on the wrong tack, and believing so, when my co-directors were good enough to place the matter in my hands, I thought it my duty, as it was a labour of love, to try to introduce improvements that had not been known hitherto, and the chief of them is the introduction of super-heated steam, by which means you get a temperature of 500 degs. of heat, instead of 310. Then by covering over the eachuchos, and making them in the shape of a pot, we cau boil the stuff in about half the time that we can if it were an open structure.

A FAMILIAR ILLUSTRATION.

I may illustrate this by the familiar example of the pot of potatoes. With the lid off we can boil a pot of potatoes in 20 minutes, but with the lid on you can do it in 10. Now the more rapidly the caliche is boiled, the better will be the result. (Cheers.) I do believe that with the very able assistance of Mr. Baillie and his good sons I have been enabled to produce a plant, which I am glad to say I am proud of. (Cheers.)

VIEWS OF MR. BAILLIE.

Mr. Baillie: I am very pleased to learn that you are all satisfied with the machinery we have constructed, under the supervision of the last speaker, and I have not the slightest doubt that in the course of time it will give you the results you require.

Mr. Harrington introduced the name of Mr. Hume Webster as a gentleman to whom practically the company owed more than any one else, for, as a matter of fact, to him it owed its existence. (Cheers.) The way in which Mr. Webster had sacrificed himself to secure the success of this company was an example to others in the initiation of companies in the City of London. (Cheers.)

MR. HUME WEBSTER BELIEVES THE COMPANY WILL BE A GREAT SUCCESS.

Mr. Hume Webster: The best thing I can say, as proving my faith in the future of this company, is that for some time past I have been a buyer of Taltal shares. I believe that the Taltal Company will be a great success. We have a practical board, and their connection with another company, the Julia Nitrate, will be of assistance to them in this. In connection with the Julia I hope we shall have a meeting similar to this in a few months' time. I mean to increase my holding, and be a large and permanent shareholder in the Taltal Company. (Cheers.)

The visitors then returned to London.

COMMERCIAL NOTES.

Metals.

Copper has been still disorganised, but is settling down at the lower prices, and the great discrepancy between spot and forward is disappearing. G.M.C. copper has been irregular. Spot has declined from 59*l.* to 50*l.* cash. Yesterday business was done at 51*l.* 10s.; 50*l.* for early prompt; closing 51*l.* cash; 49*l.* three months, and 47*l.* all the year. To-day, 50*l.* cash done, and 49*l.* early April; selllers, 48*l.* three months, and 47*l.* all the year. Messrs. Matheson are understood to have taken over the control of sales for the syndicate in London, and to have made large sales to German and English consumers and smelters. Wallaroo and Burra quoted 63*l.* to 64*l.* 10s. We quote English tough, 58*l.* to 60*l.* Best selected, 60*l.* to 62*l.* Strong sheets, 65*l.* Indian sheets, 63*l.* to 64*l.* Yellow metal sheets, 6¼d. to 6½d. Ore, regulus, &c., 11s. to 12s. per unit.

Tin has been steady. Straits sold at 94*l.* 10s. to 95*l.* cash; closing at 94*l.*12s. 6d.; three months, realised 15s. to 20s. over cash, and Australian, 15s. to 20s. premium over Straits. The Dutch market has been steady. Banca and Billiton quoted 57½fl. English ingots, 97*l.* to 97*l.* 10s.

Tin Plates quiet, and quoted 13s. for ordinary coke Liverpool.

Spelter easier at 17*l.* 2s. 6d. to 17*l.* 5s. for ordinary brands, ex ship here.

Lead quiet. Soft Spanish, 12*l.* 10s. to 12*l.* 12s. 6d.; soft English, 12*l.* 15s. to 13*l.*; L.B., China pigs, 13*l.* 7s. 6d.

Quicksilver.—Rothschild's price, 7*l.* 15s.; seconds, 7*l.* 11s. to 7*l.* 12s. 6d.

Antimony firm. 48*l.* to 50*l.*

London Metal Market.

4.35.—Closing official report.—Copper: G.M. brands, 51, ½; best selected, 56, 8; strong sheets, 65. 7. Tin: Fine foreign, cash, 94½, 5; three months, 95½, 6; Australian, 95½, 6; English ingots, 97, 8. Spelter, 17¼, ½.

Dividends Declared and Announced for Week Ending March 16th.

	Carried forward.	
Anglo-Austrian Bank	25,397 fl.	8 fl.
Brazilian Submarine Telegraph ...	—	3s. per share.
Barcelona Tramways	—	11s. per share.
Bolckow, Vaughan and Co. ...	5,633*l.*	3 per cent.
Carthagena and Herrerias Steam Tramways	—	9s. per share.
City of Buenos Ayres Tramways...	5,577*l.*	4s. per share.
City of Buenos Ayres Tramways...	—	Bonus 1s. p. s.
Charles Cammell and Co.	—	7½ per cent.
Cunard Steamship Co.	—	4 per cent.
Direct Spanish Telegraph	—	4 per cent.
Franco-Egyptian Bank	—	7 per cent.
Farthing Letter Card Co.	—	8 per cent.
F. Joyce and Co.	—	5 per cent.
General and Commercial Investment Trust	1,074*l.*	5 per cent.
Lincoln Wagon and Engine Co. ...	90*l.*	3 per cent.
London Bank of Mexico	6,303*l.*	3s. 6d. per share.
London Assurance	—	35s. per share.
Oriental Telephone Co.	500*l.*	3 per cent.
Union Steamship Co.	—	10s. per share.
William Jessop and Sons	—	40s. per share.
Waterloo House and Swan and Edgar	975*l.*	5 per cent.

BRATSBERG COPPER CO., LIMITED.

March 15th.—I am instructed by the directors to inform you that owing to the fall in copper they have been obliged to abandon their intention of paying an interim dividend. The company has large stocks of ore not yet realised, and there is also a contract running for the sale of all the ores produced up to the 30th June, 1889; aud it would be unsafe to distribute any of the profits already accrued until this contract is carried out, and the final accounts made up to the end of the financial year, on 30th June, 1889. The directors feel sure you will appreciate the prudence of adopting this course in the present uncertain state of the copper market. I am pleased to inform you that the necessary capital was duly subscribed for the smelting works, the erection of which will commence as soon as the weather permits, which will probably be at the end of next month.—C. E. Riddell, Secretary.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

J. C. H.—You have been badly advised. Sell.

British Bechuanaland Co.—You will buy them at a discount presently, or we are much mistaken.

C. M.—See answer immediately above.

Quayle.—The money will be returned.

G. W.—It is not too late to demand the return of your money from the British Bechuanaland directors, and you had better do so.

H. T.—A guinea pig.

J. W. C.—A respectable man, but he is in a bad set.

W. D.—The promoter has an unenviable reputation.

One who has suffered.—We fear your money is lost.

J. C. M.—A fictitious premium.

C. C. C.—Sell Nos. 1 and 2, but retain 4 and 5. As to No. 3, we will write to you on Monday,

G. D.—You are not a subscriber. Much loss of time is occasioned in making many of the inquiries.

J. L. S.—No. 1: Yes. No. 2: Will write in a few days.

Plague.—Keep your money rather than risk it into his hands.

Male (R. P.)—Sell your shares without further delay. The price will be lower still before long.

Anxious Reader (A. A.)—Coromandels should go better, also Victory Gold, but sell high-priced Africans you name.

Tape.—Little or no business doing in the shares you mention.

T. Johns.—We are afraid you will have to put up with the loss.

Craze (R.T.)—Insist upon immediate delivery, otherwise place the matter in the hands of your solicitor.

Wary.—Although these shares are largely advertised, we are certain they are not worth half their quoted value. Sell at best.

Curious (Yorks).—Certainly not; you have only to make enquiries here, when we feel sure you would not entrust your money to any one of the three.

Manager (Carlisle).—Keep your Colons, Emmas and Organos, as we are of opinion that a rise will take place.

B. W. M.—The season for working mines like Emma and Flagstaff is approaching.

We are, this week, obliged to omit our Mining Share Lists, but all changes are notified in the "Mining Market."

The Mining World.

LONDON: SATURDAY, 16TH MARCH, 1889.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

EXCHEQUER BILLS—A NEW DEPARTURE.

A NEW departure in the realm of finance has been occasioned this week by the determination of the leading discount houses last Saturday not to renew the Exchequer Bills due on the same terms as before, the Government only offering 2½ per cent. for the six months. This is a very poor rate, but considering that the security is not so freely negotiable as Treasury Bills, the resolve is not surprising. On Monday, therefore, holders were repaid, and promptly in Tuesday night's *Gazette* a notice appeared that the issue of Exchequer Bills would be allowed to lapse, and that in place thereof the Government would offer a larger amount of Treasury Bills in part, to cover the amount of Exchequer Bills repaid, for the usual periods of three or six months, with the option of the longer date of 12 months. Although the three month's Treasury Bill is the most popular and serviceable medium in the discount market, there are many capitalists who prefer those of six months date, while the experience of the demand for both Three per Cent. Consols and Reduced, since the conversion of the debt, is a proof that there are others who like a bill at 12 months to bring in 3 per cent., or a little less. The innovation, although it does away with the ancient form of security representing the floating debt of the Government, which with the introduction of the Treasury Bill has become more or less obsolete, is a recognition of the requirements of the times by an experienced financier such as Mr. Goschen has proved himself to be.

THE POSITION OF COPPER.

THE troubles of the Parisian Copper Syndicate continue to form the chief topic of conversation in the markets, and they seem likely to occupy a good deal of attention for some time to come. Since we referred to the subject a week ago, there has been practically no change in the position of affairs, but the general feeling about it has rather brightened in the interval, both with regard to the metal itself and to copper shares. In the latter there were very heavy "bear" sales last week; but as the markets, both of Paris and London, have exhibited a considerable amount of strength, operators for the fall have seen the wisdom of buying back to a large extent. The position of the French market will be more clearly seen at the settlement at the end of the month. Meanwhile, the advances necessary to avert a collapse of the Comptoir d'Escompte have been provided by the Bank of France, as we anticipated when last writing. It is, indeed, lucky for the syndicate that they were backed up by the Comptoir d'Escompte, for there is no doubt that the break-up of that institution would have such far-reaching effects upon French trade and finance, that every possible effort will be made to provide the Comptoir with the backbone which has been so much lacking. No doubt the speculation would not have attained such vast proportions but for the guarantee of the Comptoir d'Escompte; but we have to deal with accomplished facts, and in view of them, we repeat that it is a fortunate circumstance for the syndicate that it is identified with an undertaking upon which so much hangs.

The latest rumour is that the English companies are willing to join with the American producers in holding back supplies for a couple of months, and in reducing the output by about 20 per cent. It is also asserted that some sort of "pooling" arrangement is to be made between the principal companies, by which the floating supplies should be withdrawn and held back until consumers require them, and we hear on good authority that Messrs. Matheson would be willing to act as brokers for such a combination. Whether or not these statements be absolutely accurate, it is clear that the Copper market cannot be placed in a healthy position until some of the present vast accumulations of the metal—estimated at from 160,000 to 200,000 tons—have been disposed of. For our own part we feel

that at the present price, or at something like it, consumption will be materially increased, for already we hear of large purchases for Germany. There can be no doubt that in the past year or so the use of copper, especially for engineering purposes, has been greatly restricted. We know, as a matter of fact, that in the construction of locomotives copper has been largely replaced by steel; but with copper at 50*l.* there is reason to believe that makers would revert largely to that metal as being generally more suitable for their purposes. It is also to be borne in mind that the practical applications of electricity to lighting and motive powers must give a stimulus to the consumption of copper. These are features which it would be unwise to ignore in cousidering the future prospects of the Metal market.

But, when full allowance is made on these accounts, it is scarcely to be disputed that there has been, at all events in the past year, a great over-production of copper. This will be manifest if we quote a few figures from Messrs. H. R. Merton's statement of the principal copper supplies of the world in 1887 and 1888 as contrasted with 1879. The figures represent English tons of fine copper. In some cases they are estimates only, but they are doubtless pretty accurate:—

	1888. Tons.	1887. Tons.	1879. Tons.
Australia	7,450	7,700	9,500
Canada	2,250	1,400	50
Chili	31,240	29,150	40,318
Cape of Good Hope	7,500	7,250	4,328
Germany	15,230	14,875	9,000
Japan	11,000	11,000	3,900
Mexico	2,766	2,050	3,900
Newfoundland	2,050	1,305	1,500
Russia	4,700	5,000	3,500
Spain and Portugal	63,800	54,056	33,361
United States	103,128	79,109	23,350
Venezuela	4,000	2,900	1,597
Total supplies	261,852	224,273	151,963

From these figures it will be seen that the American supplies have been more than quadrupled in the ten years; the supplies from Spain and Portugal, mainly on account of the increased production at Rio Tinto, have nearly doubled in the same period, and in most other cases there have been more or less considerable expansions. In twenty years the total supplies of copper have increased over 200 per cent.; so that it is useless to refer now to the prices which used to rule when an altogether different set of conditions existed. It is clear that the great accumulation of supplies have come from the American and Spanish mines, and it is for the companies owning them to see whether something cannot be done to remedy the evils which have been brought about. In this connection we may mention that a representative of the leading American mines is on his way to this country with full powers to pledge the companies, and it is understood that the American, Spanish, and Cape mines will be asked to consent to a restriction of output to the aggregate amount of 40,000 tons per annum. The outlook is certainly not very cheering, but it is scarcely so gloomy as it was a week or ten days ago, for the impression seems to gain grouud that the price of copper is not likely to fall much lower than at present, if, indeed, it does not show some recovery in the near future.

THE COPPER CRISIS.

(From a Correspondent)

The crisis in Paris through the collapse of the Copper Syndicate and its financial supporters, although for the present calmer, is not over. By the aid of the French Government the Comptoir d'Escompte has been saved from closing its doors, but the directors of the Bank of France have signified their disapproval of the advance made of 100 million francs by some of them resigning, including Count Pillett Will. It is reported the security for the advance handed to the Bank of France was, moreover, short of the required amount by 30 million francs, which would show either carelessness in the management of the Comptoir, or their inability to make up the sum. The panic, however, caused by the run on the establishment, has been followed by a recovery on the Bourse, resulting in a temporary rally in the shares of the Comptoir d'Escompte, the Société des Metaux, and the Rio Tinto Company. The mainspring for the recovery has been a hope that the crisis would pass over without the expected disaster, since rumours were afloat that the Syndicate was to be supported by both French and English financiers, which would relieve the Comptoir d'Escompte. There is little doubt that assistance will be rendered, but, so far as the rumours are concerned, the only fact is that Messrs. Matheson & Co. have agreed to undertake the agency here for the sale of the Syndicate's copper.

INDICTMENT OF THE LADY FRANKLIN CO.

When a member of the Stock Exchange so highly respected as Mr. Harry W. Birks in public meeting denounces the Lady Franklin Mining Company, Limited, as a disgrace; when he describes the shareholders as cruelly treated, and the directors as occupying a humiliating position, it is evident that strong motives and a burning sense of indiguation have led him to use language of this kind. The promises of the prospectus, in the face of the realised facts, would form a fitting subject for a Palais Royal farce. One could laugh at them were it not for the serious monetary interests which have been put in peril, if not wholly destroyed by the experience which has been gained of this appareutly all but valueless property. It was most mysterious that very soon after the company was formed the rich returns, of which the prospectus made so much, fell off, and that the concern was landed in the quagmire of impecuniosity. One cannot sufficiently admire the courage, though it is impossible to applaud the discretion, of the persons who are now finding money on debentures to work this property. Our view of the action of the vendor is very much that expressed by Mr. Birks, aud we agree with him that to choose a Stock Exchange settling day for the meeting was an act which was probably unintentional, but which certainly had the effect of keeping away numbers of persons largely interested in the shares. Like Mr. Birks, we wish to cast no reflections upon the directors, but they must not be astonished that persons who feel their loss deeply should express themselves warmly.

COST BOOK MINES AS THEY SHOULD BE.

The fierce criticism to which cost book mines have subjected themselves by carrying over large debit balances instead of making calls to liquidate them, has had the good effect of making most Cornish mines adhere more strictly to the practice as well as the theory of the system upon which mostly they are worked. Accouuts are charged up far more closely thau they used to be, and such a thing as the purser of a mine being compelled, when pushed into a corner, to throw down a bank book on the table showing a deficit of 20,000*l.*, of which the shareholders knew nothing is now unknown, and yet a few years ago this event actually occurred. Shareholders are now careful to enquire whether the accounts are closely charged up, and, if not, they sometimes take the reins out of the hands of the committee, and instead of postponing the evil day of payment, accelerate it by an immediate call. An example to cost-book mines is set by the office of Mr. C. B. Parry, of Gracechurch Buildings. As regards the mines in this office, accounts are charged up almost to the day of meeting, and shareholders have the assurance that their money will not only be economically expended for the purposes for which it has been subscribed, but that at each quarterly meeting a true and complete statement of their affairs will be presented to them.

INDIAN GOLD MINING IN THE COLAR FIELD OF MYSORE, INDIA.

By One who has Studied It.

Never during the whole history of Indian gold mining have there been received in this country such welcome telegrams from the different mines at work in the Colar field of Mysore as those to hand during this month—(March)—telegrams which report the largest yield of gold for any single month since gold mining iu the Colar district started into life. These telegrams give us the most handsome return of 4,715 ozs. of gold for the month of February last, or a sum of about 18,000*l.* sterling. Never before has it been my pleasure to relate such good uews for shareholders in mining companies in the Colar.

Well, now, I feel certain, may we all take a glowing view of the future of gold mining in the Colar district—yes, riches, that will in all probability be continuous riches, lasting for gencrations, are here being developed to an extent that the public at present appear to have very little idea of. I shall be greatly surprised if during the next few years, as year succeeds year, there will not be a most marked increase in the annual produce, until a time comes when, I believe, that such produce will be almost, if not quite, *fabulous*.

Mining for gold in the Colar was commenced in the year 1880 by various companies (vide article in Mining World of July 28th, 1888), but all of these, however, with the exception of one company—the Mysore—ceased working after a year or two, in consequeuce of finding no gold to speak of. The Mysore Company, which had only 10,000*l.* left, held a meeting of their shareholders to deliberate whether they should stop working, and make a pro rata return to their shareholders of what was left, or go on working to the bitter end. The shareholders authorised their directors to go on working, and before they had expended the 10,000*l.*, rich gold was struck by the company, and in 1884 it began making returns, which it has ever since annually been increasing; and thus thanks to the perseveraunce of the Mysore Company, what now promises to shortly be a very great industry for India has been saved to that country. The total value of the gold extracted from the Colar field to the end of last year amounted to, in round numbers, 280,000*l.*, but by the end of February last this had been increased to about 315,000*l.*, a by no means inconsiderable sum, but a sum which, in the near future, will, I venture to prophesy, appear very insignificant in face of the wealth that will then have been produced from the field. But of this yield of 315,000*l.*, the Mysore Company has in all produced about 236,000*l.* Of this sum 73,973*l.* was obtained last year, and for this year (vide Mining World of October 13th, 1889) I have ventured to forecast a total return from all the mines in the Colar field of at least *a quarter of a million sterling*, which, however, judging from the January and February returns, I consider very likely to be surpassed; aud from the

present position of affairs, it would not in the least surprise me if the total return of gold for 1889 was nearer to *a half* than *a quarter of a million sterling*. From a study of the appended table, it will be seen how rapidly the output of the mines for the months there under review is increasing; broadly speaking, the produce for January and February of this year has doubled that for the same months in last year. The return for last month (February) of 3,038 ozs. by the Mysore Company is by far the best it has yet given. The yield of January last of 2,376 ozs., and of May, 1888, with its 2,306 ozs., are the two next best returns. However, this grand return of February is likely to be considerably improved upon this month, for it is for this month that Capt. Plummer has made a forecast of a much greater output and yield, when he expects to have the 60 heads of stamps at work, whereas during last month it is probable he had only 30 heads stamping. Should he be able—which is very likely—and should he decide to feed the whole 60 stamps with as rich and as plentiful a supply of quartz as he did the 30 stamps for last month, the March return should be over 6,000 ozs., or at the rate of 72,000 ozs. a year, in value about 280,000*l*., sufficient to pay on its capital of 175,000*l*. *100 per cent.* dividend or more! This, indeed, would be a magnificent return, but, still, magnificent as it would be, it is quite possible that as its more recent shafts are sunk deeper (say, within a year's time), and come upon the same run of rich ground as is found in Taylor's and Plummer's shafts, this output could be doubled, and instead of paying *100 per cent.*, would pay *200 per cent.* dividend or more. I may here mention that this output, say, of half a million, has been made, I believe, during several years by the Richmond Mining Company of Nevada, which company, I consider, is being so unjustly persecuted now. The Mysore Company is now getting a nice little sum from its tailings, which commenced to yield in February, 1888, with a return of 64 ozs. for that month, the highest return from which was in October last, with 154 ozs., and the total yield to the end of December last was 1,074 ozs., equal in value to about 4,000*l*. The yield from tailings for January and February in this year has amounted to 258 ozs., equal in value to about 1,000*l*. The yield, however, from the tailings also is likely to be very much increased in the immediate future, and will doubtless for the present year be equal to paying a small dividend on the capital of the company. I cannot but think, under the very favourable prospects now opening up for the Mysore Company, that it would do well to be getting another 30 head of stamps ready to send out to the mine, for, be it known, at Tennant's shaft, far away to the north of all its other shafts, and nearer to the very rich property of the Ooregum Company, it appears to be opening up another very rich mine, as the quartz there is now yielding over 1 oz. 15 dwts. of gold per ton. Not only did the Mysore Company during last month eclipse its former doings, but so also did the Ooregum with its yield of 927 ozs.; and the Balaghat-Mysore, with its yield of 258 ozs., made a better return than for the preceeding month of January; the best return made by this company was in June last with 370 ozs. The Nundydroog's last return of 394 ozs. has been on several occasions surpassed—its best return was made in October last, with 822 ozs.; but we were informed some little time since that we must expect a falling off in the returns of this company for a while, as it was their intention to pay more attention for a month or two to development, when we may expect far better results than we have hitherto had *from Plummer's Pet.* The Ooregum Company, which, after years of labour, only in April last commenced to yield, has since that time, in the course of 11 months, made a yield of about 21,000*l*., which is about treble the amount yielded by the Mysore Company during its first 11 months of production, and about treble that of the Nundydroog for the same period. What it will do in the future it is difficult to predict, but it has been frequently giving very rich assays, even up to 15 ozs. of gold per ton. It appears that it only requires more capital to be expended on it to produce an enormous amount more of gold annually. The past seems to justify more shafts being sunk on this property, and the employment of many more men and rock-drills upon it. The Balaghat-Mysore Company also would, it appears, do well to at once commence the sinking of another shaft, and prosecute their works with more vigour, considering what rich gold they are producing. The further outlook for these four mines is truly, in the extreme, splendid. Doubtless, the other mines in this Colar field will very shortly now show far better. The assays in the Nine Reefs and Indian Consolidated have vastly improved of late, only to be followed by much better yields shortly it is trusted. By the last written report sent to the newspapers the latter of these companies was at one point getting out ore, assaying no less than 26 ozs. to the ton. I think that all the cheaper Colar mining shares at their present low quotations are well worth picking up. More particularly should the shares of the Mysore West Company, which is now exploring *with rock-drills* in its 300-ft. level, not be lost sight of. In its upper levels the quartz has assayed respectively ½ oz. and ¾ oz. of gold to the ton, and what may be met with at the 350-ft. level it is impossible to say; but if it should yield as well as the Ooregum in its lower levels, truly, with its small capital and with its rock-drills at work it has a most brilliant future, and may shortly be the best dividend-paying company in the field, after the Goldfields of Mysore Company, which it would not be surprising to see give its shareholders truly fabulous returns in a year or two.

March 12th, 1889.

COMPARISON TABLE.

Showing tons of quartz crushed, and ounces of gold produced from all the mines at work in the Colar Field of Mysore, India.

	In 1885.		In 1886.		In 1887.		In 1888.		In 1889.	
	Tons crushed.	Ozs. of gold produced.	Tons crushed.	Ozs. of gold produced.	Tons crushed.	Ozs. of gold produced.	Tons crushed.	Ozs. of gold produced.	Tons crushed.	Ozs. of gold produced.
For January	177	231	434	1,125	595	1,181	2,188	2,246	3,208	4,237
For February	123	244	478	1,217	610	990	2,033	2,326	3,196	4,715
Total	300	475	912	2,342	1,205	2,171	4,221	4,572	6,404	8,952
Average per month ...	150	237	456	1,171	602	1,085	2,110	2,786	3,202	4,476
Average per year ...	1,800	2,844	5,472	14,052	7,224	13,020	25,320	33,432	38,424	53,712

N.B.—In the above period of 1885, 1886 and 1887, one mine only contributed to the above production.
In " " 1888, five mines " " "
In " " 1889, six mines " " "

There are seven mines out of the 13 existing in the Colar Field crushing quartz, but the yield of gold is not always given monthly by each.

The figures in above table are given in round numbers.

POINTS ON WHICH THE PAHANG KABANG CHAIRMAN MIGHT HAVE GIVEN INFORMATION, BUT DID NOT.

The Hon. Arthur Bland, chairman of the Pahang Kabang, excels in the art of knowing how not to do it. On Monday last he had a crowded meeting of shareholders before him, who were hungering and thirsting for information; but the hunger was not satisfied, and the thirst was not assuaged. It is true, he said, that everything was going on satisfactorily, but any statement in support of this mere expression of opinion was wholly wanting. He "believed" the promises of the prospectus would be realised, but the convictions of his mind which produced this "belief" were not made manifest. It was elicited from him that no active steps had been taken to secure machinery, and in fact the board seem to be in such a comfortable state of sleep that they desire to prolong it undisturbed for another 12 months. Even the chairman sees the need of calling the shareholders together more than once in each 12 months, but not during the first year "because we shall not have much to report." A more ridiculous reason for not calling shareholders together was never assigned at any public meeting. Does the Hon. Mr. Bland need to be told that it is in the first year of the company's life that its future, in nine times out of ten, is made or marred? It depends upon the action the directors are taking now, and within the next few months, whether the company will prosper, or whether it will go the way of all mismanaged concerns. The shareholders may yet live to lament that they so tamely submitted to postpone their next meeting until 12 months hence. For all the information he received there was no reason why a single shareholder should on Monday last have ascended the stairs of the Cannon Street Hotel. Anything more bald than the chairman's statement was never submitted to a waiting body of shareholders. Mr. Bland might at least have told them how the company was received by

the public, the number of shares allotted, a few of the circumstances which led him personally to join the enterprise, and his general impression and that of his colleagues of the results to be expected. Instead of a speech of this character there was no speech at all. The shareholders asked for bread, and he gave them a stone. We can only hope that he will manage the company's affairs better, from the commercial point of view, than he did the meeting on Monday last; otherwise its career will be short and far from merry.

MESQUITAL DEL ORO OUTLOOK.

This company, after a long struggle in the deep waters of preliminary difficulties, beholds, as the chairman nautically put it, port in sight. Mr. Penn-Gaskell is able to declare that the value of the property is proved beyond doubt, and his warrant in saying so is not merely the report of Mr. Holberton, which the shareholders have received, but the actual facts as reported from the mines. The ore-bearing parts of the lode, both east and west, seem to be everywhere—the unproductive portions, almost nowhere. The chairman, who has experience of mining, some of it far from agreeable, does not know of any other such record of continuous ore production. Working with almost every conceivable disadvantage and with stamps that have been a make-shift from the beginning, the returns have gone on increasing, so that there is warrant for the assumption that when the new mill gets to work the Mesquital mine will cut a very different figure in the market from what it has hitherto done. Not merely will the expenses per ton be greatly reduced, but there will be a larger saving of gold. To the latter point in particular the directors are wisely turning their attention, and if they are able to save up to 80 per cent. of the gold it will be greatly to the credit of their management. The meeting held yesterday was to raise a sum of 10,000*l.* on debentures in order to complete the equipment of the mine which has been so well begun. One of the directors, Mr. Robarts, thinks it would have been well to have raised a larger amount, for he beholds the Lugos mine lying idle, in which exactly the same sum now sought to be raised is locked up; but, at the same time, the chairman's statement that there is too much work on hand already must be accepted as a reason for allowing the Lugos property to lie fallow though it may one day prove of great value. The two points to which the attention of the shareholders should be mainly devoted are the erection and starting of the mill, and the completion of the San Miguel tunnel. The former will enable the management to do justice to the non-refractory character of the produce, and the latter will be a factor of immense importance in economising time, labour and money.

THE PRUDENTIAL ASSURANCE CO.

The prosperity of this company, which we have had the pleasure of chronicling for so many years past, knows no abatement—on the contrary, each year's figures are an increase upon those of its predecessor. After accompanying it in its wanderings for the last 40 years, the chairman is able to say that "its natural force is not abated." He could, in fact, state that never during the whole of that time has he had to move the adoption of so satisfactory a report. When we consider what past reports of the Prudential have been, that is saying a very great deal indeed. The chairman appealed not so much to the eloquence of words as to the more potent language of facts. Dealing first with the ordinary branch, he said that the issue of policies during the year was 42,475, being an increase of about 5,000 upon the preceding year. The new annual premium income—this is in the ordinary branch alone—was 235,487*l.* There are no foreign or colonial policies. The total premium income in this branch amounted to 718,848*l.* The most remarkable feature of the business is that of the industrial branch, where the premium income is 3,256,000*l.* The mind fails to grasp a business so vast and resolving itself into work so minute, and needing the very perfection of organisation to transact it properly. The increase of premium income in this department during the year was 197,845*l.* There has been a notable increase in the duration of the industrial policies, partly owing to the stringent provisions made to prevent lapsing, and partly in allowing such policies to be revived free of expense to the policy-holders. Then came in this direction the remarkable statement of the chairman that "one-fifth of the whole population of Great Britain and Ireland are insured with us." As illustrating the huge character of the society's operations, the chairman mentioned that the sums remitted to the office amounted to 3,098,000*l.*—these being received from the agents of the company, or 9,996*l.* for every working day of the year. From the office the daily remittances were about 600 in number. It is expected that by the next annual meeting—"We shall be in the position of heading every other company with an accumulated fund exceeding 10,000,000*l.*" The nature of the investments was the theme of Mr. Harben's speech. Mr. Harben is a gentleman to whom the Prudential Company, in particular, and the industrial community, in the matter of insurance, in particular, owe more than perhaps to any other person breathing, for we believe that to him belongs the credit of having established this department which is now a feature in the accounts of most of the Prudential's competitors. The investments, as given in a special table, are briefly and principally as follows:—Mortgages on property within the United Kingdom, 853,000*l.*; loans on municipal and other rates, 1,705,279*l.* 1s. 6d. City of London Corporation bonds, 24,875*l.* Investments—In British Government securities, 1,188,000*l.*; Railway and other debentures and debenture stocks, 1,573,000*l.*; freehold ground rents, 1,749,587*l.* 19s. 3d.; Scotch Feu duties, 7,499*l.* 15s. 6d.; house property—freehold, 625,413*l.* 6s. 3d.; leasehold, 2,138*l.* 4s. 1d.—627,551*l.* 10s. 4d. The Prudential is a remarkable company from whatever point we view it, and it is impossible for anyone yet to set bounds to the limits to which it may extend.

SOUTH STANDARD (WITWATERSRANDT) GOLD MINE, LIMITED.

The property which this company has been formed to acquire and develop consists of 66 claims situate on the Luipaard's Vlei Farm (Witwatersrandt) through which several "banket" reefs have been proved to run. The principal reefs which have been developed and proved to a depth of 40 to 60 ft., are known as the Burgers, Henrietta, Vera, and White Reefs. The property has been reported upon by Mr. Bell Davies, than whom a more competent and reliable expert could not be found. Mr. Davies in his report says, "My firm opinion of the goldfield is that it will prove to be one of the most profitable discovered in recent times, that it has great facilities for being economically worked, that owing to the character of the containing rocks the mines on the Witwatersrandt can be got into working order and crushing commenced in much less time than on other fields, and that in one year from this the output of gold will exceed that from any other district in the world. There is cheap labour, coal close to the field, good climate, and the only drawback I can see is that timber will have to be brought from a distance."

Mr. Maitland Grant, A.M.I.C.E., who has also inspected the property, confidently asserts that with the facilities for working, and good water supply, this property will prove itself one of the best on the Witwatersrandt, and second to none of those now working. Water-rights have been secured, which are conveniently situated, and it is said that an ample supply for working the property will be obtained. The output of the reefs is estimated to yield an average of at least 1 oz. to the ton. With a crushing capacity of 80 tons a day, this would mean a yield of 300*l.* per diem. On the other hand, the expenses are estimated to amount to one-third of that sum, and on the basis of 300 working days in the year, the profit would thus be 60,000*l.*, or 34 per cent. per annum upon the capital of 175,000*l.* The price to be paid for the property is 145,000*l.* It is only necessary to add that the company has secured the valuable services of Mr. George Hopkins, C.E., of the Richmond Consolidated and other mining companies, and from what we know of that gentleman we are confident that he would be the last man to allow his name to be associated with an enterprise that was not thoroughly bona fide, and that did not present fair prospects to the investor. The lists opened yesterday and close to-day.

AN ENTERPRISE OF PROMISE.

MANICA OPHIR MINING CO., LIMITED.

In connection with the issue of this prospectus, the meeting of the Ophir Territory Concession Company, which we report verbatim in our present issue, should be read. It will be seen how great are the prospects before well-managed estates like those owned by the Manica—estates vast in extent, and holding before the gaze of the investor a good foundation for hopes of future wealth to be obtained as the result of timely investment. At the Ophir Concession meeting, to which we have already referred, the great riches of the country were described in the language of measured hope and assured confidence, and it was broadly hinted that no concern had better chances than the one which would be heralded within a few days after the holding of that gathering. The concern to which pointed allusion was thus made is the Manica Ophir Mining Company, Limited, the prospectus of which now lies before us.

In the first place, we must congratulate those who have prepared this document upon the fulness of the information it contains, and the proper terms in which its merits are set forth. Paragraph follows paragraph in natural sequence, and the whole effect produced upon the reader is to make him think that an investment in a company of this kind is one which can scarcely fail to prove highly remunerative. The shares of the parent company (5*s.* paid), we were informed at the Ophir meeting, rose to 6*l.*, and recent facts have shown that in connection with South African properties such a result is by no means exceptional. The capital of the new company is 120,000*l.* in 1*l.* shares, of which 93,000 shares are offered to the public. The directors are gentlemen of experience in mining, the solicitors are the well-known firm of Messrs. Chave and Chave, of Devonshire Chambers, and Mr. J. Y. Watson, of the Stock Exchange, is the broker. The number of claims acquired by the company is 50, each 100 metres by 100 metres, and their geographical situation is Manica, in the Portuguese province of Mozambique, on the east coast of Africa. The position is further illustrated by the map which accompanies the prospectuses. Old records show that Manica has been famed for its richness in gold, and modern research has corroborated the statement. The powerful Mozambique Company in their agreement with the Ophir Territory Concession, Limited, bind themselves to assist the parent company and the sub-companies by all means in their power, and will do a vast number of things for

them, which it would be extremely difficult and expensive for the companies to do for themselves, and one stipulation of great advantage is that one claim, at any time within 10 years, may be abandoned for another, free of cost. It will not be in this case the buying of new properties to make up for the deficiencies of old ones, to which, in our American experience of mines, we are too much accustomed. Dr. Livingstone, of noble memory, spoke of Manica as "a place where gold is found much more abundantly than in any other part;" and the report of Mr. Henry E. O. Neill in no sense contradicts this encouraging statement. Manica, he says, "is well-known to be rich in gold, and silver has also been extracted from it." The 50 claims of the company, which are purchased for 85,000*l.* in shares and cash, are located in that part to which these remarks are known to apply. Exceptional advantages exist for the development of these properties, from both mining and agricultural points of view. Native labour is abundant, and noble rivers intersect the country. Expeditions on behalf of kindred and friendly concerns are already on their way to the scene of operations, and that of this company will follow with the least possible delay. That the result will be successful there is every reason to believe, and on all grounds a subscription for shares seems to be highly desirable.

CALLAO BIS PROSPECTS.

The directors of the Callao Bis Company, in suggesting its re-con struction, and submitting a well-conceived plan by which that proces may be carried out, fall back upon Mr. Edgar Taylor's report, and re produce its more salient paragraphs, in order that the actual position may be clearly understood. The sinking of the Unda shaft has been continued in accordance with his recommendations—the total quantity crushed to the present time being 1,806 tons, yielding 666½ ozs. of bullion, realising 2,320*l.* 6s. 4d. This result cannot be considered satisfactory—more particularly as the lode has not shown any sign of improvement. Operations have, therefore, been limited upon the No. 1 lode. The No. 2 lode appears yet not to have been sufficiently explored to determine its character. At Sosa-y-Mendez some exploratory works have been carried out, and the lode shows quartz assaying 16 dwts. to the ton. Mr. Bell Davies, the consulting engineer, states:—"I consider the result obtained justifies exploration on this lode." Discoveries in the neighbouring property warrant the exploitation of Sosa-y-Mendez in a more definite manner than has been hitherto attempted. Mr. Davies recommends the continuance of the cross-cut south-east from the 350 level and the sinking of the shaft another 100 ft. on the lode, in order to test it at greater depth. Further funds are necessary for these works, and, as we have said, re-construction is proposed. The full scheme is set forth in the report of the directors, and it will be further elucidated at the meeting next week, of which we shall, as usual, publish a verbatim report.

BUSINESS IN THE HOUSE.

The stagnation in business caused by the political and financial fears has led to the usual resort to "fun," which not even some of the older members quite discourage. A more sober "plant" than much of the rough larking indulged in by the more youthful set, has been a source of unlimited amusement to members to-day. A partner in an old established firm of jobbers took up a post of late in a more popular market, and in the usual course of business a "limit" for the sale of a number of "marble hall" shares was left with him. A buyer appeared, and forthwith our new dealer sold him some. Two other members close by were bargaining for a further lot, but the buyer only got 50 out of his 100 shares, and our dealer at once promptly sold him 50 "marble halls?" when he turned to a friend and remarked upon "another profit." The exposé, however, quickly followed when members trooped around him, and he found his "marble halls" were a dream, and his profits, ghostlike, gone.

DICKENS CUSTER RE-CONSTRUCTION.

The re-construction of this company, under the well-devised scheme of the directors, promises to be perfectly successful. We quite endorse the remark of Mr. Bolton, who presided at Thursday's meeting, that shareholders who are wise will take up on the terms offered every share to which they are entitled, and turn their backs resolutely upon any idea of arbitration. Mr. Holland, a holder of 4,000 shares, expressed the general opinion when he said, "My view of the reorganisation is this—that it is likely to lead to the best results." It should be borne in mind that the company possesses a property of which experts unite in speaking in most favourable terms, and a mill which in itself is a most valuable asset. Mr. Francis explained the agreement under which the new company takes over the property of the old in terms so clear and concise that his speech may be left to tell its own tale. The mistake is not to be made this time of reconstructing with too small a capital. The prospects of the Dickens Custer Company have of late considerably brightened.

MINING IN CORNWALL.

(FROM OUR CORRESPONDENT.)

During the past week business at the Cornish Mine Share Market has by no means been dull, and many shares have been transferred; a good business has especially been done in Carn Breas. The heavy fall in the copper market it was expected would affect the price of tin, but, fortunately for Cornwall, this has not been the case, although it is thought by many here that had there not been such a disastrous tumble in copper, tin might be higher. Wheal Uny meeting was held on Tuesday, when a loss of 2,979*l.* was shown on the sixteen weeks' working, and a call of 5s. per share was made. The loss was rather heavier than was expected by many, and few anticipated a 5s. call. The loss was mainly due to the fact that during the greater part of the four months the water has been in the mine, and the lower levels being flooded, consequently a less quantity of tinstuff could be returned than would otherwise have been the case. The mine, undoubtedly, is being worked in a most satisfactory manner, and a large quantity of ground is being opened up. The report presented by Capt. Bishop was a very favourable one, and now that the water is entirely out of the mine, the ground will be opened up with greater speed, and increased returns are confidently hoped for by Capt. Bishop. In anticipation, the plant on the dressing floors is to be increased in order to deal with the extra quantity of tinstuff. Mr. C. B. Parry, who presided, very properly remarked that the shareholders were in a state of expectation, and the future looked bright and hopeful for the mine. The next four months will prove to some extent the future of Wheal Uny, and although it is not expected that costs will be fully met next time, it is confidently anticipated that the adverse balance will be much smaller. The shares in this mine are quoted at ⅜, ½. As stated above Carn Breas have been the feature of the Cornish Share Market during the week, and there are many who believe that prospectively Carn Brea is the best speculation in the district. A large business was done from 15¾ cash up to 17⅜, and for the meeting at from 16¼ up to 18. Blue Hills remain unaltered at 26s. to 28s. Cook's Kitchens have been slightly inquired after, and a few changed hands at 11¾. Dolcoath meeting is to be held on the mine on the 25th inst., and it is expected that a dividend of 27s. 6d. to 30s. will be declared. The shares in this mine receded to 100½, and recovered to 101, but a very few shares changed hands. East Pool meeting will take place on Monday, when a dividend of 12s. 6d. is expected. Shares remain steady at about 33. South Condurrows have been somewhat inquired for at 7¼, and several shares have changed hands. Some unofficial reports of a favourable character have been in circulation as to South Crofty, and the shares have been largely dealt in from 7⅞ to 8⅛, up to 9 for the next meeting, at which they close. There have been plenty of willing sellers in Killifreths, and the prices have fallen to 21s. New Cook's Kitchens remain dull at 2 to 2½. Phœnix United Shares remain steady at 2*l.* 17s. 6d. to 3*l.* 2s. 6d. A report from West Seton states that the 264 end east is showing a fine lode worth 40*l.* per fm., and the winze, coming down from the 250, just over the end, is steadily improving. There are now two boilers in good repair at the stamps engine, and the sales of tin ought to be increased as they have plenty of tin stuff. Shares in this mine have been slightly dealt in at 5½. The new beam at Wheal Agar is now in position, and it is expected that the engine will be at work in a fortnight, although it will doubtless be a considerable time before the mine is again in full working order. Shares have been more inquired for at 11½ to 12, and sellers are scarce. Wheal Kitty shares can be bought at a low figure at the present time, about 7s. 6d. each, call paid. It is expected that the engine will be at work again in the course of a week or two, and there does not seem the slightest chance of the water rising so as to interfere with West Kitty. However, West Kittys have receded to 6⅞ to 7, and doubtless the fears entertained by some of the water of Wheal Kitty has to some extent weakened prices. South Frances shares remain neglected at 6⅝ to ⅞. Tinerofts continue steady at 11 to 11¼. The cutting of the lode at West Frances is anxiously looked forward to, and shares have declined from 9 to 9¼ to 8¾ to 8⅞.

REVIEWS.

Golden South Africa. By Edward P. Mathers, F.R.G.S. London: W. B. Whittingham and Co., 91, Gracechurch Street.

We are glad to welcome another issue of this useful work, which, on the occasion of its first issue, we took the opportunity of commending. The literature of South Africa is becoming somewhat prolific, and we cannot but think that the present volume would have been more acceptable had its contents been brought down to date. But, even as it is, its general information entitles it to careful perusal, and should secure for it a wide circulation.

Practical Plane and Solid Geometry, Scales and Pattern Drawing. By John S. Rawle, F.S.A. (Loudon: Simpkin, Marshall and Co., 4, Stationers' Hall Court, E.C.

The fact that this is the fifteenth edition of Rawle's practical geometry seems to prove not merely the need of such a work, but its great value to the student. The class-sheets prepared for use in class-teaching will be specially valued by the educational profession.

Mineral Resources of the United States.

We have before us this important and well-prepared work, which is a compendium of all that need be said on the subject of which it treats. The publications of the United States geological survey are very highly appreciated in this country, and are apparently prepared regardless both of labour and cost.

Registrarship of the City of London Court. — Mr. J. T. Hazeldine, solicitor, is a candidate for the vacancy, created by the death of Mr. Speechly. Mr. Hazeldine has had considerable experience in all branches of legal business, particularly with that coming in the sphere of the City of London Court.

The returns of the production of minerals for the past year are now being made up by the inspectors of mines. It is anticipated that the production of both coal and iron will show considerable increase.

Gold quartz crushing works, says the *Cardiff Mail*, have just been started at Llanelly by a number of foreign gentlemen. The works are situated at the Docks, and commenced operations a few days ago. Quartz is being obtained from the Dolgelly and Dolaucothi mines.

REPORTS OF MEETINGS.

THE LADY FRANKLIN MINING CO., LIMITED.

THE COMPANY DENOUNCED IN PUBLIC MEETING BY A MEMBER OF THE STOCK EXCHANGE AS A "DISGRACE," AND THE SHAREHOLDERS DESCRIBED AS "CRUELLY TREATED"—THE DIRECTORS IN A "HUMILIATING POSITION"—PROSPECTUS PROMISES v. ACTUAL RESULTS.

AN ordinary general meeting was held at the Cannon Street Hotel on Thursday "to receive the report of the directors and the accounts for the year ending 31st December, 1888, and to transact the ordinary business of the company, and to authorise the directors to borrow a sum of 40,000*l.* on the security of debentures charged upon the undertaking and property of the company. The transfer books will be closed from the 9th to the 15th March, both inclusive"—Mr. P. Penn-Gaskell (chairman of the company) presided.

Mr. GEORGE L. O. DAVIDSON (secretary) read the notice calling the meeting.

The CHAIRMAN: Gentlemen, in asking you to receive and adopt the directors' report and accounts, I will reserve more lengthened explanation until the time when I move the resolution with reference to the issue of debentures. Of course, we regret very much that Mr. Chapman, who was our manager, and our largest shareholder, is unable to attend the meeting. He left here about 10 days ago for San Francisco, to carry out the purchase of the property, if you authorise the debenture issue. The balance-sheet speaks for itself. (A laugh.) I am sorry it could not be made more to your likiug, but we have been engaged in development work, pure and simple, during the past year. We have found large bodies of ore, but not of sufficiently high grade to pay us for stoping at the present long distance from the work. The most important work done has been the sinking of the shaft 490 ft. We have solved the theory of the ore-bearing line below the stratified beariug line, which bears no ore. We have gone below it, and find it is only a belt, and that we have a mineral bearing line below us.

DEVELOPMENT DIFFICULTIES.

Our development has been undertaken with great difficulty. We were so close to some properties we desired to secure that we were actually afraid to find somethiug which would increase their value, for we had been thinking for two years to get hold of them. They have been reported upon by Mr. Moreing and by Mr. Farish, a well-known expert, aud their reports point to the absolute neeessity of our getting these properties. The map on the wall shows their position in relation to Lady Franklin. As most of our works are at a lower point we could not do better than follow the advice of experts, and make an effort to secure those properties. All our work has been carried out with that end in view. I now propose the adoption of the report and accounts.

TOO SMALL AN AREA.

Mr. M. M. MOORE: I have great pleasure in seconding the motion. Our time during the last year has been spent in trying to find a large ore body. We have not been directly successful in achieving this object, but indirectly we have the promise of being very successful. We found that the mining area we originally started with, although the record of the mine up to the time it eame into our position and for some time afterwards was good, and enabled us to pay two dividends of 5 per cent. eaeh, yet further prospecting did not bear out previous hopes. Mining, as you know, is a great uneertainty—(a laugh)—and iu the eourse of our investigation we found it was neeessary to acquire a larger area. We started with a small area of 10 acres in the Lady Franklin proper, and thought that was suffieient to carry us along safely and prosperously. But in order to make the company as it ought to be with its present capital it was necessary to acquire a more extended area. Through certain skilfully conducted operations we were enabled to get an offer of these properties at a price less than that at which we would have been able to secure them if we had gone on as prosperously as we expected to do at first, and under the advice of eminent, eompetent and capable miniug engineers who iuspected the property we have thought it advisable to take steps to secure this small extended area. It is 80 additional acres, and the map will show you how much it adds to what we originally possessed.

DIRECTORS' FEES.

Dr. ELEY: I do not wish to disturb the harmony of this meeting, but simply to criticise the accounts. This company seems to be very expensively managed—take for example the item 1,200*l.* for directors' fees. I think people ought to be paid for their services, but the directors have taken 400*l.*, and they give themselves eredit for 800*l.* in the accounts. Down below in the eapital aceount and balance sheet we find again amongst the sundry creditors the directors' fees 767*l.* 1s. 11d. I throw it out as a suggestion that in our unfortunate position the directors should waive that sum altogether. With referenee to the two dividends of 5 per eent., I think I am right in saying that part of them was from accumulated proeeeds of the mine beforehand. I think the directors ought to be satisfied with what they have had, for in my experience as one of the shareholders, I have had to be satisfied with nothing. (Hear, hear.)

A SHAREHOLDER: The real position is that the debts are 1,900*l.*, and the company has 28*l.* in hand with which to pay them.

Dr. ELEY: I certainly think the directors ought not to take any more in fees. (Hear, hear.)

AN INDICTMENT OF THE COMPANY.

Mr. W. H. BIRKS (of the Stock Exchange): The meeting has unfortunately been called on a most inconvenient day. (Cheers.) The Stock Exchange settling day, and many of my friends on the Exchange who hold shares regret very much that they are unable to be present. (Hear, hear.) I speak as a shareholder and representing friends who between them hold about 5,000 or 6,000 shares. When I mentioned to some of them that I would attend the meeting to-day I also asked them whether they would wish me to give expression to their feelings, and they agreed with me in saying that we regard this company from first to last as

NOTHING SHORT OF A DISGRACE.

(Loud Cheers.) This company was formed two years ago, aud in the first year's accounts issued it was shown that there had been a certain product from the mine, and a nett profit of 24,000*l.* over a period of 14 months. That would be about 20,500*l.* for 12 months. The next year's accounts have come out, and they are in our hands to-day, and so far from there being any profit we have only sold 700*l.* worth of ore altogether, but when we referred to the original prospectus what did we find?

PROSPECTUS PROMISES V. ACTUAL RESULTS.

We found these words:—

"The company takes over the property as from the 1st May, 1886, as a going eoncern, since which date all profits derived from the working of the mine belong to the company; the nett profits from that date, according to a telegram from the manager of the mine, received 2nd November, amount to 13,106*l.* 0s. 1d., so that there is every prospect of an early and satisfaetory dividend. This result has been obtained—not from an active working of the mine, but by simply taking out the ore in the course of its development and leaving the stopes practieally intaet."

I am not a professional miner, but it is most remarkable to me that within a few months our directors should have to issue a report stating that they find the system of management pursued by the agent in eharge of the mine is one of which they cannot approve. They say "his method of working has been immediate, at the expense of future results!" I should very much like to know when the directors first became aware of that condition of things, and why the shareholders were not immediately informed of it? It seems to me that the statement contained in the original prospectus, judging from the light of that circular, is so far a misrepresentation, that if the shareholders will only combine, it is a debateable question whether we cannot get our money returned to us.

I DENOUNCE THE WHOLE THING AS A DISGRACE.

(Loud cheers.) There is no explanation given in the accounts for the extraordinary disparity in the working of the two periods. When, as in the first 14 months the accounts shewed a net profit of 24,000*l.*, in the last 12 months we have ouly sold 700*l.* worth of ore—to all intents and purposes the accounts show that we are insolvent. We owe 1,920*l.* and have 28*l.* to pay it with. In this second year's accounts as against the product of 750*l.* worth of the ore, expenses of management in Mexico are 1,200*l.* and in London another 1,200*l.* (Oh). I do think that

IT IS A CRUEL THING FOR SHAREHOLDERS

To be treated in this way. It seems to be almost futile to offer any opposition at the present time, but I should like to take the sense of the meeting on the question of adjournment in order that the meetiug may be called at a more convenient day when we can have a more representative gathering and see whether some steps eannot be taken to investigate the companies affairs from the beginning, in order to take aetion against the vendor for the return of our money. I am sorry to see the directors in what I eannot but call the humiliating position in which they are plaeed to-day of having to father such schemes.

The CHAIRMAN: Do you move an amendment?

Mr. BIRKS: I move "That the accounts be not received, and that the meeting be adjourned to a more convenient day for the attendance of members." (Cheers.)

Dr. ELEY seconded the amendment, and commented on the extraordinary position of the eompany, whieh required the directors to issue debentures at 130 per cent. to those who took them. He thought that this was a matter whieh ought to be threshed out in a bigger meeting than the present, and that, therefore, the present gathering should be adjourned.

STOCK EXCHANGE VIEW OF VENDORS' ACTION.

Mr. BIRKS: With regard to the proposition of the vendors to surrender 40,000 shares—that, so far from lessening any feeling of indignation I have, rather adds to it, because it is a tacit acknowledgment, that to that extent, at any rate, too much was paid for the property. (Cheers.) I cannot express any legal opinion, nor have I taken oue, but I doubt whether it can be a legal process for the original vendors to give up 40,000*l.* worth of shares simply in favour of people who come in whilst those who do not are not allowed to participate. If any surrender does take place, it ought to be for the whole body, and not for the few who subscribe for the debentures. It strikes me as being most irregular.

Dr. ELEY: I should like to hear what the directors have to say about this; but in any case they will not deny that we are payiug most dearly for this issue of debentures.

REPLY OF THE CHAIRMAN.

The CHAIRMAN: I do not think Mr. Birks has treated us fairly. (A laugh.) One of the eharges he makes against us refutes itself, because he asked why we made that statement, that no stoping had been done, but that the ore had been taken out in the prosecution of the work. That statement was true, and the ore continued down from surface till we eame to the stratified line. Only 10,000*l.* worth remained, and then we eame to a stop. The reason we found fault with Mr. Taylor was, that he did not find this out sooner. We have done our best. Mr. Algernon Moreing stands very high in his profession, and Mr. Farish is supposed to be the best man in Ameriea. We can only take advice and act upon it. I do not thiuk Mr. Birks has treated us fairly in regard to the matter of the output. The profit made to October 31st was 12,526*l.*, and from the 1st November, 1886, to the 30th June, 1887, it was 12,315*l.* With regard to Mr. Chapman's salary—of course a man does not work for nothing, and if you want a good man you must pay him. We took our fees when we were paying dividends, and when we ceased paying them we eeased drawing our emoluments.

DIRECTORS READY TO GO FEE-LESS.

I am sure the directors are not going to stand in the way of the shareholders in this respect. (Cheers.) They would not draw their fees unless things became again flourishing, and, personally, I do not eare about taking fees unless I am paying dividends. (The chairman

made this statement later on on behalf of all his colleagues). The fees are put down as a matter of account, and if the shareholders wish them to be wiped out, it can be done. This has been a very anxious time for us. I admit that these mines are very uncertain, and Mr. Bonallack warned us of this in his original report. He draws attention particularly to the

UNCERTAINTY OF MINES IN THE CHLORIDE FORMATION.

I have been at the mine, and seen the place from whence they took out 17,000*l.*, and a very small place it is. We have looked into matters very closely and have come to the conclusion that what we are now proposing is the right and proper thing to do. Instead of being harshly spoken to, I think the directors ought to receive the thanks of the shareholders for having brought matters to their present pass. Every stroke of work we are doing we are practically developing other people's property, and were obliged to take steps not to benefit them at the expense of money belonging to our shareholders.

A QUESTION TO BE RESERVED.

Dr. Eley: Are the shareholders to suppose that you have discovered ore in the present portiou of the Lady Fraklin, and that you have not liked to say so because it would raise the price of the outlying property.

The Chairman: I cannot answer that question. We are obliged to follow Mr. Chapmau, but I do admit that there are places where we are not at work for fear of making the discovery for our neighbours, and that is as far as I am able to go. Will you (Mr. Birks) persevere with your amendment, because time is an element in this matter. One paymeut is due on the 1st of April, and another on the 17th.

Mr. Birks: It is not my intention to offer any obstacle to the progress of the company or to make any personal reflection upon the board, but I go to the root of the matter, and say that

THIS COMPANY IS ONE THAT OUGHT NEVER TO HAVE COME INTO EXISTENCE.

I cannot believe that the statements made in the original prospectus were true when within measurable distance of the issue of that document we had such accounts as these, which practically demonstrate to us that the hopes first held out were absolutely visionary.

The Chairman: The vouchers for original sales of ore can be seen at the office.

Mr. Birks: I think it a cruel thing as regards shareholders.

The motion for the adjournment was lost, and the report was carried.

DEBENTURE ISSUE OF 40,000*l.*

The Chairman then moved a resolution authorising the directors to borrow the sum of 40,000*l.* on the security of debeutures charged upon the undertaking and property of the company.

Mr. Moore deprecated any obstruction at the present time as being against the interests of the shareholders. He was a large shareholder, and his shares had cost him about what those of the gentlemen present had cost them. Mr. Chapmau had couveyed his firm belief that in acquiring these properties they would have a good chance of resuscitating the Lady Franklin, and he (Mr. Chapman) believed that if his proguostications came true, the debentures could be paid off in a year and a half. The largest shareholders had already offered to subscribe 20,000*l.*, and the directors thought it not right to close the lists until the other half had been offered to the shareholders.

Dr. Eley again commented upon the heavy terms upon which the issue debentures were to be made.

Mr. Moore replied that the shareholders could take them if they wished to do so.

A Shareholder: Do you see your way to get the other half taken?

The Chairman: I think we do. We know where to go to, but we thought we would like to give the first offer to the shareholders. We have had indications, "if you want more taken, come back to us."

Mr. Birks: The chairman has not answered my question as to the legality of the vendor's action.

Mr. Morris (solicitor): You may take it as quite legal.

VENDOR'S POSITION.

Mr. Birks: The vendor is in a very different position from us. He holds 80,000*l.* shares, aud he has had 90,000*l.* in cash. The property cost 170,000*l.*, and therefore the vendor can afford to be very magnanimous, especially after such an experience as we have had of the mine. His action goes for nothing to my mind.

The Chairman: The vendor received only 44,000*l.* in cash.

Mr. Birks: Then your accounts are not clear.

The Chairman: We cannot go back upon that uow. The money has been paid, aud the mine showed for some time that we took it over with all it producing power, and we hope it will come round again as we are led to believe it will.

The motion was carried unanimously.

Dr. Eley proposed the re-election of the retiring directors which was agreed to.

Mr. Neville proposed, and Mr. Birks seconded, the re-election of the auditors which was agreed to.

On the motion of Mr. Birks, seconded by Dr. Eley, the chairman was thanked, and then the meeting closed.

WHEAL UNY.

CALL OF 5s. PER SHARE.

Adventurers in Wheal Uny held a meeting on the mine yesterday —Mr. C. B. Parry presiding.

The accounts showed:—Labout costs, 2,850*l.*; merchants' bills, 2,313*l.*; interest and discount, 115*l.*; total debits, 5,279*l.* On the other side, 39 tons 14 cwt. of tin has been sold for 2,278*l.*; extra carriage, 2*l.* 6s. 9d.; copper ore, 18*l.* 5s. 2d.; leaving a loss on the 16 weeks' working of 2,979*l.*, increasing the mine's liability to 3,380*l.*

Capt. Bishop said that the prospects were better than since he had been associated with Wheal Uny. Their expenditure in respect to merchants' bills was far in advance of last quarter. When the water increased they found they were a boiler short, and were obliged to get another for Hind's engine. That had cost 85*l.* They had spent about 300*l.* altogether in additional gear, and the water had also increased the costs in the shape of more coals; in fact, it had been simply a case of more water and less tin.

The Chairman said they were now in a state of expectation, and had bright hopes as to the future of the mine. The accounts were not satisfactory, but that had been explained to them by Captain Bishop.

Mr. T. Pryor inquired whether it was true that negotiations were going on with regard to the sale of East Uny.

The Chairman said there had been some little correspondence which might possibly amount to something, but he was not in a position to state positively. They hoped for favourable results.

Mr. W. Pike: Of course the shareholders will be consulted?

The Chairman: Yes, we shall call a general meeting of shareholders if it amounts to anything.

Mr. Hodge proposed a call of 5s. per share.

Mr. Pike seconded, and it was carried.

Mr. Alfred Thomas, in proposing a vote of thanks to Capt. Bishop and the other agents, remarked that they had every encouragement in deep mining, and he hoped Capt. Bishop would be able to open up something good as he went on in depth. (Hear, hear.) The accounts were very disappointing, but circumstances of no ordinary nature had occurred with respect to the water.

A vote of thanks was also accorded to the chairman, on the motion of Mr. W. Pike.

AUSTRO-HUNGARIAN GOLD EXTRACTION CO., LIMITED.

STATUTORY MEETING—PASSING THROUGH THE PRELIMINARY STAGES—PATENTS IN ORDER, AND 16,000 SHARES ALLOTTED TO THE NEWBERY-VAUTIN CO.

The first (statutory) general meeting of the shareholders of this company was held at the Offices, No. 7, Jeffreys' Square, London, E.C., yesterday, under the presidency of H. Magnus, Esq.

Mr. H. Elliott (secretary) read the notice convening the meeting.

A RESUMÉ OF THE COMPANY'S OPERATIONS.

The Chairman: Gentleman, as you are aware, at this first meeting of our company, there is no formal business to transact, and the only duty which devolves upon me is to give you information as to what your directors have done since the time when your shares were allotted. I must first express my regret that our chairman, one of the inventors of the process, for the use of which this company was founded, is compelled, by important business connected with his invention, to be absent to-day, and also that my colleague, Mr. Gossett, who has a practical knowledge of miuing, aud is acquainted with the country in which we are interested, is far away from us on important business. Nevertheless, I will do my best to tell you what we have done, and afterwards to answer any questions you may ask and give you auy iuformation iu my power. The shares in this company were allotted on November 19th of last year, and before that date, our manager, Mr. Trevick, had left England to commence his preparations at Nagy Banya, and his negotiations with the Austro-Hungarian Government officials, from whom he informs us, he has throughout received great assistance and kindness.

MACHINERY NEARLY READY.

Briefly, what has been done is this, Mr. Trevick has received and erected the machinery, with the exception of one small detail for demonstrating the Newbery-Vautin process, he has repaired the works, and the water-wheel and its accessories; from which we shall derive our motive power, and within a few days he will be ready to commence the treatment of concentrates, although for some weeks he will work in private until it is certain that no hitch such as frequently occurs with new machinery can arise. He has also obtained from the Austro-Hungarian Government officials an agreement carrying out the terms of the concession as set forth in the prospectus of the company. Your directors have been careful to obtain au independent report upon the patents for the use of which the company is licensed by the Newbery-Vautin Company. The agent we have employed at Buda Pesth assures us that

THE PATENTS ARE IN ORDER

in accordance with the laws of the couutry, and that upon making an exhaustive search he finds nothing to invalidate, or even threaten, them. We have in consequence allotted to the Newbery-Vautin Company the 16,000 shares, according to agreemeut, and have received from them their license to work the process. You will see, therefore, that nothing exists to prevent our shortly calliug upon the Austro-Hungarian Government to appoint their commission to inspect the working of the process; and when that is doue, and as we hope and believe the success and economy of our method is demonstrated, we shall have finished what may be called the preliminary stage of this company.

FUTURE CALLS.

As to the future, it is always difficult to speak, but there is one event in the future I must allude to, and that is the calls upon your shares, which are at present only 5s. paid. In the prospectus it was stated that the making of calls was uot conteuplated for 12 months. Now we find that were we rigidly to adhere to that statement we should, as a company, perhaps becorue serious losers thereby; for you can easily see that if the Austro-Hungarian officials within the next few months approve of our process, it will be to our interest to at ouce proceed with the enlargeuent of our works at Nagy Banya, and the erection of others elsewhere. But as this is dependent on our having made a proved success, I cannot imagine that the shareholders will object to fiud the money for carrying it out without unnecessary delay.

THE PRICE OF GOLD EXTRACTION IN AMERICA.

In conclusion it may interest you to know that in one of the American States where this process is being introduced, and where labour is very high-priced indeed compared with Austro-Hungary, the parties in charge of the works find the extractiou of the gold cheaper than they had calculated upon and well within the 1*l.* per ton mentioned in our

prospectus. (Cheers.) I shall now be pleased to answer any questions you may see fit to put to me.

SAMPLE ASSAYS.

We have had some samples sent over by our manager, which have been assayed and submitted for treatment in an experimental way by the Newbery-Vautin Company, and within the last two days we have received this report from them.

Newbery-Vautin (Patents) Gold Extraction Company, Limited,
42, Old Broad Street,
London, E.C., 13th March, 1889.

H. Elliott, Esq.,
Secretary Austro-Hungarian Gold Extraction
Company, Limited,
7, Jeffrey's Square, E.C.

Dear Sir,

I have now the pleasure to inform you that your four samples marked as under have been assayed and subjected to treatment by our process with the following results :—

On Statute ton of 2,240 lbs. :

Ore :—

Assay before treatment.

	Gold.				Silver.		
	ozs.	dwts.	grs.		ozs.	dwts.	grs.
No. 1 Krutzberg ...	1	14	19	...	6	18	11
„ 2 Viruvir	13	9	3	...	20	7	15
„ 3 Telsbarry ...	1	13	23	...	4	16	16
„ 4 Nagzhanza ...	4	1	15	...	15	13	14

Tailings :—

Assay after treatment.

„ 1 Krutzberg ...	0	1	23	...	2	8	23
„ 2 Viruvir	0	15	0	...	6	10	0
„ 3 Telsbarry ...	0	3	22	...	1	17	5
„ 4 Nagzhanza ...	0	1	23	...	6	0	4

These ores must firstly be roasted with salt in proper proportions as may be found suitable on bulk working leached with water for the gold, after chlorination, and then with a solution of hyposulphite of sodium for the extraction of the silver.

Yours faithfully,
(Signed) H. L. Baker,
Secretary.

THE LOCAL MANAGEMENT.

Mr. Battinson: Has a manager been sent out besides Mr. Trevick?

The Chairman: Mr. Trevick has under him a Mr. Jones, who has been for some weeks at the works in London, and understands the working of the process. Of course they will work the process in private for a time, and if they find any hitch they will send somebody to put it right.

Mr. Battinson: These sample assays are very satisfactory, but what we have to do is to look at it in bulk.

The Chairman: We shall very shortly have an opportunity of doing so.

On the motion of Mr. Battinson, a vote of thanks was passed to the chairman, and the proceedings terminated.

THE MESQUITAL DEL ORO MINING CO., LIMITED.

PROMISING POSITION OF THE COMPANY—INTERESTING STATE OF THE DEVELOPMENTS.

A special general meeting of the company was held in Room No. 174 of Winchester House, No. 30, Old Broad Street, E.C., yesterday, when the following resolution was proposed :—

"That in addition to the moneys borrowed or hereafter to be borrowed by the directors, under the 33rd of the company's articles of association, the directors be, and they are hereby authorised to borrow and raise, for the purposes of the company, such sum, or sums, not exceeding 25,000*l.*, and at such time or times, and at such rate or rates of interest as the directors may think fit; and that for the purpose of securing the repayment of any such sum and interest, as last aforesaid, the directors may exercise all or any of the powers conferred upon them by the 33rd and 34th of the company's articles of association, in the same manner, in all respects, as if the sums hereby authorised to be borrowed were sums borrowed under the said 33rd article; and that every debenture or other security hereby authorised may be in such form and subject to such conditions, and be issued to such persons and upon such terms as the directors may think expedient."

P. Penn-Gaskell, Esq. (chairman of the company), presided.

Mr. Ralph S. Archbold (secretary) read the notice calling the meeting.

ON THE EVE OF SUCCESS.

The Chairman: Gentlemen, it gives me very great pleasure to meet you here to-day. I think we might liken ourselves to the crew of a ship in sight of port. We have required from you very great patience, and we ourselves have had to exercise the same virtue as well as undergo a great deal of anxiety in our work. The company has been going on for a long time, but there does not now remain the shadow of a doubt about the value of our property. We have it in figures in this exhaustive report which Mr. Holberton has sent us, which is in fact so full that I am left very little to say. It must be very satisfactory to you to find that we have in this mine one which is very permanent in its character, for I hold it to be quite marvellous that we have found so few barren portions of ground. Going east and west we found the ore body holding out in the most satisfactory way—in fact I do not know any other mine that can show such an absolute record of continuous ore produced. (Cheers.) It seems to be the same in each forebreast whether east or west, for we find the ore still continuing, and, if anything, improving, and in this connection I think the figures of Mr. Holberton are most satisfactory, as well as conclusive. They are principally as follows :—

IMPORTANT FIGURES.

"We have opened in 1888, 18,511 tons, averaging 1.12 ozs. per ton; and previous to 1888, after deducting that worked away we have 30,726 tons, averaging 0.786 ozs. to the ton; so that the total ore in sight in the mine is 49,237 tons, averaging 1,025 ozs. per ton; that is, 50,447.49 ozs. of fine gold, which, taking this year's milling percentage saved at 50 per cent., gives 25,223.75 ozs., or a standard mint value of 107,137*l.*, whilst the actual value of the ore is 214,274*l.*, or nearly double that existing last year."

That is very satisfactory, and, as far as the actual milling returns go, you will see the increase also is very satisfactory, because with everything against us and losing a large percentage of the 12 months ending 1888, we have actually recovered 10,750*l.* 16s. 6d., as against the six months in 1887, 2,959*l.* 1s. 6d., and the six months of 1886, 758*l.* 5s. 6d., so that you see the increase is very satisfactory, and if it can be maintained with our present stamps—and I have very little doubt that it will be actually increased—we have a very satisfactory outlook. (Cheers.) I have been asked by one or two shareholders for an explanation of the small percentage of gold saved. Now, we do not intend to rest where we are. We intend to make that saving very much larger—in fact, we have had some ore treated in New York, and there they were able to

SAVE BY SIMPLE AMALGAMATION 80 PER CENT.,

and we hope to arrive at this result on the mine. If the new mill does not do as much as that we shall use every contrivance to save everything we can. We have been making various experiments, and intend to go on with them. Of course the expense of pans is large, but we shall not hesitate to try them, and if they succeed and pay for themselves we will furnish the whole of the mill with them. At the present moment we are spending so much on capital account in building the new mill, making new roads, and opening out the mine, that we do not feel justified in going to any expense of that sort just yet. Of course, asking you for power to issue these debentures, is what we always thought we should have to do when we spent the 10,000*l.* for the Lugos Mine, and it is simply putting it within our power, by spending money which we will raise as capital, instead of spending it out of revenue, to pay you dividends in a shorter time, and in this connection I am speaking to the deferred shareholders. I am sure we have a property that it is our duty to turn to the best account. We have the raw material, and it will take capital to turn that raw material into sovereigns and dividends. We consider that we are perfectly justified and right in asking you for this money to enable you to get dividends more quickly. I hope soon that the capital account will be closed as nearly as ever it can be in a mine. Of course, development will have to go on, but when we have finished the mill, and done all the necessary work appertaining thereto, and constructed the dam and the flue so as to work more months in the year, I think our capital account may then be practically closed.

VERY LOW COSTS.

Our expenses, when we do that, will be, I imagine, lower than those of any other mine in the world, because our labour is very cheap, and if we can work for five months out of the year with water, our milling will be very cheap. Of course, wood at the present moment is a heavy item, and will be especially so when we get the new mill to work, but we are laying in large stocks. I do not believe we shall have any cause to complain of the cost of milling in the future, but that it will compare very favourably, if not be far below, the cost of any other mill in the world. As I have said, we had some ore sent to New York, and we are sending there some more. The results obtained are very good. They save over 80 per cent., and Mr. MacDermott and Mr. Duffield speak highly of it. We shall keep on trying every possible experiment at our mill, and the moment we are able to announce to you that we can save 80 per cent. I am sure you will feel gratified and pleased. This report is so full, that I do not see that, unless in answer to questions I can add anything to it at the present moment. (Cheers.) In the meantime, I will propose the resolution which has already been read.

A DIRECTOR THINKS MORE CAPITAL MIGHT HAVE BEEN RAISED WITH ADVANTAGE.

Mr. N. F. Robarts (director), in seconding the motion, said: I regret the directors have not come to the conclusion that it will be advisable to issue more than 10,000*l.* in debentures. My own feeling as a shareholder from the commencement, and I daresay I have that feeling in common with many other shareholders, is that the mine has been a long time before it has been brought into a producing position, and I believe that the sum of money which the board will have at their disposal after they have issued this 10,000*l.* will not be sufficient to bring the mine into a full producing condition as rapidly as we otherwise might do. Of course we are driving the San Miguel tunnel, but it cannot be finished before the end of the year, and meanwhile the mine is at great disadvantage. We can only raise ore and water through the shaft, and the raising of water (although there is not much in the mine) takes time and labour. The productive power of the mine directly the San Miguel tunnel is completed will be immensely increased and the great point we have to study is to be able when that productive power is increased at once to crush as much ore as possible, and as cheaply as possible, but until we have completed the dam and are able to work during the wet season with water power, we cannot crush as cheaply as possible, and until we bring up more stamps we cannot crush as much as possible. In the Lugos Mine we have a capital of 10,000*l.* lying idle of which we ought to make use. We ought to press it on as a separate undertaking under our own company. The 10,000*l.*, however, will enable us to push on very rapidly, and I suppose within a few weeks the mill, which has been so much delayed, owing to the exceptionally wet season last summer, will be at work, and soon after will be making regular, and, I believe, large crushings. Then I hope the shareholders will be even more satisfied with the condition of the mine than they are now. (Cheers.)

QUESTIONS.

A Shareholder: Do I understand that no work has been done on the Lugos mine?

The Chairman: Yes, the assessment work has been done regularly, in order to hold possession under the Mexican law.

A Shareholder: There has been no sinking of shafts.

The Chairman: Nothing of importance—simply keeping possession of the mine under the Mexican law.

A Shareholder: Is the 30-stamp mill at work, and if so how long has it been at work?

The Chairman: It is now being erected. It is the new mill we are building now. Hitherto we have been using 10 old stamps, and for a short period five additional stamps, but we cannot judge much from their performance what the new mill will do. The stamps we are using are old, and have been patched up so that they are working under great disadvantages. The stamps you allude to are the stamps to be erected in the new mill.

The Shareholder: When will they be at work?

The Chairman: We have been very much delayed. The rainy season came on a month earlier than usual, and the heavier pieces of machinery (some of them weighing 2 tons) could not be conveyed to the spot. We were thrown back a great deal in regard to machinery, timber and building.

WHEN THE MILL WILL BE READY.

We had hoped to have had the new mill ready to work in April, but whether it will be in May we cannot tell, though we trust it will not be later. We do not know what the new mill is going to do for us in the way of saving, but it certainly must be an immense improvement on the old mill.

Lord Richard Browne: When do you propose to work on the Lugos Mine?

The Chairman: We have not thought of that yet; we have too much on hand already.

NOT REFRACTORY ORE.

Lord Browne: I believe I am right in saying that the gold you have is entirely free gold, and that no difficulty has arisen from the ore being refractory. I understand that it is more a question of an efficient mill and stamps than the difficult character of the ore that only 50 per cent. of the gold was saved.

The Chairman: There is nothing refractory in our ore. The only trouble has been a ferruginous clay of a sticky nature, which, in light particles of gold has prevented rapid amalgamation with quicksilver, as you may read in Messrs. MacDermott and Duffield's report. The presence of refractory material is inappreciable, and that report deals with it. Before putting the resolution, I would like to make a further explanation.

IMPORTANCE OF SAN MIGUEL TUNNEL.

The position of our mine will be very different when we get the San Miguel tunnel through, and the south shaft down. We will then have, practically, two mines, because we can work to the eastward through the south shaft, bringing ore down from the old Briones tunnel, as we are doing at present, and the Miguel trucks can be loaded at the end of the tunnel and run out to the mill. We have the tram already laid inside the mine and outside the mill site, and I look to an enormous reduction in the cost of milling, which, of itself, is of very great importance. Figures have been drawn up by Mr. Harvey, and others, with regard to the cost we will eventually have to pay for mining and milling, but I believe the reduction will exceed our greatest expectations. The drainage is the most important point, for at the present moment we are taking out from 80 to 90 tons of water a day, but the moment the Miguel tunnel is sufficiently driven the water will run out of its own accord. I hope by November the tunnel will be completed, and by that time I think we shall be able to learn how cheaply we can crush a ton of ore, and how much gold we can extract from it. (Cheers.)

The resolution was then carried.

The Chairman stated that the ordinary general meeting of the company would be held in April. He also referred to a plan of the mine, upon which he indicated the position of the San Miguel tunnel in relation to the other workings of the mine. Of this tunnel only 600 ft. remained to be driven. The Sans shaft was sunk all the way in ore. When the tunnel was completed it would not only drain the water naturally to its own level but form the chief exit for the produce of the mine.

The proceedings closed in the usual way.

LATEST REPORT.

1st February.—Work done in the mine during the week was as follows:—Acerada level east of Sun's shaft: Six men driven 9 ft.; total 106 ft. The 85 level east: Six men driven 6 ft.; total, 566 ft. 6 ins. The reef is 4 ft. 6 ins. wide, and shows free gold. The 137 level east: Six men driven 4 ft. 6 ins.; total, 551 ft. The reef is 5 ft. wide, and mixed a little with country rock. The 137 east winze C: Six men sunk 4 ft.; total, 46 ft. 6 ins. The reef is 3 ft. wide, on an average ore. The 190 level east: Six men driven 3 ft. 6 ins.; total, 382 ft. The reef is 3 ft. wide, and shows a little free gold. The 190 east winze B: Six men sunk 5 ft. 6 ins; total, 11 ft. 6 ins. Reef 4 ft. wide, and looks well. The 190 level west (south part): Two men driven 2 ft. 6 ins.: total, 287 ft. Reef 3 ft. wide, mixed up a good deal with country rock. The 256 level east: Six men driven 5 ft. 6 ins.; total, 228 ft. 6 ins. Reef 4 ft. wide, on fair quality ore. The 256 level west: Six men driven 6 ft.; total, 165 ft. We are carrying the reef 5 ft. wide, and more still standing to the south. Reef looks well. Sans' shaft: 12 men sunk 11 ft.; total, 315 ft. Communicated to the 190 level. San Miguel tunnel: 14 men driven 8 ft. 6 ins.; total, 1,697 ft. 6 ins. Stope 13, 137 east: 10 men on day work. Reef averages 6 ft. wide, on good average ore.

THE NORDENHAM DOCK AND WAREHOUSE CO., LIMITED.

With a capital of 500,000*l.*, this company has been formed to purchase the valuable concession granted by the Oldenburg Government to construct and take over the wharves, piers, jetties and docks at Nordenham, situated on the River Weser, close to its mouth, and said to be the best of the north German rivers adapted to shipping. The traffic now carried on is as great as the limited accommodation will permit. It is expected that the shipping trade engaged in grain, petroleum, live stock, coal, and iron carrying will be attracted to the docks of the company. The map issued with the prospectus gives a clear idea of the situation and extent of the works taken over and those to be constructed. The amount to be paid to the Government is 50,000*l.* The board is composed of gentlemen of high standing in the shipping trade, both in England and Germany.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

THE MYSORE GOLD MINING CO., LIMITED.

To the Editor of the Mining World and Engineering Record.

Sir,—"The mine generally is looking very well, and we are still opening out large reserves of ore. The 466 ft. level north of Taylor's was driven in the last fortnight 29 ft. 6 ins., making a total of 499 ft. 3 ins. The lode in the present forehead is 4 feet wide, assaying 4 ozs. 18 dwts." These are the words with which Capt. Plummer commences his report, dated the 19th February. Following this, the deepest level yet driven, I again find the tabulated statement I gave in my letter, published in your issue of 2nd March, is amply confirmed by Capt. Plummer's last report. However, as the recent highly satisfactory crushing, with the yield of 3,038 ozs., is in advance of Capt. Plummer's report, I think I need say no more than to again bring to the notice of your readers, that from this great mine, most honestly worked, the average width of lodes from some 19 points of the mine is about 3 ft. 6 ins., and the yield 2 ozs. to the ton. I mentioned in my last letter that I was not possessed of the gift of prophecy, but all the same, I shall be much surprised if the return for March does not far exceed that for the preceding month.—I am, &c., W. H. B.

Norwood, 15th March, 1889.

KOHINOOR AND DONALDSON CO. AND MR. ALFRED RICKARD.

Sir,—I received your valuable paper of February 9th on Wednesday last, containing full report of the meeting of the Kohinoor and Donaldson Consolidated Mining Company, Limited, and I will thank you for allowing me a little space in your next issue to reply to certain allegations made as to the condition of the mines and machinery when I handed over the management.

In the course of his speech the chairman states that I not only failed to take care of the company's property during the suspension of active operations, but that "I dealt with it as if my intention were to ruin and wreck it;" moreover that "everything that would fetch a dollar had been removed and sold," without, however, explaining that, after writing repeatedly for the funds he had promised to send me to pay the workmen's wages, then due for months past, I was forced to take steps to raise money on some of the less essential pieces of machinery and more easily movable things, in order to satisfy the more clamorous of the creditors, and so save the company's property from being sold out piece-meal. The proceeds of such articles as were from time to time disposed of were accounted for in the proper time and regular order, as may be seen in the statement of accounts sent forward. Further, I would state that, by these means I was able to get the mill started on custom business and keep a small party of tributers at work, the result of which enables me to show, to the end of 1887, a decrease in the company's outstanding liabilities to the amount of $3,806.83, without the receipt of one cent from the board, and so far re-establish the credit of the company.

With regard to buildings, tramway, and machinery, I have to state that when Mr. Vivian took charge the mill was in full running order, earning money on custom business, which, in itself, is sufficient proof as to the efficiency of the machinery, and it is scarcely necessary to add that the buildings were in a corresponding state of preservation.

From personal inspection, made two days ago, I can state that the buildings (wood) have not received other repairs than a doubling of boarding on the "weather" side, which might easily have been dispensed with, and the smaller repairs which are always required in such buildings for winter, namely, fitting of doors and windows, and glass in the same.

The change of method for treatment of ores, adopted by Mr. Vivian, has necessitated the larger portion of the outlay, of which he speaks, and was unnecessary, since, for all practical purposes, the mill was in a good state of efficiency, as is amply proven by the business it was then in command of. Of course there were general repairs, such as adjustment of vanners, new "shoes" and "dies," &c., which are a necessary consequence of a run of some months without renewals.

The tramway needed such repairs as would be likely after having remained almost unused for two years, and the "buckets (32), broken and distributed in the gulches," fell off when the clips were worn out, and remained where they fell for want of "the necessary" to replace them.

To say that the buildings and machinery at these mines were dilapidated is an assertion in keeping with the rest, and I shall not enter into details, but simply state that they have required nothing further than such re-adjustments and repairs as would necessarily accrue from a long stoppage, and this statement finds justification in the fact that a very few days after turning over the property the machinery at the Champion was put under steam. The buildings are in precisely the same condition as then, except for such small repairs as were referred to in speaking of the mill. Further, it is interesting to note that a railway, or, rather, tramroad, "connecting the mill with the railway, which leads to Denver," is not yet constructed, not more than one-half of the requisite material being yet on the ground. So much for the accuracy of the chairman's information.

Mine: I am not much exercised in giving a very full explanation of this part of the subject, as it stands to reason that workings upon a vein of this class will suffer damage in course of time. if timbers are not renewed, and in the case under consideration they will rot out quickly on account of the imperfect ventilation of the mine. The responsibility for neglect, therefore, rests upon the board of directors for not supplying funds to pay the men for taking care of their mine, notwithstanding my earnest and oft-repeated demands.

I might take up many points in the directors' report, and bring out the utter absurdity of some statements put forward therein, but it would draw my letter to too great a length.

It is also as well to leave the future to decide as to the merits of the promises now held out to the shareholders. Mr. Vivian had the advantage of taking charge of mines, already well equipped with

machinery, with a good staff of experienced men ready to hand, and, apparently, with all the money necessary for development and exploratory work, a very different situation indeed to my own, where at no time had I a 100*l.* note to the company's credit in the bank for expenditure in the same direction, as may be gathered by reference to the circular issued to the shareholders in July, 1886.

During my visit to England in 1886 and 1887, as well as in repeated communications to the chairman and others of the board, I put the situation clearly before them, and as they were perfectly cognisant of the difficulties surrounding it from the beginning, the blame rests upon them for leaving things to take their course and drift into disrepute, paying neither wages, bills, nor agents, and not even guards.

I may mention that, in my individual case, when I came to look for settlement, they kept me waiting six months, and to avoid the unpleasantness of bringing them into a court of justice I consented to give up $500 of my claim, and took half of the remaining amount due me in cash, and half in a note at six months' date, which matures tomorrow. Whether it will be paid remains yet to be seen.

To any unprejudiced person, the wording of the directors' report in commenting upon the "principal works done by Mr. Vivian," shows a disposition to enhance the merits of what he may have achieved, and the singular exhibition of a desire to make his position good at my personal expense, taking good care not to give me an opportunity of any explanation whatever—a significant fact in itself, and more so when taken in conjunction with the fact that, during the year which had elapsed between the change of management, not one word or line was ever vouchsafed to me.

Without making any further exposition of the company's affairs, which, to some extent, I have been bound to do in vindicating myself, I leave it to my readers to say whether such a course of procedure is manly or honourable.—I am, &c.,

ALF. RICKARD.

Central City, Gilpin County, Colorado, March 2nd, 1889.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of hard quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms :—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.

"New Mill crushed 29,000 ,, 25 ,, ,, 8.60 fcs. per ton.

"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, MARCH 16, 1889. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE OPHIR TERRITORY CONCESSION, LIMITED.

IMPORTANT SUB-SALES—5s. SHARES AT £6—DIRECTORS AWARDED £1,000 — CAPT. LEMON DESCRIBES THE RESOURCES OF THE COUNTRY.

THE first ordinary general meeting was held at the Cannon Street Hotel, on Monday, for receiving and adopting the report of the directors, and for fixing their remuneration for the current year—Col. P. R. Innes, chairman of the company, presided.

Mr. HENRY B. GREENWOOD (secretary) read the notice calling the meeting, and the report of the directors, which had been previously circulated, was taken as read.

POSITION EXPLAINED.

The CHAIRMAN: Gentlemen, as a copy of the directors' report has been forwarded to each shareholder, and also a copy placed on each chair, I will, with your permission, take the report as read, and I will make a few remarks in further explanation of the report, and what has been done by your directors since its issue. Firstly, I will say a few words regarding the registration of the Ophir Concessions, Limited, which has purchased all the contracts and assets, and taken over all the liabilities of the Ophir Territory Concessions, Limited. Your directors felt the time had arrived when the formation of a company commensurate with its increased importance and obligations had become a necessity, and they availed themselves of the large powers given to them in the memorandum and articles of association. The Ophir Concessions, Limited, was registered with a capital of 250,000*l*., with which we propose to pay each shareholder in the old company 10 fully-paid 1*l*. shares. This payment will absorb 200,000*l*. We then propose to purchase for 50,000*l*. the important rights which are held by the vendors of our concessions, particulars of which I shall give you presently. It has been suggested that your directors would have acted more judiciously if they had consulted the body of shareholders in general meeting before taking this important step. I will ask you to bear in mind that time was of the utmost value to us for we wished to seize the opportunity of effecting a compromise with the vendors, which any delay would endanger; and, again, we all know that what the directors were able to effect in a few weeks, would have taken as many months and involved far greater expense. Any way, your directors, in taking advantage of the great powers which have been conferred on them, have had the interest of the shareholders at heart, and we look with confidence for your approval. The increase in the money value of the shares is almost unprecedented, and quite warrants the step which has been taken. I may say, however, that we are in treaty for additional powers and concessions, which we have every reason to believe will vastly improve our position, and through the speculative public may rush at first into the market to realise their profits; the investing public will do well to hold their shares, and we think they will have to congratulate themselves in having done so.

SALE OF CLAIMS.

I will now say a few words regarding the sale of claims which is referred to in the first paragraph of the report, which shows that we had, at the time of its issue, sold 100 claims for 75,000*l*. Since then we have sold 250 more claims for 165,000*l*., making a total of 240,000*l*., nearly equal to the whole of the capital of our new company; besides which we have 150 claims still in hand, which should realise about 150,000*l*. I will now remark on the principle we had adopted in the sale of our claims. After having satisfied ourselves of the bonâ fides of the proposed purchaser, and the strength of the parties supporting him, we prepare a contract setting forth our terms, one of which is that the directors can demand payment either in cash or shares, at their option; and another term is that on signing the contract a substantial cash deposit must be paid to our credit into our bank, which deposit will be forfeited if the contract is not fulfilled. With reference to the payment in cash or shares, the directors, in some instances, deem it advisable to accept payment entirely in shares. I will mention the Sabi Ophir Sub-concession Company, which has been successfully launched within the last few days. In this case the promoters were anxious to arrange with us that, at any rate, a large portion of the purchase-money should be paid in cash, but we declined to accept in payment anything but shares, for we knew well the immense value of their concession. The capital of the Sabi Ophir Company is 110,000*l*., 10,000*l*. of which it is not intended to issue. Now, as their purchase money from our company amounts to 50,000*l*. we virtually hold half their capital. They find working capital, they send their own agent and staff of engineers, together with machinery, and I am given to understand two small steamers for navigating the rivers; they take the whole of the responsibility, and we share equally with them in the profits. This, from a business point of view, is a grand position. I do not mean to say that we intend in all instances to take payment for our claims entirely in shares, but we shall certainly hold a large number of shares in all of our sub-companies. Now, with regard to the locating of the claims. We have sent, on February 13th, as our agent-general to Mozambique, a gentleman of vast experience, thoroughly acquainted with mining in most parts of the world, a former companion of the well-known explorer, Stanley. Our agent is in command of a staff of engineers, and takes with him a five-stamp battery and all the necessary machinery and tools for thoroughly prospecting the company's claims.

AN EXPEDITION.

It will be his duty to visit and report on the claims which we have sold, as well as those which may be worked by the parent company. I will now take the opportunity of mentioning that he has instructions from us, which will be confirmed by letter, that our policy in our negotiations with the chiefs and natives of the country will be one of honesty and conciliation. We will not palm off on them useless articles in payment for their services. We wish every man to receive a fair wage for a fair day's work. Why, in California, I am informed that the miners are frequently paid $5 a day; surely, then, we can afford to pay as many pence, which is all I hear that they demand. Again I say, and I cannot say it too strongly, that our object will be to raise, and not to degrade the condition of the people. We are told, and with justice, that we shall find difficulties in locating our claims. There is the climate, the hostility of the natives, the African fly, and what not; but, gentlemen, there was never any great undertaking that had not got its accompanying difficulties. We think we shall be able to overcome these difficulties; indeed, we mean to overcome them, and we feel confident that we, as pioneers of a great undertaking, have a grand future before us. It is now time that I should refer to the compromise which we have effected with the vendors. There were certain clauses in the agreement with the vendors which were insisted on; there was no escape, we had to accept them, and hoped the time would come when we should be enabled to modify or compromise these clauses, and when the opportunity presented itself we were anxious to strike at once. One of these clauses stipulated that we should pay 25 per cent. of the capital of every sub-company that was floated to the vendors. Now, under this clause, we, the Ophir Concessions, Limited, would have had to pay the vendors no less a sum than 62,500*l*. The Sabi Ophir Company with its capital of 110,000*l*. would have had to pay 27,500*l*, and the six other companies to whom we have sold sub-concessions would (supposing they had a capital of 100,000*l*. each) have had to pay 150,000*l*., making a total of 240,000*l*. It appears to be a preposterous demand, but I think we have done good business in getting the vendors to accept a compromise of 50,000*l*. in shares in our new company. This compromise has been effected, and the agreement has been signed.

CAPT. LEMON.

One more point I will touch on. I have heard it stated, that should the Mozambique Company grant concessions outside our company we shall suffer. We shall not do so; on the contrary, we feel the more parties there are working the mines, the stronger will be our position. There is room for all, and the greater the number of Europeans, the greater will be our security. In conclusion, gentlemen, I have great pleasure in introducing Capt. Lemon, who has been the prime mover in successfully floating the Sabi Ophir Sub-Company. Capt. Lemon has travelled in the interior of the Portuguese territory; indeed, far beyond Portuguese control. He knows the country well, and when it is said that we should have waited for our reports before registering our company with its increased capital, I will ask you to bear in mind that we have been in constant communication with Capt. Lemon, who has at all times placed his vast experience at our disposal. I am sure he will tell us much that is interesting and instructive. After you have heard what he has to say I shall be happy to reply to any queries to the best of my ability, after which I shall ask you to receive and adopt the directors' report. (Cheers.)

VIEWS OF AN AFRICAN TRADER.

Capt. LEMON (who was received with cheers) said: Mr. Chairman, Ladies, and Gentlemen, I have been asked to say a few words at this meeting in reference to the true value of what is known as the Ophir Concessions. I may tell you that when in the last weeks of 1888 my attention was called to the fact that a concession had been given by the Mozambique Company of Lisbon to an English syndicate, or to English gentlemen, with a view to floating a company, so that they might develop the resources of this hitherto unknown country, I thought it was as well perhaps to interview the directors of that company, and to call their attention both to the importance and to the value of the concessions they had obtained. I knew well that the Portuguese were not a people, as a rule, to expend the necessary amount of capital, energy, and enterprise required to develop any undertaking, presenting either national or artificial difficulties, and when I saw the way in which they were working, I at once took steps to tell them what had been done in the past, what had been attempted, how failure had been brought about, the causes which led to that failure, and the consequences to

all the parties concerned. I may tell you that in 1859-60 I was engaged in a trading expedition between Port Alice and Quilimane, the one being to the south, the other to the north. We were busy trading at that time exclusively for gold, and what struck my attention was that the gold seemed to be from alluvial or placer deposits. This I knew, because a few years before I had left Australia, and also knew about the placer diggiugs of California, and I found here, as I say, that

NEARLY ALL THE DEPOSITS WERE ALLUVIAL OR PLACER

—gold that had been rounded up after disintegration by natural forces from the quartz, leaving a rich deposit rounded off by the action of the water and pebbles with which it comes in contact. There was another peculiarity I saw, that in one of the parts of the coast nearly all the free gold was tinted with iron, which at once showed me that iron must be iu the vicinity. After scrapiug away the grit from the specimens, as I may call them, I found the gold comparatively soft. In many cases the mud had not hardened, and I concluded, seeing we had exhausted the supplies, when we came back again in a few days they were ready with a fresh supply which, of course, was evidence to me that gold must be there in good quality, and also that the gold must only lately have been removed from some sources of supply near the surface. Well, it was the dream of my life that I should go back to that part of the country, and participate in the wealth of this El Dorado. Some settlers went up country, one of them by name of McCorquodale, in the particular district of Zovara, through which the waters of the Sabi River flowed, and had discovered

AN ENORMOUS DEPOSIT OF HORN SILVER,

generally known as chloride silver. It was his custom to consign to a nephew in Belgium the silver he obtained in its natural state, and he endeavoured to induce this nephew to join him in the formation of a colony, and he sent glowing descriptions of the prospects before such an adventure. There was a goodly surrounding of chiefs, and everything favoured its formation. This seemed to be the man's ambition, but the nephew proved unworthy of the confidence his relative was reposing in him, and when he came to England he laid the whole of his papers before the Geographical Society, aud

AN EXPEDITION WAS ORGANISED.

The commander was a man named Phipps, and he had with him a Mr. Wybrant. The expedition ultimately started under the charge of the latter, and made the base of operations Zanzibar. The services of an engineer, named Maze, were secured—a man who had for eight or nine years followed his vocation as au engineers' shipwright in the navy yard of the Sultan of Zanzibar. He was iuduced to accompany Capt. Wybrant up the Sabi. They altered their course on account of the difficulties of the way, and went up to Zambesi, where those difficulties were less. They searched as they went, but Capt. Wybrant ultimately succumbed to disease. His iustructions to Maze were to return to the coast, and put himself in commuuication with the Geographical Society. Maze did so, and he was then requested to go inland, and to bring down the body of his leader for interment. The speaker then proceeded to describe certain unpleasant passages in the first opening up of this territory; and went on to say: I only desire to make plain to you the true facts of the case. Many of you may think that this is some fairy tale, but I am speaking the absolute truth, which can be verified by papers. Maze made an exact location of where these silver deposits were to be found, and they are to be found iu that portion of the conntry to which the chairmau alluded this afternoon—namely, the portion where the Sabi Company has the right of locating its 50 claims.

THE PORTUGUESE HAVE EXPENDED THEIR INFLUENCE,

and if you reflect that but a very short time ago when Great Britain claimed one-half of Delagoa Bay, and their claim, on being submitted to arbitration, the decision was given in favour of Portugal, that from that moment Portngal has been extendiug its influence. It would be impossible for any expedition to leave the coast to go into the interior of this particular part of Africa without the permission of the Portuguese. They have the power to stop any expedition goiug inland, and if an attempt were made to get at this locality by the long journey through the Transvaal and Swazieland, its cost would be in excess of any working capital that would ever be required. I know that the Limpopo is navigable to within 40 miles of the spot where we wish to locate, and that the chiefs wish to be friendly is shown by the fact that a deputation has been sent to this country askiug for the protectiou of Great Britain. The chiefs near the coast rely upon the Portuguese, and therefore will be prepared to respect any recommendation of the Portuguese authority.

A CONFIDENT PREDICTION.

In less than six months from the time that a properly organised and well-equipped expedition has started in the interests of the Sabi Company they will be able to throw upon the London market sufficient silver alone (without taking into account the gold) to repay them the whole of their subscribed capital. (Cheers.) I do not think there will be any necessity for more than one call on Sabi shares. (Cheers.) I believe that in six months time the true value of these claims will be realised, and seeing that this Ophir Territory Company has half its shares, you will understand what that means to you, for only shares in the company have been taken as payment. I think that if you see your way to follow the policy adopted by the chairman and directors of the Ophir Concessions Company, they will have earned at your hands thanks for the past conduct of yonr affairs, and they will have merited your confidence in their future administration. (Cheers.) If you will turn your attention to Baine's map upon the wall you will see the course taken by the Limpopo. Delagoa Bay can be reached by the Union or Castle lines of steamers. From that point the course of the Limpopo tends to the north and then to the west, bringing us to Lundi, where we find affluents of the Sabi River. It is here we hope to meet with those deposits of silver mentioned by McCorquodale; but I have seen specimens in the possession of Maze of alluvial gold taken from one canyon—small nuggets up to 3 dwts., more than 11 ft. from the bed-rock, which were composed of a soft, friable, sandy stoue, generally known by the name of reef. On the other side of the canyon the specimens were of a softer nature, and being completely white, I assumed that the gronnd must have been pipe-clayed. We, therefore, see that there is silver lying upon the surface, and gold also, requiring no machiuery, but only careful and methodical treatment, with possibly a little pumping apparatus to deal with the water. Under these circumstances, you can quite see that

SABI-OPHIR MUST BE THE PRIME CUT OF THE JOINT;

aud when you consider that half that prime cut belongs to the parent company, you can see that the chairman and board of directors have been wise in refusing cash and in preferring scrip. I hope that in less than five months from the present moment we shall have a sufficient amount of this silver placed upon the London market, or in the office of the company, to warrant the assertion that the confidence of the public who have subscribed for shares in the Sabi-Ophir has been merited. I have been asked to state who will be charged with the leadership of the Sabi expedition, and I have replied that I am willing to be so. I hope to be successful in my attempt, and within six or seven months, when I have the pleasure of meeting you again, I shall be able to claim your thanks, even as I already do for the board of directors, who so far have managed your affairs so well. (Cheers.)

Mr. Thomas seconded the motion.

Mr. Pike: That is rather premature, as we wish to discuss the report.

The Chairman said he invited the fullest discussion. No person rose to speak, and he therefore put the motion, which was carried uuanimously.

A FORGOTTEN DUTY.

Mr. H. T. Walker: There is one duty which we seem on the point of neglecting. I think we have forgotten that the directors have to be paid for their services, and it is only right and proper that we should appreciate their valuable services. I propose that when the original company is wound up the directors receive, as remuneratiou, the sum of 1,000*l*.

A Shareholder: How many directors are there?

The Chairman: There were three iu the old company.

GIVE WILLINGLY, OR NOT AT ALL.

Mr. Robinson: I think it a great pity that any question should arise amongst us as to the remuneration of the directors. I think it must be patent to us all that our directors are entitled to something more than onr mere thanks for the way in which they have engineered the affairs of this company. I am an original shareholder, I am happy to say, and very likely one of the largest, and it has taken me perfectly by suprise the rapid progress of this concern. I have never known a company yet which has progressed so rapidly in the estimation of the public as this company has done, aud I say that if we had not had at the head of affairs energetic men, and men who understood what they were about, we shonld not have beeu iu the position we are now. I think we should stultify ourselves by debating opeuly in this room the question whether we should give the directors 500*l*. or 1,000*l*. Our original 5*s*. shares can now be readily sold for 6*l*., and I do say it is due to the directors that they should benefit in the great increase of the value which we have all experienced. I think we ought not to discuss the question—let us give them something handsome or let us not.

UNEXAMPLED PROGRESS.

Mr. Walker: I quite agree with the view of the last speaker, and say that the progress, in my experience, that the company have made, is to my mind qnite unequalled. I will now put the resolution—those in favour—those agaiust; carried unanimously. (Cheers.)

The Chairman: We can only assure you gentlemen that in the future we will exert ourselves on your behalf as we have done in the past.

THE OCEANA TRANSVAAL LAND CO., LIMITED.

ALTERATION IN THE ARTICLES OF ASSOCIATION—GOOD PROSPECTS OF FINDING DIAMONDS—THE CONFIRMATORY MEETING.

An extraordinary meeting of the Oceana Transvaal Land Company, Limited, was held at the Cannon Street Hotel, on Tuesday, 12th March, for the purpose of confirmiug the following resolution passed at a meetiug held on 25th February:—"That the articles of association of the company be amended as follows, namely:—Clause 11.—By inserting the words 'in general meeting' after the word 'company' in the first line. By adding between clauses 11 and 12 the following clause, to be numbered 11a—'11a. The company may from time to time, by special resolution, consolidate any shares into shares of larger amount, or sub-divide any share into shares of smaller amount.' Clause 13.—By inserting the words 'on the usual common form of transfer' after the word 'deed' on the first line of the clause. Clause 14.—By omitting the last phrase of the clause from the words 'and they may refuse' to the end of the clause. Clause 23.—By substituting the words 'two months' for 'one mouth.' Clanse 26.—By inserting the words 'not fully-paid up' after the word 'shares' on the first line. Clause 47.—By snbstitnting the word 'declaring' for the word 'sauctiouing.' Clause 73, sub-section (1).—By omitting the words 'after the date of the ordinary general meeting of the company in 1889.' Clause 77, sub-section (*m*).—By the word 'common' in the second line of this sub-section being omitted, and the word 'official' substituted for the word 'common' in the eighth linc of this sub-section. Sub-section (*o*).—By adding the words 'subject to clause 98' at the end of the sub-section. Clause 78.—By rescinding the whole of this clause and substitutiug the following:—'78. The minimum remnneration of the directors shall be 1,500*l*. per annum, to be computed froui the date of the account submitted to the last ordinary general meeting, and to be distributed amongst themselves in such mode and proportions as the board may from time to time determine, and in any year iu which the shareholders shall have received a dividend or bonus amounting to 10 per cent., such further amount as shall be equal to 5 per cent. on all profits distributed in excess of the amount required to pay such dividend of 10 per cent., provided such amount do not, except with the sanction of a general meeting, exceed 3,500*l*. per anuum, to be divided as the directors shall think fit, but any remuneration paid to any local director shall not be taken into account under this clause.' Clause 93.—By rescinding the whole of this clause aud by substituting the following:—'Any member of a local committee shall cease to be a member of such committee if he shall become bankrupt or insolvent, lunatic, or of unsound mind, or be convicted of an offence

against the laws of the United Kingdom or any colony thereof, or the laws of the South African Republic, or shall cease to be the registered holder of the number of shares necessary for his qualification.' By adding between clauses 109 and 110 the following clause, to be numbered 109A :—' 109A. If any casual vacancy occurs in the office of auditor the directors may appoint an auditor in his place. When there is only one auditor in office he may exercise all the powers and perform all the duties herein assigned to more than one auditor until another auditor has been appointed.' "

Mr. H. Pasteur presided.

Mr. Samuel C. Fox (secretary) read the notice convening the meeting.

The Chairman : The resolution which has been read to you, and which was passed at the meeting held on the 25th February, provides for some slight alterations in the articles of association to meet the requirements of the Stock Exchange. It fixes the scale of remuneration for the directors, and it gives power to the company to subdivide its shares into shares of a smaller amount. If it is your pleasure to confirm this resolution to-day, you directors will then propose to give effect to it by calling, immediately after the conclusion of this meeting, a second extraordinary meeting, for the purpose of passing the necessary resolution to enable us to proceed with the sub-division of the existing 5*l.* shares into shares of 1*l.* I shall now move that this resolution be and is hereby confirmed.

Mr. W. J. Thompson seconded the motion, which was carried unanimously.

The Chairman : That concludes the business of the confirmatory meeting. The second meeting was called for a quarter past 12, but it is hardly that yet.

Mr. Barnes : Perhaps in the interval you will give us a little information as to the property.

The Chairman : I have not yet read the letters, which have just arrived, but my colleague Mr. Bullock, who has seen them, will tell you in a few words the latest news we have.

Mr. F. R. Bullock : Gentlemen, I have just glanced over one of the letters, in which I see there is a mention of

DIAMONDS HAVING BEEN FOUND IN WATERBERG.

I may as well read an extract from the letter :—" Diamonds have been found on some of the farms north-east of Blauwberg Mountains by a Mr. Trubenach, who is strongly backed up by German and London firms. He is going to prospect thoroughly next winter, and spend 5,000*l.* over it. These farms are, I am told, south of the Brack River, and extend all round the salt pans up there, and which you will see marked on Wyld's map of the Transvaal. What farms we have got there I cannot tell you with any accuracy, as Mr. Henderson has left me mapless, but he will be able to show you in the sketch he has. That part of the country will not be re-inspected till next winter, so the position of the farms is very uncertain at the present moment." Gentlemen, we hold large properties in that district, and it is to be hoped we shall be fortunate in finding diamonds, as they have already been found on farms adjacent to ours. This letter has not been read through, but I think the

PROSPECTS ARE MOST ENCOURAGING.

I understand from many who have been to the Transvaal that the great future of that country is in the Waterberg district, where our large holdings are. We hold in one block, as our chairman told you at the last meeting, enormous tracts of country both in New Belgium and New Devonshire. I think our friend, Mr. Henderson, who is here, will be able to give you more reliable information than I.

The Chairman : We will now proceed to the second meeting.

THE EXTRAORDINARY GENERAL MEETING.

An extraordinary general meeting was then held, for the purpose of considering, and, if thought fit, passing the following resolutions :—

(1.) "That each of the existing 5*l.* shares of the company shall be divided into five shares of 1*l.* each." (2.) "That the articles of association of the company be altered as follows, namely :—Clause 23.—By substituting '5s.' for '1*l.*' Clause 54.—By substituting '2,500 shares' for '500 shares' in the 10th line of the clause. Clause 59.—By rescinding the whole of this clause, and substituting the following :—' 59.—Every shareholder shall have one vote for every share registered in his name.' Clause 72.—By substituting in the 3rd line, the words 'shares to the nominal value of 500*l.* at least' for the words 'at least 100 shares.' Clause 73.—Sub-section 1.—By substituting the words ' shares to the nominal value of 500*l.* at least' for the words 'at least 200 shares.' "

Mr. Samuel C. Fox (secretary) read the notice.

The Chairman : Gentlemen, you have heard the resolutions read. The first resolution, that each of the existing 5*l.* shares shall be divided into five shares of 1*l.* each, is what I foreshadowed in my statement a fortnight ago. We have taken powers to do that, and it is a change which is recommended by many of our principal shareholders — both men connected with the Stock Exchange, and private individuals. I shall, therefore, move the first resolution.

Mr. Gillespie seconded the motion, which was carried unanimously.

The Chairman : The second resolution is a natural consequence of the other. The articles of association were framed on shares of 5*l.*, and it is necessary to alter them according to the new amount of the shares. The first clause that we propose to alter is No. 23. Of course our capital is fully-paid at the present moment, but it is possible in the future we may issue fresh capital. Therefore it is necessary to provide for it by substituting 5s. for 1*l.* The next clause that requires alteration is No. 54. It is in case of a poll being asked. The articles at present state that if any five shareholders representing 500 shares at any meeting demand a poll, such poll shall be granted. We propose to make it 2,500 shares of 1*l.*, instead of 500 shares of 5*l.* The next clause is No. 59. It states that every shareholder shall have one vote for every 5*l.* share, and it stands to reason, gentlemen, if you sub-divide your shares into shares of 1*l.*, it is necessary every shareholder should have one vote ; and the question arose whether it is desirable to limit the voting power on the same scale, as it was limited under the old articles of association, and I understand that of late years especially the tendency has rather been to do away with any restriction. We propose to let every man vote according to the number of shares he holds. The next clause is No. 72. It relates to the qualification of directors. It states that the qualification of a director shall be that he shall hold at least 100 shares. We propose to say "shares to the nominal value of 500*l.* at least," leaving the qualification practically the same as it was before. Finally, clause No. 73, sub-section 1, we propose to alter, and make it read "shares to the nominal value of 500*l.* at least." These are the only articles that require alteration in conformity with the new scale of shares of 1*l.* instead of the 5*l.* shares. I, therefore, move this second resolution, and if any of you are willing to second the same, I shall then put it to the meeting.

Mr. Thompson seconded the motion, which was carried unanimously.

The Chairman : This concludes the business of the meeting. We shall, of course, have to call you together in 15 days in order to confirm the resolutions passed to day. If any of you wish for further information, Mr. Henderson is here, and he will no doubt be glad to give you any information he has, but I do not know that he has anything fresh to tell you after the exhaustive statement we made a fortnight ago.

Mr. J. C. A. Henderson : Gentlemen, you have heard the report this morning from the letters received, that we have lands in the vicinity of those where diamonds are supposed to be. I say supposed advisedly. For a long time that ground has been known to be very similar to that of Kimberley, having the same sort of ground and the same stones. There is no map. The map already referred to happened to be my own personal property, obtained some years ago. I have tried to make a rough sketch, from which you will see the whereabouts of our lands. I may mention that at no very great distance from the black patches on the map,

COAL HAS RECENTLY BEEN FOUND,

so that in the event of these properties being mineral-bearing the cost of working will be very much less than it would have been had that coal not existed. All the country partakes of the same character, and if diamonds are found on the adjacent lands we have also a very fair chance. But under any circumstances, if diamonds are found, the value of our land must necessarily increase. That is all I have to say about diamonds, but at no very great distance we have been finding rubies or garnets, and that is a good indication of diamonds not being far off. Moreover, we have discovered bort not far from there, which is another indication of diamonds. We might make a great fuss about the Oceana, but our prospects are so good that we do not wish to say too much. We want to be very certain of our success before we say anything. That is what makes me so cautious. We hope, in a short time, to lay before you schemes for bringing out the properties separately, and, no doubt, the first property which will be brought out will be Koppies Kraal in the Randt district.

THANKS.

Mr. Buckingham : I should like to say, in proposing a vote of thanks to our chairman and directors, that there are two or three of us who feel, although the time may not be quite ripe, that the directors deserve a larger remuneration for their services. They have worked during the last 18 months daily, and all they have received has been 250*l.* to divide between them. That is a very small remuneration, but I hope and trust that at the next meeting we shall be able to reward them for all they have done.

The Chairman, in returning thanks, said they had always felt they were supported by the shareholders, and he would be only too happy if the results by and by confirmed the trust reposed in them.

The proceedings then closed.

ASIA MINOR MINING CO., LIMITED.

PROFIT FOR THE YEAR £2,234—ADDITIONAL WORKING CAPITAL NECESSARY—£10,500 DEBENTURES OFFERED—DIRECTORS SHOW THEIR CONFIDENCE IN THE PROPERTY.

The eighth ordinary general meeting of the Asia Minor Mining Company, Limited, was held at the Guildhall Tavern on Tuesday, under the presidency of G. A. Köttgen, Esq.

Mr. Edwin Habben (secretary) read the notice convening the meeting, and the directors' report and statement of accounts were taken as read.

THE PROPERTY IN EXCELLENT WORKING ORDER.

The Chairman : Gentlemen, at our last meeting I had the satisfaction of telling you that your concern was in excellent working order, and it has so continued since. From the reports, which are in your hands, you cannot fail to have found this borne out. The accounts also contain evidence of it, and I will now invite you to follow me in a short review of those accounts. Taking the balance-sheet, and comparing it with that of 1887, you will find the capital account reduced by one-half exactly, and the opposite side, under the head of capital expenditure, shows that our property, as written down, stood in our books at 40,000*l.* less than at the end of 1887. Particulars of the re-valuation I gave you at our last meetiug. Further, the deficiency of 19,000*l.*, which appeared at the end of 1887 has been wiped out. Reverting now to the left side of the accouut, you find the debenture-debt is reduced to 13,000*l.* odd ; the creditors and open accounts show a considerable increase, to 6,794*l.*—to this item I shall refer later. Against it we have, on the credit side, a corresponding increase in the stock of ore in hand. The balance-sheet closes with a profit for the year of 2,234*l.* 5s. 6d., and this brings us to the revenue account. The expenditure in 1888 for miuing and dressing and for transport shows a moderate increase on the previous year. The other items are nearly the same—slight decreases in most of them. We did not deem it right to write off for 1888 the usual percentages for further depreciations, seeing that such large and ample reductions were made in the re-valuations that I have already referred to. With the present year, however, we hope to resume these annual reductions for depreciation on machinery and mine account.

A SORE DISAPPOINTMENT TO THE BOARD.

The production exceeded that of 1887 by about 250 tons, and we realised in money 22,133*l.*, as against 20,589*l.* in 1887, leaving us the modest profit that I have just stated. Now, I shall not hesitate to tell you at

once that the smallness of the profit is a sore disappoinment to the board. When I had the privilege of addressing you here in March last year, we were looking forward to a very different result, and had good reasons for so doing. Had our productiou continued during the second half of 1888 as in the earlier months of that year, I should have had the satisfactiou of congratulating you to-day on a very handsome profit; but in the past half-year the production fell off very unexpectedly, simultaneously, in several points. Some of the best stopes and ends became poor, and during six months the yield remained much reduced bothin quantity and quality. I need scarcely say that we viewed this with great anxiety, but we came to the conclusion that it must be regarded as accidental and not as permanent. One misfortune never comes alone, and the ores produced during the year yielded considerably less of silver than in previous years, and the price of lead suffered a great fall. Thus, not only did our production remain greatly behind what we thought at one time it would be—it was 300 or 400 tons behind our estimate—but the ore when sold averaged quite 2*l*. less than at the commencement of the year. Now, if you bear in mind that our production in 1888 amounted to 1,618 tons, you will see what that means. I wish to make this point very clear, so that you may see why it is we are met here to-day once more with hopes deferred.

MORE CHEERFUL ACCOUNTS.

It is well that we did not abandon them altogether, for the latest accounts are more cheerful again. Our output has increased, and active research has resulted in several good finds. The dressing works were to start again (after the usual winter's rest of about three months) about the 1st of this month, and when they do start there is sufficient ore to keep them going for several months, working full time. Our agents and consulting engineer remain full of confidence that the corner has been turned, and that we are entering at last upon a period of long-expected, and, I may say, well-deserved prosperity. (Cheers.) I have here a report from Dr. Gurlt—I may call it a review of the past eight or ten months' work. You are aware that Dr. Gurlt examined the mine about four years ago, since which time he has remained as our adviser; but last year he was called away on an expedition to Mexico, and we have had to do without him. He left just before the troubles began, and returned only quite recently after a long absence. This is his first communication, and he tells us what he thinks of the work done during his absence. We did not receive this communication until two or three days ago; if we had had it before, we would have issued it to you with the report. I will ask the secretary presently to read you the full text of it. Dr. Gurlt speaks lightly of our late troubles—just as your own doctor would of the measles. (Laughter.) He says that they will come at uncertain, and, it may be, at very inconvenient times, but you should expect them—in fact, that they are the right thing altogether. (Laughter.) They make you feel unwell, but you ought to be quite happy all the same. If your ores yield 30 ozs. of silver when you have been accustomed to 50 ozs. —what does that prove? It proves that there is no fixed ratio in that, and that to-morrow your ore may turn out 100 ozs. of silver. (Hear, hear.) That is his view of the matter. He buoys us up with the reminder that our tunnels are fast approaching that juncture of the lodes to which we have been looking forward for the last year or two, and towards which we are working as fast as possible. That juncture ought to be reached in another six months or thereabouts. Now, all these are comforting prospects, but I must take you back now to

THE STERN PRESENT,

and to that item in the balance-sheet to which I promised to allude—I mean the item of creditors on open accounts, 6,794*l*. 17s. That was the amount at the end of December, and to-day it has increased to 10,000*l*. In other words, that is nothing more or less than advances made by our willing colleague, Mr. Schluter, under the joint guarantee of the directors, and partly made by our equally generous chairman. They do not want me to extol the services and sacrifices that they make for this company, but I cannot well pass over the matter without mentioning that they declined to receive any remuneration for their advances beyond an ordinary banker's interest on the money. We, as a board, are all agreed that this cannot go on. It is not reasonable that the mine should be worked practically with their money, nor is it a desirable state of things for the company. It has been going on now for a long time. Nobody expected it would go so far, or that the amount would become so large, and at the risk of repeating myself, I should like to explain to you how it became so large. I have already told you how our calculations were upset last year. We had a revenue of many thousands less than we were fairly entitled to look for. Then there is another special cause which comes in inconveniently. For some time we have been able to ship our ores from the shipping port, Kerasund, direct to the smelting port, Swansea. Now, that was a very important achievement, but there was one drawback for us with our small working capital, viz., the opportunities of shipment from this port to Swansea are not regular, and we cannot depend upon them. They can only be got from time to time, and we have to accumulate a large stock of ore at the shipping port—much larger than we used to.

A SHIPMENT OF 630 TONS.

Thus it is that we have had no ore in since the last seven months, and only to-day I learned that we had a telegram advising a shipment of 630 tons. (Cheers.) That speaks for itself, and you see how it works. We do not get anything in, and expenses go on and have to be provided for. Well, in short, the financial position is poor—very poor indeed. It has always been since our re-organisation in 1886. The real fact of the matter is, that the debenture loan then raised of 14,500*l*. was quite insufficient for our requirements. Some said that we ought not to undertake the work on such slender means, but we could not get more at the time. Our position looked very desperate, and people were not willing to take more of the debentures, and we tried to make it do. We did this because there was only one alternative at the time for us. If we did not go on and try to make this do we should have had to re-construct the company. I need not tell you what that means. It simply comes to this, that those who are not willing to put their hands in their pockets go to the wall. There was a very strong feeling at the board that re-construction should not be resorted to if it could be at all helped, but that we should stand by the general body of shareholders and protect them all alike.

A GENEROUS DIRECTOR.

Now, this winter, during the last four months, Mr. Schluter has practically provided the money for carrying on the mines; indeed it could not have been done without him. When that became clear, I was strongly for coming to you and showing you our necessities, and requesting you to provide the necessary funds by taking up the unissued balance of the debentures, but I was told that you would not respond, particularly as the news which we had at that time were not at all encouraging. I do not know whether you would have responded or not, but, at all events, there is no reason why you should not do so now. Our debentures are now a very fair security indeed, and also a profitable investment. It is very little that we want, and I must really urge you not to make our task unnecessarily difficult, but to come forward and contribute each his share. I can assure you our task is quite difficult enough as it is. We have no sooner done with one trouble than the Turkish officials and the Government provide fresh ones for us, with excessive demands for taxes, &c., and we never get any rest. That makes it all the more necessary that in regard to our finances we should be in a sound and safe position.

AN APPEAL.

Having about 340 shareholders, and amongst them a great many well-to-do-men, it is not a very great matter. All we want is 10,500*l*., and a quarter of that will be taken up by the directors. If every shareholder took only 20*l*. of these debentures, that would supply the whole of the money required, and I again ask you to respond to our appeal, and take up these debentures, and thus not add to our difficulties. I think I have now said all that it is necessary for me to say about this part of the business, and I will conclude by moving the adoption of the report and accounts. (Cheers.)

Mr. Joseph Brougham seconded the motion.

DIRECTORS' CONFIDENCE IN THE PROPERTY.

Admi. Sir J. E. Commerell, G.C.B., V.C.: I do not think gentlemen, I can entirely concur in all Mr. Köttgen has said, because I think he takes a gloomy view of our position. My idea of the genuine position of a company can be tested by one infallible rule: when you find your directors putting their hands in their pockets, and prepared to increase their stake in the company, you may depend upon it that they must have a fair idea that it is going on very well. (Hear, hear.) When I met you last year I owned 5,000 shares; at the present time I own 6,000. Now, it is not likely that I should have invested my money in another 1,000 shares if I saw that things were going to grief. Mr. Köttgen has told you the absolute facts of the case, but at the same time he has not told you of one of the reasons, and I consider it the principal reason, of our not meeting you to-day with an excellent dividend. I have been over the mines twice, and have had to deal with the people employed in the mines for a great number of years, and I can tell you this, that

IT ALL DEPENDS UPON SUPERVISION.

If your supervisors, from negligence or other causes, fall short of their work, depend upon it you will not get proper results. Now that has been the case with us. During the first half of the year we had a total production of about 1,000 tons. We did not begin dressing until the middle of March; and, therefore, you may suppose that if we could have gone on at that rate up to the end of the year we should have had a very handsome dividend for you. Unfortunately, however, we did not; and now I will ask you to listen to me for a few moments while I give you one of the principal causes for that.

A SPOTTY MINE.

I do not believe, as far as the mine is concerned, that it altered one jot for the better or worse. These stopes are always deceiving. Supposing a man goes into an end or a stope and says, "I calculate that that will be so many tons per fm."—it is quite guess-work. If you had solid stopes, well and good—you might say so; but do you ever have solid stopes in silver-lead mining? Mr. Peter Watson, who, I am sorry to see is not here to-day, would tell you that one of the principal features in silver-lead mining, is that you never know to-day what you are coming to to-morrow. One day finds it poor and the next very rich indeed. It is what is called a "spotty" mine. Here you have a pocket of rich stuff, and then you run into unproductive ground. The moment you come into poor ground, if you have no capital, you are compelled to stop. In course of time, at every level and end, the ground becomes unproductive. We are hampered with insufficient capital, and we are obliged to be very careful about driving, so that we shall not run to the end of our tether. I believe that our mine has not decreased in value—in fact, on the contrary, I believe it has increased. The falling off the in production for the latter part of the year arose from the fact that we were disappointed in our chief mining agent, Capt. Thomas, who, in consequence of family trouble, neglected his work, and the miners did not earn their money.

MINE LOOKING BETTER.

We are now doing very much better, and our mine is looking more favourable in many points. We have an excellent mine captain in Capt. Kemp, who, you will remember, was with us before, and also in young Mr. Middleton. I would strongly advise you, gentlemen, to do as your directors are doing—put your hands in your pockets and give us something to work with. Mr. Köttgen has told you that we have found it most advantageous to ship our ore direct to Swansea. We can do it cheaper; but at the same time there is the difficulty of getting regular shipments. We have now on the way home a consignment of 625 tons, which is insured at 18*l*. a ton, and which will realise a very large sum of money. But how are we to find capital while those shipments are on the way? I cannot think that you shareholders would expect Mr. Schluter and the other directors to put their hands in their pockets and find thousands upon thousands for you in the future. We have done so—and Mr. Schluter in a most handsome manner; but he will not do it in the future, and I cannot believe that you shareholders would ask him to do it. It is not fair or right of you to do so. Therefore, we ask you to take up the debentures. I can assure you that I have a very firm conviction that this mine will turn out a great mine.

ADVICE TO SOUTH AFRICAN INVESTORS.

When I see the prices given for South African shares—Simmer and Jacks, and Jumpers, and Jubilees, going up from 1*l*. a share to 20*l*. and more, and knowing perfectly well that if this 10 and 12 per cent. a month

were going to last, and if it were distributed over this 20*l*. a share it would not mean ½ per cent.—when I see that, I think they had much better come to us, and receive a very good 8 per cent. with as good security as anyone could possibly desire. (Hear, hear.) I am determined to take my full share, and more, and I ask you, gentlemen, to help us, and do the same. A very little from each individual shareholder would place us in a position which would keep us entirely clear of anything of the kind in the future. I do not intend to part with one single share below the price I paid for them. I am perfectly certain, as Dr. Gurlt's report will tell you, that you will not have to wait very much longer before you find that the result will answer your expectations to the uttermost. (Cheers.)

AN EXPERT'S VIEWS.

The SECRETARY then read the following letter from Dr. Gurlt, M.E.:—"Bonn, March 6th, 1889. After a careful perusal of the mining reports up to the month of February, and after mature consideration, I beg to offer you some remarks on the prospects of your very valuable mining property in Asia Minor. I see from the reports that the production of marketable mineral during the latter six months of last year was rather less than had been confidently anticipated in the beginning of 1888. I find the reason for this shortcoming in three causes, namely:—(1.) Diminished value of ore ground of some of the large stopes, for instance, the big Petri stopes, a matter which might have occurred at any time before, and could not be foreseen. (2.) The considerable reduction of hauds introduced by the former underground, agent during the middle of the year, which caused a diminished area of ore ground to be cut if compared with previous months. (3.) The over valuation of some newly-discovered ore ground, particularly so in the ancient air shaft, by the same agent, an occurrence which may easily happen, as the usual Cornish valuation from mere eyesight is more or less guesswork, and, therefore, deceptive. The production, though about 300 tons less than was anticipated, has nevertheless increased nearly an equal amount if compared with the year before.

EXPLORATORY WORK.

As the old ore ground is rapidly being exhausted, of course the discovery of fresh ore ground is to be aimed at with all possible means. This was done as far as possible for a good deal of the year, however, with less results than could be wished for; only towards the end of the year some brighter prospects made their appearance, and they are likely to continue now. It is inherent to all mining enterprises upon mineral lodes that their ore-bearing ground is restricted to certain floors or shoots of ore of very varying dimensions as to length and depth, which are divided from each other by portions of barren ground of equally uncertain dimensions. These barren portions, however, must at all events be passed before the discovery of a fresh ore body becomes possible. This seems now to be the case in several of the drivages towards the interior of the mountain, as, for instance, in main adit, Arthur, Hamburg, Petri, ancient air shaft, Union, Savalan, and Michael. The two latter offer the most advanced points towards the juncture of Savalan lode with the north lodes which are known on surface, and where, with all probability, a large ore body may be expected to exist. Since some time the hitherto barren lode has in both ends changed in a well defined and mineralised body of lode material; and as we know from experience that the occurrence of muudic and blende on these lodes is the forerunner of the silver-lead ore, I can only recommend you to continue this exploratory work with greatest energy in the upper and lower sections of the mine, as it is sure to be rewarded by valuable discoveries. Patience in lode mining is one of the very first requirements if an ultimate desirable result is to be obtained. And as the nature of both the champion lodes, the Savalan, as well as the Petri, is that of true fissure lodes, which are known on surface to exist in the country rock for a considerable distance, it would be utter folly not to try their value in the interior of the Kutchuk Tepe hill by underground drivings. If new ore bodies are once discovered there, a result which I consider not only probable, but certain if the exploring work is properly done by following up of the lodes, even if they had dwindled down to a narrow string, there will be no great difficulty in preparing them for work. We know perfectly well that the lodes have no uniform thickness; they may widen to 10 or 12 metres, as in the instance of Petri stopes, or dwindle down to a few centimetres, as in Savalan; but as long as they continue, and are followed, there is not only the chance, but the greatest probability, for the discovery of fresh ore bodies in them.

THE MODUS OPERANDI OF THE AGENTS APPROVED.

With the general measures which your agents have taken with regard to the management of your mines I perfectly agree, and I think they could hardly be better under the circumstances. I was glad to see that the carriage road from Kerassunde is at last finished, so that the heavy items for transport to the coast will be materially reduced. I am also happy to learn that the old, very defective laboratory at the mine has at last been replaced by a new one, so that your manager is now able to control what kind of products are obtained both at the mines and at the dressing floors. Hitherto he had to feel his way, under especially difficult circumstances, more or less in the dark, so that a clear light will now be welcome to him, and to the interest of your company. With regard to the question of the varying amount of silver contained in the dressed marketable ore, I do not think that in the dressing machines it is lost or washed away in any great proportion than the lead. But I do not wonder that the silver is not in a constant quantity in all the floors of ore; because the sulphide of silver contained in the galena, or sulphide of lead, is only most intimately mixed with it, and not in a distinct chemical combination with the same. Consequently its amount may vary in different places, as it actually does, viz., from 102 ozs. in Petri stopes to 42 ozs. in Union level, and 32 ozs. in Tobacco stope per ton of dressed ore.

SUMMING UP.

Summing up, I consider the prospects of your great enterprise now in a far more favourable position than this time last year, and I feel certain that your efforts will be crowned by well-deserved success, supposing that you continue to open the mines with energy and consideration. I shall be happy to give you further my advice, and should like to have a copy of the new mine plans made by Mr. Middleton.—DR. AD. GURLT, M.E."

The motion adopting the report and accounts was then carried unanimously

FORMAL BUSINESS.

Mr. W. M. Reeves and Adml. Sir J. E. Commerell, the retiring directors, were then re-elected.

The CHAIRMAN announced that a vacancy had occurred on the board, in consequence of the retirement of Mr. Oesterley, and the directors had elected Mr. Herbert Taylor to fill the vacancy. In Mr. Taylor they had a very valuable colleague, and he (the chairman) had much pleasure in proposing that the election be confirmed.

Mr. GASKELL seconded the motion, which was carried unanimously.

The auditors, Messrs. Spain Brothers and Co., were then reappointed.

THANKS TO THE STAFF.

Adml. COMMERELL: Gentlemen, I wish to propose a vote of thanks to our employés on the mine, and to our secretary in England. I can assure you of this, though we have not such a bright report as we should have desired to have presented to you, Mr. Twelvetrees, our manager, Capts. Kemp and Middleton, and others, are all doing their work thoroughly well. Our secretary, Mr. Habben, who I daresay many of you know, does his work exceedingly well. He receives people courteously, and you may depend upon this—which you cannot always depend upon in a secretary—that you will get civility and the truth. (Cheers.) He is going out to the mine about the 1st May. I think it very desirable that the secretary should go out to the mine and see into everything. I beg to propose a vote of thanks to our employés on the mine and in England.

Mr. BROUGHAM: I have great pleasure in seconding that.

GENEROSITY OF THE BOARD APPRECIATED.

Mr. HAMILTON proposed a vote of thanks to the directors, and said he wished to express his appreciation of the manner in which the board had worked their way through a bad time, and for the great and, he might say, unreasonable liberality which they had shown in their dealings with the company. It hardly became them, as shareholders, to accept the directors' generosity any further. He joined with the board in urging the shareholders to raise the necessary capital, which was the only course that good feeling and prudence dictated.

The motion was seconded and carried unanimously, and with the brief reply of the CHAIRMAN the proceedings terminated.

LATEST REPORT.

February 23rd.—68 men driving; value of ends, 6 tons; 180 men stoping; value of stopes, 12 tons, 3 cwts.; 12 men rising, 8 men cross-cutting, 145 labourers, &c.! The main adit is going forward in a strong lode, which is shortly much improved, and is now worth 10 cwts. silver-lead ore per fm. No doubt, as the driving proceeds, the lode will further improve. The lode in Petri air shaft is 8 ft. wide, and worth 1 ton of silver-lead ore per fm. The lode in bottom Union has since last advised very much improved, and is now worth fully 2 tons of silver-lead ore per fm. The lode in Savalan (special drivage) is showing a better appearance than for a long time past, the vein stone being of a favourable character, intermixed with blende and a little silver-lead ore. March 2nd.—Weather unusually mild, water pouring down in streams everywhere; tramroad being cleaned, and everything being got ready for commencing dressing on Monday, 4th inst.

THE BRATSBERG COPPER COMPANY, LIMITED.

RESOLUTIONS CONFIRMED.

AN extraordinary general meeting of this company was held at the Guildhall Tavern, Gresham Street, on Thursday, for the purpose of confirming the resolutions passed at the extraordinary general meeting of the company held on the 27th February.

Mr. J. B. BALL took the chair and read the notice convening the meeting.

The CHAIRMAN: Gentlemen, there is nothing for me to say, but simply to propose the resolutions which are as follows:—

(1.) "That the directors be, and they are hereby authorised, to enter into an agreement in the form of the draft, a print whereof has been produced to this meeting, and identified by the signature of the secretary of the company, and to carry the same into effect." (2.) "That the articles of association of the company be altered as follows:—(*a*) In article 11 the words 'and stock' in the 2nd line shall be omitted, and the words 'not fully paid' shall be inserted in lieu thereof; and the words 'or stock' in the 11th, 16th, 23rd and 25th lines shall be omitted. (*b*) In article 12 the words 'or stock' in the 3rd, 12th and 15th lines shall be omitted. (*c*) In article 15 the words 'provided that no call shall exceed 25 per cent. of the nominal amount of the shares or be made payable at intervals of less than two months' shall be inserted after the words 'appointed by the board' in the 7th line. (*d*) In article 20 the words 'usual common' shall be inserted after the words 'shall be in the' in the 2nd line, and the words 'from time to time approved by the London Stock Exchange' in the 2nd and 3rd lines, shall be omitted. (*e*) In article 42 the words 'one-fourth' in the 5th line, shall be omitted, and the words 'one-eighth' shall be inserted in lieu thereof. (*f*) In article 91 the words 'but the board shall not without the sanction of an extraordinary general meeting of the company, borrow more than a sum equal to one-half of the nominal capital of the company for the time being' shall be inserted in a parenthesis after the word 'capital' in the 13th line." (3.) "That the capital of the company be increased to 200,000*l*. by the creation of 80,000 new shares of 1*l*. each."

Mr. F. C. BARKER: I have much pleasure in seconding the resolutions which the chairman has just proposed. I have nothing to add to what was said so very fully at our last meeting, both in respect to this company and in regard to the smelting company, the shares of which have been allotted to-day.

The CHAIRMAN then put the resolutions, which were carried, and the proceedings terminated.

THE PRUDENTIAL ASSURANCE CO., LIMITED.

A BRILLIANT YEAR—THE COMPANY IN THE FRONT RANK—ENORMOUS INCREASE OF BUSINESS.

The fortieth annual general meeting was held on Thursday, March 7th, at the Chief Office, Holborn Bars, London, E.C.—Mr. Edgar Horne (the chairman) presiding.

Mr. W. J. Lancaster (the secretary) having read the notice conveuing the meeting, the report and accounts were taken as read.

40 YEARS A DIRECTOR.

The Chairman, who was loudly ehcered on rising, said: Gentlemen, on presenting you with this our fortieth annual report I am reminded that I have for 40 years been a director of this compauy, and I do not think that during the whole of that time a more gratifying report has been presented to the shareholders, either by myself or by those who have preceded me in this chair. (Cheers.) It has been remarked that we make our report shorter each year, but the figures we present to you speak more eloquently of the progress of the company than any of the conventional phrases which are generally found in this description of literary composition, and I think there has been only one adjective employed to emphasise the extent of our operatious. (Hear, hear.) I shall endeavour to initiate the brevity of the report iu the remarks I make in submitting it to you for your approval, and I will of course follow the paragraphs in their order as they appear. The first of these is one which I would wish more particularly to call your attention to, for it records a continuance of the remarkable progress in the ordinary branch of our business, and the more remarkable when we take into consideration the active competition which is now carried on amongst all the offices—not only the young and pushing ones, but the older offices as well, who do not wish to be left behind in the race.

ORDINARY BRANCH.

You will observe that we have issued 42,475 policies during the year, being 5,000 more than we issued in 1887, and the new annual premiums amounted to 235,487*l*. About half of these were for assurances of 100*l*. each, and rather more than a quarter were for 50*l*. each. These comparatively small assurances produced 160,000*l*. of the new aunual income, and the balance of 71,000*l*. a year was produced by policies ranging from 200*l*. to 3,000*l*. I called attention last year to the fact that we had issued 731 policies of 500*l*. and upwards, but in 1888 we exceeded that number by 120. (Cheers.) In fact, if we discard all policies assuring less than 200*l*., our new annual premium income from the remainder considerably exceeds the largest new annual premium income realised by any English assurance company—(hear, hear)—and let me also remind you that our business is derived exclusively from British sources, as we accept no foreign proposals, nor even from our Colonies. The premiums actually received during the year amounted to 718,848*l*., which places us in a very foremost rank amongst our brethren. (Hear, hear.) The claims in the ordinary branch do not call for any special remark. They amounted, as you will see, to 210,000*l*., being rather less than the amount reckoned upon, although 50,000*l*. more than in the previous year. This completes the short summary of our ordinary branch business, aud I am sure you will agree with me that it is highly satisfactory, and that our determinatian to develop this brauch has been well carried out. (Cheers.)

INDUSTRIAL BRANCH.

I now come to the other department of our business which we call the industrial branch, and there again the continued progress we have made is very remarkable. Our premiums actually received during the year were a little over three-and-a quarter millions, being an increase of 197,845*l*., or very nearly 200,000*l*. (Cheers.) You may remember that last year we stated in our report that the effect of the revision in the tables of the industrial branch in favour of the assured had been much appreciated, and that the effect had been to add more than 30,000*l*. to the amount paid in that year for claims; and I now wish to call your special attention to the paragraph respecting our claims in 1888, as I wish to point out to you that we are still paying away a large additional sum in consequence of those revised tables. The number of deaths in 1887 was 142,665, and you will see that the number in 1888 was 142,751, being only 86 in excess of the previous year, which we attribute to the wet summer and consequent absence of fever, but the amount we paid away for claims exceeded the amount paid away in 1887 by 26,000*l*. As a practical illustration of the extent to which our industrial policy-holders are sharing in the success which has attended the operations of the company, I may say that if we had paid the same number of claims in 1886 before the revision of the tables the amount would have been some 47,000*l*. less. You will find I stated last year that

OUR CONCESSIONS WERE EQUIVALENT TO A MILLION STERLING,

aud the result bears that out. The next sentence informs you that we have been able to reduce the rate of our expenses, a point to which I need scarcely assure you we devote the closest attention; and then comes the paragraph where we find it necessary to introduce the adjective "enormous" to denote the increase in the number of industrial policies during the past two years. It affords us the greatest satisfaction to inform you that in spite of this great increase the average duration of all the industrial policies in force (now more than eight millions) is not less than six years—(cheers)—and this is owing partly to the stringent measures we take to prevent policies being lapsed, and partly to our liberality in allowing such policies to be revived free of all expense to the policy-holders. (Hear, hear.) We have no doubt been assisted, also, by allowing free policies to those policy-holders of five years' standing who do not desire to continue their payments, and these, you will see, amounted last year to 40,000, making a total of 228,135 of these policies now in force. As

ONE-FIFTH OF THE WHOLE POPULATION OF GREAT BRITAIN AND IRELAND ARE INSURED WITH US,

it goes without saying that any disaster involving a large loss of life is immediately felt by us, and relief at once afforded. I am pleased, however, to state that no great accident occurred during the year. 240 claims were paid on lives lost at sea. We had 216 claims resulting from railway accident, the majority being railway employés, and 381 resulting from suicide. As an instance of the increase in the use of electricity, I may mention that we record for the first time a death from electric shock. As we know it is your wish we should act in all cases with the greatest liberality, and treat those as our best friends who select our company when they insure their lives, I may give you an illustration of the liberal course we have recently pursued. You may remember the circumstance of

THE LOSS OF THE GLENCOE,

a large steamer which was run into and sunk a few weeks ago near Beachy Head. One of the crew of that steamer sent in a proposal to insure his life for 50*l*. before starting on the voyage, but before all the formalities were completed the vessel sailed without the first premium being paid, but as he had left directions for this to be done we were satisfied to take the will for the deed, and on proof of death paid the claim to his relatives. (Cheers.) We also paid a claim on the life of the pilot who was on board the same ill-fated vessel. Our operations with the principal towns in the kingdom are now on such an extensive scale that we have deemed it expedient to establish district offices, which the superintendents of the district make their headquarters, and where they can be seen by the ageuts and all cash transactions are carried on. Those at Liverpool, Manchester and Portsmouth are now in operation, and others will be opened in due time at Glasgow, Birmingham, Bradford and Leeds. To show

THE EXTENT OF THESE TRANSACTIONS,

I may mention that during the past year no less than 3,098,000*l*. was received from the agents of the company, the number of remittances to the head office being 740,647, an average of 2,389 remittances, amounting to 9,996*l*., for every working day. On the other hand, the cash remitted from the head office was 1,850,000*l*., the number of remittauces being 183,582, being a daily average of more than 600. (Hear, hear.) Before leaving the industrial branch, I would briefly allude to a subject which has been somewhat before the public lately. I mean assurances ou the lives of children under the Friendly Societies Act. As some degree of misconception exists upon this question, I would remind you that a Royal Commission, under the chairmauship of the late Lord Iddesleigh (then Sir Stafford Northcote), was appointed to inquire into the subject in 1875. Sir Stafford Northcote was good enough to consult us in reference to the matter, and to inquire whether we should offer any opposition to a reduction of the amount allowed nnder these policies which the Commission were disposed to recommend. Our reply then was that, while our large experience gave us no reason whatever to believe that any such prohibition was at all necessary, we should willingly fall in with any restrictions which might be considered advisable in the interests of public policy. The House of Commons over-ruled the recommendation of the Commission, and in the Friendly Societies Bill the amounts were increased to 6*l*. for the ages of 5 and under, and 10*l*. for ages between 5 and 10. The assurauces can only be effected by the parents or their personal representative, aud penal clauses were inserted to prevent any evasion of the provisions of the Act.

CHILDREN'S LIVES.

The amount of 6*l*., which the Act fixes for the younger ages, is a larger sum than we provide for by our tables. We use a sliding scale, increasing by yearly increments to the legislative maximum. A Committee of the House of Commons has again been appointed to investigate the subject, and our manager, Mr. Dewey, has been invited, and will shortly be called upon to give evidence. I, therefore, feel I should not make further reference to the subject at the present time. I will only say that the still wider experience of the industrial classes which we have gained since 1875 fully confirms the opinion we then held. I now come to the last, but not by any means the least, item in our report, in which we inform you that we have raised our total assets to 9,302,007*l*., being an increase during the year of 1,434,904*l*.—and as far as we can judge at present there can be little or no doubt but that long before we ask you to meet us again we shall have attained our great desire and the proud position of heading every other company with an accumulated fund exceeding 10,000,000*l*. (Cheers.) I now beg to move "That the accounts certified by the auditors be received and affirmed, and that the report of the directors be also received and adopted."

THE INVESTMENTS.

Mr. Harben (deputy-chairman): In seconding this motion I wish to draw the attention of the shareholders to the mode in which that increased fund has been invested during the year, because you, sir, have so thoroughly exhausted everything contained in the report, with the exception of the mode of investment, that there is no necessity for me to go into any particular exposition of it; but I should like the shareholders to know absolutely from the board, apart from examining the accounts, which they can do themselves, that the old traditions of the office—that nothing but the best in the best kind of securities is good enough for us—still maintains, and as long as the board exists will be maintained. (Cheers.) In British Government securities we have invested 134,000*l*.; in railway and other debentures 493,000*l*.; in loans on municipal rates 189,000*l*.; in freehold ground rents 270,000*l*. In freehold property we have invested 39,000*l*.; and in Indian and Colonial Government securities 155,000*l*. more. In mortgages we have 200,000*l*. more; in loans on the company's policies, which you will understand are as good as Consols, 11,300*l*. more. Our outstanding premiums are more, but there is a point I should like to draw special attention to, especially of those who live in the country, that our outstanding premiums are considerably less than one month's portion of the whole income, and when you know they have one month's grace on every policy, although some persons may imagine 263,000*l*. is a large sum, yet it is really less than one-twelfth of the income of the company. (Hear, hear.) Now, in order to meet a want which we find existing we have published a synopsis of our investments, which we shall deliver by thousands throughout the length and breadth of the land, showing how we invest our money, the same as in the valuation account. I think those are the only points to which I need draw your attention, and I have much pleasure in seconding the motion. (Cheers.)

The resolution was unanimously agreed to.

The Chairman: I have another very pleasiug duty to do, and that is to propose the re-election of my old friend. Dr. Fraser, to be a director of this compauy. After myself, Dr. Fraser has been the longest and oldest director on this board. We value his services very

highly, and we only hope it will be many years before we lose those valuable services. I beg to propose that Dr. Fraser be re-elected a director of the company. (Cheers.)

Mr. HARBEN: Having known Dr. Fraser, I believe, as long as anybody else, I should particularly like to second his re-election, because a better director does not exist in any company.

The resolution was unanimously agreed to.

The CHAIRMAN: Now, I have an equally pleasing duty in proposing that another of our old colleagues, Dr. Cross, be re-elected a director of the company. Dr. Cross has performed good suit and service for many years, and, as I said before, I hope he will do so for many years to come. I beg to propose that Dr. Cross hereby be re-elected a director of the company. (Cheers.)

Dr. FRASER: I have great pleasure in secouding that proposition.

The resolution was unanimously agreed to.

MR. HARBEN, JUNR.

The CHAIRMAN: Gentlemen, having re-elected two of our senior directors, I have now to come to one of the junior ones, but it is with equal pleasure I rise to propose the re-election of our friend Mr. Henry A. Harben, the son of our esteemed deputy-chairman. I may remind you that his great legal knowledge has been of great service to us on the board, and we value those services, and we shall look forward to having them for many years to come. (Cheers.)

Mr. LORD (Newcastle-on-Tyne): I rise to second this proposal with great pleasure. I had the honour of seconding his election when he was first elected a director. The deputy-chairman has referred to the traditional policy of this company, and who can better carry out that traditional policy than one who represents the honoured name of Harben? (Hear, hear.)

The resolution was unanimously agreed to.

Mr. H. A. HARBEN: I am the more sensible of the honour you have done me, inasmuch as I feel conscious that for some little time past I have not been able to devote so much time to the duties as I should like to have done. As most of you know, my health has not been good, but I am happy to think it is now satisfactorily re-established, and I shall be able to devote myself heart and soul to my duties in connection with the company. (Hear, hear.) I can only say, I feel very deeply the responsibility which falls upon me as the son of one who has done so much for the interests of this company. I feel it would not do for my father's son to fall short at all events, if not of his ability, of his integrity, and of the enthusiastic spirit which he has infused into all he has done for this company. (Cheers.)

AUDITORS.

Mr. HUNTER: Mr. Chairman and Gentlemen, I have great pleasure in proposing that Messrs. James Allanson and Thomas Wharrie be re-elected the auditors for the current year, and that the thanks of the meeting be given to Messrs. Allanson, Wharrie and Cole for their services during the past year.

Mr. G. SMITH: I have much pleasure in seconding the motion.

The resolution was unanimously agreed to.

THANKS TO DIRECTORS.

Mr. GREGORY: The resolution I have to propose is the usual vote of thanks to the directors of the company, and I feel sure that, on behalf of the shareholders, I can say that we fully appreciate not only the heavy responsibility which weighs upon the directors in the duties which they have to perform, but we are sensible of the great skill and wisdom which they bring to bear in the performance of their duties, and the statesmanship which characterises the conduct of the company. (Cheers.) I feel sure the meeting will pass this vote of thanks with acclamation. (Cheers.)

Mr. PRESTON: I very cordially second the resolution which has just been proposed. Although I am not unaccustomed to have to deal with something like large figures, I must confess that in looking over this report I felt almost staggered by the amounts which were placed before me. But it makes me feel the more that we are indebted to those who take the control of an association of this kind, for if they did not keep their heads well on their shoulders, depend upon it in dealing with such large sums as we have placed before us, we should very soon find that instead of a considerable profit a considerable loss would be incurred. (Hear, hear.)

This resolution was carried unanimously.

The CHAIRMAN: Gentlemen, the directors feel very grateful to you for the unanimous vote of approval which you have just passed. Mr. Gregory alluded to the great responsibility the directors are under in carrying on an institution of this sort. Let me assure you we are fully alive to that responsibility, and we shall endeavour to go on in the same steps we have hitherto trod.

THANKS TO THE STAFF AND AGENTS.

I have to propose a very comprehensive motion, "That the best thanks of this meeting be given to the secretary, the managers, the medical officers, the solicitors, inspectors, superintendents, assistant-superintendents, and agents." Gentlemen, you have been praising and thanking the heads of the army, and we now come to the officers and the rank and file of those who help us in carrying on this enormous business. I have had occasion to say before, and you all know, we have had no changes. These are the same men who have served us year after year, and to whom we are indebted for a great deal of the success which the company has met with. (Cheers.) No further recommendation on my part is required to make this a thoroughly acceptable resolution to you. I will ask the deputy-chairman to second it.

Mr. HARBEN: I do so with great cordiality. As I have often said before, on me devolved the practical selection of my successors. They have now been at the head of this company for many years, and I am bound to say that the confidence which I had in them at that particular time has been wonderfully increased, because it is my duty to tell you that they are more conservative than I who educated them in the business, and I can pay them no better compliment than that. (Cheers and laughter.)

A FEW WORDS FROM THE SECRETARY.

Mr. W. J. LANCASTER (the secretary): On behalf of the list you have heard read to you, I beg to tender my very sincere thanks for the compliment. On behalf of the outside staff, the agents, assistant-superintendents, superintendents, and inspectors, I need only point to the amount of business done. On behalf of the clerks—both at the district and head offices—and ourselves, I think we can point to the way in which the large business has been managed, and say that we have not fallen short of what was expected of us. It is especially pleasing to feel that you have the confidence in us to pass this vote of thanks, which we most heartily appreciate. (Cheers.)

The proceedings closed with a hearty vote of thanks to the chairman.

THE DICKENS CUSTER CO., LIMITED.

RESOLUTIONS CONFIRMED—MR. FRANCIS EXPLAINS THE AGREEMENT—SUNDRY POINTS DEFERRED TILL THE NEXT MEETING.

AN extraordinary general meeting of the members was held at Winchester House, Old Broad Street, on Thursday, for the purpose of confirming the following resolutions, which were passed as special resolutions, at an extraordinary general meeting held on the 25th day of February, 1889:—

1. "That it has been proved to the satisfaction of this meeting that the company cannot by reason of its present position continue its business, and that, therefore, the company be wound up voluntarily under the provisions of the Companies Acts, 1862, to the present time." 2. "That Mr. C. T. Gladstone (the secretary) be, and he is hereby appointed, liquidator, at an agreed remuneration of 105*l*."

If the above resolutions are carried, the notice further stated, by the requisite majority, the following resolution will be submitted as a special resolution, and the same, if carried by the requisite majority, will be again brought before the members for confirmation at a subsequent meeting to be convened for the purpose:—"That the liquidator be, and he is hereby authorised to consent to the registration of a company, to be called the Dickens Custer Mines, Limited, and in accordance with Section 161 of the Companies Acts, 1862, to enter into an agreement for the sale of the company's property to a new company, for the consideration and upon the terms specified in the draft agreement signed by the chairman for the purpose of identification, and submitted to this meeting, and hereby approved, with such modifications or additions as the liquidator may determine not being substantial variations therefrom."—J. C. BOLTON, Esq., presided.

Mr. C. T. GLADSTONE (secretary) read the notice calling the meeting.

ABSENCE OF MR. WOLSELEY.

The CHAIRMAN: I have received a telegram from Mr. Wolseley, stating that his bronchitis is worse, and that he is unable to leave the house, but he desires that I should express his regret to the meeting for his involuntary absence. I am exceedingly glad that the business to-day is of such a formal character, because we are so accustomed to see Mr. Wolseley that I feel out of place in taking his position on this occasion. I may say with regard to the accounts—a general wish was expressed by the shareholders that they should be prepared as soon as possible, and they were put at once in the auditor's hands, who are working at them as diligently as they can, and we have sent out a telegram to Mr. Treweek for him to forward the estimate of the stocks he had on hand on the 31st of December as quickly as possible. I may say that if any gentleman has anxiety with regard to the figures with which the board have had to deal during their tenure of office, I have brought with me the same statement that I made in January, and shall be happy to repeat it if it should be desired

LATEST NEWS.

In order to put you au courant as to the latest information, I may say that at our last board we had a letter from Mr. Treweek of the 21st of February, in which he says:—

"If the ore bodies near the surface in the Custer property continue to dip (which I have every confidence in believing they will) the work we have done will bring us nearer the realization of good results. The news from the Vigus Tunnel (the important tunnel on the Custer property) is of a most encouraging nature, and seems to show that we are not far from a good ore body. I am satisfied that this tunnel will bring the company out all right yet. As you are aware, we have no rock-drilling machinery, all work being done by hand labour which is both slow and costly at best."

You know now as much about the mine as we do ourselves, and therefore without taking up your time any further, I will move the confirmation of the first resolution passed on the 25th February, as given above. (Cheers).

Mr. FURBER seconded the motion, which was carried unanimously.

The CHAIRMAN: I move the confirmation of the second resolution as above.

Mr. GOLDEN seconded the motion, which was carried.

The CHAIRMAN: Before the next resolution is put, I will ask Mr. Francis, our solicitor, to explain the agreement.

AGREEMENT MADE CLEAR.

Mr. FRANCIS, of the firm of Messrs. Francis and Johnson, of Austin Friars: Gentlemen, before I again explain this agreement, which I had the pleasure of doing to the meeting on the last occasion, I wish to state that I also have received an intimation from Mr. Wolseley, in which he bids me convey to you his extreme regret at being absent, but he has been confined to his room by the doctor's orders. Now, gentlemen, the agreement which will come into operation when you have passed the resolution lies on the table, and is an agreement to be entered into by the liquidator on the one part, and the new company which he is to form and incorporate on the other part, and after reciting the resolutions which are before you here as complete resolutions, subject to the confirmatory meeting, and, after setting out in full detail the properties which the liquidator is to sell and the new company is to buy, including amongst such properties all the chattels of the company, books, debts, moneys, bills, &c. It goes on to state that

THE CONSIDERATION FOR THE SALE

to the new company shall be as follows:—13,200*l*. are to be paid to Mr. Alfred Bull and Mr. Campbell, who are the trustees for debentures aggregating 18,000*l*., The new company is to take over, perform, and fulfil all contracts and engagements binding upon the old company, including the contract to buy the mining claims known respectively as the Pilot and the Ward Beacher, and

they are to indemnify the old company and its liquidators. As further part of the said consideration the new company shall pay the moneys due to the directors for their remuneration up to the date of the liquidation of the company and the costs of the solicitor, excluding however such costs as directly appertain to the formation and incorporation of the new company, the preparation of this agreement, and other legal matters appertaining to the sale, which, under the contracts previously explained to you, the contractors undertook to pay.

TERMS OF NEW SHARES.

As the residue of the said consideration the new company is to allot and issue according to the directions of the liquidator of the Dickens company, all the shares in the new company to be credited with 16s. 6d. paid thereon, and every member of the Dickens Company shall, in respect to each share held by him upon which he shall have paid all moneys due, be entitled to require the liquidator, upon payment of 1s. per share, to obtain to be allotted and issued to him a 1*l.* share in the new company with a sum of 16s. 6d. credited as paid thereon. Each shareholder may apply at par or at a premium within 21 days' date of the confirmatory meeting for further shares in the new company, and the directors of the new company may, with the consent of the liquidator, allot any balance of the 420,000 shares which may not have been applied for by the other shareholders to such applicants upon such terms as they may think fit, and any member of the Dickens Company who shall take the benefit of this clause takes it in full satisfaction and discharge of all claims he has upon the old company. There is a clause put in as to the powers of the liquidator to buy up the interests of dissentient shareholders in the common form, and the new company is to accept the title of the old company, and to make a good title to the Ward Beacher and the Pilot claims. The Dickens Company and its liquidator shall enact and do all the necessary legal acts for assuring the property in every respect and confirming it to the new company, and keeping them idemnified from all costs and damages which may arise by defending actions and proceedings, and obtaining such steps as may be necessary to get the full benefit of the same. The Dickens and its liquidator has a lien on the whole of the property until the sum agreed upon shall have been repaid to the liquidator ; and he is to retain the property and hold the same at his discretion until that has been determined upon.

The Chairman here invited discussion.

THE NEW BOARD.

Mr. Griffin : At the last meeting I was given to understand—not by the directors, but by the gentlemen working with them—that some information would be given as to the composition of a new board.

Mr. Francis : That question is very pertinent to this occasion, and it has not at all escaped the consideration of the board ; but on considering the matter more carefully, I came to the conclusion that it would not be in order to-day to absolutely determine about the new board, until such time as the resolution has been carried and confirmed, whereby the sale is to be carried through, but that it would be very advisable to take the opinion of the shareholders now, not only as to the new board, but as to the substratum of the new company. I should like to ask the shareholders if they wished me so to draw the articles, that each share shall carry one vote.

Major Cotton : Do you not think it would be better to leave these matters in the hands of the committee ?

Mr. Francis : I am left with instructions from the liquidator to prepare certain articles ; if I prepare them with one vote for one share complaint may be made.

Major Cotton : I think the committee has the confidence of the shareholders, and could settle this.

Mr. Johnston thought it would be best to leave this matter until the next meeting.

Mr. Francis : My opinion is, and it is only the opinion of an individual, that every man who pays his money should have a vote for every share he takes.

A Shareholder : I think there ought to be a limitation to the number of votes.

Major Cotton : Certain people are getting their shares cheap, and they might be able to come in with their large number and carry the meeting with them.

LIKELY TO LEAD TO THE HAPPIEST RESULTS.

Mr. Holland : I hold 4,000 shares, and think the better plan would be to strengthen the existing committee. My view of the reorganisation is this—that it is likely to lead to the happiest results. I should like to see Mr. Lott on the committee.

The Chairman : I shall be glad if you will elect a committee, and as to voting—I think it should be vote for vote up to 100 shares, and after that one vote for every 10 shares.

Mr. Lott : I think the first proposition will meet with general approval—and that is to defer matters until the next meeting, when we can all be here, for to-day is very inconvenient. I am sure the liquidator, Mr. Gladstone, will be glad to have the advice of the shareholders. For all reasons I think the postponement better.

GOOD ADVICE.

The Chairman : I now move the third resolution as above. One word on the subject of those who would like to go to arbitration. A certain number did so last time, and after a second liquidation, within little more than 12 months, there is not any possibility that the liquidator can allow anything much above the market price of the shares. I hold the same shares that I did when I joined the board a year or more ago, and my strong advice to each proprietor is to take every share he is entitled to in the new company, because I feel satisfied that he will do far better with them than by dissenting and going to arbitration.

Mr. Master seconded the motion, which was carried with one dissentient.

Mr. White : I should like to move that the articles be printed, or a synopsis of them, in the circular calling the meeting.

The Chairman : On the part of the liquidator and directors we will use every endeavour to have the articles at the office a few days before the meeting, and if possible our solicitor will make a résumé, and it will be sent out with the circular, which will give the shareholders in brief the salient points of the articles. We cannot send the articles, as to do that would cost several hundred pounds. We are doing everything we can to assist the shareholders.

Mr. Johnston : I beg to propose a vote of thanks to the chairman for the very able way in which he has conducted this meeting, and to express our regret at the absence of Mr. Wolseley.

Mr. Griffin seconded the motion, which was carried amidst cheers.

With the brief reply of the chairman the meeting ended.

GREAT FORTUNE MINE.

INCREASED RETURNS—BETTER PROSPECTS—SHAREHOLDERS HOPEFUL.

A general meeting of the shareholders was held at the Office of the company, Gracechurch Buildings, Gracechurch Street, on Thursday : "To examine and audit the accounts, to make a call if necessary, and to transact the ordinary business of the company."—Capt. Argall presided.

Mr. C. B. Parry (secretary) read the notice calling the meeting, and the minutes of the previous gathering.

The report of the agents, as read by the chairman, was as follows :—

AGENT'S REPORT.

11th March.—The level driving east at adit level, on the No. 2 sett, on the Conqueror branches, is worth 4*l.* per fm. Two stopes on No. 1 sett are worth 5*l.* per fm. Two stopes on No. 2 sett are worth 5*l.* per fm. One stope on No. 3 sett is worth 3*l.* per fm. Aggregate value, 17*l.* Four tribute pitches on the Conqueror brauches and two on the copper ore are worth in the aggregate 14*l.* per fm. During the past four months we have completed the cross-cut from No. 1 to No. 2 set of branches, holed the winze from deep cutting to the adit level, and opened up a good piece of tin ground ; also repaired the tunnel and other deadwork. In the coming month we propose to commence to drop pitwork for a 10-fm. level, and from the large excavations and the returns which must have been made by the ancients at the adit level—we have evidence of work 200 years ago—and as they worked so extensively above adit we fully expect to get increased and profitable returns below. We have increased our returns a little, but the drop in the price of tin and the increased price of coals has been much against us.—W. Argall, S. P. Curtis.

The Chairman : I should like to mention that on the adit level the ancients worked for 200 years. We have evidence of that in the shape of old candlesticks found there which I now put as curiosities in the British Museum.

A Shareholder : Did you find the candles alight ? (Laughter.)

The Chairman : I cannot say that ! (Laughter.) With regard to the prospects, as we have stated in our report, about the adit level we found that the ancients had taken away the best part of the stuff, and that we are working away after them. Below the adit level we have found the stuff much better, and in the coming four months we hope to get the pitwork down, and work on a set of branches about 60 ft. wide. If these are anything like what they have been above

WE SHALL HAVE GREATLY INCREASED RETURNS.

Even as it is we have increased the returns a little during the last month or so, and we hope not to go back upon that in the future. The accounts are a little against us, but we have had to pay for a good deal of extra coal, and there has been a decrease in the price of tin. In the four months we lost 230*l.* 14s. 11d., and the adverse balance now is 366*l.* 4s. 11d. A call of 6d. a share will clear it, but we think it better to carry forward that balance, and not to make a call at the present time, because in the next four months we have better prospects, and can probably do without a call. I now propose the adoption of the accounts.

Mr. Wagstaff proposed the adoption of the report, which was carried.

SHAREHOLDERS MUCH ENCOURAGED.

Mr. Simmons remarked that the expenses had increased very rapidly, but observed that they had opened out a new piece of ground.

Mr. Wagstaff : I am very pleased to see that the last sale of tin has been an increase upon what went before. If you go on like that, Capt. Argall, we shall soon come here with very smiling faces, because this return is very different from what we have seen before. I think that on the whole, we must regard this as a very pleasing statement. What price do we get ?

Mr. Parry : The very best in the county—57*l.* per ton. (Hear, hear.)

Mr. Wagstaff : The last sale was the best of all.

POSITION SUMMARISED.

Mr. Hodgkinson : I gather from your remarks, Mr. Chairman, that we shall open the mine, drain the water, and begin working upon ore that has been worked over before, the richest part having been taken away ; but that when you get the water out and work at a lower point you will be able to return ore that has not been worked over before, and we naturally presume that then the produce will be richer than what you have hitherto been selling. That, I understand, is the present output. (Hear, hear.)

The Chairman : It is exactly as you state. When we fork another 10 fms. we expect the ore to be a good deal better than it is now—in fact it is almost certain. We know it is the bottom of the mine now.

Mr. Simmonds : What is the width ?

The Chairman : About 60 fms., in a series of branches. We are driving through the lode, and are working the richest shutes.

Mr. Hodgkinson : I think the outlook is very good.

The Chairman : In the 60-fms. there are probably 90 or 100 branches.

Mr. Simmonds : Did the ancients sink the shaft, or did we ?

The Chairman : The ancients, and went down as deep as they could. The mine was worked 40 years ago, when the returns were 25 tons a month.

PAY YOUR DEBTS AND BE RESPECTED.

A Shareholder said he thought that the balance against the mine ought to be cleared off, and that a call of 6d. per share should be made for the purpose. This was adhering to the true spirit of the

cost-book system ; besides which it would maintain the good standing of the company with the people with whom it did business.

Mr. BRITTAIN cordially seconded this motion, and said it was impossible to talk about adhering to the cost-book system if they did not pay their debts. It was a feature in regard to the mines in this office that the accounts were kept closely charged up and paid. (Hear, hear.)

The CHAIRMAN: We have talked over the matter of a call, and thought with our present prospects that we could do without one until the next meeting, and that then, if matters did not turn out as we expected, a call of 6d. might be desirable. The amount is not heavy, but, for my own part, I would rather make a call and wipe it off. (Hear, hear.)

The call was then made payable within a month, with the allowance of the usual discount.

A vote of thanks to the chairman closed the business.

EDWIN BRAY GOLD MINING CO., LIMITED.

A PART OF THE SHEBA REEF—GOOD PROSPECTS—A MAGNIFICENT ASSAY—A WATER-RIGHT.

AN extraordinary general meeting of the Edwin Bray Gold Mining Company, Limited, was held at Winchester House, Old Broad Street, E.C., on Tuesday last, in order that the subjoined resolution might be proposed.

RESOLUTION.

"The articles of association be altered in manner following :—(*a*) In article 8 the word 'two' shall be substituted for the word 'one.' (*b*) In article 23, after the words 'instrument of transfer,' the words 'shall be of the common form' shall be inserted. (*c*) In article 30, after the words 'the company shall have a paramount lien on the shares,' the words 'uot fully paid-up' shall be inserted. (*d*) In article 67, in the second line, the words 'after his appointment' shall be struck out, and instead, the words 'of the incorporation of the company' shall be inserted."

Mr. Browne Martin (chairman of the company) presided.

Mr. C. JERMYN FORD (the secretary) read the notice calling the meeting.

The CHAIRMAN having read the resolution to the meeting, aud explained the slight differeuce that it made in the articles,

Mr. RHODES moved the approval of the resolution.

Mr. JAY seconded the proposal, and stated that the only object of the alterations was to comply with certain requirements of the committee of the Stock Exchange, and would have the effect of puttiug the company on an improved basis.

ARTICLES AMENDED.

The motion was then put, and unanimously carried.

The CHAIRMAN said that as they had met together that day he would give them a little information. As stated in the prospectus they had secured the services of Messrs. Webster and Trubshawe as managing directors in South Africa, aud the directors were very well satisfied with that appointment, and congratulated the shareholders upou it. They had also secured the services of Mr. Stephan as mining mauager, who came to them with the highest testimonials as to character and ability. He was well known to certain meubers of the board, and to others connected with the company.

TRANSFER COMPLETED.

The directors had received a telegram through the Bauk of South Africa, iuforming them that the trausfer of the property to the company had been completed, and that the company was now in possession of the property. The Sheba Mine was, of course, well known to the shareholders. (Hear, hear.) He was a moderate shareholder in that company himself. He had the greatest confidence in that mine. He believed it to be the richest mine in South Africa. Well, the Edwin Bray was

A PORTION OF THE SHEBA MINE.

The Sheba Mine at the present time, with its paid-up capital and premium, represented nearly as much per claim as the whole of the capital and working capital of the Edwin Bray. (Cheers.) That, he thought, spoke well for the future success of their little company. (Cheers.) There had been some excitemeut and reaction in African shares on the Stock Exchange lately, but it had not affected them. The directors themselves had purchased in the market recently shares at 1⅛ premiuu, in order to increase their holding. (Cheers.) He concluded by expressing his willingness to answer any questions the shareholders might like to ask. They had present Mr. Trubshawe, who had seen the property—a brother of oue of their managing directors ; perhaps he would say a few words.

A HISTORY AND A REPUTATION.

Mr. TRUBSHAWE said that he had not expected to be called upon to make a speech, but he would be pleased to offer a few observations. In the first place, he wished to state that the miue had a thoroughly good history in the past. (Cheers.) He meant a thoroughly good reputation. (Applause.) The Edwin Bray was looked upon as a thoroughly sterling mine. The Sheba reef undoubtedly ran through the whole of the claims. (Applause.) During bad times, in Barberton, the Edwin Bray had never fallen below par, aud the shares had beeu as high as 15*l*.—(cheers)—and at the present time stood at a high premium in South Africa. There had previously beeu difficulties in the way of the development of the mine, the most serious of which had been the difficulties of trausport, and of securing

A WATER RIGHT.

They had uow secured both these important factors. The Sheba Company failed in getting a wire tramway, but the Edwin Bray had been successful. (Cheers.) They would be able to transmit their quartz to the mill for half what the Sheba Company had to pay. The Sheba Company had to pay 8,000*l*. for their water right, and the Edwiu Bray owued a larger one, aud paid much less.

A WONDERFUL ASSAY.

He had asked his brother to send him home some samples of the quartz, that he might have it assayed. He did so. None of the samples showed auy visible gold, and he (the speaker) was very much surprised to receive from Dortmond the return of no less than 12 ozs. 8 dwts. per ton. That quartz was

NOT PICKED STUFF.

He did not mean to assert that the whole of the quartz in the Edwin Bray rau anything like that, but he felt confident that they possessed a rich and valuable property. (Cheers.) They had all the elements of success—cheap transport, a good body of stuff, moderate capital, and facilities for working. They ought to be able to give a very good account of themselves. (Cheers.)

NO QUESTIONS.

The CHAIRMAN again invited discussion, but no questions beiug asked, he stated that the statutory meeting and the meeting to confirm this resolution would shortly be held, and said he hoped at the first annual meeting to lay before the shareholders a very satisfactory statement. (Applause.)

Mr. JAY moved, and Mr. FORD seconded, a cordial vote of thanks to the chairman, which closed the meeting.

QUAYLE GOLD MINING COMPANY, LIMITED.

A COMPANY WITH A BRIEF EXISTENCE—SHAREHOLDERS TO RECEIVE THEIR MONEY BACK—UNFOUNDED NEWSPAPER STATEMENTS—A FRESH START PROBABLE.

AN extraordinary general meeting of the Quayle Gold Mining Company, Limited, was held at the Cannon Street Hotel, on Thursday—Ernest Haines, Esq., presiding—for the purpose of considering, and if thought fit, passing the following resolution :—

"That the company be wound up voluntarily under the provisions of the Companies' Acts, 1862 and 1867, and that Ernest Haines, of 110, Cannon Street, in the City of Loudon, Esquire, and Walter Robert Fitzgerald Moore, of 22, Leinster Gardens, in the County of Middlesex, Esquire, be, and they are hereby appointed, joint liquidadators, without remuneration, for the purpose of such winding up."

Mr. C. D. N. GRANT (secretary), read the notice convening the meeting.

HONOURABLE ACTION OF THE DIRECTORS AND VENDORS.

The CHAIRMAN : Gentlemen, your directors have called you together thus early in the proceedings of the company to consult you on the positiou of affairs. The compauy, as you are doubtless all aware, was brought out about a fortnight ago only—on the 25th February—and an allotment was made after receiving due applications for the shares. The amount of money which was required and asked for in the prospectus was 57,500*l*., and the applications which were received from the public amounted to 64,439*l*. The capital was therefore fully applied for, and was allotted by the directors. Very soon after the allotment—I think on the 28th February—it was brought to the notice of your directors that a damaging statement in conuection with the mine had been published in one of the London papers. At once, on reading that statement, your directors met, and they resolved that under no circumstances should any of the money of the shareholders be parted with until the matter was fully iuquired into, and they resolved then that an independent expert, to be named by some person entirely unconnected with your board or with any of the vendors, but one on whom reliance could fully be placed—that such inspector, being a competent mining engineer, should be sent out to the property to see if there was any truth whatever in those statements. (Hear, hear.) That was the first action, taken within an hour after the notice appeared in the newspapers. It was intended by the directors to act upon that resolution, but before that could be done some little delay was necessary, and these damaging statements continued to appear from day to day in the papers, and unfortunately there was no appearance of a contradiction to them from the only persons who were in a position to do so. I must remind you that your directors had no other information, and could uot possibly have any other information than was giveu to you in the prospectus. The experts' reports were there priuted in full, aud every shareholder was in as good a position to judge of the prospects of the company as the directors themselves. The mine was a long way off, and the board could only repeat that which was already public property, and well known to everyone, and which appeared in the prospectus itself. Well, these damaging reports continued, and letters were received by your directors from shareholders, expressing distrust in the mine, and a large number of shareholders calling at the office also seemed uneasy in regard to it.

A WISE CONCLUSION.

Therefore, your directors had to consider whether—no reports having appeared in contradiction of these daunaging statements, and seeing the evident opinion of the shareholders that there was some truth in them—it was wise for them to incur a heavy outlay in sending out an engineer to New Zealand, and waiting two or three months for his report, in order to find out whether the miue was what it was professed to be in the prospectus. The directors came to the conclusion that it was far better to call you together to-day than to speud any of your money ou an exploration of this kind. You may be glad to know that the money is now at the bank, aud not one single penny of it has been interfered with. (Cheers.) It is perfectly safe and available for being returned to you should you desire it.

DIRECTORS' FAITH IN THE MINE.

What I wish to impress upon you to-day is that your directors do not stand here in any way to impugn the honesty of the vendors of this mine or the truth of the statements published in the prospectus. Before entering into this company, and allowing our names to be put upon the prospectus, we had examined that document carefully, and had come to the conclusion that there was every prospect of the dividend being paid to you which was mentioned in the prospectus—that, in fact, we had a good mine, and we were perfectly justified in bringing it before the public. But now the position of affairs is altered. We find discredit thrown

upon our mine ; we find our shares at a discount in the market, and our shareholders in a great state of excitement. We are unable to give them any further information about the mine than we have afforded them already, and we do not care to face the outlay which would be necessary if we employed an expert to examine the mine—in short, we do not see the necessity for wasting the shareholders' money in unnecessary explorations to prove what we think to be true. We do not cast any doubt whatever upon the mine, but we recognise the fact that we act in a fiduciary position for the shareholders, and we would not put their money into a venture that we would withhold our own from. Therefore the position we take up to-day is, that in consideration of the present dissatisfied state of a great many of the shareholders, as evinced by letters we have received and calls made at the office, and also of the discredit which has been thrown upon the mine, we have thought that it would be unwise for us to enter upon this venture.

VENDORS MEET THE DIRECTORS.

We accordingly put ourselves in communication with the vendors, and laid the facts before them, but they were unable to give us any explanation. The owner of the mine, since the date we called this meeting, has put a letter in the paper contradicting these statements. It appears that he has an enemy who, by means of the public press, is trying to cast a slur upon your property. We put ourselves, as I say, in communication with the vendors, and they met us very readily. They said, "We do not in any way wish to force this mine upon you. We agree to cancel the contract, provided the shareholders agree to a proper legal winding up of the company ;" and the board, on your behalf, accepted that cancellation, subject, of course, to your passing this resolution to-day. Your money is at present retained in the bank. Should you pass this resolution it will be necessary, under the Companies Act, to call another meeting a fortnight from this to confirm the resolution, and, having confirmed it, your money will be returned to you, we hope, intact. (Cheers.) Of course, it must be a great disappointment to the shareholders to find that this mine, which started with every prospect of success, and with a great deal more favour than most of the mines which are offered to the public—the ore being a free milliug orc—but I say it is far more unsatisfactory and disappointing to the directors to have to come and offer you your money back than to you shareholders who are only interested to the extent of your investment. The directors are interested not only as regards the money they have put into this company, but also in upholding their honour. (Hear, hear.) The chairman concluded by moving the resolution as above, and by offering to answer any questions.

Mr. Raphael : Have any proceedings been taken against the company ?

Mr. Munk (solicitor) : I am the solicitor to the company, and I can say that none whatever have been taken.

MR. QUAYLE'S BONA-FIDES.

Mr. Robson : I have represented Mr. Quayle in this matter from the outset, and should like to say a few words before you adopt this resolution. In the first place, I say—and I am quite sure the solicitor and the directors will confirm me when I say it—that there has been the utmost good faith on Mr. Quayle's part from the commencement. (Hear, hear.) He handed over the whole of the title-deeds, gave the directors all the information in his possession and placed himself unreservedly in their hands. The reports he obtained were not anonymous productions ; they have been verified by experienced mining engineers. You have Mr. Henry M. Smith, authorised mining surveyor of the Thames goldfield, and Mr. Jas. M. McLaren, who was for 15 years the Government Inspector of Mines (there are no better names in the colony), and the property has also been reported upon by other experts. You have to weigh these reports, gentlemen, against anonymous contributions to the papers, which we know to have emanated from a man who was interested in this mine, and who tried to squeeze Mr. Quayle out of it. That is the long and the short of it. After the statements made it was only right that the directors should call you together to let you decide whether you prefer to have the company wound up, and your money back, or to re-purchase the property. At first it was said that there were no lodes at all ; no ore of any description ; that all the lodes in the district had been abandoned ; that a syndicate had refused to have anything to do with it, and that Mr. Quayle bought it for 2,000*l*.

THE *Star* WITHDRAWS.

Mr. Quayle called upon the editor of the *Star*, and showed him the reports (copies of which you have seen), and after that the *Star* very properly and fairly withdrew a number of the statements made in their first issue, and content themselves now by saying that payable ore has not been discovered in the district. I may tell you that these discoveries are of recent date—within the last two years. Hitherto the necessary machinery has not been on the ground. There are three different lodes of considerable extent. Certainly payable ore has not yet been got out in sufficient quantities, but what has been obtained assays upon the average 1½ ozs. to the ton, and Mr. McLaren says that 2 dwts. will pay all expenses. Then the *Star* says that one of the most valuable mining properties in the world was bought for a few pounds. (Laughter.) The mine may be worth all Mr. Quayle says it is, and he pledges himself to the accuracy of every statement in the prospectus and reports. You are quite at liberty to submit these statements to an independent expert at Mr. Quayle's own expense, and if they are not verified he will not ask you to part with one shilling of your money. (Hear, hear.) He cannot make a fairer offer than that.

A SUGGESTION.

The only other suggestion I have to make is, that although a majority at present may be in favour of winding up the company, I hope there are sufficient left who have confidence in Mr. Quayle, and who will rally round him, and enable him to float this mine again and develop the property. (Hear, hear.)

Mr. Raphael : I should be glad to know whether, if the meeting resolves to carry out the suggestion which has emanated from the last speaker, any litigious proceedings are likely to arise ? I understand that this gentleman, one of Mr. Quayle's representatives, gives up the right to any contracts that he may have entered into with the company, but one would be glad to know whether the gentlemen interested with him have any legal rights, in consequence of which difficulties may arise hereafter.

Mr. Munk : Mr. Quayle has never entered into any contract with the company. He has entered into one with the syndicate which sold the property to the company.

Mr. Raphael : Has any provisional arrangement been made with the syndicate, assuming that the meeting here to-day resolve upon this resolution ?

Mr. Munk : The vendors of the company are willing to cancel their agreement, and there is no privity at all between Mr. Quayle and the company.

A Shareholder : I take it that if we pass this resolution we shall have our money forthwith ?

The Chairman : After the confirmatory meeting. The company has made no contracts, and spent no money at all.

THE DIRECTORS' ACTION APPRECIATED.

Mr. Stove : As no one else rises to second the resolution proposed by the chairman, I take upon myself to do so. I think, after the very straightforward and explicit statement which we have heard from the chairman, we ought to give to him, and to all the directors, our hearty thanks for the honourable way in which they have conducted the whole of the business of the company. We ought also to express our thanks to the representative of Mr. Quayle for coming here and telling us what he has, and also to the vendors for cancelling their contract. It is most likely that the great majority of you will prefer to have your money returned ; at the same time, some of you, doubtless, will elect to join a syndicate and work the mine upon some other basis.

MR. QUAYLE MAKES A STATEMENT.

Mr. Quayle : As the proprietor of this mine, I may perhaps be permitted to say a few words. I have had this mine examined thoroughly by the best experts in New Zealand, and it has been proved that the mine is a good one. A tunnel has been driven 160 ft. upon gold-bearing ground, and it is found to be of free milling nature. Another tunnel has been driven 60 ft.—48 ft. wide of quartz. —the finest quartz I have ever seen. I have been through nearly all the mines in the district, and have never seen better free milling ore than I saw there. It assayed 1 oz. 12 dwts. from the very worst parts of the mine ; and I am quite certain that it would run 2 ozs. clear pure gold to the ton. Because a man happens to bear me

A LITTLE MALICE,

and brings forward all kinds of damaging statements, it by no means follows that the property is worthless. I had a contract with this man to purchase the mine, and signed an agreement to buy it for 16,000*l*., and I was to pay 8,000*l*. for my half-share of the mine. In consequence of certain matters coming to my knowledge, I began to be suspicious about him, and upon making enquiries I found that he did not pay anything like that for the property. The miners told me that he did not purchase the mine at all, but had merely obtained the refusal of it. I therefore asked whether the option was on or off, and was informed that the time had elapsed, and they were open to sell the mine to anyone who would buy it. I then bought it, and this man has followed me to England and has done me this damage. He commenced an action against me in Auckland for not fulfilling my contract with him and thus preventing him from purchasing the mine I foolishly paid him 620*l*. to cancel that agreement as I was anxious to get to England, and that action would have caused me six months' delay. If I had gone to law with him he would not have got a penny I am sure. I am very sorry that all this has happened. I do not care who goes out to examine the mine—I will prove that it is a thoroughly good property, and all the miners and competent judges in the locality say it is the best mine in the district. I am sure it will run 2 ozs. to the ton, and perhaps a great deal more. (Hear, hear.)

A FAITHFUL FOLLOWER OF THE EXPERTS.

Mr. W. R. Fitzgerald Moore (director) : As many of you may be aware, I have been connected with mining for a great number of years. I know Mr. McLaren, Mr. Henry M. Smith, and Mr. Pond, and all I can say is this, that I would follow them in a venture to-morrow. If I were wanting men in New Zealand to examine a mine, I would appoint these three men, and would follow them implicitly. Mr. Bush and myself have proved that by the amount we have put in with the shareholders of this company.

Mr. Quayle : Mr. Parkes, who has just returned from New Zealand, and who is a metallurgist of great notoriety, has assayed the ores in our neighbourhood, and perhaps, as he is here, he will say a word or two about them.

AN INDEPENDENT OPINION.

Mr. Parkes : I have spent nine months in the neighbourhood, and it has been a great delight to me to ascertain the value of the mineral properties. I have assayed about 50 samples, and have found from ½ oz. up to 117 ozs. of gold, and 3,000 ozs. of silver to the ton. These, of course, are exceptional samples ; but all round the country is metalliferous, and that this is a good mine I have no doubt. (Cheers.)

Mr. Raphael : As I understand, you are giving us your general experience of the neighbourhood—not of this particular mine ?

Mr. Parkes : Exactly.

THE BEST MINE IN THE NEIGHBOURHOOD.

Mr. Quayle : This mine is considered to be the best in the neighbourhood. I shall write out to New Zealand and get reports from influential men there, and shall send them to the mining and financial papers, so that you may see them for yourselves. The mine which Mr. Parkes assayed from is the Maritoto proper, which is only half a mile from my mine.

The Chairman : I am sure we are all delighted to hear such a favourable opinion about this mine. I only regret that at the very first note of danger someone did not come forward and re-assure us, and prevent our shareholders from feeling that doubt and dissatisfaction which has been spread amongst them.

The motion was carried unanimously, and the proceedings then terminated.

THE JULIA NITRATE CO., LIMITED.

ARTICLES ALTERED IN ORDER TO OBTAIN A STOCK EXCHANGE QUOTATION.

AN extraordinary general meeting of the Julia Nitrate Company, Limited, was held at Cannon Street Hotel, on Thursday, "for the purpose of proposing the confirmation of, and, if approved of, confirming certain resolutions for the amendment of the articles of association of the company, which were passed at an extraordinary general meeting of the company held on the 26th day of February, 1889," and which were as follows, viz. :—

"That article 38 of the said articles be amended by striking out the word 'fifth' in the third line thereof, and substituting therefor the word 'tenth.'" "That article 61 of the said articles be amended by striking out the words 'six months' in the second line thereof, aud substituting therefor the words 'one calendar month.'"

Hy. Wm. Carter, Esq., presided.

Mr. F. STOBBS (secretary) read the notice convening the meeting.

PRO FORMA MEETING.

The CHAIRMAN: Gentlemen, I need keep you but very few minutes to-day. Our business is very short; it might almost be called pro formâ. The object of the meeting is to confirm certain resolutions for the amendment of the articles of association. I mentioned at the meeting a fortnight ago that the committee of the Stock Exchange wanted these two small alterations in our articles of association, and nobody connected with the company saw, so far as I know, the slightest objection to the alterations. Our object is to get a settlement, and to do that we must eomply with the requirements of the Stock Exehange. The chairman concluded by proposing the confirmation of the resolutions as above.

Mr. JOHN T. C. WINKFIELD seconded the motion, which was carried, and with a vote of thanks to the chairman the proceedings closed.

WHEAL METAL AND FLOW.

INCREASED SALES—GOOD PROSPECTS IN THE 35-FM. LEVEL.

AN ordinary general meeting of this company was held at the Offices, Gracechurch Buildings, Graceehurch Strcet, on Thursday, the 14th of March—Mr. G. J. Wagstaff in the chair.

The SECRETARY read the notice calling the meeting, and the minutes of the last meeting, which were confirmed,

The CHAIRMAN: Gentlemen, it will not be necessary to read the accounts, as you have got them before you. I think you will find they compare very favourably with the accounts for the previous four months. Capt. Argall being here, it will not be necessary for me to say anything, as he will explain to you the merits of the mine. It appears from the accounts that there is a liability over the assets of 195*l*. 11s. 2d., but our worthy secretary says we are going to pass them, as Capt. Argall will give us such a glowing account of the mine that we shall have nothing to fear in the future.

CAPT. ARGALL'S STATEMENT.

Capt. WM. ARGALL: Gentlemen, in supplementing the report I might say that during the last four months we have been washing in the top part of the Flow. The stuff on the top is uot quite so good, but it is now looking better. In the bottom and in the Flow we have opened the old adit shaft, and we found the water down at about 20 ft. run out iu the Flow. If that continues we shall have a good supply from that source. Of course we cannot be certain that it will until the dry weather sets in. With regard to the other points, we have cut some tin in the 35-fm. level driving east of the Wheal Metal lode—probably 150 to 200 fms. from the old bunch of tin in the Metal. The stuff from the lode, which is about 2 ft. wide, is now being stamped, and we have occasionally good stones of tin from it. The main body of the lode is worth from 14 lbs. to 28 lbs. per ton, and it looks like improving. I believe we shall have very good tin there soon. It is a piece of new ground, but there is every reasonable hope we shall have a good bunch of tin there. We have increased during the last four months our returns from 12 to about 16 tons of tin, and we hope to keep up those returns. The price of tin has dropped a little, and the price of coals has advanced. We are paying about half-a-crown more for coals than previously. The water has been heavy, and these facts will account for the merchants' bills being a little more than usual. We have sold since we commenced about 167½ tons of tin at the Metal and Flow, realising about 8,304*l*. Of course, gentlemen, the proceeds of these sales has been spent underground, and in other necessary work. We are laying down a new tramway to the Flow, and when this is completed we shall be able to wash the stuff better. The costs during the four months have been about 300*l*. We have lost 90*l*., leaving about 210*l*. actual profit on working the Flow.

QUESTIONS.

The CHAIRMAN: You are driving the 35, and you are just coming into what you expect to be the lode—is that so?

Capt. ARGALL: It is the lode. That is a certainty.

The CHAIRMAN: What width is that lode?

Capt. ARGALL: 2 ft. wide. It is tinny all through.

The CHAIRMAN: But it was not tinny from the first part of your driving. When I was down at the mine it was only a supposition, now it is a reality.

Capt. ARGALL: Yes, that is so.

Mr. SIMMONS: Do you not think it necessary to sink on that lode, or do you consider it sufficient simply to drive?

Capt. ARGALL: I shall continue to drive on it. I have seen the bad effects of sinking too deep, and having no tin at all.

Mr. SIMMONS: We were just now told that we were paying 2s. 6d. a ton more for coals. Is that right? I have a good deal to do with metals and so on, but I do not think I am paying 2s. 6d. more. It is only 1s. or 1s. 3d.

Capt. ARGALL: We are paying 16s. now, whereas we formally paid 13s. 6d. In addition to that we have to pay 2s. cartage.

The CHAIRMAN: That is a tremendous charge. We must get tenders for the coals.

The CHAIRMAN then moved "That the accounts be passed, printed, and circulated amongst the shareholders, together with the agent's report and proceedings of this meeting."

Mr. DIXON seconded the motion, which was carried.

The usual vote of thanks brought the proceedings to a close.

THE PAHANG-KABANG, LIMITED.

VERY LITTLE INFORMATION ABOUT THE COMPANY—SHAREHOLDERS AS WISE AS THEY WERE BEFORE—ARTICLES ALTERED.

AN ordinary general meeting was held at Cannon Street Hotel, London, E.C., on Monday—the Hon. Arthur Bland in the chair.

Mr. J. E. PARK (secretary) read the notice calling the meeting.

PAUCITY OF INFORMATION.

The CHAIRMAN: We have called you together at this early date, in consequence of the requirements of the Stock Exchange, to alter the articles, and we have taken the opportunity of holding the statutory meeting at the same time, because we thought it more convenient to do so. The statutory meeting is purely formal, but I may say that everything is going on satisfactorily, and our agent is on his way from Singapore to take over the property that has been sold to us by the Pahang Corporation, and the directors have no reason to doubt that what was held out in the prospectus will be fully realised at the proper time.

A SHAREHOLDER EXPRESSES HIS VIEWS AND ASKS QUESTIONS.

Mr. PYKE: Can you state now when you propose sending out the stamps? Of course I know they cannot go at once, but have you made a contract for their delivery?

The CHAIRMAN: We have not done so yet, but we hope to send them out soon. We are making inquiries as to the best manufacturers.

Mr. PYKE: I suppose there is some limit as to the time it will take to get the stamps ready? (Hear, hear.)

The auditors, Messrs. Quilter, Welton and Co., were then elected, at a remuneration of 50 guineas.

The CHAIRMAN then proposed certain alterations in the articles of association, which were purely of a verbal character, and rather strengthened the position of the shareholders as agaiust the directors.

The meeting agreed to the alterations unanimously.

EXCESSIVE BORROWING POWERS.

Mr. PYKE: I wish to call attention to the borrowing powers of the company. If I understand it rightly—the directors are empowered to borrow 100,000*l*. without the consent of the company in general meeting. That seems to be a very large sum for the directors to have power to borrow without calling the shareholders together. (Hear, hear.) I propose that it should be 25,000*l*. instead. I am aware you cannot alter this at the present meeting, but I think the alteration should be made at the earliest possible moment. If you will give us your promise that it will be brought before another meeting, that will be satisfactory.

The CHAIRMAN: It is evident we cannot do it now, but we will consider the matter. The power to borrow so largely, I agree with you, is rather extreme, and we shall make mention of it at our next meeting.

CURIOUS REASON FOR NOT HOLDING A HALF-YEARLY MEETING.

Mr. PYKE: According to the articles only annual meetings will be held, and I think that is too long a time for the board to be in a position to keep back accounts. After the present year I think the articles should be altered so that we should have half-yearly meetings.

The CHAIRMAN: If the company is as successful as we hope it will be, we shall hope to see the shareholders more than once in every 12 months, but it is useless for us to meet more than once in the first 12 months, because we shall not be in a position to report much progress.

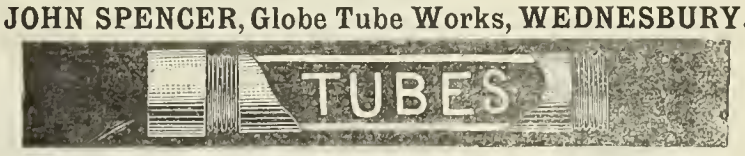
Mr. PYKE: But still the shareholders in the meantime will like to know what is going on. (Cheers.)

The proceedings closed without the usual vote of thanks to the chairman.

DEATH OF VICE-ADMIRAL SOADY.—We regret to annouuce the death of Vice-Admiral J. Clark Soady, who was on the boards of the following companies—The United States Gold Placers, The Gold King, The Gold Queen, and The Comstock Mining Company, and was much esteemed as a valued colleague, and as one faithful in the discharge of his duties to the shareholders.

HOLLOWAY'S PILLS.—Changes of temperature and weather frequently upset persons who are most careful of their health, and particular in their diet. These corrective, purifying and gentle aperient Pills are the best remedy for all defective action of the digestive organs. They augment the appetite, strengthen the stomach, correct bilousness, and carry off all that is noxious from the system. Holloway's Pills are composed of rare balsams, unmixed with baser matter, and on that account are peculiarly well adapted for the young, delicate, and aged. As this priceless medicine has gained fame in the past, so will it preserve it in the future by its renovating and invigorating qualities, and the impossibility of its doing harm.

JOHN SPENCER, Globe Tube Works, WEDNESBURY.



WROUGHT IRON TUBES and FITTINGS for Gas, Water, Steam, Air, and Hydraulic purposes, Galvanised, White Enamelled inside, or coated by Dr. A. SMITH'S process for preventing rust. Telegraph Poles, Boring and Mining Tools and Well Tubes. Tubes in Stock to 6-in. diameter. Iron and Brass Cocks and Valves, Tubes and Cylinders for Compressed Air, Ironwork and Tools for Mines.

THE MINING MARKET.

City, Friday Evening.

MARKETS DEPRESSED BY PARIS NEWS — COPPER — INDIANS — SOUTH AFRICANS — GENERAL FOREIGN SHARES.

The news from Paris has not helped the boom the brokers expected before Easter. Shares in truth have been booming downwards rather than upwards ; but there has been no tendency at any time to panic. Copper has fallen to half its value. All copper shares are down, but still, even in this market the absence of panic has been one of its noteworthy features. After the crash the stars in their courses seem to have fought for the mining Sisera. Copper. when dealt in at 35*l.* per ton, reached the lowest price at which any recorded transaction has ever taken place. A rally has since occurred in the market, which is firm at 41, with a prospect of going still higher. The full position is dealt with in our leader columns. Rio Tintos have been as low as about 10, but mark a recovery of nearly 2*l.* Other copper shares have been the sport of the hour, but as we have already said, there has been no tendency to panic.

It is again stated, and with good authority, that the financial houses in London interested in the operations of the syndicate in copper, in order to preserve credit and prevent forced sales, have arranged to hold the stock of copper represented by warrants until opportunities arise of realising at a fair and reasonable value. As the stock is estimated at 160,000 to 200,000, this would involve, it is said, the enormous lock-up of nine millions! At 45*l.* to 50*l.* per ton the stock could possibly in the future be worked off, but with the present competition it will take a long time. The brokers here to the Société des Métaux, involved by the collapse, have offered a composition of 7s. 6d. in the £, which it is believed will be accepted by the creditors. It is stated that the shareholders of the Comptoir d'Escompte intend applying to the Tribunal of Commerce to summon a meeting with a view to the judicial liquidation of the company. The Bourse in Paris to-day has been firm ; the announcement of the issue of the new Russian Loan on the 29th inst. creating more confidence, and the shares of the financial companies were better.

The Indian market has been firm. Investors are gradually coming to the conclusion that in view of the actual returns the position in this case has every appearance of solidity and permanence. It is currently reported on the market that the Mysore return for next month will beat previous records. The general position of these mines is evidenced by the reports, which continue to be most promising.

South Africans have been in better demand, though there have been a good many choppings up and down during the week. The general tendency, however, has been to firmness, but the leaps of pounds per share in a few hours have departed, and with them also descents of a similar amount. The South African Market has indeed been firmer than people supposed from the general state of affairs it would be.

We do not know whether our readers have been following of late with care the reports from the Etheridge group of mines, but we can assure them that they are well worth perusing. They reveal a degree of progress to which the company for many months after its inception was entirely strange. We do not think that any mines that have been floated on this market have ever had so many initial difficulties to contend with as those which have beset the Etheridge United Group, but happily they are now all overcome The machinery is in place, the underground development is proceeding with vigour, and we are pleased to record that during the present week there has been a large business in the shares, and the opinion of the market is that they are destined to go to double or treble their present price within a comparatively short time. Present quotations represent, in our judgment, the dulness of despair, and not the real merits of a property which is on the eve of making returns that are likely in some degree at least to rehabilitate Queensland mines in the public estimation. With the exception of the business in Etheridge United Shares Cumberlands need only to be mentioned in the same connection. At the same time, we must not forget the very gratifying meeting that was held by the Day Dawn P.C. Company, which has continued to pay dividends steadily from the commencement. At the present moment the company appears to be upon the verge of that prosperity which was anticipated at the outset, but which from a variety of causes has been delayed.

In the general Foreign market business has been of a spasmodic nature. There has been no definite news to give any sort of basis to transactions. Prices all round have been fairly maintained, and that is all that can be said of them.

The Home market has been quite featureless.

A satisfactory meeting was held of Roman Gravels re-constructed company yesterday, at which it was reported that a new and more favourable lease had been obtained from the ground landlord ; that new machinery has been supplied ; that at different points the mine has improved ; and that altogether the position is highly satisfactory. It should be remembered that Roman Gravels was formerly about the most productive lead mine in the kingdom.

Africans.

There has been less business doing in the house in African shares than for many weeks past, and some of the dealers have been amusing themselves by playing cricket in the market with sticks and oranges. Prices generally have fallen, as will be seen by the following list :—Edwin Bray have fallen ¼ ; Pigg's Peak, ⅛ ; Shebas, ¼ ; Johannesburg Waterworks, ¼ ; Moodies, 10s. paid, 1/16 ; Aurora, ⅜ ; Bantjes, ⅜ ; Central Langlaate, ¼ ; City and Suburban, ¾ ; Crown Reef, ¾ ; Dornkop, 3/16 ; De Villiers (Robinson), 2*l.* ; Evelyns, ½ ; Ferreira, 3*l.* ; Goldfields of South Africa, ⅛ ; Heriot, 20s. ; Henry Nourse, ¾ ; Johannesburg Pioneer, 20s. ; Jumpers, 1⅛ ; King Solomons, ⅛ ; Knights, ⅜ ; Langlaagtes, ⅛ ; Langlaagtes Block "B," ¼ ; Main Reef, ⅛ ; Main Reef United Roodeport, ¼ ; Modderfontein, ⅛ ; Morkel, 1/16 ; Moss Rose, ½ ; Nabob, ½ ; New Grahamstown, ⅜ ; Salisbury, 2*l.* ; Simmer and Jack, 1¼ ; Spes Bona, ½ ; Stanhope, ½ ; United Langlaagte, ⅜ ; Van Ryn, ¼ ; Wemmers, 2½ ; and Wolhuters, ⅛. The only rise has been in Moodies, fully paid, 1/16 ; Durban Roodepoort, ⅛ ; Geldenhuis, ⅛ ; Kleinfontein, ⅛ ; and Vogelstruis, ½.

Copper Shares.

This has been a most anxious week for dealers in the Copper market, and although certain large operators have made a considerable sum of money on the fall, the public at large have undoubtedly lost heavily. Quotations have varied every few minutes. Rio Tinto, which were quoted at 12⅝ to 12⅞ last week, have since been done at 11¼, and close this evening at 12 1/16 to 12 3/16. It should be noted that the New Quebrada shares last week were dealt in as 10*l.* shares. They are now dealt in as sub-divided, or 3*l.* shares, hence the great difference. The market generally closes firmer this evening.

Indians.

A steady business has been transacted in Indian Shares during the week, but prices have not varied much. The best known shares are a shade firmer. Considering the reports that are coming to hand, prices, we think, should be higher. The following are the changes. A rise in Mysore Gold of ⅛; and Ooregum "Preference," 1/16; whilst the following have receded: Balaghat, 1/16; Goldfields of Mysore, 1/16; Mysore Reefs, 1s.; Niue Reefs, 3s.; Ooregum Ordinary, 1/16; and South-East Mysore, 1s.

Australians.

There is little or nothing doing in Australian Shares, with the exception of Etheridge United, which has shown activity.

A fall is shown in Bonnie Dundee, 6d.; Day Dawn, 1s.; Gympie Golden Crown, 6d.; ditto Great Eastern, 6d.; Kapanga, 6d.; Livingstone, 6d.; and Mosman, 1s. The only rises are in Day Dawn P.C. of 1s.; Etheridge United, 3d.; and Cumberland 1/16.

Diamonds.

There has been a considerable business doing in the above shares, but, as we have repeatedly foreshadowed, prices have not been maintained. Bultfontein made up last account at 4, and close this evening 3⅝, 3¾; Griqualand West at 6⅜, and close 5⅞, 6; and New Jagersfontein, after making up at 14½, close at 13⅞, 14.

A fall is shown in Griqualand West of ⅛; New Consolidated, 1/16; New Jagersfontein, ¼; Read's Drift, ¼; and Burmah Ruby Mines, 3/16; whilst a rise has taken place in Anglo-African and De Beers of ¼.

The following are the closing quotations:—

Anglo-African	5¼ —	5½
Bultfontein, New Shares—	3 5/8 —	3 7/8
Central Dorsfontein	8 —	10
De Beers Consolidated	15¼ —	15½
Gordon Diamond	19/ —	21/
Griqualand West	6 —	6¼
New Consolidated	21/6 —	22/6
New Jagersfontein	13¾ —	14
Sonth African (Pullinger)	15/ —	17/
Spes Bona (Bultfontein)	4/ —	5/
United	2⅛ —	2⅜
United Jagersfontein	16/ —	18/
London and Orange Free State Explor.	4¾ —	5¼
London and South African Exploration	16 7/8 —	17
Read's Drift Land Co.	2¼ —	2½
Burma Ruby Mines	1⅜ —	1⅝ p.m.

Foreigners.

There has not been much doing in the Foreign market, and prices have been somewhat dull all round, notwithstanding the efforts of outside touting dealers to lift certain stocks. American shares in general will not move until about the end of April, when the weather breaks.

The only rise to note is in Colombian Hydraulic.

General.

The following have fallen:—Don Pedro, ⅛; Flagstaff, 1/16; Frontino, 6d.; Garfield, 1s.; Linares, ¼; Montana, ⅛; New La Plata, 6d.; New Organos, 6d.; Old Lout, ⅛; San Christian, ⅛; St. John del Rey, 6d.; United Mexican, ⅛; Victory, 1s.; and West Argentine, ⅛. The only rises have been in Colombian Hydraulic of ¼, and Consolidated Esmeralda. 6d.

The following list shows the principal changes which have taken place:—

LATEST FROM THE MINES.

Indian Mines.

Indian Consolidated.—The directors have sold, through Messrs. Pixley and Abell, the following gold, the result of the January crushings. From the Phœnix section, 129½ ozs., which realised 515*l.* 5s. 3d., and from the Colar section 115¼ ozs., which realised the sum of 435*l.* 2s. 6d., making a total for the month of 950*l.* 7s. 9d.

Colonial Mines.

Day Dawn Block and Wyndham.—The result of the crushing for the fortnight ending 16th inst. is as follows :—712 tons crushed ; yield of gold, 530 ozs. ; approximate value, 1,840*l.* Fortnight's expenses, 1,620*l.* ; new mill working 24 hours a day with 40 head of stamps since 15th inst.

Gympie Great Eastern.—A cablegram from the mine (March 19th) is as follows :—"Reef in winze still 4 ins. ; showing gold ; formation between walls, 3 ft."

Foreign Mines.

Antioquia. — Advices for December state : — Produce, 808*l.* 16s. 10d. ; cost, 521*l.* 10s. 11d. ; estimated profit, 287*l.* 5s. 11d.

Colombian Hydraulic.—Cablegram of returns for the months of January and February :—" We have cleaned up after a run of 1,150 hours. The gross returns are 4,700*l.* ; the nett profit is 3,300*l.*"

Consolidated Esmeralda.—The superintendent reported on March 20th by cablegram :—"The mill was running all right ; no change in the mine." A second cablegram received to-day (Friday) states :—" Struck a seam of rich ore in south drift 375 ft. lowest level Durand. Assay value, 180 ozs. standard gold per ton.

El Callao.—Messrs. Baring Bros. and Co. have received the following telegram : " March 7th : 1,790 ozs. of gold produced for the past fortnight. No change of consequence in condition of mine since last report."

Frontino and Bolivia.—Advices for January state :—Produce 1,829*l.* 12s. 5d. ; cost, 2,289*l.* 19s. 9d. ; estimated excess of expenditure, 460*l.* 7s. 4d.

Kohinoor and Donaldson.—Telegram from the manager, Mr. Samuel J. Vivian, on the 21st inst. :—"Mill working splendidly with water-wheel and engine. Mine looking first-rate."

New California.—The directors have received the following telegram from the manager, Mr. A. Rickard, dated 19th inst. :—" February output, 1,000 tons ; yield, 620 ozs. ; valne, 2,000*l.* ; mining costs, 1,150*l.*"—The mining profit therefore was 850*l.*

New Hoover Hill.—The directors have sold, through Messrs. Pixley and Abell, the bullion obtained during the month of February, weighing 180 ozs., which realised the sum of 601*l.* 1s. 6d.

New Russell.—The manager announces that he has made a further shipment of 57 ozs. of bullion, and that the ore ordered forward for testing purposes has also been duly shipped.

Pinos Altos Bullion.—A telegraphic advice stated that the out-turn for the week ending 16th inst., was $11,000.

Rocky Bar Wide West.—A partial clean-up at the mill at the end of the second week of the present month resulted in a yield of 150 ozs. of bullion from 225 tons of quartz milled.

Stafford.—A telegram from Mr. H. B. Tilden, the manager at the mines, dated 21st March, announcing particulars of the clean-up for the first two weeks of March :—"Crushed 80 tons, which yielded 30 ozs. of gold."

United Mexican.—Telegram:—"San Cayetano Property : Gross returns,week ending March 16th, $7,200 ; total expenses,week ending March 9th, $6,900 ; loss, week ending March 9th, $100. El Cubo property : Gross receipts, week ending Maroh 16th, $1,130 ; total expenses, including capital expenditure, week ending March 9th, $4,620."

SEE PAGES 492 AND 493.

Metals.

Copper has been disorganised. On Monday last it transpired that the syndicate brokers were unable to meet their prompts, and a grand crash was the result. G.M.C. for cash and early prompt sold at 35*l.*, closing better at 38*l.* 10s. paid, and three months also done at 38*l.* On Tuesday market irregular. About 500 tons sold at 35*l.* to 40*l.* cash ; 250 tons all the year, sellers' option, 35*l.* to 36*l.* ; and 250 tons, sellers' option up to 15th May, 39*l.* On Wednesday and yesterday from 40*l.* to 42*l.* was the variation for g.m.c. ; closing 40*l.* 15s. cash. To-day an auction of about 1,100 tons was held for cash to-day, and an average realise of 41*l.* 10s. to 42*l.* for g.m.c., and special brands better prices. After the sale, 300 tons g.m.c. at 41*l.*, and 100 tons at 41*l.* 5s. cash sold ; Chili Charters, 2,200 tons ; English copper nominal. We quote tough, 46*l.* to 48*l.* ; best selected, 47*l.* to 49*l.* ; strong sheets, 53*l.* to 55*l.* ; Indian sheets, 50*l.* to 53*l.* ; yellow metal, 6¼d. ; ore, &c., 8s. to 10s.

Tin steady. Straits about 94*l.* to 94*l.* 5s. cash, and 95*l.* three months. The Dutch market is steady. Banca and Billiton, 57¼fl. English ingots, 96*l.* 10s. to 97*l.*

Tin Plates in good demand at better prices, 13s. 3d. to 13s. 6d. for ordinary coke Liverpool.

Spelter quiet, 17*l.* 5s. for ordinary brands, ex ship here.

Lead quiet. Soft Spanish, 12*l.* 10s. ; soft English, 12*l.* 15s. to 13*l.* ; L.B., 13*l.* 7s. 6d.

Quicksilver. — Rothschild's price, 7*l.* 15s. ; seconds, 7*l.* 8s. to 7*l.* 9s.

Antimony, 49*l.* to 50*l.*

London Metal Exchange.

4.35.—Closing official report.—Copper : Chili, cash 41½, 2 ; three months, 41¾, 2¼ ; best selected, 47, 9 ; strong sheets, 52, 3 ; English tough, 45, 6. Tin : Fine foreign, cash, 94, ½ ; three months, 95, ½ ; Australian, 95, ½ ; English ingots, 96½, 7½. Spelter, 17⅛, ¼.

COMMERCIAL NOTES.

Railways.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year : — Increases : — Caledonian, 4,834*l.* ; Eastern and Midlands, 27*l.* ; Great Northern, 5,362*l.* ; Great Western, 7,460*l.* ; Hull and Barnsley, 910*l.* ; London and North-Western, 12,543*l.* ; London and South-Western, 2,507*l.* ; London, Chatham and Dover, 923*l.* ; Manchester and Sheffield, 2,111*l.* ; Metropolitan, 654*l.* ; Midland, 6,242*l.* ; North British, 4,186*l.* ; North-Eastern, 8,856*l.* ; and North Staffordshire, 277*l.*

The Brighton Railway traffic receipts for the week ended March 16th show an increase of 2,636*l.*, and the South-Eastern an increase of 1,638*l.*

The net earnings of the Denver and Rio Grande Railroad for December were $226,300, against $232,470 in 1887. The net earnings for the year 1888 were $2,563,900, compared with $3,241,370 in 1887. The gross earnings of the Mexican National Railroad for the second week in March amounted to $74,200. For the week ended March 14th the Chicago, St. Paul, and Kansas City Railway receipts were $49,992, being $12,446 more than last year.

The traffic receipts of the Mexican Railway Co. for the past week were 16,400*l.*, showing an increase of 500*l.* compared with 1888.

From March 1st to 15th the Nitrate Railway receipts amonnted to 32,696*l.*, against 26,000*l.* last year. In consequence of severe floods having occurred on a portion of the line, interrupting the traffic, the receipts of the Buenos Ayres and Pacific Railway for the week ending March 9th were only $16,435. The gross earnings of the Denver and Rio Grande Railroad for the second week of March were $133,000, against $107,000 last year.

Dividends Declared and Announced for Week Ending March 23rd.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (20th March).—The lode in the 40-fm. level east of junction is from 3 to 4 ft. wide, producing 7 tons of mixed ores per fm. In the same level west of Haley's winze the lode produces 4 tons of arsenical ores per fm., together with some good tin work. The several stopes in back of the 40-fm. level east are producing their usual quantity of ores. In the 30-fm. level west of new engine shaft we are taking down a piece of lode, which is producing a good deal of arsenical ore. We are now preparing to open this ground by a winze from the 30 to the 40, which will open a long run of productive lode for stoping. The new stopes below the 30 west at and near the junctiou are producing very well. We are preparing for more stopes in this part of the mine.—T. Gregory.

BLUE HILLS.—The lode in the 66-fm. level east continues to look very promising, producing good stones of tin. The west end at this level is opening out good paying ground.

CARPUAN (19th March).—We shall complete collaring up the shaft on the south lode this week, after which I shall force on the sinking on the course of the lode, which is worth 20*l*. per fm. Have hauled a quantity of the lode to surface again this week, which is yielding a high percentage of tin. Should this discovery hold down some fathoms, and I think there is every probability that such will be the case, as the lode is presenting a fine healthy appearance to-day, you will shortly have a property of great value.—R. Knott.

DRAKEWALLS (20th March).—The 147-fm. level has been driven east on the south part of the lode 2 fms. 3 ft. 7 ins. during the past month, producing on an average 6 tons of mundic per fm. The ground for the present is rather hard for exploration, being mixed with strong capel and spar, &c. It is now worth 4 tons per fm. In the 147 driving east on the north part of the lode it will produce 8 tons of mundic per fm. and occasional good stones of copper ore. The winze is now down 3 fms. and we are pushing on the sinking here as fast as possible to secure better ventilation at the 147-fm. level. The lode in the stope in the 132 west on the north side of the drivage continues to yield 5 tons of copper and mundic ore per fm. We have commenced clearing out the arsenic soot in the new chamber from the new calciner. We are also preparing a parcel of tin for sale the early part of next week. We are getting on with the new buildings aud all other surface work very satisfactorily.—H. Rodda.

EAST BLUE HILLS.—There is no report this week, but everything is proceeding satisfactorily. We believe the values of the different points are maintained. The tin sale for the month amounted to 112*l*., which about meets the cost. The operations on the Pink lode are being continued with every expectation of success.

EAST GRASSINGTON.—The following report, dated 20th March, has been received from the manager :—East shaft : Excellent progress has been made during the past fortnight in extending the 47-fm. level west towards No. 3, ore body ; the lode in the end is to-day upwards of 2 ft. wide, with well defined walls, and carrying limespar, sulphate of barytes, and nice patches of lead ore, being saving work for dressing. A stope behind the end in a lode 3 ft. wide, and producing 8 cwt. of lead ore per fm. In the intermediate levels, east and west of No. 2 sump, below Amy's Workings, the lode will average 2 ft. wide, aud yield respectively 15 and 20 cwt. of lead ore per fm., the richest ore all along is going down into the soles of our drivages, and extending considerably further west than in the upper levels, and as soon as the pumping gear is in full swing at this shaft ; the deep level will be pushed forward night and day in this direction. The lode in the drivage west of No. 3 sump is 2 ft. wide, yielding 20 cwt. of lead ore per fm. In the same level east the lode yields 12 cwt. of lead ore per fm. A stope in the back of the 37 fm. level yields 10 cwt. of lead ore per fm. Other points in this part of the mine without any change worthy of notice to-day. Harris's main engine shaft : This shaft is iu regular course of sinking by a full complement of hands, and now down 44 fms. 3 ft. below surface. We have weighed off and sold another lot of pig lead, and are daily carting ore towards another smelt ; good progress in fixing the new pumping gear.

GREAT FORTUNE.—There is no change to report since the meeting. Preparations are being continued for the draining of the deeper workings, as reported last week, and it is hoped iu the course of a week or two the work will be well onward.

MID-DEVON.—Report for week ending 16th March.—Surface : The weather has been favourable this week, and machinery has done good duty at five revolutions per minute. A shaft : The water is 12 ft. below the 80. I am expecting an abatement in the influx of water ; until it takes place draining will be slow. C shaft : The 60 east has been driven by nine men 1 fm. ; total distance from shaft, 33 fms. and 6 ins. The strata is composed chiefly of capel and compact garnet, intermixed with a little yellow ore and arsenical mundic ; in the bottom of drivage it is rather easier, having a little chlorite and axinite intermixed, indicating an early change. The preparatory work for trip plat and tramway is being executed by six men, and fair progress made ; the shaft has been sunk this week 4 ft. The 50 east stopes, Nos. 2, 3, and extreme point of drivage, worked on by six, six and two men, are worth respectively 2¼ tons, 3½ tons, and 2 tons per cubic fm. for copper ore.—J. Neill.

PRINCE OF WALES.—The lode in the engine shaft maintains its size and value, 16*l*. per fm. for the length of the shaft, and all other points are opening good tin ground, the aggregate value being reported at 59*l*. per fm. The dressing arraugements are approaching completion. The new calciner will be roofed in the course of next week. Immediately this is completed tin will be got ready for market. A large accumulatiou of tin awaits the completion of these surface works.

ROMAN GRAVELS (21st March).—We are pushing on the work iu connection with the taking out of the old pit-work from main engine shaft, and the fixing of the new as fast as circumstances will permit. The erection of No. 1 new 14-in. plunger lift from the 100 to the 65 is now completed, and the men will this evening commence to take out the old pitwork above that level. We consider that very fair progress, indeed, with this work is being made, and if the same success as hitherto be met with throughout, the new work will be in place at an earlier date than we have anticipated. The water is rising very rapidly, but we are far enough ahead of it to have nothing to fear. We have nothing new to report to you since last week of the workings now above the water. Samples of 100 tons of lead ore for sale on Thursday next are being sent out by this post.—A. Waters and Son.

RUSSELL UNITED (21st March).—The recent severe weather caused such an influx of water as to completely overpower the pit-work here, hence the driving of the 80 west, as well as the cross-cut south, has been since delayed. Up to the time of the men being hindered the samples taken from the lode did not vary to any noticeable extent from that last reported, nor was there any change in the cross-cut. I am expecting the water will be out to admit of the men resuming the driving to-morrow. The machinery has continued to work most satisfactorily.—W. George.

SOUTH CONDURROW (20th March).—The 40 end east of engine shaft is worth 8*l*. per fm. The 50 end east is worth 10*l*. per fm. The 60 east is worth 12*l*. per fm. The north section of the lode above the 70 fm. level is worth 20*l*. per fm. There is very little alteration to notice in the stopes and pitches throughout the mine.—W. Rich, W. Williams, H. King.

SOUTH DARREN (21st March).—The following bargains are let for the month:—To drive the 142 end west by six men at 9*l*. 10s. per fm. ; lode worth 2 tons of silver lead ore per fm. To strip in this level by four men at 2*l*. 5s, per fm.; the lead seems to be holding back here, but at present we are stripping the poorest part of the lode. To drive the 142 end west by two men at 7*l*. 7s 6d. per fm. ; the lode here is a little stronger. To stope in this level by four men at 3*l*. 10s. per fm. ; lode worth 17 cwt. of silver lead ore per fm. To drive a cross-cut in the 130 end west by four men at 4*l*. per fm.; this is being driven in a south-west direction to try and find the lode which was lost after passing the cross course. We think the strong lode we have in the 142 must hold up this length. To drive the 110 end east by two men at 7*l*. 5s. per fm ; lode worth 12 cwt. of silver lead per fm. To stope in this level by two men at 3*l*. 5s. per fm., and 4*l*. for rising 1 fm. long ; lode worth 10 cwt. of silver lead ore per fm. To drive the 100 end west by four men at 8*l*. 7s. 6d. per fm. ; lode worth 12 cwt. of silver lead ore per fm. The lode here is very much wider than we are carryiug in the drivage. We think we are on the strongest part, but it may afterwards be advisable to put out a cross-cut to prove it. To stope in this level by four men at 3*l*. 10s, per fm. ; worth 12 cwt. of silver lead ore perfm., with good copper.—J. Mitchell.

TILT COVE.—Return for February, 3,627 tons of 5 per cent. ore ; report No. 1 stope, 5 per cent. ; No. 2, 4½ per cent. ; No. 3, 5 per cent. ; No. 4, 4 per cent. ; No. 5, 5½ per cent. ; No. 6, 4 per cent. ; winze, 5 per cent. Boden's level driven 67 ft. ; winze sunk 7 ft.—W, R. Toms.

TREGEMBO (20th March).—I have nothing particular new here since my last. In the 42 east of Pennick's the lode is getting more settled. I expect we shall be on a run of tin here quickly. I expect to take down the lode in the engine shaft on Friday next, wheu you will hear from me again.—T. Hodge.

VAN (21st March).—The 135 cross-cut south has reached the hanging-wall, and to-morrow we commence driving west in the hanging of the lode, which is worth 3 tons of lead ore per fm. The 120 east is unchanged since my last. I have nothing to report from the stopes.—W. H. Williams.

WEARDALE (16th March).—Weather more favourable for dressing. Ore raised for the week, 66 tons. Ore dressed for the week, 92 tons. Ore, &c., smelted for the week, 132 tons, producing 67 tons of pig lead.

WEST CARZISE.—The 40-fm. level is being driven vigorously both east and west, but the lode has not yet been taken down. In the course of a day or two something of its value will be known. In the 30-fm. level west of cross-cut the old Carzise main lode is 18 ins. wide, all saving work for the stamps. The new shaft on the north lode is down about 7 fms,, and to water. A level will be driven east and west at this depth in a lode which, from its present appearance, will more than pay cost.

WEST GODOLPHIN (20th March).—I have nothing new to report. —T. Hodge.

WEST WHEAL GRENVILLE (20th March).—Since our last report the shaftmen have been engaged in securing Engine shaft below the 80-fms. level, and in making way for dropping forking lift. We have been prevented from dropping said lift in consequence of the clack of same failing under water. We are now forking water which rose while drop clack was got to work in this lift, and have drained to a little below the 80 level.—T. Hodge, J. Skeat.

WHEAL CREBOR.—The lode in the 200-fm. level, both east and west, maintains its size and value, producing arsenical mundic and a little copper ore of good quality. The lode in the 170-fm. level west continues to improve in appearance, yielding good saving work. No change in any other point.

WHEAL GRENVILLE (21st March).—The mine is drained to bottom, and every man to his place at work. Nothing new has taken place in the bargains since my last. A full report will be sent out to the shareholders next week.—T. Hodge.

WHEAL METAL AND FLOW.—The Metal lode in the 35-fm. level east is of the same value as reported at the meeting. The water is increasing and indications favourable for an improvement.

WHEAL UNY.—The sinking of Hind's engine shaft is being continued in a fine promising lode. A boring machine has been started in the 190-fm. level west, where an improvement is daily expected as it approaches the rich tin ground passed through in the level above. The 190-fm. level east is also very promising, and of the same value as last reported. The values of the different stopes are maintained, and additional stamp heads are being erected with a view of treating the large quantity of tin stuff which is expected from the increased area of tin ground now being laid open.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (19th Feb.)—Mine : The north-east drive at the 50 was advanced 29.7 ft. with the machine drills, carrying its breast to a point 5093 north, 4979 east, where the east country rock was struck without finding ore. The east, or footwall, of the lode, which was found so well formed further south, is at this point broken up in the country rock. This week we have continued the driving from a point 5091.5 north, 4963 east, where the lode looks less unfavourable. The new direction will be about north 15 degs. west, so as to gradually approach the western wall, and explore the whole width of the lode without cross-cutting. The Balvanera shaft was sunk 3.8 ft. ; total depth below the 50, 21 ft. The north east drive at the 24, San José, was driven 6.1 ft. The breast contains at present very little black ore. The 24 east cross-cut from bottom of No. 4 winze was driven 2.7 ft., and is still on unproductive lode. The 24 south drift from breast of main cross-cut was driven 10.5 ft. ; total from cross-cut,

28.5 ft. At the end of the week this point showed an encouraging appearance.

— (26th Feb.)—The 50 was driven last week 19.9 ft. with the rock-drills. The lode has much improved in appearance this week, and shows stones of black and green ore. It is also more compact, The north-east drive at the 24 end, San José, was driven 6 ft.; it is producing only about 1½ tons of black ore per lineal fm. The 24 east cross-cut from bottom of No. 4 winze, San José, was driven 1.9 ft., and discontinued. The 24 south drift from breast of maiu cross-cut was driven 7 ft.; total length from cross-cut, 35.5 ft.; occasioual stones of green ore specked with petanque occur here, but not enough to value. The Balvanera shaft was sunk 5.9 ft.; total depth, 26.9 ft. below the 50.—Sanchez.

ASIA MINOR (2nd March).—64 men driving; aggregate value of ends per fm., 5 tons; 180 men stoping, aggregate value of stopes per fm., 12 tons 3 cwts.; eight meu rising, eight men cross-cutting, four men sinking, 151 labourers, &c. The lode in main adit is 9 ft. wide and worth 10 cwt. silver-lead per fm., with every indication of a great improvement shortly. The lode in Petri air shaft is 9 ft. wide, and worth one ton per fm. The lode in Union level is about 9 ft. wide, and worth quite two tons silver-lead per fm. We are opening up a good section of stoping ground here. The lode in Savalan (special drivage) is much improved in appearance. The other ends are about the same as last reported. The crude raisings for February was 1,400 tons, estimated to yield 168 tons rich silver-lead. Dressing was resumed on the 4th inst. Production 449 tons crude, producing 55 tons rich silver-lead.

BALAGHAT MYSORE (26th Feb.)—Winze in 330: The quartz in the winze at bottom of the 330 level north has increased very much in size; to-day it is about 2½ ft. wide, and worth about 12 dwts. per ton. The 165 north end is carrying good walls now with about 3 ft. of quartz, worth from 7 to 10 dwts. This "make" of quartz is heading more westerly than the lode used to run; it will be very interesting to see what it will lead to. Medal obtained from Mysore Exhibition: We sent some small specimen pieces of quartz to this Exhibition, as did most of the other mines. Our specimens were awarded the highest place, and I have received a small medal from the Deputy Commissioner of the district in token of this. The improvement iu the thickness of the quartz is a matter of considerable importance. The lodes found in the mine hitherto have only held a streak of quartz, varying from 6 to 18 ins. thick, rendering its extraction tedious and expensive, and preventing the crushing of anything but small quantities monthly.—A. S. B. Oakley.

BRATSBERG (11th March).—Hoffnung Mine: No. 2 adit level has slightly declined in value recently. The rise in the back of this level and the winze in the bottom are yielding about 1½ tons per fm. respectively. No. 3 adit level is looking very encouraging now, producing 1 ton per fm., and the rise in the back of this level is worth ¾ ton per fm. No change since last report in either the mid-level at Ball's, the rise in No. 4 level, or No. 5 level west. No. 5 level east fully maintains a value of ½ ton per fm. The mid-level at Murchison's is worth 1 ton per fm., and the shallow rise ½ ton per fm. Johannes Mine: We have recently cut, and are now driving in, a side lode with the Johannes lode, probably Howard's lode, at the cross-cut. As yet we cannot say much about its value, as the most orey part is against the hanging wall. We are, however, well pleased with the prospects thus far shown, and we believe that this lode will pay to operate upon. Næsmark Mine: The lode in the bottom of the shaft is looking better, but we have recently cut more water, so that progress in sinking is impeded. We want to sink about 2 or 3 metres more, so as to get a fork for the pump. Surface work and remarks: For the first 10 days in March we have had bad weather for this department, we hope, however, to get the machinery ready for starting by 1st of April.—J. D. Holman.

COLAR CENTRAL (26th Feb.)—Low's engine shaft: The 200-ft. east cross-cut has been advanced 13½ ft. since last report; total distance from shaft, 170½ ft. There is no change to note of any importance; we come across small patches of quartz here and there, but nothing in the shape of a reef. For the last few feet drivage we have tapped a little water; driven by one rock-drill. The 200 ft. north drive from east cross-cut has been driven 12 ft., making a total of 46 ft. from east cross-cut. The quartz here has entirely disappeared, so we have put the rock-drill to open out south on the quartz met with in driving east cross-cut; driven by one rock-drill. The 200-ft. west cross-cut has been driven 13 ft.; total distance from shaft, 170½ ft. I am pleased to say we have holed to Darlington's shaft, which has improved the ventilation, and will enable the men to work in the end better. For the last few fect of drivage, the water that was standing in Darlington's shaft much impeded the work; driven by one rock-drill. Underlay shaft: The 171-ft. level has been advanced 6 ft., by hand labour, making a total length of 65½ ft. We are still carrying a nearly vertical wall on the eastern side of the drive. I propose shortly to put a cross-cut out here in a north-easterly direction. East boundary shaft has been sunk to a total depth of 72½ ft. The water is increasing here, and I am afraid we shall not be able to sink to the 100 ft., without machinery to assist us. We can only just keep the water in fork at present with the bullock whim.—A. S. B. Oakley.

COROMANDEL (2nd Feb.)—All work is progressing satisfactorily. We have cut into the Green Harp reef at the 280-ft. level, having driven about 25 ft. to cut it; the reef where cut into is unproductive, but is, of course, on the same bearing as cut through in the shaft above. We shall now open north and south upon it. The flinty vein which will intersect the Green Harp iu driving north, and which I mentioned some time since was a good indication, is carrying gold equal to 3 ozs. per ton, as per assay of our school of mines here. It is not, however, free milling; it is exceedingly fine, and hidden iron pyrites, but as an indication, however, it is a good one, and might improve the Green Harp when it intersects it. The other points are without change.—Capt. Hodge.

CORTEZ (2nd March).—Ore dumped into ore house at mine, 180 tons; ore hauled to mill, 218 tons; ore worked at mill, 142 tons; pulp assay of which showed it to contain 93 27-100 ozs. per ton of silver. Bullion shipped, 10 bars, which contained 10 781-06 ozs. silver and 9 47-100 ozs. gold.—Welsh.

DENVER (23rd Feb.)—I have to reportagain to-day an uuchanged condition iu the ground opened up during the past fortnight, the drifts east and west at the 1,050 level having shown no improvement whatever. We have extended the drifts steadily since resumption of work in November in these directions without making discoveries of paying ground, and it occurs to me it would only be judicious now to change somewhat our line of development. The west drift is now in 300 ft. from the cross-cut, and having explored the north lode close up to the line of No. 2 cross-cut of the 900 level, it has in all probability got beyond the range of ore ground as seen in the upper levels on this vein; but the main lode (Kansas) is here unexplored and intact from the 900-ft. level down. and as you may observe in the plan of the workings the strike of the two veins converges towards each other, and there is not much distance between them at this point. I propose, therefore, to cross-cut south from the end of the drift, and get on to the Kansas vein, and drift along its course west to the point of junction. I consider the chances for discovery on that vein better, and of course we shall reach our objective point as well. The east level is in 210 ft., and it will soon be necessary for further advancement of the drift to make connection with levels above for ventilation. Seeiug that we have opened up uo pay ground. I would propose suspending the drift for the present and put the men to prospect the bottom of thc 900 level, preparatory to sinking a winze for this purpose.—A. Rickard.

DEVALA MOYAR (25th Feb.)—The lode in the winze sinking below the deep tunnel has widened to fully 6 ft. It does not contain so much pyrites, but quartz is making all through the lode, and producing some coarse free gold. Altogether the appearance is of a most promising character. The tunnel east of cross-cut is without change. As soon as it reaches the pyritcs winze we shall sink another winze from this level. The stopes in the back of the deep tunnel are very hard to work, and to facilitate the extraction of the quartz we are going to sink another winze from the 48-ft. level 50 ft. west of the present winze.—J. Williams.

DON PEDRO.—Telegram dated Marianna, 21st March:—"Incline through the stopes cleared 45 ft. below thc 40-fm. cross-cut." Office note.—The incline here referred to is the No. 2 incline, through which thc mineral is brought to surface, and is situated to the north of the No. 1 or permanent drainage incline, which latter has just been re-opened to the 50-fm. level, viz., the bottom of the mine. As soon as the No. 2 incline has been re-opened to the samc depth as the No. 1 (only 15 ft. remaining to be cleared), both entrances to the stopes will be available.

EAST AREVALO MEXICAN.—The directors have to-day received the following report from their mine manager, Capt. Prideaux, dated El Chico, Hidalgo, Mexico, February 18th, which states:—Since my last report we have driven the No. 2 level 30½ ft., and sunk No. 1 winze 6 ft. The level is being driven between the hard and soft lodes, and in two weeks time I intend to cut into each vein to ascertain their value. During the same period the No. 3 level has been driven 44½ ft. I have for the time discontinued the drivage east and commenced to cut into the lodes north and south. In the north cross-cut we have driven about 6 ft.; the lode is kindly for metal. The No. 4 level has during the same time been extended 32 ft.; the ground is in a very unsettled condition, but I hope to have an improvement ere long. Since my last report we have been working chiefly on the unproductive part of the lode, where the ground is soft, so as to get further east as rapidly as possible. I shall now open the more mineralised portion of the vein with, I hope, good results. On account of a recent inspection I made of some mines near us, I intend on the 25th inst. to commence a cross-cut north to cut some veins which are yielding a large quantity of very rich metal, and which are running parallel with our lode. The adjoining Arevalo Company have altered the boundary of their sett, and now, instead of being close to our shaft, they have withdrawn to a distance, beginning at the surface to about 70 ft. west of the bottom of our shaft. This piece of ground I can if I think desirable add at any time to our property, which I shall do if, after I drive a level in that direction, it proves to be valuable.

GARFIELD (2nd March).—The mill has been working steadily. To-morrow a shipment of 4 bars bullion will be made, weighing 491 lbs. (avoir.) of the estimated net value $3,863.21 (silver at 93c.).—Hooper.

GYMPIE GOLDEN CROWN.—Report for fortnight ending 31st January:—Since my report of the 17th inst., the cross-cut being carried in east at the 1,200-ft. level has been extended a further distance of 21 ft.; total distance from shaft, 71 ft. The man-hole that I mentioned in last report is finished, and is a great convenience for the men when firing. As it was very hot at this level air pipes have been put in from the shaft to within a few feet of the face, and are a great improvement. At the 930-ft. level the cross-cut west has been carried in a further distance of 19 ft.; total distance from shaft, 73 ft. The formation is black and grey slates; a further distance of 100 ft. should cut the March reef. The man-hole at this level will be finished this week; air pipes will also require to be put in at this level. The battery is fully employed on stone from 3 North Phœnix, and we have plenty of water for all purposes; everything about the mine and the mill is in fair order.—T. Ramage.

GYMPIE GREAT EASTERN (24th Jan.)—Fortnightly report.—During the past fortnight the drive going north at the 634-ft. level has been extended 7 ft.; total, 28 ft.; there is a large body of crushing stuff with a little gold showing. The south drive has been extended 10 ft.; total, 48 ft.; the reef is about 12 ins., and shows a little gold. In the stopes above these levels north and south there is a large body of crushing stuff with a little gold showing. In order to get crushing stuff, an intermediate level was put in about 20 ft. under the 580-ft. level in the Great Eastern winze, and during the fortnight some very good gold was got there: this I intend to stope as soon as the stopes from the 634-ft. level are worked a little higher. The winze at the 580-ft. level in the eastern cross-cut to cut the I South Great Eastern reef has been sunk 12 ft.; total, 69 ft. The country is good slate, and there are some good heads coming in from the east with quartz facings on them; this is the first quartz I have seen in the winze. The stopes above the 500-ft. level are all showing fair gold, and those above the 364-ft. level on the old Eastern reef are all showing a little gold. The 10 head of stampers crushing for the Nicholl's Lease Company have been hung up since the 21st inst. Everything about the mine, winding engine, and battery is in good working order. There are 77 men employed; 70 at the mine, and seven at the mill. We will wash up on the 30th inst.—J. James.

INDIAN CONSOLIDATED (25th Feb.)—Phœnix section: 3 ft. have been driven in the tramway tunnel, making the total distance from cross-cut 11 ft. The appearance of the lode is without alteration since my last. Lode matter is still 3 ft. wide, composed of quartz and gneiss, carrying a good hanging wall, but of no value. The stopes

working in back of the tramway are getting mixed more with blue rock the nearer we come to the surface. In the stopes working in back of midway tunnel, the lode is not quite so wide; now 5 ft., but the quartz is of the usual quality. Two stopes working in back of No. 1 are producing quartz of the usual quality; lode 6 ft. wide. Two stopes in bottom of No. 1; lode is 6 ft. wide, but I think the quartz is a little below the average value. All the other work on the mine is proceeding satisfactorily.—J. Williams.

— (25th Feb.)—Colar section.—No. 5 shaft: This shaft sinking below the 360-ft. levels has been sunk 12 ft. 5 ins., or 21 ft. 5 ins. below the levels; the lode at present is small, being only 8 ins. wide, and assaying 10 dwts. 11 grs. per ton stone. Owing to the fever scare on the field, the 350 drives have been suspended for the past two weeks; men resumed work to-day. The 300 bottom stope south is again improving; lode from 1 to 2 ft. wide, assaying 2 dwts. 12 grs. per ton stone. The 300 top stope and rise south are being pushed on with all speed; lode averaging 1 ft. wide, assayiug 16 dwts. 23 grs. per ton. The 300 bottom stope north has in no wise changed; the lode is 2 ft. wide, assaying 2 dwts. 3 grs. per ton stone. The 230-ft. level driving south of shaft has advanced 4 ft., or 91 ft. from shaft; in the forebreast the lode is 1 ft. wide, low grade. The winze sinking below the 230 north has been cut 2 ft. 8 ins.; lode large, but low grade. The winze sinking below the 156 north has been cut 1 ft. 6 ins.; lode 2 ft. wide; low quality. Davey shaft: The 170-ft. level driving south of shaft has advanced 19 ft. 6 ins., or 30 ft. from shaft. The lode is showing a vein of quartz 6 ins. wide, assaying 12 dwts. 21 grs. per ton stone. The 170-ft level driving north of shaft has advanced 16 ft. 10 ins., or 25 ft. 4 ins. from shaft. The quartz in this drive shows rather over 6 ins. wide, and from its appearance I expect it to increase in size and value; assay value, 12 dwts. 21 grs. per ton. New trial shaft north: This shaft has been sunk to a vertical depth of 43 ft., and on the incline 8 ft., making the total depth 51 ft. The ground seems as if it has been opened before, but there is no quartz in any of the stuff drawn to surface to give us a hope of good things deeper down. Shall push on this work until I strike the face where the ancients left off. Surface: All plant and machinery in good condition and running well. All top work in a forward state. Health of camp very good.—T. R. Davey.

Josephine.—Extract from superintendent's report for the week ending 23rd February:—The main shaft has been sunk 7 ft.; total depth, 550 ft. With the last few feet there has been some change in the ground. The footwall is changing from granite to quartzite, and a streak of black slate has come into the gouge next to the hanging-wall, and from appearances I think the slate will cross the formation, and will make a new footwall, thus once more making the vein a contact. Should this supposition take place, I think some good developments may be looked for in the deeper sinking. The 300 east has been driven 14 ft., and carries a very nice-looking vein of quartz from 2 ft. to 2½ ft. wide. The stopes above this level look well. The 300 west stopes are showing considerable quartz. The mill has during the week been supplied from these two stopes, and the batteries give promise of a very fair clean-up.

— The following cablegram was this morning (March 21st) received from the superintendent:—Yield of free gold for fortnight, $4,000; estimated value of sulphurets, $1,500; 500 tons of ore crushed."

Mount Morgan Extended.—The directors have received from the local committee report No. 31, dated Rockhampton, January 20th, 1889, which states:—I am writing the draft of this letter at the Mount. I have been here for a fortnight, marking out the various excavations, buildings, machinery, &c., and shall be engaged here until the end of January. We have finished the storm bye-wash, all but the top end of it. We are now cutting the tailings gutter along the storm bye-wash to connect with the reservoir. We have finished the timber tressel road across from No. 1 tunnel to the foot of incline road. We have finished the incline road all but laying the rails and building the bridge over the feed platform at the top. We are engaged in the excavations for the leaching platform, the precipitating platforms and the platform for concentrates. The contractors have completed the erection of the engine and two Watson's pans. I have had a most difficult task in the design and laying-out of your machinery in consequence of the mountainous character of the country and the strong necessity to work everything with a view to convenient and economic extension. Had the task been only that of erecting the machinery for a treatment for, of say 100 tons a week, it would have been comparatively easy, but I have had to keep the extensions continually in view, which has caused me to go into expense that I might have avoided if it were not necessary to avoid throwing a much heavier expense upon the future extensions. As I have arranged it, however, it will be a matter of very moderate cost to increase our strength to 300 or 400 tons a week. There appears no doubt that by ordinary leaching we may extract a sufficiency of copper, and make the treatment of some of the ore profitable without roasting, but when I can afford to erect a sulphuric acid chamber and roasting furnaces the output of copper might be doubled, and the ore rendered more tractable and easily treated for gold.

Mount Morgan Extended.—The directors have just received report No. 32 of their local committee (per Mr. R. Ballard, M.I.C.E.), dated Rockhampton, Queensland, February 1st, which states I have just returned from the mine, where I have been hard at work for nearly a month. I have got everything fairly under weigh, and going on in capital order. We have erected the little 8-horse boiler and steam pump, and are now about to commence the important task of deepening our well. I have got the platforms for leaching and precipitating and concentrating our ores nearly complete. I am at present engaged in making the plans of our sheds, and in completing your map, which I hope to have ready to illustrate your reports, &c., at the June meeting. I have ordered a 27,000 gall. tank for our supply-tank—a cheap tank—which will only cost us 100*l*. on my design. I have applied to the railway department here to let me have enough rails to lay our incline road. Their rails will be eminently suitable for that work road, Our earthworks are in an advanced state, February will very nearly complete them all. We have about 50 men at work at the mine at present, owing to these works. By the end of February these men will be greatly reduced. I shall not go into much detail this report, reserviug that until my March report, principally. I am steadily prosecuting my experiments on the leaching of the copper ore with. I am happy to say, very fair success. I have found by assay that the extent of this ore is far greater than we at first anticipated, and by experiments that a considerable amount of the copper can be extracted with care and economy previous to the treatment of gold. I never was so sanguine of success in our mine as I am at present. I am exceedingly thankful that our capital is only 150,000*l*. It is the large capitals that make mines so difficult to yield dividends. I have little fear, &c., of your future if you do not increase your capital any more than you have already done. I am so arranging our plant and machinery that we can be able to increase our strength and output at a very moderate cost from time to time, which, I hope, will not be severely felt by shareholders. I am so glad I did not sell the other engine. I shall certainly want it and the spare boiler at the mine before very long.

Myerscreek.—The manager writes on February 7th that he has been making various changes in the machinery, and that there is no change in the mine to report on, as we have only been working seven days below for the past fortnight. Mr. Clark, the company's financial agent, writes on the same date:—"I have received the first instalment of the prospecting vote (from the Government). I have this day received notice that a second instalment will be sent to the local treasury in a few days.

Mysore Reefs (26th Feb.)—Fortnightly report:—Harvey's shaft: The 320-ft. level north has been advanced 16 ft. 9 ins.; now 45 ft. 3 ins. from shaft. There is a little quartz intermixed with the hard rock, but of no value. I expect, in a few blasts more, to intersect the bunch of quartz gone down in the bottom of the level above. Cross-cut west of plat 250-ft. level has been extended 21 ft.; now 134 ft. from plat; there is a little quartz intermixed with the hard trap rock, but of no value. Cross-cut east of the 250-ft. level has been advanced by hand labour 11 ft. 9 ins.; now 135 ft. 9 ins. from level; the rock is a little easier and letting out water, a favourable token that there is a lode or branch ahead of us. We have commenced to sink a winze below the 250-ft. level north in the bunch of quartz and pyrites intersected by the No. 1 cross-cut east of this level. We find some of the quartz contains visible gold, and a sample of the stuff broken for a width of 4 ft. gave, according to assay, 1 oz. of gold a ton. I shall put on two more shifts of men next month, and get a few tons of the best of the quartz and put through the mill. We are rather troubled with water at present, but am hoping when we cut this in the lower level that it will leave down part of the water. Taylor's engine shaft: Rock-drills, three Englishmen, and a full force of natives have been employed sinking this shaft; 7 ft. have been sunk, which makes a depth of 135 ft. 3 ins. from surface. We are now in a very hard bar of ground, but am hoping as we get nearer the lode there will be a change, and better progress made.—M. Scantlebury.

New Eberhardt.—The mine manager reports, under date 3rd March, as follows:—South Drift: There has been assorted and put on the ore dump seven tons for the week. Assay value of same, $52 50-11. These drivings continue about the same as mentioned heretofore, the seam of ore being small and irregular. North shaft, No. 1: The sinking of this shaft has been advanced 6 ft. for the week. Total depth 63 ft. The bottom is still in hard black lime. North shaft, No. 2: Drift westerly from bottom of this shaft has been extended 4 ft. Total length, 56 ft. There is but little change to note, there being some more quartz of about the same grade as reported last week. North shaft, No. 3: Drift southerly from bottom of this shaft has been extended 4 ft. Total length, 30 ft. The face of this drift is still in hard black lime, and if we do not find some change in the coming week we will change the men and see if we can find anything by going north from this shaft. East drift from bottom gore incline has been advanced 13 ft. for the week. Total length, 169 ft. At 168 ft. we came to very hard quartzite.

New Emma (2nd March).—I have to report work carried on at the mine for the week ending to-day as follows:—Level No. 1 easterly advanced 9 ft.; total, 200 ft. Not any noticeable change to report. Rock is seamy and continues heavily charged with oxidised iron, and also still shows manganese with traces of silver. Cross-cut from No. 1 towards hanging-wall has been stopped for the present, and instead have started to raise on the seam of galena ore. As mentioned in my letter of the 16th ult. have raised 8 ft.; total, 8 ft. Appearances are good for the seam opening. We now have about 1 in. of galena, with several very small narrow stringers of ore branching off, the surrounding rock being soft and mineral stained. Drift from No. 1 towards hanging-wall advanced 10 ft.; total, 36 ft. No material change to report. Rock is about the same character as in face of level, strongly saturated with oxidised iron, and also carrying manganese. Level No. 1 north-westerly advanced 15 ft.; total, 206 ft. Continues in old workings. We shall push this level through the old works for the purpose mentioned in my report of 23rd ult. Level No. 3 south-easterly advanced 12 ft.; total, 345 ft. Rock continues to improve; narrow seam of oxidised iron and clay still in face, with the surrounding rock a little softer. Level north-westerly from uprise from Attwood's winze advanced 8 ft.; total, 118 ft. Not much (if any) change to report: seam of about 8 ins. wide of vein matter continues.—H. C. Wallace.

New La Plata.—The results for February month were cabled from Leadville by the manager on the 22nd inst., as follows:—"Royalties received, $1,300; net profit to La Plata Company, after paying all expenses at Leadville, $350. The prospects are encouraging. N.B.—Adding the rental of the smelting works, the clear profit for the month is about 200*l*.

Nine Reefs (26th Feb.)—Mining operations:—Malleson lode: Main shaft 310-ft. level north has advanced 2 ft., a total distance from shaft of 90 ft. 6 ins.; vein, 6 ft. wide; assay, 5 dwts. 5 grs. gold per ton. Morrison shaft: Sinking under the 185-ft. level, has advanced 4 ft., a total depth below the 185-ft. level, 31 ft. 6 ins.; the part of the vein carried is 6 ft. wide; the assay, 4 dwts. 13 grs. gold per ton. Baynard shaft, 310-ft. level north: The men who were engaged in driving this drift are now employed in stoping the bottom of this level, so as to make it correspond on levels with the 310-ft. level north of main shaft; this work will soon be completed, and the drivage resumed; the assay, 2 dwts. 21 grs. of gold per ton; vein, 5 ft. wide. 310-ft. level south: The bottom of this level is also being stoped. The vein is 5 ft. wide; the assay, 1 dwt. 7 grs. gold per ton. Stopes: No. 1 stope in the back of the 185-ft. level north of main shaft: Vein 6 ft. wide; assay, 2 dwts. 14 grs. gold per ton. No. 2 stope, in the back of the 185-ft. level north of main shaft: Vein 6 ft. wide; assay, 3 dwts. 22 grs. gold per ton. No. 3 stope, in the bottom of the 185-ft. level south of Baynard's Shaft: Vein 4 ft. wide; assay, 2 dwts. 14 grs. gold per ton. No. 4 stope, in the bottom of the 185-ft. level south of main shaft; Vein 4 ft. 6 ins. wide; the assay, 7 dwts.

14 grains gold per ton. No. 5, in the bottom of the 185-ft. level north of main shaft: Vein 8 ft. wide; the assay, 2 dwts. 7 grs. gold per ton. No. 6 in the back of the 310-ft. level north of main shaft: Vein 6 ft. wide; assay, 2 dwts. 14 grs. gold per ton. Champion lode, Vyvyan Shaft: The cross-cut driving east to intersect No. 2 vein at the 145-ft. level south of Vyvyan shaft has advanced 4 ft., the total distance now being 12 ft.; no vein has been intersected. North end of south stope in the back of the 145-ft. level south of Vyvyan shaft: Vein 20 ins. wide; assay, 3 dwts. 22 grs. gold per ton. South end of south stope in the back of the 145-ft. level south of Vyvyan shaft: vein 16 ins. wide; assay, 3 dwts. 6 grs. gold per ton. North stope in the back of the 145-ft. level north of Vyvyan shaft: Vein 16 ins. wide; assay, 1 oz. 6 dwts. 3 grs. gold per ton. A rise in the back of the 145-ft. level south of Vyvyan shaft has also been commenced. No. 2 lode 95-ft. level north and south of the cross-cut south of Vyvyan shaft has advanced 9 ft., a total distance of 21 ft.; vein 3 ft. wide; assay, 9 dwts. 2 grs. gold per ton. New shaft sinking south from Vyvyan shaft is now down to a depth of 20 ft. in the old workings.—Capt. Bennetts.

NORTH MEXICAN (1st March).—The gallows frame for the whim is put up at San Nicolas, and next week I will have the horse whim put in its place, so as to keep work going on. We have had some rain this week, which interfered with the work, so that a little time has been lost, but not to stop work entirely.—R. S. Carlisle.

NUNDYDROOG (26th Feb.)—Mining operations: Webb's shaft is down 399 ft. 6 ins. Taylor's shaft is down 355 ft. 8 ins. The 370 cross-cut north of Webb's shaft has been driven 11 ft. 3 ins. These places are all in hard barren rock. We have passed through a small branch of quartz in the cross-cut; it is dipping to the west, and the rock generally shows faces of quartz in the joints. Stopes: The stope in the bottom of the 370 south of Webb's shaft; the lode is smaller than usual, the assay, however, continues to be good—2 ozs. 17 dwts. 12 grs. But there is water in the stope, and we have decided, until the shaft is got deeper, to suspend the working and put the men to work in the ore reserves higher up. The stope in the bottom of the 300 south of Webb's shaft is worked by Eurasians and coolies with one rock-drill; they are giving satisfaction; the lode is 3 ft. wide, assaying 2 ozs. 4 dwts. 6 grs. The intermediate level shows a band of quartz 2 ft. wide, assaying 13 dwts. The stope in the bottom of the 230 ft. south of Webb's shaft, the lode is 1 ft. 8 ins. wide, assaying 1 oz. 18 dwts. In the middle level there is a lode 1 ft. 8 ins. wide, assaying 4 ozs. 7 dwts. The stope in the bottom of the 166 is a little improved; the lode is 1 ft. 6 ins. wide, assaying 1 oz. 6 dwts. 12 grs. The rise in the back of the 230 north of Webb's shaft is not quite so well defined as it was; the quartz is 1 ft. 6 ins. wide, assaying 1 oz. 12 dwts. 12 grs. Weekly samples from the mill: rough quartz, 2 ozs. 15 dwts. 6 grs., and smalls, 1 oz. 12 dwts. 12 grs.—B. D. Plummer.

OSCAR GOLD (15th March).—Oscar Lode:—By the middle of next week the timbering of the shaft will be completed, when sinking will be resumed. In the two levels driving west we see no alteration to call your attention to. The No. 3 lode is looking well, and the men are making fair progress. Daw's Lode:—Shaft improves daily, which leads us to believe we shall soon considerably increase our returns from this mine. Bottom level north with rise and stope in back of ditto no alteration. Ditto south has been communicated with the winze. Quartz about 8 in. wide, in which we see some gold. No alteration to note elsewhere.—J. Daw, Jun.

ROCKY BAR WIDE WEST.—Extracts from mine captain's report, week ended February 26th. Mill: During the month the mill has run 15 stamps, steadily making a very close saving in the value of the ore crushed. Machinery: Everything in this department is in good repair, and is being run with the greatest economy possible. The ore mined and milled during the month has averaged about ¾ oz. per ton, showing an increase over January of 38 ozs. bar gold and a decrease in wages of $500. Everything is in perfect order in and about the mine.

SOUTH-EAST MYSORE (26th Feb.)—Mining operations: Lavelle's shaft, end north—During the past week we have driven 21 ft. 6 ins.; distance from shaft, 176 ft. 6 ins. The lode in the end is 5 ft. wide, and how much more of the lode is standing in the hanging-wall side I am not prepared to say. It is a grand lode, as saying at present 14 dwts. 12 grs. The distance between this shaft and Rogers' to be cut is about 63 ft., and, if all is well, we expect to do this in about three weeks. The shoot of ore still increases in length and width; sometimes it assays very high, and at other times low, but yet, taking the lode throughout, it is a good paying one, and capable of yielding a large quantity of quartz. Stope in the back of this level: Nothing has been done here since my last, owing to the Coolies not having yet returned since the cholera scarce. The same may be said of the winze. I have sent away to the villages, trying to get some. They promise, but up to the present have not turned up. Roger's shaft: Sunk during the past week, 2 ft. 9 ins.; total depth from surface, 276 ft. 9 ins. Here also we have been short of coolies; considering this, the progress has been very fair. The lode is still in a decomposed state, the solid part of it being deeper. There are other points to be worked when coolies return; but until they do we must concentrate all our best energies in driving the end north at Lavelle's. Machinery continues to work well, and doing good duty. Stamps: We are at work crushing day and night. So far, the plates are looking much better. The vanners are also doing better duty. It will take a little time to get the bed into proper working shape. Assays: Our assayer is still unable to make them. I have made one of the lode in Lavelle's north, which gives 14 dwts. 12 grs. per ton.—Capt. Rogers.

VICTORY (19th Feb.)—I am taking out quartz from a reef in one of the old drives on the west side. I drove in on the line of reef 12 ft., and I have started sinking a winze down on the reef, which is 3 ft. 6 ins. in width, and gives very good gold. I intend sinking about 40 ft. down, and then drive out two levels east and west on the line of reef. I have sunk down up to date 7 ft. I have also started a second winze sinking on the east drive on the line of reef, which is 4 ft. 6 ins. wide, and in very good milling ore. I intend sinking this winze down about 20 ft. I shall then start my drives, which will give me 20 ft. of stoping ground between my lower drives in my west winze and east winze. Up to date I have sunk a depth of 6 ft. I think we have about 70 tons of quartz ready for milling, and can get sufficient ore to keep the mill running.—Nicholls.

THE MONTANA CO., LIMITED.

INCREASED DIVIDEND—OUTLOOK BETTER.

REPORT OF THE DIRECTORS.

20th March.—The directors herewith present their report, and the balance-sheet and statement of accounts, for the half-year ending the 31st December, 1888. The accounts now submitted show on net revenue account a balance of 23,071*l.* 17s. 11d. for the half-year, out of which two quarterly interim dividends have been paid (each at the rate of 5 per cent. per annum), amounting in the aggregate to 16,500*l.*, and in addition to this item, 6,433*l.* 2s. 8d. have been appropriated from net revenue account for expenditure on capital account during the half-year, leaving a balance of 138*l.* 15s. 3d. carried forward to credit of the current half-year ending 30th June, 1889.

BETTER DIVIDEND.

The profits earned in the months of January and February, and the estimated profit for the current month, justify the directors in declaring a first quarterly interim dividend for the half-year ending 30th June next, at the rate of 7½ per cent. per annum; and it will be paid, free of income tax, on the 15th April next. The following summary will show the amount of dividends paid by this company, which now comprises 2,912 shareholders.

SUMMARY OF DIVIDENDS PAID AND DECLARED SINCE THE FORMATION OF THE COMPANY IN JANUARY, 1883.

Number of Dividend.	Date of Payment.	Amount per Share.	Rate per cent. per annum.	Total Amount Paid.	Remarks.
		on 2/. sh		£ s. d.	Rate of
1	Sept. 1st, 1884	8d.	6⅔	9,533 17 4	Dividend.
2	Oct. 1st, 1885	1/6	15	24,507 19 6	Average for half-year
3	Jan. 15th, 1886	1/6	5	24,515 11 0	ending Dec., 1885 .. 15⅞
4	Apr. 15th, 1886	1/6	15	24,750 0 0	Average for half-year
5	July 15th, 1886	2/6	25	41,250 0 0	ending June, 1886 .. 20⅞
6	Oct. 15th, 1886	2/	20	33,000 0 0	Average for half-year
7	Jan. 15th, 1887	2/6	25	41,250 0 0	ending Dec., 1886 .. 22½⅞
8	Apr. 15th, 1887	3/	30	49,500 0 0	Average for half-year
9	July 15th, 1887	3/	30	49,500 0 0	ending June, 1887... 30⅞
10	Oct. 15th, 1887	3/	30	49,500 0 0	Average for half-year
		on 1/. sh			ending Dec., 1887... 25⅞
11	Jan. 14th, 1888	1/	20	33,000 0 0	Average for half-year
12	Apr. 14th, 1888	1/	20	33,000 0 0	ending June, 1888... 12½⅞
13	July 16th, 1888	3d.	5	8,250 0 0	Average for half-year
14	Oct. 15th, 1888	3d.	5	8,250 0 0	ending Dec. 1888 ... 5⅞
15	Jan. 15th, 1889	3d.	5	8,250 0 0	
				£438,057 7 10	Total Dividends paid.
16	Apr. 15th, 1889	4½d.	7½	12,375 0 0	Now declared, payable 15th April, 1889 ...
				£450,432 7 10	

A table shows the proportion of gold and silver in bars and concentrates produced since the formation of the company:—Total gold (assay value), 734,223*l.* 14s. 11d.; silver (assay value), 522,744*l.* 12s. 5d.; total (assay value), 1,256,968*l.* 7s. 4d. Of the total produce the proportionate value of each metal was: Gold 58 per cent., silver 42 per cent.; the Drumlummon Mine therefore comes under the designation of a gold rather than a silver mine, and this is made more manifest by the fact that the gold has been increasing, and the silver proportionately decreasing during the six years.

PROFITS AND THEIR APPROPRIATION.

Up to the 31st December, 1888, the mine returned a total profit of £550,871 11 10

This has been appropriated as follows:—

1. Dividends paid	£438,057 7 10	
2. Loss on 31st December, 1884, written off out of profits ...	23,735 18 9	
3. Reserve fund invested in stores and concentrates	24,000 0 0	
4. Depreciation	9,312 9 3	
5. Adjoining locations, machinery, and other purposes chargeable against capital	55,577 0 9	
6. Balance on 31st December, 1888, carried forward	138 15 3	
		£550,871 11 10

In addition to the above total profit, there has been spent, out of revenue, upon exploratory works alone, since 1884, the sum of £65,126 5 8

During the six months ending 31st December, 1888, the mills crushed 42,469 tons, producing a yield in bullion and concentrates on assay of $452,355.69, equivalent to $10.65 per ton, but the actual realised value of the bullion and concentrates amounted to only $391,034.80, giving an average per ton of $9.21 nett yield. The difference of $61,320.89 or 13.52 per cent., is accounted for by (1) the heavy depreciation in the value of silver from the official standard of $1.2929 per oz.; and (2) the difference between the estimated and realised value of the concentrates.

PRICE OF SILVER.

The comparative prices of silver in the United States for the half-years ending 31st December, 1887, 30th June, 1888, and 31st December, 1888, are as follows:—

	Half-year ending 31st December, 1887. Cents per ounce.	Half-year ending 30th June, 1888. Cents per ounce.	Half-year ending 31st December, 1888. Cents per ounce.
Highest	97⅞	97	96.50
Lowest	94⅝	91	91.50
Average	95.93	93.90	93.12

Statistical results show that after making allowance for the lessened expenses of mining and milling the quartz, the decrease of revenue for 1888 compared with the previous year amounts to $820,432.57, or 169,510*l.*

ORE RAISED AND MILLED.

	Tons.	Average per ton.	Gross yield.	
High grade, 1887	37,264	$40.87	$1,523,216	
„ 1888	17,969	28.96	520,365	
Decrease	19,295	$11.91		$1,002,851
	Tons.	Average per ton.	Gross yield.	
Low grade, 1887	37,741	$13.71	$517,458	
„ 1888	65,776	8.73	574,233	
Increase	28,035	Decrease $4.98	Increase	$56,775
Decrease in value				$946,076.00

WORKING EXPENSES ON REVENUE ACCOUNT.

Year ending 31st December, 1887	$709,855.23	
„ „ 1888	584,211.80	
		$125,643.43
Decrease in revenue as compared with previous year		$820,432.57

GENERAL SUMMARY, &c.

Briefly summarised, the facts and main features of the working for the half-year ending December 31st, 1888, are as follows :—

Number of dry tons of ore raised and crushed in the mills—Six months December 31st, 1888	42,469	
Ditto December 31st, 1887	39,418	
Increased tonnage		3,051 tons.
Weight of concentrates obtained in the mills for the half-year ending December 31st, 1888		239 tons.
Value of bullion obtained direct from the mills for the half-year	$328,267.86	
Value of concentrates obtained direct from the mills for the half-year	124,087.83	
		$452,355.69
Average cost of mining and milling per ton of ore for half-year ending 31st December, 1887	$9.15	
Average cost of mining and milling per ton of ore for half-year ending 31st December, 1888	6.44	
Decreased cost per ton		$2.71

Proportion of gold and silver in bullion bars and concentrates :—

For half-year ending December, 1886	Gold 53%	Silver 47%
„ „ „ June, 1887	Gold 57%	Silver 43%
„ „ „ December, 1887	Gold 62%	Silver 38%
„ „ „ June, 1888	Gold 65%	Silver 35%
„ „ „ December, 1888	Gold 69%	Silver 31%

No. 1 shaft : No sinking during the half-year	
„ Total depth below 400-ft. level	590 ft.
No. 2 shaft : Sunk on incline of lode below the 400-ft. level, half-year ending 31st December, 1888	215 ft.
„ Total depth below 400-ft. level	415 ft.
Lineal developments (during the half-year)	3,285 ft.
Expenditure on permanent improvements („ „ „)	$31,414.64
Cost of exploratory or dead work, including sinking No. 1 and No. 2 shafts („ „ „)	$51,512.64

AVERAGE COST OF MINING AND MILLING.

The average cost of prospecting, mining and milling per ton of ore for the six months ending 31st December, 1888, was $6.44 against $7.53 which prevailed in the previous six months. This decrease was mainly due to the circumstance that no cost was incurred in pan amalgamation in the 50-stamp mill, since low-grade ores only were reduced in that mill. Now that the pans are added to the 50-stamp mill the cost will be increased.

ORE RESERVES.

High grade ore in reserve, above $20 per ton, on 31st December, 1888, estimated at	78,195	tons.
Low grade ore in reserve, $20 per ton, and under, on 31st December, 1888, estimated at	137,657	„
Total	215,852	„

Of the ore in reserve, the estimated quantity apportioned to each vein is—

Drumlummon	179,952	tons.
East Drumlummon or Castletown	34,000	„
West side lode	1,900	„
Total	215,852	„

COST OF DEADWORK.

The following figures give the amount expended on dead work for four years, ending 31st December last :—

Twelve months ending December, 1885	$33,588.24
„ „ 1886	61,442.38
„ „ 1887	112,577.97
„ „ 1888	107,602.61
Total in four years	$315,211.20 = £65,126 5s. 8d.

AIR DRILLS.

The average number of air drills employed throughout the year was 27, representing the work of 324 men, operating with ordinary hand drills.

NEW HOISTING ENGINE.

It was hoped that the erection of the new hoisting engine would have been completed at the end of October last, but in taking out ground for this machinery it was found that, owing to the near proximity of vein workings, a great deal of it had to be supported by masonry of a difficult and costly character, which deferred the completion of the engine until early in January of the present year. In addition to the expenditure already incurred for machinery, it will be necessary to purchase and erect a permanent and economical pumping engine, while it is desirable to increase the number of air drills, so as to apply them to the quick development of the additional lodes now under attack. The cost of these two items will be considerable, since the number of drills cannot be increased without a second compressor. The erection of the pumping engine will, however, have the directors' first attention.

MONTHLY RETURNS.

With such a variety and varying value of the ore as comprise the "reserves," it is extremely difficult to adjust the money amount of one month's run with another, so as to show an approximate regularity in the figures. If it should happen that a "monthly run" is a few thousand dollars over or under the figures of a previous month, it must not be regarded as evidence of an increase or decrease in the value of the property. The monthly output of ore is now from 6,000 to 7,000 tons, and the mere difference of $1 per ton in its value which may easily arise, would, in the aggregate, amount to a considerable sum.

THANKS TO STAFF.

The directors desire to tender their sincere thanks to Mr. R. T. Bayliss, Mr. G. H. Robinson, and all the members of the staff, both at home and abroad, for their zealous and able services.

DIRECTORS.

The directors retiring by rotation are Messrs. T. J. Bewick and F. P. Crowther, who, being eligible, offer themselves for re-election. The directors have received from a large and influential body of shareholders residing in the North of England an intimation of a desire that one of their number should have a seat on the board, and that the number of directors should be increased for that purpose. The directors are willing to meet this desire, and a resolution will therefore be submitted to the shareholders (under article 97), increasing the number of directors by one. On this resolution being passed, Mr. Edward Crowther, of Leeds (who has been nominated by the body of shareholders above referred to, and whom the directors recommend under article 100), will be proposed for the office. Through a recent Act of the Federal Government, Montana, hitherto a Territory, has become a State. It is fully expected that its laws, when formulated, will abrogate the clause in the Alien Act relating to the holding of mines in territories of the United States.

FUTURE POLICY AND OBSERVATIONS.

The directors will continue to observe the policy set out in their last half-yearly report. The requisite exploratory works will be made on the various lodes with the view of discovering additional bodies of ore, while care will be taken to augment as far as possible the quantity and value of the ore in reserve, and to extract and mill it in approximate relation to its tonnage, grade, and metallic contents; also to increase the rate of profit without lessening the intrinsic value of the property for investing shareholders. In realising these conditions, forethought, care and experience are necessary, and the rules of good mining must be observed. In reviewing the condition of the undertaking it is evident that the working area on the lodes is much increased, that the points of attack are multiplied, that means are provided for hoisting the stuff from a depth of 3,000 ft., that the reserves of ore are considerably increased, and that the prospects of the undertaking are materially improved.—Stewart Pixley, Director, Thomas Neal, Secretary.

VIEWS OF MR. RAWLINSON T. BAYLISS.

Mr. R. T. Bayliss closes a masterly report with the expression of the following general opinions:—"In my half-yearly report to 30th June last I endeavoured to assure the shareholders that the period of low returns they had then entered upon would be only of short duration, and the year 1889 would show a "material advance in the direction of returning prosperity," and in the concluding remarks reiterated my strong conviction in the future success of our developments, and expressed my willingness to stand by every promise made or expectation held out by me to the shareholders. The opinion then expressed I hold as firmly now; indeed, the past six months have strengthened my conviction that the mine justifies the expression of the views I ventured to make respecting it in my half-yearly report for June, 1888. It is unnecessary for me to amplify these opinions by further repetition, and I will, therefore, content myself by assuring you and the shareholders that, in view of permanence and stability, the mine presents at this date a more encouraging future and better appearance than it has ever done before, and that the distinguishing feature of the future will be prosperity and not decline. My thanks are once more due to Mr. G. H. Robinson and Mr. P. Sennott for their valuable services in conducting the underground operations, and to all the other members of your staff who have rendered to your company such efficient service, and yielded such willing co-operation to myself.

REPORT OF MEETING.

DOUGLAS DEVELOPMENT SYNDICATE.

STATUTORY MEETING—44 CLAIMS SOLD REALISING UPWARDS OF £40,000—GOOD PROSPECTS.

THE statutory meeting of the Douglas Development Syndicate, Limited, was held yesterday at Winchester House, Old Broad Street, E.C., under the presidency of Mr. George Hopkins.

The SECRETARY (Mr. W. J. Hammond) having read the notice calling the meeting,

PRELIMINARY WORK.

The CHAIRMAN said: Gentlemen, it is nearly four months since this company was incorporated for the purpose of further developing a property in the Witwatersrandt district on the Luipaards Vlei farm, consisting of 97 claims, each claim being 450 ft. long and 150 ft. wide. Previous to the incorporation of this company, sufficient work had been done on these claims to prove that a number of reefs ran through or intersected them, some well known by name, and others not having any name. At the time the company was floated it so happened that mining securities in the Transvaal were rather at a low ebb, and although the amount of money that we required for our purpose was but small, the directors had considerable difficulty in raising it. It required personal exertion on the part of the directors in order to obtain the amount. However, very soon after the company went to allotment a different state of things came speedily forward. What is familiarly known as

A BOOM CAME ON

in all Transvaal property very rapidly, and I must say that it was an unfortunate thing for the vendors of this property to us that their wants made it a necessity for them to raise further capital just at that particular time. When this boom had taken place we had offers from different persons—inquiries rather—as to whether we would sell some part of our property. The directors took these offers into serious consideration, and we came to the conclusion that it would be desirable in your interests that we should sell a portion of the property and retain the remainder. After the preliminary terms had been arranged some delay arose in consequence of the breaking down of the telegraphs in the Transvaal, because as a matter of course the intending purchasers, before committing themselves finally to the purchase, as discreet men of business, thought it desirable to wire over to the Transvaal to make inquiries about the property. I happen to know, because I had it from themselves that the answers to their inquiries were satisfactory. (Hear, hear.) The negotiations, therefore, went on, and we entered into a preliminary

AGREEMENT TO SELL 44 CLAIMS

out of the 97 belonging to us, reserving 53. In addition to the 44 claims agreed to be purchased from this company, they also entered into an agreement to purchase 22 other claims which did not belong to us, but which were situated between our property and the property of the South Standard Company, a company which has been recently floated in the English market, thus giving the purchasers 66 claims altogether. After a little delay caused by the preparation of the necessary documents and other things, and just when this company, which I may call now the South Standard Company, were ready to come before the public, the

FINANCIAL TROUBLES IN PARIS

occurred, the smash in copper, which not only had the effect of bringing down copper shares, but also affected very seriously the price of the shares in the Transvaal; so much so that it was not altogether the best possible time to bring out a new company to work properties situated in the Transvaal. However, I daresay some of you know the South Standard Company advertised their prospectus a few days ago, and I am happy to be able to tell you that they went to allotment last Wednesday. Now, I think we, the Douglas Syndicate, have made a very good sale, and whilst it is a good sale for us, I think it is a very good purchase also for the South Standard. I may say the price we shall realise for our 44 claims will be about 40,000*l*., or perhaps a little more, about two-thirds of which will be in cash, and one-third in shares of the new company. We consider that that was a very good price indeed for this property, and when I say that, I think it will not be a bad one for the purchasers. I say it for this reason, that since we agreed upon this price, now six weeks ago, the news that has come over from the Transvaal has tended, I think, to show that the property is valuable. I have an impression myself that the claims which we have still there will soon be found to be in the very heart, or in the best part of the Witwatersrand district, and I think that those who hold shares in this syndicate will be fortunate, because of what I have mentioned to you as being the approximate amount which we will realise from the 44 claims we have sold, which will go a long way to recoup you for the whole of the capital you have put into this company, and you will also have

53 CLAIMS TO DEAL WITH,

through which it is just possible, from information which only came to hand to-day, that the famous battery reef runs. (Cheers.) If so, these shares may be worth anything. I know this—that not very far from our property five claims on the battery reef have been recently sold for 12,500*l*. a claim, and if the battery reef—as we hope it may, and as there is reason to expect it will—runs through some of your claims, as a matter of course they will become very valuable. I was very anxious in your interest that this arrangement which we have entered into should be carried through. We had a great deal more delay than under ordinary circumstances we might have had, and had the new company been able to bring themselves to the notice of the public a month sooner, I believe their capital would have been very largely subscribed. As it was, they happened to come at an unfortunate time, but still they are not dissatisfied with what has been done. I may mention here—it is rather a personal matter, but still I will mention it—that in order to carry out the sale for you I had to consent to be chairman of the new company, the South Standard. I was not very willing to act in that capacity, because it is only putting one more load on shoulders that have quite enough to carry as it is at the present time. However, the purchasers of this property made it a sine quâ non if they went on with the matter at all, that I should continue to act as chairman of this new company, the South Standard. (Cheers.) Now, gentlemen, I dare say you will all be a little anxious to know what we are thinking of doing with

THE PROCEEDS OF THIS SALE.

(Hear, hear.) We have not got the money yet, and we shall not get it until the property is legally transferred. We sent out yesterday the necessary powers of attorney, authorising the transfer to be made. We shall have seriously to consider, when this transaction is completed, how we shall divide this money. The question is not without some little complication. We may, or may not, have to call up the remaining 10s. in order to place all the shares on one footing. (Hear, hear.) That is to say, to make all the shares fully paid up. I have had a great deal to do in these five or six weeks to carry these negotiations through, and to get the new company floated. Of course, we have only got the application money yet, and we shall collect all the money due, and when we have that we shall send out telegraphic instructions to our agent in the Transvaal to transfer the property. Of course, we shall not transfer it until we have the money ourselves under our control, and when we have got that I hope to have the pleasure of seeing you again, and we shall have to consider how we shall deal with the money, and we may have to convene a meeting to take your advice upon the subject.

A SATISFACTORY STATEMENT.

Speaking generally, the portion of the property which we have sold will give you back nearly the whole of the amount which you have spent for the whole of the property—(cheers)—and the 53 claims which you have left we have every reason to believe will be as valuable, if not more valuable, than those we have already sold. (Cheers.) Directly we were in the position of going to allotment we sent out instructions to our agent to proceed with the development works, and we ordered machinery in England for pumping or sinking, which is now almost ready, and will leave England in a few days. We lost no time in that respect, and in the negotiations with the new company I have provided that all outlay made by this syndicate in developing our property shall be recouped us by the purchasing company—(hear, hear)—that is, all such outlay as has been spent on the 44 claims which we have sold. I think that is a satisfactory arrangement. We have a very

EXCELLENT AND ACTIVE AGENT,

whom several of us know perfectly, in the Tranvaal, and in a letter which I received from him only yesterday you will be glad to hear he says he has been busy taking up for us additional claims; altogether he has taken for us 25 additional claims, all of the same size as I mentioned at first. These claims immediately adjoin the existing claims we have. Of course he has done that with the object that if the reefs should extend a little out of the present property we shall have the property on which they run. That is a very important thing, and will very probably considerably enhance value of our property. Luipaard's Vlei Farm is coming rapidly to the front, and nearly every day we get additional information as to the value of property in the immediate district of our own. (Cheers.) A few days ago I had a letter from Mr. Sherman stating that

THE BATTERY REEF HAD BEEN CUT,

not very far off at a depth of 200 ft., and that the quartz was assayed—at one time it was mentioned as 11 ozs. to the ton, and another, 15 ozs. I mention that as one item amongst many that have come forward showing the value of old reefs in this particular district. This, gentlemen, as you are all aware, being our first general meeting, is called in compliance with the Act of Parliament, and is more familiarly known as the statutory meeting. It is the duty of the chairman to state generally what has been done since the formation of the company, the number of shares allotted, and the number of applicants. The whole of

OUR CAPITAL OF 60,000*l*. IS ALLOTTED,

and I believe we have something like 80 or 90 shareholders; and I hope, gentlemen, that none of you will have any cause to regret having joined this company. (Cheers.) On the contrary, that after a short time you will have received the whole, or nearly the whole, of your money, and will still be left in possession of a very valuable property. (Cheers.)

Mr. BRICBACH moved a cordial vote of thanks to the chairman and directors.

Mr. HENDERSON seconded the motion, which was carried unanimously.

The proceedings then closed.

THE ZARUMA GOLD MINING CO., LIMITED.

IMPORTANT NEWS.

THE following telegram has been received from the manager at the mines, dated 15th March:—"100 tons of ore crushed, produced 100 ozs. of gold from the copper plates only." The average value of gold produced by previous crushings from the Portobella lode in 1886 and 1887 was 2*l*. 17s. 2d. per oz.; 1 ton of average ore from the Abundancia vein (now being worked) sent to England for treatment, has given the following results:—7 cwt. was sent to Tottenham to be treated by Mr. Atkin's patent process, and according to his letter the ore assayed before treatment 3 ozs. 5 dwts. gold to the ton, and the tailings showed only 6 dwts.; 8 cwt. treated by the Newbery-Vautin process gave (according to their letter) as follows:—Assay before treatment, 2 ozs. 4 dwts. 9 grs. per ton; gold extracted, 2 ozs. 0 dwts. 2 grs. per ton. A further telegram is daily expected with the result of a larger amount of ore crushed, and will immediately be made known to the shareholders.—A. P. M. RIVOLTA, Secretary.

GOLD HILL.—In their report the directors say: The quantity of ore crushed during the year produced 439.189 standard ozs. of gold, which realised 1,687*l*. 3s., or an average price of 3*l*. 16s. 10d. per oz. The directors have given the financial position of the company their careful consideration, and they have formulated a scheme which, if carried out, will enable further operations to be continued upon a large area of the company's property which has not yet been explored. It will be necessary, in order to carry out the proposed scheme, that the present company should be reconstructed, and it is intended to hold, at the conclusion of the ordinary meeting, a special meeting, when the reconstruction scheme will be fully considered.

"NOTES ON INVESTMENTS"

The OLDEST and SAFEST GUIDE to INVESTORS and SPECULATORS

PUBLISHED FORTNIGHTLY. FREE ON APPLICATION.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be fonnd in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. Od., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

R. G.—Sell No. 2; hold No. 1 for a month or two, and then write to us again.
Mineral Phosphate.—You will buy them at a big discount, but our advice is—do not buy them at all.
J. W.—The statements about Mineral Phosphate Company are damaging. Have nothing to do with it.
G. T. H.—The directors are guinea-pigs pure and simple.
St. Augustine holder.—We have done as you wish. It remains to be seen whether they will refuse admission.
Lady Franklin.—Read our report last week. The position of the shareholders is unenviable.
J. W. B.—The "reply" of Lady Franklin directors was really no reply at all. No price.
C. C. C.—No business.
T. W. writes:—"Ought I to buy Bellite shares?" No, if you value your sovereigns.
W. D.—3d. last time; 4½d. this.
B. D. H.—See answer to "J. W."
D. R.—We read the report favourably.
Callao Bis.—Yes, join the re-construction.
Emma.—We do not expect a rise till the weather breaks, and the mine gets to active work.
A. H. Leeds.—I should not advise you to apply for shares. Do not trust them. The "bureau" cannot even afford to retain the services of an office boy.
C. (Bournemouth).—Certainly not; not worth trusting.
E. M. (Irongate).—You can scarcely do wrong in selling your De Villiers, Ferreiras, Jumpers, and Salisburys; but keep the others.
Credit (Lincoln).—It does not follow that *all* who so advertise are worthy of confidence. The person you mention is, in our opinion, trustworthy. Sell the Australians, but keep the others.
Transvaal.—We gave the advice you want last week, viz., sell high-priced Africans; De Beers will go lower.
J. M. A. (Newport).—There has certainly not been any news from the company, but the liquidator, Mr. Powell, says he has every hopes of the company being successful in the near future. Write fully to secretary.
W. S.—The reply is, we have no dealings *direct* with the person mentioned.

The Mining World.

LONDON: SATURDAY, 23RD MARCH, 1889.

The "MINING WORLD" is not the property of a Mining Speculator nor under the control of any clique.

THE POSITION OF COPPER.

THE past week has been one of considerable excitement in connection with copper, and the securities more or less directly affected by the break up of the speculation in that metal, and the consequent collapse of its chief backer, the Comptoir d'Escompte. As we mentioned last week, the Bank of France, with the assistance of some of the leading financial houses in Paris, made an advance of 100,000,000 francs, or 4,000,000*l*., to the Comptoir d'Escompte, to relieve that institution from the necessity of closing its doors, and thus greatly adding to the severity of the crisis. On Monday a further advance of 40,000,000 francs, or 1,600,000*l*., was made through the same source, and it became known that the Comptoir was to be re-organised. But, although this timely help has restored a certain amount of confidence to the Paris Bourse, the securities of the chief lending establishments, excepting those of the Bank of France, have continued to dwindle throughout the week.

In London, the movements in the French capital have naturally been watched with very keen interest. Early in the week it was rumoured that the London brokers of the Société des Métaux had not been furnished with the remittances necessary to take up the copper warrants then falling due, and the rumour was soon verified by two of the brokers suspending payment. As our readers are probably aware, it is a rule of the Metal Exchange that brokers are to be regarded as principals in any transactions in which they engage. Hence the failures just mentioned. A good deal of sympathy has been felt for the unfortunate agents of the Société des Métaux, and we understand that the composition offered by them was readily accepted. The immediate consequence of the failures was a rapid drop in the price of copper, which from about 50*l*. per ton fell with a bang to about 38*l*., transactions having taken place as low as 35*l*. per ton, or nearly 5*l*. per ton lower than the quotation at which the metal stood eighteen months ago, when the French Syndicate began to operate. Rio Tinto shares touched 10½, and all through the list copper shares stood not upon the order of going but scrambled down with a rush.

The mid-monthly statistics of the copper trade were certainly serious enough, showing as they did a further accumulation of stocks and visible supplies in the first half of the month. The figures as supplied by Messrs. James Lewis and Sons were as follows:—

	March 16th.	March 1st.
Stocks	114,859 tons ...	113,448 tons.
Total visible supply ...	120,663 „ ...	118,403 „

Thus, while the visible supply has increased 2,200 tons, the price had fallen very much. It was, therefore, only natural that much anxiety should be felt as to the future course of events. Just at the time, however, the further financial assistance to the Comptoir d'Escompte referred to above became known, and then the scare gradually subsided. The very low price to which the metal had fallen had the effect of bringing in purchasers; while the evidence of heavy "bear" sales of copper shares induced those who were convinced that bottom had at last been touched to come into the market as purchasers. The consequence was that much of the "bear" account was closed, and the market has since assumed a decidedly healthier appearance. Yesterday 1,000 tons of g.m.b. copper was sold by auction at prices ranging from 41*l*. 2s. 6d. to 42*l*. 7s. 6d. per ton; while copper shares regained a portion of the recent heavy fall, Rio Tintos fluctuating at a little below 12, and other descriptions showing a more or less marked recovery. There is reason to expect, therefore, that the worst of the business is over, and that by the end of the month the statistical position of the copper market will be less serious than it was a week ago.

While we say this, however, it would be absurd to regard the future as anything like assured, or, indeed, as promising a much healthier state of things for some time to come. We cannot lose sight of the fact that the visible supply of the metal at the present time is about two and a-half times what it was when the price of the commodity last stood at the average quotation of the past week. While the speculation has lasted the copper companies have undoubtedly made large profits—too large by far, as events have proved; but it is clear that these profits will be greatly diminished until the conditions of supply and demand are very materially changed. There is an impression in some quarters that the companies should take steps to enforce the

guarantees which they have under the contracts which have still about two years to run; but, as we have said before, such a policy would be simply suicidal. The attempt to insist upon the fulfilment of the contracts would bring matters to a deadlock, and would, we are convinced, have anything but satisfactory results for the companies. The syndicate and the producing companies are, in fact, in the same boat, and they will sink or swim together. The policy of both parties should be to lessen supplies, and to encourage consumption by every means in their power, for while the stocks of the metal are so vast there can be no material rise in prices. The sooner this fact is appreciated at its full value the better it will be for all concerned.

PAUL PRY AND CO. IN THE CALLAO BIS OFFICE.

On that eventful day, March 5th, in the year of grace 1888, when the directors of the Callao Bis Company met for a board meeting, which lasted from 11 in the morning until 3.40 in the afternoon, they little knew, and probably as little cared, for Paul Pry and Company, who were surveying their proceedings from the uncertain vantage ground of the outer office. They evidently had a good deal more to do than either Mr. Pittard or his client—in fact, these gentlemen having no business of their own to attend to, it occurred to them that they might as well go and attend to the business of other people. For this purpose a lavish expenditure of time was necessary, which, for the aforesaid reason, they were not slow to bestow. At 2.5 p.m. they presented themselves at the office of the company, probably after having fortified themselves with luncheon at the adjoining tavern. In the outer office they seated themselves and watched the progress of events until 3.40. The one hour and 35 minutes that thus elapsed they employed, if not like the Canterbury Pilgrims in telling tales to each other, at least in making notes and drawing inferences, but the notes being based on fallacies, the inferences could hardly have facts as their foundation. These fallacious notes and these foundationless facts were submitted to a meeting on Monday, but the shareholders laughed *at* Mr. Pittard and not *with* him. Their narration was useful to them from this solitary point of view that it showed reasonable shareholders some of the pettifogging annoyances to which boards of directors are occasionally exposed.

The directors had important business to transact, and it kept them nearly five hours. This in itself was "confirmation strong as Holy Writ" of directorial guilt to the suspicious mind of Mr. Pittard, and to the client who was metaphorically chained to the car of his fanciful triumph. Between 2.5 and 2.40 nothing important seems to have occurred, though the interval might have been profitably employed by Mr. Pittard and his client in considering whether their conduct commended itself to the dictates of either propriety or common sense. At 2.40 their monotony was relieved. An important event happened. A gentleman left the office! Who was he? Mr. Mackay who holds 8,000 shares. There was evidently something mysterious in this, though the probable explanation is that Mr. Mackay thought he might as well do what Mr. Pittard had done previously—go and get something to eat. It was evidently the opinion of Mr. Pittard that to have seen Mr. Mackay leave the office at 2.40, after sitting at a board meeting from 11 o'clock, was worth all his toil and labour. At 3.10 the bell rang. "Hear it not, Duncan." This was important—evidently working up to a tragical denouement. Mr. Pittard was on the alert, and woke up his client, who was probably by this time getting rather tired of the whole proceedings. The ringing of the bell was followed by the despatch of a note from the board room. Now or never was Mr. Pittard's opportunity. Here was a note addressed to somebody else, and by hook or crook he must see to whom. At this stage of his narration Mr. Pittard evidently expected to receive the approbation of his hearers, but instead of that there came the cold-blooded remark, "That is not a gentlemanly action to begin with." The despatch of the note was followed by the sudden appearance of a broker. Who was he? "I was curious to know who it was, although I knew it at the time"—a process of logic of which, probably, Mr. Pittard is the sole, because the only capable, exponent. "He asks for the secretary." Who would the visitor to the office of a company naturally ask for but the chief official? The evidences of directorial and official guilt, in the eyes of Mr. Pittard, were fast accumulating. "Who is he?" asks Mr. Pittard of the clerk. "That is the broker." Did he think it was Banquo? Mr. Pittard turned on his chair like a teetotum, and addressing his client in sharp, crisp language, exclaimed, "Did you hear that? Do you see what is going on?" "Yes," said the client, waking up and trying to understand it all, "go and sell my shares." Mr. Pittard was triumphant. He received his order (which was probably what he wanted) and hied off to the market. There he met with a collection of brother jobbers, their faces arranged in commercial mourning. He tried to "get on," as they say in the market, but could not. One after the other smiled sadly when he mentioned Callao Bis, and bitterly cursed the hour they first heard the name. What could be the meaning of this? "Ah!" said Mr. Pittard, "has Mr. So-and-So been here?" "Yes," they replied, in dirge-like chorus, "he has had me," "and me," "and me." Mr. Pittard's only regret seems to have been that his brother brokers were not "had" by him.

When the vital interests of the Callao Bis Company were at stake, this was the sort of twaddle that was served up to them as solid meat by Mr. Pittard. That gentleman may be complimented upon the fancifulness of his imagination, but cannot be extolled for the soundness of his judgment. As a matter of fact, there was no reason why the shares should have fallen upon that particular day—if fall they did. On the contrary, there was every reason why they should have risen, because a reference will show that the news from the mine was wholly good, and that a favourable telegram had been received from the manager. Everything appeared to promise well for the company, and if matters have since turned out differently, so much the worse for Mr. Pittard's client, to whom, as a large shareholder, we extend a sympathy which we are indisposed to offer to Mr. Pittard himself, who is merely the holder of five shares. In this connection we may state that Mr. Mackay is not the holder of 8,000 shares, and, in fact, that gentleman described Mr. Pittard's statements as "the purest fiction."

This gentleman since he has been a director has never dealt in a single share, and the chairman's statement to the same effect was equally explicit. We have devoted too much space already to the peculiar proceedings of Mr. Pittard and to the mare's-nest he has unearthed, so that we can only give our opinion that the re-construction scheme is likely to be a great success, and that every shareholder who understands his true interest will participate in it to the utmost extent to which his holding permits. Mr. Bladon clearly showed that re-construction is justified by facts, and he was perfectly right in saying that shares rise when the public know there is a strong working capital at the back of a company. The mining chances are also such as must give additional force and recommendation to the well considered scheme which the directors submitted, and which the shareholders sanctioned.

MONTANA REPORT.

The report submitted by the directors in anticipation of the annual meeting to be held next Wednesday, shows an increase of dividend, and a generally improved condition of the mine. The dividend is 7½ per cent. per annum, as compared with 5 per cent. per annum for the corresponding period. The dividends paid since the formation of the company in January, 1883, have amounted to 450,432*l*. The noteworthy feature of the present report is that the production of silver is decreasing, and that of gold increasing. The proportionate value of each metal produced was gold 58 per cent., and silver 42 per cent., and hence the directors feel rather inclined to designate Drumlummon a gold rather than a silver mine. The work of the year has been chiefly exploratory, the management having devoted itself to this department with the utmost energy and with no inconsiderable degree of success. The directors, who have ever shown themselves willing to meet the reasonable views of their shareholders, have added to their board Mr. Edward Crowther, of Leeds, who will represent the North of England, where a considerable portion of the capital is held. The policy of the directors in the future will be that which has guided them in the past—vigorous development work—so as to increase the returns, and at the same time the ore in reserve. The result of the last 12 months has been to augment the working area on the lodes, to multiply the points of attack, and to provide hoisting machinery to haul the ore from a depth of 3,000 ft. The result of the year may, in fact, be summed up in the closing words of the directors—"The reserves of ore are considerably increased, and the prospects of the company have materially improved." The report of Mr. R. T. Bayliss, the resident managing director, corroborates, in the greatest detail, the general summary we have given of that of his colleagues in London.

THE FUTURE OF THE BURMA RUBY MINES.

(From Our Paris Correspondent.)

The name of Mr. Moritz Unger figures so largely in the Blue Books upon the Burma Ruby Mines, that I was in no way surprised when I received your instructions to interview him upon this interesting subject.

I found him at his residence in the Boulevard Haussmann, and was at once received by him in an apartment, half library, half bureau, that positively bristled with souvenirs of his two visits to the realm of the Lord of the White Elephant.

First and foremost, one of the golden umbrellas that served to mark any one over whom it was extended as a very august personage indeed, and that under the old régime was conferred almost as exclusively as is the Most Noble and Distinguished Order of the Garter in our own country—trophies of arms, silks of the richest, a score or two of precious nicknacks from Theebaw's Palace, jewelled playthings of the fallen monarch's children—and I know not what.

"These volumes," said Mr. Unger, opening some bulky, gorgeously-bound and heavily-gilt books, "are sacred books; they are unique—the British Museum does not possess their fellows. They are in the Pali language, and in them lie hidden ideas of religion that were in vogue long before Moses went to school at On, or Aaron doffed for the first time his sacerdotal robes."

"I thank you a thousand times, Mr. Unger," said I, "for the very interesting things you have shown me, but if you will allow me to say so, and can spare me 20 minutes, I have come to talk about rubies, and, if you will further permit me, I will put to you a few questions, sug-

gested by a perusal of the Blue Books our editor has sent me. In the first place, I find in one of your letters to Sir Edward Buck, chief of the Indian Revenue Department, you say that the offer you were prepared to make was calculated to add about 400,000*l.* per annum to the revenue, and that for an indefinite term of years. The difference between that sum and the four lakhs of rupees offered by Messrs. Streeter is so great that I should like to know what you had in your mind as the base of such an offer.

"I will tell you. I have been twice to Burma upon this business. Upon the first occasion I was the bearer of letters of introduction to officials of the old régime that secured me a reception from them, and opened sources of information, that I venture to say were absolutely inaccessible to others—above all, those coming under the direct protection of the British invaders. Utilising these sources of information, I found that the former lessee from Theebaw paid him one and a-half lakhs per annum for the mines, giving up, however, all stones of a value exceeding Rs.1,000. About six months before his déchéance Theebaw obtained a better price, viz., 2½ lakhs per annum. I set to work to find out what probable profit this lessee and his partners netted, and I discovered that by their charge of 15 per cent. upon the value of all stones sent by them to the Ruby Hall at Mandalay, there accrued to them something over 3 lakhs per annum, after paying all expenses and the rent due to the King. Hence I obtained my first item, viz., 200,000*l.*, the value of stones yearly consigned to the Ruby Hall. Then I found that by various routes rubies were sent in very considerable quantities to Siam and China, by circuitous ways through the mountains to Ragoon, and by special messengers direct to Calcutta, the principal ruby mart of the world. This trade was smuggling, pure and simple, and a reliable estimate of its extent could only be arrived at by most searching enquiries. In such a business as ruby smuggling the 'cutest Chinee must take a back seat to a Burman, and I was not surprised at finding the best informed natives estimated that the value of these smuggled stones very considerably exceeded the total of the recognised trade. I, however, set it down for the purposes of my estimate at an equal value with the legitimate trade, and so let us call it another 200,000*l.* Let us now add the value of the large stones (Rs.1,000 and over) which the lessees were compelled by their agreement to surrender to the King, and take also into consideration those given by them as bribes to the scores of ministers and officials that surrounded him. I will not put this value into figures, nor will I say anything here of the hundreds of valuable stones that were buried by the finders and smugglers, except that I know from the numerous purchases I made myself the total must have been magnificent. I will simply say for the moment that I have shown you a reasonable estimate exceeding 500,000*l.* per annum."

"Had you any other means of calculating the output of the mines?"

"Yes, I had another base of calculation. Under Theebaw there existed in Mandalay a British post-office, through which there passed rubies to the annual value of about 30 lakhs. (300,000*l.*) I estimated the indirect trade before-mentioned, the smuggled and buried stones, the bribes and the King's portion; in fact all those that did not pass through the post-office at an equal sum, viz., 300,000*l.*, and so I was able to show the friends in Europe with and for whom I was acting, that I was well within the mark in estimating that under Theebaw's rule, and with the primitive methods of working then obtaining, the annual yield could not have been less than 500,000*l.* This was taking the rubies at Burmese valuation, which, when I first arrived there, I found to be certainly not over 50 per cent. of their European value."

"Then may I take it that you seriously put the total production of the mines under Theebaw at 1,000,000*l.* sterling per annum?"

"Well, yes; at any rate I clearly saw that with modern appliances and methods, and by the restriction of smuggling and stealing which would result from adopting the system of keeping the miners in compounds that prevails on the South African diamond fields (where, as you know, I had a long experience), the mines could easily be made to yield a round million per annum. It was with these facts in my mind, and with the intention (if allowed to tender for the concession), of offering the Government 40 per cent. of the profits that I wrote the letter to Sir Edward Buck to which you have called my attention."

"Can you tell me, then, how it was that the first concession could have been given to the Streeter syndicate for such an apparently inadequate sum as four lakhs?"

"Well, to begin with, you must not assume that I communicated to the officials every item of information that I accumulated. In fact, to have simply mentioned some of my sources would have been to have closed them. But I do not profess to have had a monoply of the power of obtaining information. On the contrary, I think that the information that must have been acquired by Col. Sladen during his long residence in Mandalay as political agent, would have been simply invaluable at this juncture. Looking back, however, it appears to me that Sir Charles (then Mr.) Bernard went upon the simple plan of takiug a rise upon the first bid made him. Messrs Gillanders, Arbuthnot and Co., of Rangoon and Calcutta (a house that has the honour of counting a son of Mr. W. E. Gladstone as one of its members, and who had always extended to Mr. Bernard their political sympathies), were the first to make offers for the mines. They bid ultimately 2½ lakhs, and, as you will see by your Blue Book, were warmly supported by Sir Chas. Bernard. Messrs Streeter's representative, Capt. Paton, who had enjoyed the great advantage of intimate acquaintance with Mr. Streeter's personal friend, Col. Sladen, and who was then at Simla, cut in with a direct offer to the Viceroy of 4 lakhs. An intimation of this offer was immediately telegraphed to Sir Charles Bernard, who could hardly do less than recommend its acceptance. I protested, as you will see against this, or any other, offer being taken before the Governmen, were in possession of the mines, and before they had had a fair chance of undisturbedly estimating their value—but in vain. Through my legal agents, Messrs. Allen and Van Sommeren, of Rangoon, I also offered to send up to the mines, at my own expense, a competent engineer, who should report direct to the Government; but again in vain. Please do not think, however, that I have any personal grievance to establish. Is there anything else you wish to know?"

"Yes. I should like to know whether you do not think that when the company get to work with machinery they may glut the market?"

"No. Why should they? They have, to begin with, an absolute monopoly, for the true Oriental ruby is found nowhere else. The supply in reserve in their mines is, I have no doubt, practically unlimited, and the former rate of production will be increased, but there is nothing to oblige the company to put out all they might, and they will, of course, regulate the supply to the demand."

"What then do you think is the approximate value of rubies that the markets can absorb?'

"The Western markets, Europe and America, can easily take a million pouuds' worth of fine and medium qualities without danger of affecting values, while the eastern trade will always absorb an unlimited quantity of the lower qualities. I must tell you that although the far largest proportion of rubies produced are inferior, yet there is always a sure market for them in India and the East, where they are used to inlay jade and other ornaments, cups, dagger and sword hilts, the saddles, and even the harness and trappings of oriental magnates. Very few people in Europe have an idea of the enormous quantities of inferior and even good rubies that are in demand for these purposes."

"The company's gain must be a proportionate loss to the unfortunate Burmese. What about the 'native rights' that figured so frequently in the dispatches?"

"There were no 'native rights.' Anyone acquainted with Burmese affairs, and above all the officials, must have known that all property in that kingdom vested in the Crown absolutely and entirely. It has devolved from Theebaw to Her Most Gracious Majesty, whom, as one of her most loyal subjects, I venture to congratulate upon her acquisition, and so I must bid you and the Mining World good day."

AN EXTRAORDINARY BALANCE-SHEET.

We may fairly credit the directors of the St. Augustine Diamond Mine, Limited, with issuing the most extraordinary balance-sheet that was ever submitted to a body of shareholders. On several occasions we have pointed out that, like the prodigal, Saint Augustine (was ever a holy name applied to a more unrighteous concern?) Diamond Mine, Limited, was coming to no good end. We have left our readers to decide whether this was from the inherent poverty of the concern or from the incapable management of the directors, though we rather more than hinted that it was from both. The value of the diamonds raised is put in the balance-sheet at 400*l.*, and the cash in hand, 38*l.* 12s. 7d. The figures on the other side, in contrast with those we have just mentioned, are simply appalling. The subscribed capital is given as 465,000*l.*; "royalty certificates" (whatever they may be), 250,000*l.*; debentures, 14,980*l.*; and sundry creditors, 2,244*l.*; or a total of 732,224*l.* The cost of the mine was 564,993*l.*, which it is no figure of speech to say was dear, when we contrast it with the value of diamonds produced, 400*l.* The expenditure to get this 400*l.* worth of diamonds was 12,896*l.* to June, 1887, and the cost of development since that date, "as per contract dated 8th February, 1888," 150,000*l.* Other expenses call for no special comment, unless it be the heavy charges in London. In the face of figures like these the directors say they "have the pleasure to circulate the accounts made up to the 17th September last." They further add that "the developments lead the directors to expect the most satisfactory results." If the results set forth in this document are a sample of those that are to follow, the directors must be easily satisfied. They naively remark that before the shareholders are summoned together "there are many possibilities;" but so far as we can see the main possibility is that of winding-up. The chairman promises explanations "when he has the pleasure of meeting the assembled shareholders," and these individuals must be lamb-like indeed if they listen without bleating to a tale which tells them how completely they have been shorn, and how little in the process the wind has been tempered to their fleeceless state.

STRIKE IN THE CONSOLIDATED ESMERALDA.

We congratulate the shareholders of this company on the telegram that was received yesterday from the manager, informing them of the strike of rich ore in the south drift on the lowest level of the Durand mine, the asssay value being 180 ozs. of standard gold per ton. This may come as a surprise to those shareholders who have not read the latest reports, and particularly to those who have left unstudied the speech which Mr. Ann delivered on the occasion of the last meeting. A strike of this kind was distinctly foretold, and now that it has come off we offer our sincere felicitations to the directors, the shareholders, and all concerned.

CARLISLE AFFAIRS.

THE shareholders of the Carlisle Company, on Thursday, acted with the wisdom we predicted they would do, in retainiug the services of the board, the head and front of whose offending, in the eyes of a noisy, but not numerous section, of the shareholders, has been that a lode thousands of miles away has fallen off from its original value. As we pointed out, the solitary spot in the conduct of the directors upon which the said noisy, but not numerous, clique could place its finger was the matter of the Empire debentures, and the directors removed all ground of complaint on this head by taking up these debentures themselves at par, and placing the proceeds, with the remainder of the reserve fund of the company, in the Two-and-Three-Quarters per Cents. The truest word at Thursday's meeting came from a shareholder, whose name we for the moment forget, but who said "we have money to carry out Prof. Clayton's recommendations, but we have no money to indulge in the luxury of a committee of investigation." If the Carlisle shareholders had allowed this committee to be appointed, we venture to say that their last state would have been worse than their first—in fact, that there would have been a carcase round which the eagles would have gathered together. As it is, they decided to leave their affairs in the experienced and able hands of Mr. Bladon and his colleagues, and in our opinion, if anything is to be made out of Carlisle for the share holders, as distinguished from committees of investigation, lawyers and professional accountants, they are the men to make it.

TWO DOUBTFUL ENTERPRISES.

THE gentlemen who have allowed their names to appear as directors of the Mineral Phosphate Company, Limited, are not deficient on the side of courage, though they fall short upon that of discretion. Their names will not be handed down to an admiring posterity for anything they have particularly done in the past, and there is certainly no chance of their covering themselves with glory by what they are likely to do in connection with this concern which has had a hostile reception from the discerning portion of the Press. They appear to have relied solely for their estimates of dividends on the report of a Mr. MacAndrew, and not to have supposed at all that it was just possible his views might have been influenced by the fact that he was to accept the post of manager, no doubt with a rattling salary to boot. The calculations of this sanguine gentleman are based upon a selling price of phosphates of 1s. 2½d. per unit, but the directors have been asked whether this price has been obtainable for the last four or five years—in fact, whether 1s. per unit is not just now the maximum price. If this be right, then the superstructure the directors have built upon Mr. MacAndrews's estimates falls to the grouud because of the weakness of its foundation. The estimate of 5,000 tons for the first seven months' working must be taken as a simple assumption; for the example they give of the production of the Emerald mine tells rather against the company than in its favour. Allowing for the time that concern has been at work, the output would not exceed 4,000 tons per annum, and even the best mine in Canada of this kind (the High Rock) is only capable of a production of from 5,000 to 6,000 tons per annum. Great stress is laid on the value of the adjoining property. It is not, however, the value of an "adjoining property" that intending investors wish to know about, but the value of that which they themselves are about to secure. There is a good deal of information about the Emerald, and other mines; but what is positive in these instances is negative in that of the Mineral Phosphate Company, Limited, with which, of course, the prospectus ought chiefly to concern itself. On the whole we are inclined to think that if the purchase of these properties be completed, it will be upon the strength, not of their own inherent merits, but upon those of the adjoining mine. We could name many reasons why investors should not subscribe for shares, but in the witness-box we could not asseverate one which ought to lead them to an opposite conclusion.

A word as to the Bellite Explosives, Limited. The more the prospectus of this concern is studied the less inviting does it appear. There is no distance in this case, and therefore there is no enchantment. Travellers tell us that the picturesque beauty of eastern cities is apt to fade on a closer inspection, and the ornate prospectus of the Bellite Company certainly does not come out well from a close perusal. Our opinion is that if investors place their money in such au enterprise as this they may bid farewell to it as they would to a friend going to an island the cannibal propensities of whose people are well known. Companies with new explosives should be carefully scrutinised. We say this for a reason that will commend itself to the common sense of every person who has arrived at man's estate. New explosives are continually coming to the front, so that the invention of to-day may be superseded by that of to-morrow. It is the old story of the electric light companies which bought patents valuable enough at the time, but which were soon put in the background by better ones that succeeded them. The fate of the electric light companies will befall the Bellite shareholders, and as we feel utterly indisposed to place our own money in such a concern, we take it that the course we think good enough for our ourselves is good enough also for our readers.

Revelations have been made about Bellite, gathered from the contracts mentioned in the prospectus, which should induce each person who has had the courage to subscribe for shares to demand from the directors the return of his money. The directors should answer the questions that have been put to them without circumlocution (1) Whether Bellite is not an infringement of other patents? (2) Whether it has been rejected in Germany because it is not new? (3) Whether they think, upon maturer consideration, that the purchase terms are excessive? (4) What are the present orders referred to in the prospectus, and for whom have they been received? (5) Who valued the factory in Stockholm which the company is to take over?

As to the directors—our opinion is not a high one. The best feature with respect to the chairman, Lord Bateman, is that he is a director of no other company, though some may be disposed to say that this is not an advantage, seeing that he will have to acquire all his experience at the expense of Bellite. Viscount Combermere, one of his colleagues, can supply any information with regard to milk that may be wanted by Bellite, seeing that he is a director of the Dairy Supply Company. Of course there is the inevitable major-general and there are two laymen to fill up the number of five. Is it too late, and we specially make this appeal to Lord Bateman, to reconsider the whole matter from this point of view—whether it would not be well to return the subscriptions to those who have made them, and to close prematurely the career of a company that appears to have failure stamped upon its forehead?

A "TRUST" THAT SHOULD NOT BE TRUSTED.

"THE Concessions Trust, Limited," may have been conceived in innocence and brought forth in purity, but it looks very much as though, like mankind, it has been conceived in sin and shapen in iniquity. We read this prospectus in the light of a distinct invitation to the public fly to walk into the parlour of the promoting spider. 100,000*l*. is the bagatelle which is required in this instance to put the company on its financial legs. There are 400,000 shares of 5s. each, and the scratch board that has been collected may be relied upon to exhibit more promptitude in making the calls than in distributing the dividends. In fact, dividends do not enter into the philosophy of the persons who call themselves founders, and who absorb for nothing a thousand of the shares, for the usual estimates are, with a wise reservation, withheld. The company proposes to give itself a sort of roving commission. It will go into anything and everything. Like the drama of Mr. Crummles it will belong to no people, age or clime, and, therefore, offend the susceptibilities of no one. The mysterious concessions which the vendors hint at, but do not name, must be taken on "trust"—in fact, there is a good deal too much to be taken on trust in this concern, though it should be remembered that in the commercial world men are more often saved by the absence than the presence of faith. We have referred to the scratch board, on which there is a good deal of the ornamental element, including a major-general and a major. The former we observe is connected with the London Cemetery Company, and will, no doubt, be able to officiate in either the capacity of mute or chief mourner when the concern goes to that bourne from whence no company returns.

WEST ARGENTINE GOLD.

THE report issued by the directors of this company is one that gives much occasion for regret, though certainly it casts not the slightest reflection upon the management. They have done their best to deserve success, but they have not obtained it. The falling off in the yield of the ore has quite altered the financial position and exhausted the remaining capital, and the directors mournfully admit that "the yield of the ore is no longer sufficient to cover the expenses of winniug it, whilst on the Carolina series of lodes fresh discoveries have not been made." They have determined to stop all drivages, and to sink a shaft to see whether in depth the promising appearauce of affairs at surface will be borne out, but even the manager is not sanguine as to probable results. A table of returns shows that from April to January, exclusive, 4,494 tons of ore were crushed, producing 2,574 ozs., of the value of 9,007*l*.—the apparent profit in the first five months being 1,081*l*., and the apparent loss in the last five months 1,904*l*. In the seventh department prospects of a far more favourable character are opening out where samples of ore on assay have given from 1 oz. to 9½ ozs. to the ton. From other portions of the report bearing on this department we judge that the prospects are highly favourable, and that if shareholders were to abandon the concern now, when they have all their machinery on the spot, and when their property is by no means played out, they would lay themselves open to the charge of cowardice in mining. A special meeting of the shareholders to consider the position will be held next Wednesday.

HENDERSON AND FORBES GOLD MINING CO., LIMITED.

THIS company has been formed to purchase the concession of mining and other rights over a territory comprising about 34 square miles situate in Swazieland. It is bounded on the north by the famous Forbes Reef property; on the west by the South African Republic (Transvaal); on the east and south by Acton's and Neumann's Concessions; and on the south-west by Pulleyn's Concession. Mr. R. W. Wright, the manager in South Africa of the Forbes Reef Gold Mining Company, has exhaustively reported upon the property. "The formation (he says) is in every way similar to that of the Forbes Reef Concession, a property on which over 30 gold-bearing reefs have been found during the last eight months. A large number of the reefs lately found on the Forbes Concession run in a direct line for the centre of your property, and as there is no break in

the formation, there is every chance of these reefs being picked up by you." This is certainly an encouraging outlook when we are told by all experts who have seen it that the Forbes reef is "the best mining property in South Africa." It is proposed to work on the reefs already discovered (six in number), and to form subsidiary companies for the purpose of purchasing and working other portions of this extensive property. The company possesses exceptional facilities for cheap working, among them being a plentiful supply of water and cheap labour, and it is within easy access of the railway terminus. The board consists of highly influential gentlemen, who are well acquainted with mining in South Africa, and they will have the advantage of the services of Messrs. John Taylor & Sons as managers and consulting engineers. The capital of the company is 150,000*l.* in 1*l.* shares, and the price to be paid to the vendors for the concession has been fixed at 115,000*l.*, of which 45,000*l.* will be payable in fully-paid shares, and the balance in cash, or shares at the option of the company. Everything points to this property turning out a good investment. The lists will close on or before Wednesday next.

THE MONEY MARKET.

City, Friday Evening.

The Money Market in consequence of the more serious financial position in France has been decidedly firmer, and well up to the bank rate, viz., 3 per cent. both for discount and short loans. The efforts of the Government and the Bank of France to avert what would be a crushing blow to French credit are patriotic and praiseworthy, and seem likely to be crowned with success. Although, however, the arrangements made will, it is probable, save the Comptoir d'Escompte from bankruptcy, the Société des Metaux has practically closed its doors, and a liquidator has been appointed. The calls due this week, apart from that of Worthington's Brewery on Monday last have not been heavy, but the repayment of loans borrowed last week have hardened the market. In anticipation of Mr. Goschen's statements in introducing his Bill for dealing with outstanding 3 per cent. debts, the Bank has notified that holders of reduced may, if they desire, receive payment of principal when the next dividend is due, viz., the 5th April, when they would receive 100*l.* 2s. 6d. for their 100*l.* stock xd. The amount of reduced outstanding is about 4½ millions. The Bank return, with an influx of 40,000*l.* from abroad for the week, shows an increase of nearly 200,000*l.* under bullion, and the reserve is better at 15,459,000*l.*, against 16,595,000*l.* last year, or 42¼ per ceut. of the liabilities. The latter have slightly increased, the revenue payments having absorbed 1,140,000*l.* of the private deposits, and added 1,480,000*l.* to the public deposits. The private securities have increased barely 200,000*l.*, and now exceed by that much the private deposits. Money has been in demand, and bills have been more numerous and, what is equally important, a more settled feeling has prevailed to-day, but owing to the result of the application for Treasury Bills, discount rates were easier at 2⅞ per cent. for three months' paper, and short loans were obtainable at 2¾. The amount of 2,200,000*l.* Treasury Bills offered produced tenders for the extraordinary sum of 11,710,000*l.* of which about 3,500,000*l.* were for those maturing in 12 months, and this proves that the innovation will become very popular. Three months have gone at 2*l.* 11s. 11d., six months at 12*l.* 12s. 1d., and 12 months at 2*l.* 16s. 9d. The Paris exchange has further fallen 2 cents to 25.27½.

The Bank has bought and received to-day 67,000*l.* in gold. Bar silver and Rupee Paper are unaltered.

Business at the Stock Exchange has gradually dwindled, dealers being chary of increasing their commitments in the present state of affairs in Paris, while the general public have been at times conspicuous by their absence. Rather more re-assuring advices have been received from Paris with regard to the Copper Syndicate, but most of these are lacking confirmation. The settlement in Paris at the end of the month is looked forward to with evident anxiety, as it will be a severe test as to the strength of the market. Prices, despite the collapse of the Société de Metaux, and the re-construction of the Comptoir, have been well sustained, but the final alterations are not at all serious. The Funds have risen, the New Consols closing ½ higher, on the statement with regard to the conversion of the outstanding Three per Cent. issues. After some hesitation Foreign Government Bonds have risen to a slight extent, in sympathy with the Continental Bourses, although at times there have been some hot contests between operators for the rise and fall, and Paris has supplied the stock. The present is certainly a time for exercising caution in either investment or speculative operations as until it is sure with what amount of success the Paris Bourse can pass through the next monthly ordeal, the most prudent prefer holding aloof, or to slightly alter an old proverb, "not to speculate in haste and repent at leisure." English Railway Securities, although the traffic returns were very good, record adverse balances on the week, more especially among the heavy and Scotch lines. The feeling of uncertainty and despondency so long prevailing in the other markets, has at length settled upon American Railroad Securities, and prices have in consequence fallen away until nearly the whole list shows a loss of ½ to 1 with a special break of 5 in St. Louis and San Francisco Preference issue. Grand Trunk Stocks gave way, the traffic returns showing an increase of 18,500*l.*, as compared with a decrease of 25,000*l.* for the corresponding week. Mexican Railway Stocks were also a shade weaker. In the Miscellaneous departments prices were fairly well sustained.

A very strong tendency has characterised the Stock Markets to-day, and higher quotations have been received from Paris and New York. The arrangements for the new Russian Conversion Loan also tended to assist the upward movement. The loan will be issued on the 29th instant, but the terms have already been communicated to the committee of the Berlin Bourse, and the amount will be for 700 million francs. The Funds have been weaker on the belief that Mr. Goschen intends to offer an alternative of several investments to holders of Consols and Reduced Three per Cents. Indian Government and Colonial Inscribed Stocks, together with several Corporation Loans, rallied ⅛ to ¼ per cent. Foreign Government Bonds were very firm, but the feature was the rise of 1 in Egyptian Unified, Greek, and Turkish Tribute and Defence Loans, the rest being ¼ to ½ firmer, except Peruvian Bonds, which closed weak. Home Railway Securities were firm. Brighton "A" being conspicuous with a rise of about 2. South Eastern "A" were 1⅛ up. Great Western North-Western, and North-Eastern ¾, and others ¼ to ½; Hull and Barnsley fell ½, and Taff Vale 1. The firmness in the American Railway Market continued, and going particularly strong on the receipt of cable advices this evening, and there is an almost general rise of ½ to 1. Grand Trunk Stocks were rather lively, and recovered ¼ to ½ of yesterday's loss, while Mexican Stocks were quiet but firm. The Nitrate group was particularly strong, the Primitiva and San Jorge issues rising 1¼; and others ½ to 1.

Annexed are the final quotations to-day :—Consols Account, 97 13/16, 97 15/16; Egyptian Preference, 103, 103¼; Egyptian Unified, 88, 88⅛; French Four-and-a-Half per Cents., 103¼, 103¾; Hungarian, 84 1/16, 84 1/16; Italian, 94 15/16, 95 1/16; Mexican, 93¾, 94¼; Peru Five per Cents., 13 13/16, 13 15/16; Peru Six per Cents., 14 1/16, 14 3/16; Russian, 1873, 101 15/16, 102 1/16; Portuguese, 65, 65¼; Spanish, 74 5/16, 74 7/16; Turkish, 1871, 88½, 89; Turkish Defence, 100⅜, 100⅝; Caledonian, 117⅜, 117⅝; Great Eastern, 72⅜, 72⅝; Great Western, 152¾, 153; Brighton "A," 144, 144½; North-Western, 178⅝, 178⅞; Metropolitan, 80, 80½; Metropolitan District, 36¾, 37¼; Midland, 136½, 136¾; North British Deferred, 56⅝, 57⅛; North-Eastern, 164⅞, 165⅛; South-Eastern "A," 109½, 109¾; Hull and Barnsley, 33, 33½; Grand Trunk, 11 7/16, 11 9/16; Ditto First Preference 72⅝, 72⅞; Ditto Second, 52¾, 53; Ditto Third, 28⅝, 28⅞; Mexican Ordinary, 44⅝, 44⅞; Canadian Pacific, 49¾, 50; Denver, 16¼, 16½; Erie, 28 7/16, 28 9/16; Milwaukee, 64, 64¼; Lake Shore, 103⅞, 104⅛; Louisville, 62½, 62¾; Atlantic First, 33¼, 33½; Ontario, 16½, 16¾; Ohio, 21, 21½; Norfolk and Western, 50⅜, 50⅞; Reading, 23⅜, 23⅝; Reading Income Bonds, 84, 84½; Union Pacific, 65¼, 65½; Wabash Prefereuce. 26½, 26¾; Ottoman Bank, 11 9/16, 11 11/16; Anglo-Telegraph, 48¾, 49¼; United Telephone, 15⅛, 15⅜; Hudson's Bay, 20⅝, 20⅞; Suez Canal, 88½, 89; Guinness, 31⅛, 31⅜; Allsopp's, 8⅜, 8⅝; Bryant and May. 12¾, 13; Nitrate Railway, 25⅜, 25⅝; City of Mexico Five per Cent. Loan, ¼ dis., par; Salt Union, 12⅜, 12⅞; Primitive Nitrate, 26¾, 27¼.

MINING IN CORNWALL.

A livelier interest has been manifest in the Cornish mine share market during the past week, and at times the market has been exceedingly active and excited. The impression seems to be here that now the copper scare is over a better price for tin will be obtained, and the outlook is considered very good. The chief feature of the week has been the large business that has been done in Carn Breas, a very large number of shares having changed hands at prices varying from 19*l.* to 20*l.* for the meeting. It is said that the 262-fm. level at Highburrow West is now in the midst of a fine course of ore which in the stope behind is worth quite 100*l.* per fm. The sale of 43 tons on Tuesday was very satisfactory, but an increase to 45 tons is anticipated for the ensuing fortnight. Tincrofts have been largely dealt in, and advanced from 11¼ to 13¼, but they soon fell back again to 12, and closed at 12⅞ to 13⅛. A rather large business has been done in Dolcoaths, but the price keeps about 100*l.* On Thursday a few changed hands at 100*l.* 5s. A dividend of 27s. 6d. is expected at the meeting to be held on Monday. Blue Hills nominally 26s. to 28s. East Pool meeting was held on Monday, when a profit was shown on the twelve weeks' working of 3,229*l.*, and a dividend of 10s. per share was declared. The report of the agents was a moderately favourable one. Capt. Bishop is confident that the water from Wheal Agar can never drown East Pool, and in fact he has no fear whatever of its interfering in the least with the working of East Pool mine. The question of intermediate reports was discussed, and Capt. Bishop promised in future to issue such reports. The dividend declared was the smallest for the last ten years, and the mine has gone down in market value since the last meeting held in December no less than 36,000*l.* This fall in the value of the mine is due in a great measure to the free selling of shares by certain adventurers who are looked upon as well-informed. Since Monday the water has slightly increased, but the engine is now only going six strokes a minute. Shares in this mine have been flat during the week and have been freely offered at 30*l.* for the next meeting. Many still hold the opinion that the agents will never be able to cope with the water that must come from Wheal Agar, and consequently sellers are many but buyers are few. At Cook's Kitchen meeting, held on Thursday, a loss on the 16 weeks' working was shown of 1,699*l.*, and the balance against the mine was 1,767*l.* A call of 7s. 6d. per share was made. The report of the agents was a very favourable one, and Capt. Josiah Thomas, in his supplementary remarks to the report, said he always had great hopes in the improvement of the bottom of the mine, and added that the lode which he saw at No. 1 winze at the 39*l.* was the best he had seen in the mine. He had never seen the mine look better, and expressed the opinion that Cook's Kitchen would prove a rich mine in depth. Shares in this mine advanced from 11⅝ to 14½, owing to the improvement in the bottom of the mine; after the meeting, there were buyers at 15½ for the next meeting. The repairing of the breakage at Wheal Agar is being pushed on as quickly as possible, and the bottom of the cylinder is expected to be on the mine in a few days. This is the next piece of casting to be fixed, and directly this is done the work will proceed more rapidly. The water is now between the 160 and the 170, and is rising very slowly. Even with the work being pushed on with all speed, and under favourable circumstances the engine will not be at work before another three weeks. Shares in this mine remain dull, at 10½. Killifreths remain steady at about 1*l.*; not much doing in shares. South Francis have been a little dealt in at 7. South Condurrows remain firm at 7¾. South Croftys have been easier during the week at 8½ to 8⅝, and they close firm. West Setons have been a little dealt in at 5¼ to 5½. Wheal Grenville, 12¼ to 12¾; West Frances quiet, 8⅝, 8¾. Shares in West Kitty have been inactive at 7; Wheal Basset nominally, 6¾, 7; West Basset, 1¾, 2.

REPORTS OF MEETINGS.

ROMAN GRAVELS CO., LIMITED.

COMPANY PROCEEDING VIGOROUSLY—VALUABLE MACHINIC APPLIANCES ACQUIRED AT A CHEAP RATE—IMPORTANT REPORT FROM THE MANAGER.

The first general meeting of the members of this company was held on Wednesday, in conformity with Section 39 of the Companies' Act, 1867, which requires a meeting to be held within four months after the registration of the company—Tufnell Southgate, Esq., chairman of the board, presided.

Mr. Felix F. Wilson (secretary) read the notice calling the meeting.

A BETTER LEASE AND MORE GROUND.

The Chairman: This is a meeting called in pursuance of the statute. The directors on this occasion have no report to make, or any accounts to present, but wish just to let you know how things have gone on since the formation of the company. You will be happy to hear that we have arranged the terms of the new lease on a satisfactory basis, which is set forth in the circular of October last. We expected the draft of this lease to-day, for Mr. More has promised it, but though it is not here, we know it is in hand, and that it will be ready in a few days. With regard to the machinery, I will not say much. Mr. Peter Watson, one of my colleagues, will, no doubt, tell you presently all we have been doing in that respect. We have had a very anxious time during the last month or six weeks, owing to the bad weather and the great difficulty encountered in getting the materials from the railway to the mine. That work is all going on in a satisfactory manner, and I think that now we may be considered to be in pretty fair water. If there is any question that any shareholder would like to ask I shall be most happy to answer it, but first, I think Mr. Watson would like to tell you something about the machinery. (Hear, hear.)

MR. PETER WATSON ON THE MACHINERY.

Mr. Peter Watson (managing director): With regard to the property—of course you are all aware that during the last 12 or 18 months we have suffered from the smallness of the pitwork. We have had a considerable influx of water at the bottom of the mine, and in consequence have had from time to time a material interference with our returns. It became necessary to re-organise the company for the purpose of finding capital to develop the property even more vigorously than we have done in the past. On the formation of the company it was our business to look out for this larger pitwork, and in consequence of its dimensions we had a good deal of trouble in finding what we wanted. We went all through Cornwall and Devon, but failed to find what would suit us. We then had to go into the north of England and Wales, and found the greatest difficulty in making our choice. I should think in this way the better part of six or seven weeks was taken up before we could find anything like what would suit us. After obtaining it, then came the difficulty at the beginning of the year with the railway companies. At the opening of 1889 a new tariff was started by most of the railways, and consequently the local management of the various companies could not undertake to enter into contracts unless they were first submitted to headquarters in London. That caused great delay, and it was in consequence of that that we could not get the pitwork delivered.

DIFFICULTIES OVERCOME.

Then when we did get a proper tariff, the snowstorms came upon us, which hindered us first in getting the pitwork to the mine, and next in placing it in position. However, instead of buying new pitwork, we have got equally as good second-hand, and for about one-half the money. (Cheers.) That will save us many hundreds of pounds, and now we have the whole of it at the mines, and are rapidly putting it in position. We shall go on with the old compressors for some time, but shall want a new boiler, cylinder and cylinder bottom, and many other things that we raised the capital to provide. We have started several of our ends driving in various directions, and some which were very poor at the first have come into ore ground, and have excellent propects of making, I hope, as good a mine as ever we had in Roman Gravels before. Of course you must clearly understand that it is a work of time to fix this pitwork, to fix the various parts of the machinery, and to open out the mine; but, at any rate, we have started the work under the happiest auspices. The chairman alluded to the new lease, but we not only negotiated for that, but

WE HAVE THE PROMISE OF SOME ADDITIONAL GROUND,

which, we believe, will not merely be beneficial to the company, but also to the landowner, Mr. Jasper More. We can develop it in the course of a comparatively short time, whereas by sinking a new shaft and putting up new machinery, it would take a course of years before anything could come to the benefit of anyone. Therefore, this ground being possessed by Roman Gravels will add very materially to its prosperity. It was always believed it would be so, and from what we see of the dip of the shale, and the dip of the ore ground, we believe that when we come to drive levels north and south, and sink the shaft on the course of the vein, we shall open up a very good mine. I will now ask the secretary to read a report from Capt. Waters received to-day.

The Secretary read the following report:—

IMPORTANT REPORT FROM THE AGENT.

19th March.—According to your instructions, I now beg to give you below, first, a full account of the present position of the underground workings, and of their future prospects; second, an epitome of the work done since operations were commenced by present company in November last, including that in connection with the change of pitwork in main engine shaft. New south shaft: The 135 is driven about 32 fms. south; the lode in present forebreast being in two divisions, the footwall part, which is the part being carried, is worth 2 tons of lead ore and good stones of blende to the fathom. I would add that the Big Spar, upon which the main footwall deposit is usually found, is standing to the west of this drivage with country rock between, and it may be that we are now going forward upon the minor portion of the said main footwall division, and, therefore, by the side of the principal ore course. This, however, will be proved in due course as the end advances. It is well known to you that this level has passed through a very rich bunch of ore, and that, as far as we have been able to judge, the vein has been more productive along the foot of the drivage than elsewhere. Taking into consideration the dip of the beds, and of the courses of ore passed through in the levels above, and seeing that the second run of ore in the 125 south of this shaft extended to a point immediately over the present 135 end, there is no doubt but that the latter level will require to be driven several fathoms further before a corresponding point with the above, and before, therefore, the end of the bunch in question will be reached. It is important here to note that in the ground driven through at the 135 south, corresponding with that at the 125, the vein has been much more productive at the deeper level, a good omen of the increasing richness of the ore deposits, as greater depth is attained. Comparatively speaking, very little work has been done by present company below the 125, on account of the difficulties experienced by breakages of the pitwork, which caused the workings to be flooded with water from time to time. The stopes in back of this level, two in number, average 3 tons per fm. each. The driving of the 125 south was resumed in December last, from a point, say, 35 fms. south of said shaft. The lode in the forebreast was in two divisions, neither of which carried ore to value. We went forward on what we considered was a part of the main foot-wall portion, and inclined the drivage to the west, in order to reach the said main division, which had not been seen further south than in the stopes some 3 fms. or 4 fms. behind the end. This object has not yet been attained, but two or three nice ribs of lead ore have been passed through, which are no doubt off-shoots from the main ore deposit. The driving of the 110 south was resumed in December last from a point 277½ fms. from main shaft. At this time we were stoping at a point, say, 3 fms. above, and 4 fms. in advance of the forebreast. (We have now three stopes at work here, worth respectively 2 tons, 1½ tons and 1½ tons per fm.) The forebreast is now 286 fms. from shaft, and has just reached the ore ground, but is not far enough to catch the proper dip of the bunch. We value the end to-day at 1 ton per fm. It may, I think, be reasonably inferred that this bunch exists in front of every forebreast in this the south end of the mine from the 65 down to the 135, and taking the very flat inclination of the beds and of the shale into consideration it is evident that the length of the metalliferous strata increases at each successive level as we go down. The driving of the 110 north of old shaft—on east lode—was also resumed in December last, and has since been driven about 3½ fms. The lode has been strong and wide throughout, and has varied in value from 15 cwt. to 25 cwt. of lead ore per fm. The forebreast is just now reaching a point above which at the 95 a good bunch was found. The Roman lode and east lode were in junction at this level at a point, say, 12 fms. behind present end, but the former has not been seen further north, and we therefore purpose, as soon as circumstances will permit, to cross-cut and prove its productiveness or otherwise. Caunter lode: The 80-fm. level north-west of Roman lode is now driven 7½ fms.; the vein in the forebreast to-day being in two divisions, together 2 ft. wide; worth 1 ton of lead ore, and saving stuff for blende to the fathom. We resumed this drivage from a point 2½ fms. from Roman lode, the lode in the forebreast being 1 ft. wide, well spotted with lead ore. We have to-day started to drive north-west at the 65-fm. level, and shall go forward on the foot-wall portion which shows favourable signs of productiveness. It cannot be expected that this lode will be found very productive until we get beyond the influence of the Roman vein. The Caunter was not explored north-west of the Roman by former workers of the mine below the 40-fm. level, but above; considerable returns were undoubtedly made. It is evident that both this and the Roman became unproductive at, and about, the 40 and 50-fm. levels. At the 65, however, the latter opened out again and became exceedingly rich, and I think, therefore, that we have every reason to expect that the Caunter will follow suit. It is with this end in view that we are driving out at the 65 and 80 levels, and also to prove the productiveness or otherwise of the Saw-pit lode, which will be intersected. The Saw-pit, as stated in several reports, was very productive indeed from surface down to the adit, below which it has not been proved. There are two stopes at work in bottom of 110 south-east, worth together quite 3 tons per fm. A stope in back of 125 south of Edward's winze, worth 1½ ton per fm. No. 1 stope in back of ditto north of Lewis' winze, worth 2 tons per fm. No. 2 stope ditto ditto, worth 2½ tons per fm. No. 1 stope south of ditto, worth 1 ton per fm. No. 2 stope south of ditto, worth 1½ ton per fm. To go into further details with respect to the prospects that are held out for the working of the mine below present depth would but be to repeat my full report to the shareholders in October last, to which I beg to refer you. We have taken out all the old pitwork from the 125 up to the 65-fm. level. The new 15-in. drawing lift is fixed from the 125 up to 110. The new 14-in. plunger bottom is fixed at the 110-fm. level, and the column will be completed to the 65 to-morrow evening. As you are aware, we have ordered a new 60-in. cylinder, bottom and piston (complete) from Harvey and Co., Hayle, which will enable us to give our pitwork a stroke of 8 ft., instead of as at present only 6½ ft. The larger pit-work has entailed upon us the necessity of putting in new main stays for main rods, &c., and necessitated the cutting of a lot of ground in the shaft. We have erected a new shears for capstan, and added a new drum and gearing to the semi-portable engine, making it equal to all that will be required of it for capstan work. The severe weather has from time to time considerably checked our progress, as difficulty was experienced in getting the new work up to the mine, and the frost and snow prevented any work being done at surface in connection with the new shears and the necessary building. There will be a few tons over 200 in the bin after present sale (100 tons) is sent away, and about 50 tons of blende; and say, 400 tons of lead ore broken underground.—A. Waters.

QUESTIONS.

Mr. Carter: I have come into this company quite recently. You have spoken of a new bottom to the cylinder. What is your consumption of coal?

Mr. Watson: From 350 to 400 tons a month.

Mr. Carter: Have you considered the advisability of getting a mechanical stoker? Some of my relatives are not paying half so much for coal as they did formerly, thanks to this contrivance.

Mr. Watson: We shall save a good deal by having this cylinder. Coal is a very heavy item. It is not merely its original cost, but the

charges for conveying it to the mine. Altogether we expect to make a very great saving in coal.

IS THE CAPITAL ENOUGH ?

Mr. Carter: I would ask another question as I am a new shareholder; and I must say that whenever I go into anything of this kind my first experience is that the shares go down.

Capt. Paull: I hope that this will be the reverse.

The Chairman: In other words—the exception that proves the rule. (Laughter.)

Mr. Carter: My question is—have you sufficient capital to do all that you wish to do?

Mr. Watson: That is certainly my opinion.

Mr. Carter: Then I am satisfied, because that is the main point. No doubt Roman Gravels is a good mine if it is opened out. (Hear, hear.)

Capt. Paull: It is some years since I was underground in this mine, but, I know that there are fine bunches of ore yet to be laid open in it. I am satisfied of that from what I saw on the occasion of my last visit, and from what I have seen and heard since.

Mr. Carter: When do you expect to get the water out?

Mr. Watson: I should think in about a month or six weeks from this time.

The Secretary: We were working in the bottom until we took the pumps out the other day. The water is rising at the present time, while the new pitwork is being put in.

Mr. Watson: We commenced changing the pitwork on the 4th of March, and that is the time at which we were obliged to let the water in.

Mr. Saunders: Are we paying current expenses?

SALES.

Mr. Watson: We cannot get at the ore while the water is in. The cost of the pitwork and other machinery and work will go, of course, to capital account. We sold 100 tons last week, we shall sell 100 tons next week, and another 100 tons the week after. (Hear, hear.)

Mr. Saunders: Does not that keep you going?

The Chairman: Not with lead at 8*l*. 17s. per ton. It has taken sometime to raise.

POSITION SUMMARISED.

Mr. Watson: I think, on the whole, the mine has improved. I had a letter from Mr. Waters the other day, in which the following sentence occurs:—"You will be pleased to hear that everyone says we have secured a capital lot of second-hand machinery. The mine is looking better all round, and I think we shall find a big bunch in front of the 80, 95, 110, 125, and 135-fm. levels; so that you see that will be 60 or 70 fms. high and dry ground, going away south." (Cheers.) He has repeated that in several of his communications, but has reported upon it more fully in what you have heard read by the secretary to-day.

Mr. Saunders: What is the value of the shares at the present time?

The Secretary: There are very few transactions at present.

TOO TRUE.

Mr. Watson: The price of shares is no criterion as to the value of a mine. There are some mines selling for hundreds of thousands of pounds that are not worth hundreds. The nominal value—that is the market value—of this mine is a mere farce when you come to consider that 40,000*l*. has been spent upon the mine. It would have continued to pay dividends from the time it commenced them to the present day but for the fall in the price of lead. That it has not done so is not the fault of the mine, but of the low price of lead. (Hear, hear.) The prices of gold and diamonds do not fluctuate so seriously. The price of lead now is 8*l*. 10s., or 9*l*., as against, at one time, 16*l*. 10s. to 17*l*. 10s. There are only two or three purely lead mines left in this country. Roman Gravels is one of them. There are other mines producing large quantities of lead and blende together, but Roman Gravels has been almost a purely lead mine.

The proceedings were then brought to a close.

EAST POOL.

DIVIDEND OF 10s. PER SHARE.

A meeting of the adventurers in East Pool was held on the mine March 19th, under the presidency of Mr. J. R. Branwell.

Labour costs for the 12 weeks to March 9th had been 6,828*l*. 3s. 11d.; merchants' bills for December and January, 2,155*l*. 11s. 1d.; income tax for one year, 956*l*. 17s. 6d.; dues, 1,032*l*. 1s. 9d.; and Stannary assessment, 16*l*.; total debits, 10,988*l*. 14s. 3d. The credit side of the accounts showed—tin sold, 266 tons 12 cwt., at an average price of 50*l*. 12s. 6d., for 13,497*l*. 7s. 6d.; arsenic, 465*l*. 8s. 4d.; copper, 106*l*. 3s. 9d.; other amounts brought the total up to 14,218*l*. 5s. 3d., leaving a profit of 3,229*l*. 11s. Last time 269 tons of tin were sold for 14,909*l*., arsenic produced 840*l*., and wolfram 265*l*., the profit being 4,800*l*.

The Chairman said the committee recommended a dividend of 10s. per share, absorbing 3,200*l*., and leaving 29*l*. 11s. to be carried to the reserve fund, which would now amount to 3,254*l*. 17s. 1d. The statement was not quite so good as they would like it to be. The difference between the price of tin on this occasion and at the last meeting was responsible for something like 4s. a share, and their not having sold any wolfram, and the fact that the arsenic was less would account for a further deficiency of 1s. 6d. per share. These causes were responsible for the state of affairs, because there was no great falling off in the mine, and they would see that the difference in the amounts of tin sold this and last time was but three tons. The average produce was somewhat less, being 50 lbs., as against 52 lbs. last quarter. He moved that the accounts be adopted, and a dividend of 10s. per share declared. (Hear, hear.)

Mr. Woolcock seconded, and hoped this was the last time he would have to second so small a dividend. They must have bigger dividends than that.

The ordinary business was transacted.

FATHER AND SON.

Mr. John B. Reynolds, of 37, Walbrook, is "exceedingly sorry" that the shareholders of West Polbreen will not spend any more money upon this unprofitable mine. We can quite understand Mr. Reynolds' regret, for no doubt he and the lesser Reynolds always earned a little out of the management. But Mr. Reynolds has no idea of letting West Polbreen slide, although he admits that the tin ground discovered "has been already exhausted." He thinks that, though the mine must be sold to suit the views of majority of the shareholders, the minority should combine to buy it. "Large losses have frequently been retrieved by this policy, and, therefore, I shall be glad to assist such shareholders in any way I can by opening a purchase account forthwith." Mr. Reynolds agrees to the sale of the mine with reluctance, and only because the disgusted shareholders "may be within their rights, and, under the circumstances, it would not be wise to act at variance with their wish." This is a marvellous admission from the Bombastes of 37, Walbrook. He is seldom so considerate towards the shareholders of whom he is the servant, though he treats them in such a masterly way. We do not anticipate that many of the shareholders will be disposed to subscribe to buy West Polbreen just to keep an iron in the fire for the two Obadiahs. Mr. John B. Reynolds's administration has not been such an unqualified success as to induce a fresh trial of it, and it is quite possible that it might be advantageous to have the mine wound up independently, and not, as Reynolds aîne purposes, by Reynolds cadet.—*Financial News.*

DEVON GREAT CONSOLS MINING CO.

This company is still the largest producer of copper ores in this country. The directors have determined, in view of the present disorganised state of the copper market (so we learn from the chairman and managing director, Mr. Peter Watson), not to sell any ore at the present prices. Other Cornish and Devon mines will, it is expected, adopt this commendable course. The directors of foreign copper mines would do well to immediately follow this prudent policy.

The latest report from Devon Consols is as follows:—

21st March.—Wheal Maria, Eastern shaft, Capel Tor lode: In the 86 east the lode is 3 ft. wide, and continues to yield saving work of copper and mundic ores. In the 86 west the lode is 2 ft. wide, of a promising character, and yielding a little copper and mundic ores. There is no alteration in Rutter's rise in the back of the 74 west, and the same remark applies to Sargeant's winze in the bottom of the 62 west. Wheal Emma railway shaft, new south lode: There is no alteration to remark on in the cross-cut north at the 260 west since last advice. Watson's engine shaft: In the cross-cut south, at the 86, the ground still continues without alteration. In Lark's rise, in the back of the 148 west, the lode maintains its size—4 ft. wide—and continues to yield 5 tons of copper and mundic ores per fm. In the 136 east and west the lode in each direction continues very promising. It is also of good size, 4 ft. wide, and is yielding 5 tons of copper and mundic ores per fm.—I. Richards.

COMMERCIAL NOTES.

(*Continued from page 491.*)

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increases:—London Street, 146*l*.; Provincial, 671*l*.; London, 492*l*.; North Metropolitan, 864*l*.; Belfast, 282*l*.; Southampton, 9*l*.; London Southern, 9*l*.; Sheffield, 172*l*.; Hull, 51*l*.; Calcutta, 65*l*.; Continental Metropolitan, 91*l*.; Glasgow, 413*l*.; South London, 32*l*.; Bristol, 355*l*.; Gothenburg, 49*l*.; Bordeaux, 74*l*.; Imperial, 50*l*.; Sunderland, 91*l*.; and Swansea, 49*l*. Decrease:—Calais, 19*l*.

MISCELLANEOUS.

A branch of the Capital and Counties Bank will be opened on the 25th inst. in Birmingham, under the management of Mr. Edwin Rhead, hitherto the manager at the Redditch Branch.

The Hamburg, Altona and North-Western Tramways Co. announce that the interest on the debenture bonds, due the 31st inst., will be paid by Messrs. Lloyds, Barnetts and Bosanquets, 72, Lombard Street, London, on and after the 30th inst.

From the report of the Roburite Explosives Co. it appears that no dividend can be declared for the past year.

Major-Genl. Sir Reginald Gipps, K.C.B., has joined the board of the London and Lancashire Life Assurance Co.

The English Bank of Rio de Janeiro notify to the holders of Seven per Cent. Debenture Bonds of the Western Railway Co. of Sao Paulo that the interest thereon due on 1st April will be paid by them on and after that date.

Mr. Justice Stirling has appointed Mr. E. H. Collins, official liquidator of the Diamond Cutting Co.

The Royalty Question.—The Government have consented to the appointment of a Royal Commission to inquire into the question of royalties upon mines.

Sam Christian Gold Hydraulic, Limited.—An extract from a private letter from Mr. Hambley, dated 8th March, and received 21st March:—As to clean-ups we have only recently settled our long-delayed dispute with the farmers. I expect, however, from this time on, to work regularly and on pay gravel. I expect to make a clean-up early next month, and to continue making monthly returns from that time. At the big cut—you remember the place where all the 8 lb. pieces were found—we have traced the gold out of the gulch on to the hill sides in grass roots, and I believe all the ground along the belt of veins from the saw mill to Moore's dry hollow (below the reservoir) will pay. The last few days we have found about 200 dwts. in nuggets in grass roots. One piece of solid gold found yesterday weighed 50 dwts.

SOUTH AFRICAN NEWS.

LATEST TELEGRAMS, &c.

South Standard (Witwatersrand).—Letters of allotment in this company have been posted.

Manica.—It is announced that the letters of allotment in the Manica Ophir Mining Company, Limited, have been posted.

Barrett.—Cablegram from their mine manager :—"24 days' work; 960 tons crushed ; 193 ozs. gold." Have remitted 250 ozs. gold."

Sunbeam.—A cablegram to-day from the solicitors in Pretoria, dated 20th March, states :—"Sunbeam title verified ; possession given."

New Jagersfontein.—Preparatory to the declaration of a dividend, the transfer books will be closed from March 30th to April 8th, both days inclusive.

Edwin Bray.—The directors have received a notification to the effect that the Oriental Company has struck good ore adjoining the Edwin Bray Mine.

Gordon Diamond.—Return of work done at mine for the week ending 16th inst :—Loads blue hauled, 6,500 ; loads blue washed 5,600. Diamonds produced, 1,800*l*.

Moodie's Golden Quarry.—Work is being energetically pushed forward night and day, and the mine is being rapidly opened up. Preparations are being made for an early crushing.

Ferriera.—The secretary has received the following cablegram from Johannesburg :—"At a special meeting yesterday. Increase of capital, 5,000 shares ; purchasing seven deep claims 50 stamps."

Mount Morgan.—The Richardson reef has been struck 7 ft. wide, showing visible gold. Samples of the new strike have been brought into town, and the stone appears to be very rich. The battery (six stamps) is crushing satisfactorily.

London and South African Exploration.—The directors have declared a dividend of 5s. per share, less income tax, for the quarter ending the 31st inst., payable on and after the 30th inst. The transfer books will be closed to that date.

South African.—The following particulars of work relate to the week ending February 16th :—Blue ground hauled, 4,460 loads ; blue ground washed, 2,561 loads ; sumps washed, 2,872 loads ; diamonds obtained, 1,137 carats ; estimated value, 1,137*l*.

Durban-Roodeport.—Cablegram from the mines, dated 16th inst. :—"Since our last cable (2nd March) we have crushed 315 tons of quartz, producing 654 ozs. of retorted gold, working 10 days ; one day lost by reason of various causes which will be explained by letter."

Oriental and Sheba Valley United.—We hear that the allotment of the new 60,000 shares in the amalgamated company will give applicants, as far as Barberton and Johannesburg are concerned, about 5 per cent. of their applications. This says much for the faith felt in the future of the company by investors generally.

Wemmer.—The following cablegram has been received from Kimberley, showing the results of the crushing of the company for the month of February :—"1,245 tons quartz and casing raised ; 1,543 tons crushed ; 1,259 ozs. retorted gold won from same." A cable message has just been sent from the company's head office at Kimberley stating that the board are arranging to pay dividends quarterly.

New Akankoo.—In a letter dated February 6th, which we have lately received from the mines, the managers states :—Mining goes on as usual. We are driving all the levels, and have a lot of ground ready for stoping, which, when we start, will give us all the stone necessary to run the mill constantly. The mine is nicely opened up and the men can work now, and have cool, nice air to breathe, and good ground to work in. We have since received a telegram from him announcing the shipment of 157 ounces of gold.—H. D. Boyle.

Great She.—Working for week. No. 2 syndicate block : The low level drive west from the bottom of the quarry is making good headway. Progress last week by night and day shifts, 14 ft. 6 ins. ; the quartz now gives nearly an ounce prospect. The high level drives east from shaft above quarry is going forward with two shifts ; the quartz has become much richer, and gives over a 2-oz. prospect. Magnet block : The Magnet shaft having been sunk to a depth of 74 ft. is now temporarily suspended, while the erection of a horse-whim for hoisting is in progress. Standard block : A high level drive south across the measures is going forward towards the hanging-wall of the reef.

George Walker (Moodie's).—The secretary has received the following :—Extract from manager's letter of 14th February. North reef : The ore section of the western shaft continues about 18 ins. wide, and pans well throughout. This shaft is now down 19½ ft., and will soon be communicated with the drift from main shaft. The main shaft on this reef being in hard sterile rock at present is not sinking, as we have three other shafts going down, two of them in ore. South reef : The main shaft has been enlarged in the bottom to give better blasting facilities, and sinking re-started ; total depth, 43 ft. The eastern shaft has also been enlarged, and is now sinking on a lode about 2 ft. wide of ferruginous shale, carrying small strings of quartz throughout the mass, and giving fair shows of gold ; total depth, 21½ ft. No. 1 level west of creek, or western section : An open cutting has been brought in from the creek to a point suitable for a level, from whence we have cross-cutted 26 ft., and cut a well-defined vein carrying a quartz leader of about 9 ins. in width. General : All the points with the exception of the main shaft, north reef, are giving a little ore, and we are consequently accruing ore at surface for later milling.

Transvaal Exploration and Land.—The following particulars are from manager's advices of February 18th :—Mines : Theta vein —During the week 60 tons have been extracted, assaying 6 ozs. 4 dwts. gold, and 4 ozs. silver, per ton. The vein has improved in appearance, and now averages 6 ft. thick. During week 150 tons have been carted to mill, and the work is being continued vigorously. Columbian Hill : Bore-hole No. 3 has been sunk 11 ft. during week ; total depth, 100 ft. The formation continued without change. No. 4 has been sunk 12 ft. through loose slate, earth and white quartz. Beta vein : During week a paddock was stripped nearly down to the vein, but no ore extracted. Brown's-hill mill : Battery—The battery was at work for 100 hours, and crushed 122 tons ore from Zeta vein, assaying 2 ozs. 18 dwts. per ton. Clean-up of plates yielded 222½ oz. of amalgam. The figures for crushing of Theta ore in previous week are :—122 tons crushed produced 1,054 ozs. amalgam, yielding 331 ozs. of gold, equal to 2 ozs. 14 dwts. 3 grs. per ton. Pans : The pans ran for 110 hours, and treated 36 tons, tailings from Theta ore assaying 2 ozs. 2 dwts. per ton. Figures for clean-up in previous week are :—39 tons blanketing from Delta and Eta ores produced 231½ ozs. amalgam, yielding 48¾ ozs. of gold, equal to 1 oz. 5 dwts. 2 grs. per ton.

Vogelstruis (21st. Feb.)—No. 2 shaft : The machinery at this shaft is still being erected, consequently all underground work is at this point temporarily suspended. No. 3 shaft : This latter shaft is down about 70 ft. We propose continuing its sinking, water permitting, to the plane of the drainage level, 90 ft. vertical below surface. At the 50 ft. point a reef was cut, for which we shall again cross-cut at the 90 ft. point. The reef referred to (perhaps south reef) is about 16 ins. wide, well defined, and gives a fair gold prospect. South reef : In Maddock's and Rosewaine's winzes the reef in the (4) drifts is about the same in general appearance. After another month's drifting in each, if reef continues up to present appearance, a nice length of south reef will have been laid open, available for stopping. Main reef stopes : Stopes are being opened out east and west of winzes. Nos. 1, 2, and 5 respectively. The bulk of our quartz for milling purposes will be obtained from these six stopes, and on the whole they are affording considerable ore. Drainage level : I am glad to report the drainage level has penetrated the mud dyke, and is now being driven on in solid reef, being also on the point of communicating with No. 6 winze. Battery : On the 19th a preliminary trial was made. The start may be considered as satisfactory. A few matters of detail, however, are now being attended to, but on Monday (25th) we hope to commence regular crushing. Barring unexpected delays we shall continue the mill run till end of March.—C. Rowe.

Nooitgedacht Estate and Gold.—Report from the manager dated 20th February.—Button's lode, No. 3 section : The lode on the main level is again opening out, and is carrying a view of rich pyritic ore several inches thick. The 145-ft. drive west continues rich, and has over 2 ft. of ore. In the 90-ft. drive west the reef is thin and of a low grade. The 90-ft. drive east shows 2 ft. of decomposed quartz of a fair quality. No. 1 level east has a large lode over 5 ft., but the quartz is coarse and vitreous and of a low grade. In No. 1 level west the lode has widened out to 2 ft., and has also improved in quality. No. 4 section : In consequence of the sudden influx of water the main drive has not been extended much since I last wrote. The lode shows no alteration, being still 3 ft. in thickness and very rich. In the 10-ft. cross drive east the end shows the lode, 4 ft. thick, mostly of a milky white quartz, with patches of pyrites, estimated to yield 125 tons of ore of 1 oz. grade (for milling) per fm. The forebreast of the 80-ft. level west shows 3 ft. of quartz heavily charged with ferruginous matter. Davidson's reef : No. 3 level is still going forth in a good lode 2 ft. thick. The 80-ft. level west has also 2 ft. of rich "vughy" quartz, which will go at the mill at least 4 ozs. per ton. In the 80 ft. drive east the end shows 3 ft. of high grade quartz slightly impregnated with pyrites. At the No. 2 level the two cross drives show no falling off in value, and have an aggregate width of ore of 5 ft. No. 5 level continues much the same as when last reported on. In getting out the mill sites (which is situated on the outcrop of the new reef) we shall obtain sufficient gold from the quartz that is being broken, not only to pay for excavating the ground, but also to meet the whole cost of the mill. Machinery, &c., has at last left Natal, and should be here in the course of a week or two.

INDIAN GOLD MINING.

(From the *Pioneer*.)

The reef on which the Mysore Company is at work is the same as that which passes through the territory of the Balaghat, Nundydroog, and Ooregum Companies, and it is fairly within the bounds of reasonable expectation that in these workings also, when milling resources are developed, the crushings will show very large results. Then, parallel to the Champion reef which runs through the concessions already referred to and some others, there lies another, the Maharaja reef, which promises to prove no less a "true fissure vein" than its companion. On this reef the South-East Mysore Company is at work, and has proved the value of one of its lodes at two points under the old workings. At one of these the assays were over 3 ozs., and though the milling resources hitherto available have not been sufficiently extensive to yield a large out-turn of gold, they were expected to cover all mining costs last month, and with further machinery ordered it seems fairly probable that the mine will establish its position in the market very shortly as a highly profitable business * * * Some day the London Stock Exchange will wake up to the fact that the Mysore mines are immense realities, with shares still quoted at rates appropriate to uncertain speculation. Then there will be a grand carouse, and Nundydroogs, Mysores, or South-East, as the case may be, will become a "feature" of the market. Let the speculation turn out as it may, the result will be good for India, turning more capital in this direction, and helping people in Europe, where such floods of money are always banked up waiting for opportunities of profitable employment, to understand that this—the oldest country of the world historically—is none the less one of the newest and most promising industrially.

An English Mining Company in Servia.—Our Belgrade correspondent telegraphing last night, says :—The greatest quicksilver mine in Servia, which is situated on the Avala, 14 English miles from Belgrade, and close to the most important Servian railway line, was to-day sold by the Servian Syndicate which owned to it an English company. The concession of these mines is advantageous, as it comprises the very best mineral ores diselosed in Servia up to the present. They include silver, lead, and gold in plenty, and promise enormous receipts if energetically developed. They have been examined by an expert, who reports favourably, and the exploration is to be favoured by the Servian Government in every possible manner.—*Daily News*.

BURMA RUBIES.

Now that the iron horse has reached Mandalay, the district of Mogok in Upper Burma that has for ages supplied the world with its most precious stone—the ruby—has been brought well within a month's travel of London.

Lest, however, some blasé globe-trotter should be tempted to incontinently add Mogok to his itinerary, let us warn him that to avoid the disappointment of being turned back within hail of his goal, he should before starting make quite sure that he is persona grata with the Burma Ruby Company, and should furnish himself with the best recommendations he can obtain to some well-placed Anglo-Burman official.

In the meanwhile we can partially satisfy his curiosity.

From a report by the Government engineer (Mr. C. Barrington Brown), presented by him to the India Revenue Department in June last, and which has not as yet been accessible to the general public we take a few interesting details,

To begin with we must first speak rather of the ruby fields than of ruby mines; for mining, properly so called, has never been practised in Burma, the alluvial deposits only having been worked, and that only in the most superficial and primitive manner.

These deposits exist over an area estimated at 66 square miles, the whole of the alluvium of which may be described as rubiferous.

The three descriptions of diggings in which the ruby is at present won by the Burmese are locally known as follows :—

1. Twinlones, or pits in the alluvium.
2. Medwins, or open cuttings in the hillwash, and
3. Loodwins, the name given by the Burmese to the caves and fissures in the limestone, extending in every direction, and often reaching great depths, and from which is excavated a brownish clayey loam containing rubies. In the alluvial workings water is met with at an average depth of 8 ft., and in such volume as to flood the workings during the night, so that the first few hours of each day's labour is baling out the hole with bamboo baskets, pumps being unknown. That under such dispiriting circumstances the native miners should not have sunk to any considerable depths is not surprising. Nor was Mr. Brown able to make anything but a superficial examination of the alluvial, for he writes :—

"I have endeavoured to ascertain the nature of the alluvium below the clay near Mogok, and whether there was a second ruby-bearing gravel beneath, but was unable to induce the Shan miners to undertake the work, the screwing and unscrewing of the rods being by them considered a most laborious task. After one day's trial, they could not be induced to continue the work, and as the boring tools did not arrive at the mines until a short time before the termination of my investigations, I did not deem it advisable to waste time over it."

The "Medwins" are the most numerous of all classes of the workings, and are cuttings of an elongated form, the lower end of which is open to a gully. In commencing this sort of mining some little outlay of capital is necessary in leading water to the head of the working. Want of means and appliances, and almost entire ignorance of engineering has compelled the Burmese to leave untouched numerous sites that the modern hydraulic engineer will promptly devastate. Mr. Brown, in fact, strongly recommends the hydraulic system of working as being specially applicable over a very large area.

Of the third description of workings, "Loodwins," there are only eight now at work, but the immense number of old cave diggings attest the importance of these in former times. They are said to have produced the largest and finest rubies. A miner told Mr. Brown of three vertical shafts in the Pingu Hill, near Kyaptpyen, once filled with detritus, which it took three months to sink through, and in which, on reaching the ruby clay, every basket of that substance brought to the surface produced half its bulk in rubies. One of these shafts is called the Royal Loo, and from it came one of the finest rubies ever found, which is said to have been as large as a walnut, and which was sent to the king.

The matrix rock from which the ruby has been liberated by disintegration, and which is described by Mr. Brown as a granular limestone (calcspar) interbedded in masses of gniess, is frequently exposed throughout the country, and exists over the whole region. That this rock has not been mined in recent times is due to the prohibition of the use of gunpowder. But that it is the true home of the ruby is shown by the following extract from Mr. Brown's report. Speaking of an exposed calcspar bed near Mogok, he says :—"Here the miners formerly blasted the rock, breaking the stone thus procured with hammers, and chipping out the enclosed rubies. By this rough method of proeedure the rubies were more or less shattered; nevertheless some good stone obtained. Two men employed by me for a period of ten days procured in this way 14 good-sized rubies and numerous small ones from 1½ cubic yards of rock."

As Mr. Brown does not give the approximate value of the rubies so obtained, nor even their weight, we must confine ourselves to remarking that such results at least sound far better than diamond mining, in which the yield from the "blue," or matrix, rarely, if ever, averages a carat per "load" of 16 cubic feet, even from the richest claims.

There is no reason to suppose that the calcspar ruby matrix will not be amenable to analagous treatment with the diamond blue. In any case science will quickly discover a proper method of compelling the matrix to release its treasures, and hence there can be no doubt that the future main source of the supply of the ruby will be the limestone beds that appear from Mr. Brown's report to be practically without limit. In the face of such boundless potentialities Mr. Brown has not committed himself to any estimate of possible output, and, indeed, the making of any such calculation did not enter into his duties.

It will be seen, however, in the account of the interesting interview between Mr. Moritz Unger and our Paris correspondent which we give in another column, that Mr. Unger, no mean authority upon anything concerning precious stones, considers that the mine can easily turn out 1,000,000*l*. worth of rubies per annum.

Without in any way committing ourselves to Mr. Unger's estimate, we may show what such a return would give upon the company's capital of 300,000*l*, supposing it to be fully called up.

Gross annual revenue		£1,000,000
Fixed rent payable to Government ...	28,000	
Working expenses (say 10 per cent). ...	100,000	
		128,000
Net annual profits...		£872,000

On the other side we have :—

Government share of net profits (one-sixth) ...	£145,334
Dividend of 15 per cent. upon 299,000*l*. ordinary shares	44,850
Further dividend upon ordinary shares at 110 per cent. per annum...	329,890
A like amount divisible amongst 1,000 founders' shares	329,890
Balance forward	22,036
	£872,000

The natural reflection that arises from a consideration of such a magnificent prospect is whether the Indian Government did not act somewhat precipitately in disposing of the Ruby monopoly. Why, for instance, did not our diamond mining magnates get at least a chance of bidding? Some of them must have saved something out of the sixty odd millions that their mines have yielded them during the last few years, and that they are apt at financial combination and daringly speculative we know only too well.

It is impossible, after reading the Blue Books, to get rid of the impression that the Indian officials were in a desperate hurry to get rid of their windfall; in fact, the first concession to the Streeter syndicate was made months before our troops were able to advance into the district, and the sending of Mr. Brown appears to have been only an afterthought forced upon the Government by awkward questions in the House of Commons.

We could understand the Grand Turk jumping at the first bid for such a prize, or any other, but Calcutta is not Constantinople and we think Lord Dufferin's government might at least have waited to ascertain what they had before they disposed of it.

Our object, however, is not to bell the official cat, but to place before our readers some facts about the Ruby mines that have not before seen the light of day.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

MYSORE DIVIDEND.

To the Editor of the Mining World and Engineering Record.

Sir,—Now that the Mysore Mine is making large profits every month, it is high time that the balance of profit to the end of last year should be distributed.

We shareholders much prefer to have our dividends when earned to waiting longer intervals for larger amounts, though, no doubt, the latter course gives less work to the management.—I am, Sir,

Large Shareholder.

RAE TRANSVAAL GOLD MINING CO.

Sir,—Could you or any of your readers kindly give me some information respecting above?

I understand it was floated under the same auspices as the West Moodies Company, and like the latter, after a brief existence, was in liquidation, last July, since which time I have heard nothing, although two gentlemen, whom the shareholders (who attended the meeting) seemingly had confidence in, were appointed liquidators, and who surely could have done something ere this, that the shareholders might have been informed of. I understood that another property had been secured, and that the company was to be re-constructed, and I would like to know if there is any likelihood of this being done.

The insertion of this in your next issue will oblige, and if you would please give a list of the directorate it would be esteemed.—I am, &c.,

A Country Shareholder.

Belfast, March 20th, 1889.

[The directors of the company were :—William Benitt, Capt. John R. Pearson, W. Henry Penning, F.G.S., and Charles Dawson Philpot. The liquidators are :—J. M. Klenck and S. H. Fry, both of 42, Bishopsgate Street Within, E.C.]

PROSPECTS OF THE CUMBERLAND CO.

From the Cumberland news comes of a valuable new make of stone in the lowest workings of the p c. Particulars of the find are not made public yet, but rumour has it that the reef is both large and good. This mine was formerly the property of O'Brien and Co., but it now belongs to an English company, the machinery erected by whom is worth a visit to the Cumberland to inspect. It consists of a 20-stamper battery, with the most modern of grinding and amalgamating appliances. In its erection no expense has been spared, and when finished it will be one of the most compact and perfect plants in North Queensland. If the good old days return at the mine, and justify such an expenditure, the Cumberland will become an important mining centre. The dam for supplying this plant with water is one of the finest to be seen. It is now full, and backs the water fully ¾ mile, and insures a supply of water for 12 months to come.—*Queenslander*, January 26th.

On and after the 25th instant, the offices of the Pahang Corporation, Limited, will be Blomfield House, London Wall, E.C., and after that date all communications should be addressed to the Secretary there.

THE CAPE COPPER COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN that, in consequence of the present position of affairs connected with the Copper Market, the Directors have resolved that it is desirable in the interests of the Company that the dividend lately declared shall be paid in two instalments, viz., 2s. per Share on 25th inst., and 2s. per Share on 24th June next, both free of Income Tax.

The above instalments will be paid on Coupons Nos. 3 and 4 respectively, and to the Shareholders who were on the books of the Company on 8th March instant, as already notified.

By order of the Board,
J. C. LEAVER,
Secretary.

PORT PHILLIP AND COLONIAL GOLD MINING CO., LIMITED.

VALUABLE GOLD MINES IN VICTORIA.

Particulars and Conditions of Sale of the

Valuable Gold Mines, Mining Rights, Plant, Machinery, and other Property of

THE PORT PHILLIP AND COLONIAL

GOLD MINING COMPANY,

Limited (In Liquidation),
Situate in
TALBOT COUNTY, COLONY of VICTORIA
Consisting of the well-known
"Clunes Mine" and "Criterion Mine,"
Together with the
Large and Valuable
Plant, Machinery, Tools, and Effects,
Suitable for Gold Mining.
TO BE SOLD BY TENDER, AS A GOING CONCERN, IN ONE LOT.

Tenders must be sealed and addressed to "The Liquidator of the Port Phillip and Colonial Gold Mining Company, Limited, 57, Moorgate Street, London, E.C.," on or before the 12th April, 1889.

Particulars and Conditions of Sale may be had of Messrs. Kerly, Son and Verden, Solicitors, 14, Great Winchester Street, London, E.C., and of the Liquidator, J. H. A. Smith, Esq., at the Office of the Company, 57, Moorgate Street, London, E.C., where photographs of the surface works and buildings, a view of the crushing works, and plans and sections of the uuderground workings, and a surface plan, may be seen.

ESTABLISHED 1851.

BIRKBECK BANK.—Southampton Buildings, Chancery Lane.

THREE per CENT. INTEREST allowed on DEPOSITS, repayable on demand.

TWO PER CENT. INTEREST on CURRENT ACCOUNTS, calculated on the minimum monthly balances, when not drawn below £100.

The Bank undertakes for its customers, free of charge, the custody of deeds, writings, and other securities and valuables; the collection of bills of exchange, dividends and coupons; and the purchase and sale of stocks, shares, and annuities. Letters of Credit and Circular Notes issued.

THE BIRKBECK ALMANACK, with full particulars, post free, on application,
FRANCIS RAVENSCROFT, Manager.

The Birkbeck Building Society's Annual Receipts exceed Five Millions.

HOW TO PURCHASE A HOUSE FOR TWO GUINEAS PER MONTH, with immediate Possession and no Rent to pay. Apply at the office of the Birkbeck Building Society, 29, Southampton Buildings, Chancery Lane.

HOW TO PURCHASE A PLOT OF LAND FOR FIVE SHILLINGS PER MONTH, with Immediate Possession, either for Building or Gardening purposes. Apply at the Office of the Birkbeck Freehold Land Society as above.

THE BIRKBECK ALMANACK, with full particulars, on application.
FRANCIS RAVENSCROFT, Manager.

THE ALLIANCE BANK, Limited.
Head Office.
BARTHOLOMEW LANE, LONDON, E.C.
Capital, £2,000,000.
Paid-up Capital - - - £800,000.
Reserve Fund, £250,000.

Deposits of £10 and upwards received on current terms, and otherwise according to arrangemeut.

Every facility afforded for the transmission of money between Loudon, Liverpool, Manchester, and Scotland, and for the receipt and delivery of Stock, Shares, &c.

Circular Notes and Letters of Credit issued, and every other description of Banking business transacted.

R. O. YEATS,
General Manager.

TO BE SOLD, pursuant to an Order of the High Court of Justice, made by his Lordship, Mr. Justice Chitty, in the Matter of THE CENTRAL WYNAAD GOLD MINING COMPANY, LIMITED (in Liquidation), A LEASEHOLD INTEREST IN LANDS (with Mining Rights to search for Gold under portion thereof, known as the Manakan Kotay Mala, adjoining Needle Rock Peak, situate in the Davolah District in South-East Wynaad, Madras Presidency, about 45 miles from Ootacamund, and 80 from the Coast of Calicut).

The Land is held under lease from the Rajah of Nilamboor for 45 years, from January, 1876, at an annual Rental of ~~Rs~~ 2 per acre for 36 years, and ~~Rs~~ 2½ per acre for the remaining nine years, with agreement as to renewal.

The boundaries of the land (comprising about 1,560 acres) are shown in the lease.

The Mining Rights on this land are secured under a separate lease for 36 years from August, 1879. The lease specifies only 5 acres at an annual rental of ~~Rs~~ 25 per acre, but the lessor has agreed to grant any additional acreage required for mining purposes on the same terms, if applied for before November, 1891. Twenty-five acres of the land comprises a coffee plantation, which has been cultivated for the past few years by Alexander Wright, Esq.

To be sold by Public Auction on TUESDAY, the 9th day of April, 1889, at One o'clock in the afternoon, at the Auction Mart, Tokenhouse Yard, London, E.C., by Mr. John Matthew Klenck (whom the Judge has appointed to sell).

Particulars and conditions of sale may be obtained of Thomas Stephen Evans, Esq., 5 and 6, Bucklersbury, London, E.C., Official Liquidator of the said Company; of Messrs. Snell, Son and Greenip, 1 and 2, George Street, Mansion House, London. E.C., Solicitors for the said Official Liquidator; of the Auctioneers, Messrs. J. M. Klenck and Co., 42, Bishopsgate Street, London, E.C.; and at the Mart.

REPORTS OF MEETINGS.

THE CALLAO BIS CO., LIMITED.

POSITION OF THE COMPANY—UNGENEROUS ATTACK UPON THE DIRECTORS—SOSA-Y-MENDEZ LOOKING WELL—FACTS JUSTIFY RE-CONSTRUCTION.

AN ordinary general meeting of the above company was held at Winchester House, Old Broad Street, on Monday—(1) to receive the directors' report and statement of accounts; and (2) to transact the ordinary business of the company—Francis Joseph Bladon, Esq. (a director), presided.

The CHAIRMAN: I very much regret to say that our Charles Ronaldson is laid up with a severe attack of pleurisy. He has written to me as follows:—

"My dear Mr. Bladou,—I am suffering severely from an attack of pleurisy, and regret to say I shall be unable to attend the Callao Bis meeting on Monday next. I had delayed writing hoping to have been well enough to preside, but my doctor states it is impossible. Kindly explain my absence to the meeting as well as to my brother directors." Under these circumstances my colleagues have asked me to preside to-day—(hear, hear)—and, therefore, I will now call upon the secretary to read the notice convening the meeting.

Mr. J. H. THORNTON (secretary) here read the notice calling the meeting.

MR. EDGAR TAYLOR THINKS WELL OF THE PROPERTY.

The CHAIRMAN then addressed the meeting as follows:—Now, gentlemen, of course we are holding now the ordinary general meeting, and I propose to keep matters perfectly distinct—in other words, I do not propose to enter into the scheme of re-construction at all at this meeting, but simply to show you shortly, and I trust clearly, our past, our present, and what I hope we may regard as our probable future. (Hear, hear.) In doing so, I shall just remind you that at the last general meeting we met under circumstances when, being very much disappointed at Capt. Richard's anticipations not being realised, we had thought it desirable, in the interests of the company, to have the mine further surveyed by Mr. Edgar Taylor, and on that occasion we were able to give you the result of a cable, in which he said "I think well of the property." (Hear, hear).

WHAT MINING IN VENEZUELA MEANS.

Now, I want, gentlemen, to-day, very quietly and calmly, to consider what mining in Venezuela means. We are dealing with a district where mining is exceedingly expensive, and where, at the same time, a rich find, when we meet with it, recoups, I may say, years of anxiety, delay and expense. Other companies (and one very large one) have gone through what we ourselves have been going through; and during the past year we have continued to carry out, under the instructions, or rather the recommendations, of Mr. Edgar Taylor, a large amount of development work. In addition to that we have completed what we may almost describe as a new mill—a mill that is perfectly ready to deal with any reasonable amount of quartz, when our manager finds it. Now, the director's report has been circulated amongst all the proprietors, and I take it that you will consider it as read. Is that your wish? (Hear, hear.)

NEED FOR PURSUING A BOLD POLICY.

Very well; we have been doing the work that I have just spoken of during the past year, and up to the present time the amount of quartz we have found has not been sufficient to satisfy our reasonable expectations, and it is perfectly clear that if we are to arrive at success we must boldly go on with sinking the shaft and driving levels, in the hope that at a lower depth we shall met with that amount of paying quartz which hitherto we have been disappointed in not finding. I wish you to remember that we are not devoting our entire energies to the Sosa-y-Mendez property. We are giving our attention to the Callao Bis property, pure and simple; but in addition to that we are spending a reasonable amount upon the Sosa-y-Mendez, and that property certainly gives promise—if we may judge by what has been occurring in an adjoining mine—of producing very good results. I am going to speak very briefly to-day, but I want to bring the salient points before you, and, therefore, I would draw your attention to some remarks in

MR. EDGAR TAYLOR'S REPORT.

On page 8 he says:—"In the bottom of the shaft a large lode, apparently about 10 ft. wide, has been struck, having good walls, the lode matter being well mineralised, and containing numerous patches of quartz. As no development of this lode other than by the sinking of the shaft has been made, it is difficult to form an opinion as to its value, but its development is of great importance, as the lode appears to be a large and masterly fissure." And then lower down, he says:—"I most strongly recommend

CONTINUING THE SINKING OF THE SHAFT

with all possible speed, and as soon as the depth of 350 ft. is attained, the driving of levels both upon the lode recently cut through in the shaft and upon the lode worked upon above. I would recommend also the continuance of all the ends now in work, and the drivage of a cross-cut south in one of the upper levels as the easiest way to prove the lode cut through in the bottom of shaft. In order more effectually to test the extent and value of the quartz developed in the 200-ft. level, I recommend a cross-cut being driven at 100 ft. from surface, and a stope being commenced underhand, so that the 'escajo,' or waste rock, may be more effectually separated from the gold-bearing quartz. The mill being erected, I think it would be advisable to make trial crushings of such rock as your agents consider will actually cover the cost of milling. I believe that the reef in the Unda concession, which is now being worked upon, is undoubtedly the same as that worked in El Callao; and, as I said before, I see no reason why

A PAY SHOOT

may not at any time be discovered within your property. This view, coupled with the fact that your developments are in a forward condition, and that gold has been met with in various parts of the workings, induces me to confirm the opinion expressed in my telegram, viz., 'I think well of your property.'" Now, that is what we have been searching for, gentlemen, and up to the present time we have not found a pay-shoot sufficient to recoup us for the expenditure incurred in development work.

WHAT MR. BELL DAVIES SAYS.

Mr. Bell Davies, in his report which you will find annexed on page 14, says:—"The new lode, No. 2, which was first seen in the shaft at the depth of 310 ft., is of a somewhat remarkable character, but it has not yet been enough explored to enable any definite opinion as to its ultimate value to be formed; at present it contains a little gold, and when cut through at the cross-cut at the 350-ft. level is some 30 ft. wide. With regard to the future, I recommend at the Unda shaft that the cross-cut south-east from the 350-ft. level be continued. If your funds permit, I would also recommend the sinking of the shaft another 100 ft. on the lode, in order to thoroughly test the new lode to a greater depth. I also consider that the No. 1 lode should be intersected by a cross-cut at the depth of 350 ft., for although it proved to be not continuously rich in the upper levels, it certainly showed some very good bunches of ore, and at a greater depth discoveries of a more permanent character may be made. The fact must be taken into consideration that the

DISTRICT IS OF A PROVED AURIFEROUS CHARACTER,

and that the adjoining mine (El Callao) has from the lode to which your veins are without doubt related—yielded enormous riches." And then, referring to the Sosa-y-Mendez—and we cannot to-day lose sight of that very important property, though as yet we have done very little upon it—he says:—"At Sosa-y-Mendez some exploratory works have been carried out, and at the eastern portion of the concession a strong lode has been explored in a shallow cross-cut or adit, which shows quartz assaying some 16 dwts. of gold per ton." (I want you to bear in mind that he says there "assaying" 16 dwts.) "I consider that the results obtained justify further energetic exploration of this lode." And then he says: "At Sosa-y-Mendez, the recent discoveries in the neighbouring property belonging to the Union Company, taken in conjunction with the appearance of the discovery in the cross-cut on your own property above-mentioned are, in my opinion, sufficient to justify a systematic exploration of the property, and I, therefore, recommend the same to be carried out."

FUNDS FALLING SHORT.

Well, gentlemen, we have arrived at that very interesting period, and find our funds, as is usual in such cases, falling short. We have made an effort, therefore, and have managed to get over the accounts sufficiently early to call you together without leaving you in suspense; because the directors are well aware that statements have been made that we are falling short of money. If these statements are allowed to go on they do infinitely more damage than they would if we called you together at once, and laid before you the exact position of the company. I feel that in doing what we have done to-day, and losing no time whatever, the shareholders will consider that we are really acting in their best interests. (Hear, hear.) We received our last letter from the mine on Saturday, which is exceptionally early—they do not generally arrive until the Monday—and we at once sent to the papers what news it could give us. Some of you may not have seen it, and therefore I will read it from the text. (The full text of the report referred to will be found at the end of this report.) I think that may give us courage as regards our future in Sosa-y-Mendez. If you had read that paper you would have found a reference to the discovery in the "Union" property, which has a very impor-

tant bearing to my mind, and that of my brother directors, upon the value of our Sosa-y-Meudez property.

TWO STRINGS TO THEIR BOW.

In the Callao Bis property you have not one string, but two—you have the Callao Bis property pure and simple, and the Sosa-y-Mendez, which may develop into something even better than the Callao may be. That brings us from our past to our present, and to what I think may be our probable future. I shall not take up the time of the meeting, because at the extraordinary meeting the details of re-construction will be gone into; therefore, I shall confine myself now to moving "That the report of the directors and statement of accounts presented to this meeting be received and adopted."

Mr. Rumball (director): I beg to second the motion.

No one rose to address the meeting, but the chairman added:—I have endeavoured to give you the facts as fully and as plainly as I know them myself. In doing that, of course, I have told you everything the directors know. Disappointment has been the result of the working of the past year, but the discoveries in the Union Company point to a better future for us when we have the funds to sink the shaft. These, I hope, will at some future date enable me to congratulate my brother shareholders, and also my brother directors, upon this—that at last, after all our anxiety and suspense, we have arrived at a satisfactory solution of our difficulties. (Cheers.)

BEARING OF THE UNION STRIKE.

A Shareholder: How does the Union Company's discovery affect us?

The Chairman: It is an adjoining property, and we hope to receive more definite information as to the exact strike of their lode. We cannot tell you more than I have told you to-day.

A Shareholder: Two or three years ago I understood we struck the Callao Bis lode, and I want to know whether the Union lode will be something of the same kind?

The Chairman: I am afraid if we have remarks of that character we shall get into a rambling discussion, and, therefore, I hope that critisism will be confined to the business actually before us. I assume that you are the only gentleman who desires to make any comments. I do not think we are here to consider that there is any bogus scheme or any bogus resolution in connection with the Callao Bis Company. We have all been sufferers by the hitherto unsuccessful expenditure of a large sum of money, but if we look at neighbouring companies who have, after a similar period of probation, arrived at success, we must be encouraged. We know we have done an immense amount of development work, and have to look to the sinking of a shaft and the driving of the lower levels, and this discovery on the Union property is very promising, as regards the Sosa-y-Mendez, if we had only capital to work that mine. This I say without desiring to lead any shareholder away, but I for one, and my brother directors also,

LOOK FORWARD TO THE FUTURE WITH VERY CONSIDERABLE HOPE,

and I may also say confidence. Mining, recollect, is a venture, and I am not here to prophecy what is going to happen, but we certainly have encouraging prospects for the future. That is the opinion of those who best know the property, including Mr. Bell Davies and Mr. Edgar Taylor, who all speak hopefully; and why should we shareholders here, having gone through a heavy period of depression, not indulge the same feeling, when we have the experience of our neighbour to guide us?

A Shareholder: Have you any news of a discovery on the Potosi?

The Chairman: We are here on Callao Bis business, and any discovery Potosi might make would not affect our property. I cannot give you any information about Potosi.

A Shareholder: Where is it situated with regard to Sosa-y-Mendez?

The Chairman: To the west, at some considerable distance. A discovery 1 or 2 miles away would not affect us very much, whilst the discovery in the Union property does so, because we are actual neighbours.

A Shareholder: These accounts are made up to the 31st December, and I want to ask you—what is the state of our account now?

ACTUAL FINANCIAL POSITION.

The Chairman: I would have supplemented that if I had thought of it. We have 2,000*l.* on deposit this side, and also some money on the other side.—sufficient in every way to prolong our operations until the re-construction of the company takes place, if you so order it. We cannot afford to spend as much as I should like to secure more rapid development, but we have, in consequence of that, limited our expenditure, so that we have enough to carry on until such time as the money will come in under the re-construction. We shall not starve the mine, but keep it going, though we are cabling out to-day the absolute necessity for further economy.

Mr. Pittard (who declined for some time to give his name) said: That is, assuming you are going to carry out the re-construction. There is a strong feeling in the market—whether it arises from anything genuine or not, is a question; but it finds expression in the common saying that if the directors had given attention to the working of the mine as much as they have given to the working of the market, there would have been a considerable dividend to the credit of the shareholders. (Oh.) If the directors say it has not been so, then I have something further to say. I should like to ask the directors the last time they sold shares on account of the company. Will they give me the date?

MR. BLADON'S REPLY.

The Chairman: I understand that I am answering once for all. It is not fair that first one shareholder and then another should get up and make further inquiries after I have made my final reply. (Hear, hear, and No, no.) I am ready to hear any further questions now, and I think I am prepared to answer them to the satisfaction of every reasonable person. After a pause the chairman proceeded thus:—First, as regards calling you together at an earlier period. At the last meeting we told you how well we were off as regards funds, and that the amount would carry us over for a very considerable period. What would you have thought of us if we had called you together before it was necessary to do so? You would have said, why have you done so? That would have been your remark, and a very proper one under the circumstances. We had plenty of money, and we always hoped, as persons must do in mining, for a successful result.

AN INDIGNANT REPUDIATION.

Now, as regards the directors operating on the market—I, for one, utterly repudiate having done anything of the sort. (Cheers.) I tell you candidly, I have been here to carry through a scheme of re-construction, and have done so. I could have sold my qualification, and pocketed a very fair and handsome profit, but I was told that if I did something would be considered wrong, and so I stuck by the ship, and hold my qualification to-day of 400 shares, and they have dwindled to the present price, whereas by selling them I might have cleared 1,200*l.* I stood by the company, and I intend to do it. When you cease to have confidence in me, tell me so, and I shall willingly devote my energies elsewhere. (Loud cheers.) I say deliberately that all shares sold by the directors, as directors, have been as representing the shareholders, and every farthing of the proceeds has gone into the coffers of the company, and of the premium, the company, less brokerage, has also had the benefit. (Loud cheers.)

Mr. Pittard: When was the last sale made?

The Chairman: About a year ago—February 12 months back. I have not the books by me, and I rely upon Mr. Thornton for my information. The remark that you have made comes to this:—that the directors have manipulated the market so as to get higher prices, but it is not so, and if higher prices have been obtained it has been for the benefit of the company. (Cheers.) Our duty was to sell the shares as best we could. We wanted to do the best we could for you, and we obtained a higher value for those shares than any of you could have got if we had simply asked you to take a certain proportion more in addition to your existing holding. Therefore, we claim that we have done our best for the entire body of the shareholders. (Cheers.)

Mr. Pittard: I have something further to say, and I intend to be heard. I am very glad you have given me the date of the last operation—February, 1888. Does Mr. Thornton confirm that?

The Chairman: I really cannot answer you personally.

Mr. Thornton: There was a parcel of 20 shares sold (I am trusting to memory) as recently as May or June of last year, to clear the whole matter up.

A MYSTERY WHERE THERE IS NO MYSTERY.

Mr. Pittard: I do not intend to make any charge against the directors, but in the course of my business I hear remarks made on the Stock Exchange. I have dealt in Callao Bis shares by hundreds and thousands, both for my clients and for myself, and they well know that in the market. If anything is wanted to be known about Callao Bis they come to me. (Laughter.) Taking a large interest in the company as I have done for years, it is not at all unnatural that I should be at the office to see the reports as they come out. I want to see the reports as early as I can. Now, on the 5th March I went to the office of the company along with one of my clients. I am not going to make any charge about the directors, but to give you just the incidents that happened, and I think my client, who is here, will testify as to the truth of what I say.

PAUL PRY AND CO.

This memorandum (holding it up) was made within half-an-hour of attending at the Callao Bis Office:—5th March—board meeting, 11 o'clock. I gathered this from the clerks. It broke up at 3.40. I called at the office at 2.5, and waited till 3.40—something very extraordinary to keep the board waiting all that time. At 2.40 a gentleman left the office. We asked who it was. We were told it was Mr. Mackay, who held 8,000 shares. At 3.10 the bell rang—(laughter)—and there was a note despatched from the board room.

THE MYSTERIOUS LETTER.

The directors must not blame me if having eyes I use them. When that letter is put into the hands of a lad as he passes me you must not blame me if I see who it is addressed to. (Laughter.)

A Shareholder: That is not a gentlemanly action to begin with.

Another Shareholder: Simply an eavesdropper.

SUDDEN APPEARANCE OF A BROKER.

Mr. Pittard: At 3.35, 15 minutes afterwards, a broker appears at the door—(laughter)—he asks for the secretary. He was told he must wait, because the secretary was occupied with the board, which had not broken up. I was a little bit curious to know who it was, although I knew it at the time.

A Voice: A regular Paul Pry.

Mr. Pittard: I asked one of the clerks whether this was one of the directors. He said, "No, that is a broker," mentioning his name. I turned to my client and said, "Did you hear that?" (Laughter.) "Do you see what is going on?" and he said, "Yes, I do." (Much laughter.) "Go and sell my shares." I went into the market. I asked at least half a dozen jobbers, "Has Mr. So-and-so been here?" "Yes," they replied, mournfully,

"HE HAS HAD ME."

Fifteen minutes afterwards this identical man appears at the door to report, I presume, what he has done, and I find he has been just all round the market and landed his shares on everybody. That is before the report is out, and before the directors have left their board room. I read the report before it was stuck up on the frame-work in the office. If you had no shares to operate for on behalf of the company, who were they for? Who were you operating for? That is the question. I have given you the simple facts, and what I want to know is, who were you operating for if you were not operating for yourselves? That is my simple question.

The Chairman: All this sounds very ad captandum, but I do not know one solitary incident of what the gentleman has been relating, but he has named Mr. Mackay, and I will ask that gentleman to reply. I have not the slightest knowledge of any mysterious notes or sudden appearances and disappearances of the brokers. I know absolutely nothing about it. What do you know about it Mr. Mackay?

FANCIES V. FACTS.

Mr. Mackay (director): I am pleased to be able to offer some reply to the gentleman who has just sat down. It may be well to inform you, in the first instance, that I have never been so foolish as to hold 8,000 shares in Callao Bis, and more than that, since I have been a director I have never dealt in a single share. You place your

confidence in me, and I defy any gentleman present, be he shareholder, broker, jobber, or dealer on the Stock Exchange, or off it, to say I have bought or sold a single share since I have been a director of this company. (Loud applause.) As to the circumstances narrated about my alleged holding—they are the purest fiction. (Laughter.) There is not an atom of foundation in fact for any one of the statements that have been made.

The CHAIRMAN: I do hope that we have set at rest for ever these innuendoes. They would be bad enough if I were an ordinary shareholder, but as a director I must protest against them as being utterly baseless. I am glad, however, that they have been made, because they they have been so easily, and, I trust, so satisfactorily refuted. (Loud cheers.)

CONFESSIONS OF A LATE EDITOR.

Mr. J. C. GRANT: I was formerly for four years editor of the *Mining Journal*. You have been charged in my presence within the last five minutes of rigging this market. I know of my own knowledge that the directors did not know of the discovery of the striking of the El Callao lode at the time that other gentlemen in the City knew it. I know that Messrs. Smith and De Crano had prior knowledge of it, and I had notice of it from Mr. Hamilton Smith himself—Messrs. Smith and De Crano being mining engineers to the Barings and the Rothschilds, and they had notice of this discovery. I had an opportunity of buying 1,000 shares on the Monday at 25s. and selling them at 3*l*. on the Wednesday—in fact, I had the "straight tip" long before anybody else, and does anybody want to charge the directors with rigging the market? (Laughter.)

The CHAIRMAN: I am extremely obliged to this shareholder for what he has said, and the manly manner in which he has said it.

Mr. GRANT: I have Mr. Hamilton Smith's letter in my pocket now.

The CHAIRMAN: I do hope you will all be of opinion that this matter is settled now. There are not many gentlemen connected with the press who would have made such a statement as he has done. (Hear, hear, and laughter.) It was well known that at the time this seemingly rich discovery was made, the news of it reached other persons before it reached the board, and they were the operators no doubt who made money. We had nothing to do with it, and I do hope once for all this sort of thing will cease. As long as we are here, and enjoy your confidence, so long will we, in every sense, do our best in your interests. More than that I do not think it is necessary to say.

A SHAREHOLDER: Messrs. Rothschild bought the shares, and their names figure on the list as holding them at the present time.

The report was then put and carried.

Mr. MACKAY: I beg to propose the re-election of the retiring directors, though in a few days the whole of the board will be submitted to the shareholders for re-appointment or not, just as they may think fit. As a matter of form, however, it is necessary that I should propose the re-election of our absent chairman, and of Mr. Bladon, who is in the chair to-day. The last year has been one of great anxiety to the directors of this company, but

WE MAY CLAIM TO HAVE STUDIED YOUR INTERESTS AS IF THEY HAD BEEN OUR OWN.

It is a thankless office to be the directors of a mining company that does not pay a dividend, but we may certainly claim to have served your interests in every possible way. We have availed ourselves of every opportunity of looking after them, and I am sure if you have the courage to support us you will have a rich reward. (Cheers.)

Mr. CUNDELL seconded the motion, which was carried unanimously.

Mr. BLADON, in returning thanks, said: You may rely upon one thing, that we will take no advantage of the market for our own personal interests in the way indicated by a certain proprietor. If, however, you can make money by buying or selling shares, we shall be only too delighted, but we, as directors, are not going to do it.

Mr. RICHARD JOLLY proposed the re-election of the auditor, Mr. Elliot.

Mr. VICKERS seconded the motion, which was carried.

The CHAIRMAN: That completes the business of the general meeting, and now we will resolve ourselves into an extraordinary general meeting, at which we will go into the merits of the scheme of re-construction.

THE SPECIAL MEETING.

An extraordinary general meeting of the company was then held, "when the subjoined resolution or resolutions to the like effect will be proposed, and if such resolutions, with or without modification, are passed by the requisite majority, the same will be submitted to a subsequent extraordinary general meeting for confirmation as special resolutions, when a liquidator of the company will also be appointed."

Mr. THORNTON read the notice of meeting. The resolutions have already appeared.

SCHEME OF RE-CONSTRUCTION.

The CHAIRMAN: In moving the first resolution it is my duty to make a few observations with reference to the scheme of re-construction. We might have adopted more than one scheme in this sense that we might have brought before you alternative schemes. To do that would certainly have led to no good result. We had to consider what would be for the best, and I think you will see there is no other plan open to us, but the one we bring before you to-day, and for this reason—those of you were shareholders in the original company (and I was one) took a certain proportion of debentures—in fact, I took rather more than my proportion, and with what result? That when a scheme of re-construction had to brought forward the stumbling block was the debentures. We could not get more of them taken, and we could not get those that were taken to stand aside, and come into any scheme except on terms which I am bound to say were exorbitant. Now, if we had adopted the plan of debentures first I do not think we should have got them taken up in the present discredit which attaches to all mining undertakings, and if we did, it would not be to such an extent as to give complete confidence in the financial position of the company, because, sooner or later, those debentures would be our deadweight, and we felt that if anything went wrong we should be again going through a process, which, judging from our former experience, I think you would greatly blame us if we had incurred; therefore, we gave up the idea of debentures at once. Then we worked on the basis of the Sosa-y-Mendez. That is a valuable property, but I will not prophecy its future.

MR. BLADON WILL NOT PROPHECY.

I will do that about almost anything else expect mining, but in the case of a mine which varies from month to month, and even from day to day, all I can say is, that I cannot see into the ground, and I know if I do the chances are dead against me. Hence I would rather be in the same boat with you all than propheey in regard to a future which I know not. At the same time you may see for yourselves that you have in the Sosa-y-Mendez what is, in the mining sense of the term, a valuable property, but not valuable for the purposes of re-construction. We could not hope to get a syndicate to take a large block of the shares upon a prospectus of the Sosa-y-Mendez Company, and if we turned promoters for your benefit and failed to float a company, we should have to bear the blame of the expense that would be entailed. Clearly that was wrong, altogether, and, therefore, we had to fall back upon the simple, the genuine style of re-construction, which implies a certain amount credited as paid-up and a certain liability, so that all those who care to continue shareholders in this company, and to incur that liability may hope, by the double chance of an improved market and of a discovery in the mines, to profit and to recoup some at least of the loss they have sustained. There is also an improved market value when it is known that you are financially strong—(hear, hear)—and hence, all things considered, we think we have done the wisest and most prudent thing in making this a simple scheme of re-construction. In crediting you with 15s. as paid-up you run no risk. I have my professional friend by my side, and he will confirm what I say that so long as we take up share for share in right of our current holding we run no risk. But what will be the result if we do not take up these shares? You can either take advantage of the Act, and claim your rights under the arbitration clause for what they are worth, or sell your shares for the current market value, which, in my humble opinion, will give you a greater value than you will get under arbitration. That is a matter of opinion, but I give you mine.

RE-CONSTRUCTION JUSTIFIED BY FACTS.

I shall not only take up all my shares as a director, but I should be pleased to do so as an ordinary shareholder, because I believe the scheme we have brought before you will make us strong, financially strong, and of course our future indicates that amount of promise which justifies the contribution of more money. We have made the calls as moderate as possible—6d. on application, and 6d. on allotment, and I am justified in saying that these will carry us through the whole of the current year. (Cheers.) Now, remember what that means—with its chances. Those who go out—I pity them, because those who remain in, I believe will be rewarded. I trust the latter will, before the year expires, have some grounds for gladly welcoming the fact that they did not lose heart in taking up their shares. Already, shareholders holding upwards of 30,000 shares have voluntarily signified their desire to come in, and holders of 130 shares have dissented altogether. That shows you the general feeling. I say I am justified in bringing forward this scheme, and in asking you to accept it, and I now move the first resolution. (Cheers.)

Mr. CUNDELL seconded the motion.

Mr. PITTARD: How do you value the property when you put it at 15s. a share?

DISSENTIENTS.

A SHAREHOLDER: I should like to know what provision you have made for dissentient shareholders? I do not say that for the purpose of raising any obstacle, because I intend to join the new company. (Hear, hear.) But I am connected with a company which has just had some trouble with its dissentient shareholders, who have filed a petition to restrain the directors from carrying out the scheme until due provision has been made for them. We are prepared to satisfy them, but we could not restrain them from going to the court, and putting us to very considerable expense.

The CHAIRMAN: As regards the 15s., that is the usual amount credited, and I do not think you would like to see your shares cut down to 5s. You will feel that with 15s. credited as paid your shares will have a much better chance of working up to 1*l*.

Mr. PITTARD: How do you get at the value?

The CHAIRMAN: I cannot value the property, and I decline to enter into any such question. Mr. Pittard is probably in the position of a dissentient, and if he wants me to justify the 15s., I decline to do it. As to the other question, I will ask the solicitor to answer it.

Mr. PITTARD: You have not answered my question.

The CHAIRMAN: I decline to do so. (Several VOICES: "Quite right," and cheers.)

A SHAREHOLDER: Does not the 15s. represent the capital spent on the mine?

The CHAIRMAN: I will answer it in that way if you like. Perhaps Mr. Pittard is a dissentient shareholder.

Mr. PITTARD: You do not know that, and I ask you how did you arrive at 15s.?

The CHAIRMAN: In the usual way, and I decline to answer you further. We have spent 15s. a share and more on this property, and if it went to a forced sale I cannot tell what the result would be.

Mr. SNELL (solicitor of the company): It is generally conceded that whatever price the new company puts upon the property, or gives for it, if shares are given no Court will ever question the value that is given, any more than it would the shares that are given to the vendor when a company is first brought out.

A SHAREHOLDER: Has it not been decided otherwise?

Mr. SNELL: I believe not—I know of no such case—if you know of one perhaps you will state the case.

The SHAREHOLDER: I cannot from memory, but I will give you the name of the other company privately.

THE LAW OF THE CASE.

Mr. SNELL: I do not know of such a case, and do not think one could have been heard in the Courts without my knowing it. I have heard the Lords Justices say this—that if a man files an agreement, and says he is going to value property at 10*l*., and means to give 20 1*l*. shares for it they will rule against that, because on the face of it, it shows he is going to give 20*l*. for what he himself only valued at 10*l*., but if he says he is going to give for a certain property a certain number of shares you cannot go behind that. This is the point upon which all re-constructions, under the advice of eminent counsel at the Bar, have taken place, and the Court will never go behind it. Of course that is only my opinion, and the opinion of men at the Bar, and I cannot answer for what Courts of Appeal and other

judges may do hereafter. With regard to the dissentients, the liquidator will have to make provision when he knows who the dissentients are. They have a certain time within which to dissent or not. Provision is made that if there are more than a certain number of dissentients the whole matter will fall through. You must first know who the dissentients are, and then we can meet the question that you raise.

Mr. Pittard: Do you consider the assets worth 15s.?

A Shareholder: Certainly we do, and why not?

Mr. Windus: I contend, with regard to these re-constructed companies, that we are not issuing shares at a discount at all, but really at a premium. It is always my contention that we issue shares at 25s. and return the shareholders 5s., and I do not see why it is called shares at a discount at all.

The Chairman: The Courts of Law have taken peculiar views of this matter, but we are acting under good advice, and I must again decline to say how I calculate the 15s., or any other sum.

The resolution was carried unanimously.

The remaining resolutions were proposed by the Chairman, seconded by Mr. Cundell, and carried en bloc unanimously.

A Shareholder: Who is to be the liquidator?

Mr. Snell: He will be appointed at the next meeting.

The Chairman: We have fixed the confirmatory meeting for Wednesday, April 3rd, at this place, at 12 o'clock, and we shall be glad to see any shareholders who may attend, though a large meeting will not be necessary. Any information we possess you shall have whether you come or not. I thank you for your attendance, and only regret that the chairman of the company is not present to-day. My duty is now over. (Cheers.)

The proceedings closed in the usual way.

LATEST REPORT.

20th Feb.—Mine—Unda shaft: I have again resumed the driving of the level in No. 1 stope, east, since last writing; 3 ft. 6 ins. have been driven. We are still in quartz mixed with patches of bluestone containing sulphur. These sulphurets, by assay, contain a small percentage of gold. I have assays made every few feet, always a little gold is found, but yet not sufficient to pay the cost of mining it. Assay value about 5 dwts. At the 350-ft. level I have started to cross-cut in the hanging-wall for the purpose of cutting some of the veins found in the shaft. The 350-ft. cross-cut, south-east, is pushed forward with as much speed as is possible; 5½ ft. have been driven. Sosa-y-Mendez: In the work of cutting back through the lode, we are still in quartz mixed with clay matter, but no definite walls are yet seen, or can the dip be thoroughly determined. We are evidently in a large deposit of quartz, and it is hard to say into what this will subsequently devolve itself. I purpose, however, to drive on some few feet further. Drivage for the fortnight, 10 ft. Besides, in the small shaft on the Union property, we have driven on the lode about 10 ft. more. I have still the good opinion of this property, and along the surface I am making prospects which I hope will prove something of value later. 30 tons of quartz have been crushed, which gave 15 ozs. of bar gold, or ½ oz. per ton. I hope that you consider this satisfactory, as the ore was mined from very near the surface, and will, in all probability, improve in depth. Remittance: I send you 24 ozs. of gold bullion, the result of the Sosa-y-Mendez crushing, together with the 5½ ozs. which I had in the safe since November, and the crushing of a few tons already at surface.—G. W. Eustice.

THE DAY DAWN P.C. GOLD MINING CO., LIMITED.

A COMPANY WITH BRILLIANT PROSPECTS AND REGULAR DIVIDENDS—ORE SENT TO ENGLAND WORTH £36 PER TON—PROPERTY ACQUIRED WITHOUT EXTRA OUTLAY — COLONISTS BUYING SHARES.

The ordinary general meeting of the shareholders was held at Winchester House, Old Broad Street, on Tuesday—Francis Joseph Bladon, Esq., chairman of the company, in the chair.

The notice calling the meeting was read by the Secretary (Mr. B. Peyton Ward), and the report of the directors was taken as read.

REPORT OF THE DIRECTORS.

The directors submit the accounts for the year ending 31st December, 1888. The total amount of net revenue (after deducting 1,408*l*. 2s. 3d. for income tax paid) available for dividend earned during the past year, is 42,165*l*. 15s. 11d., to which has to be added the balance brought forward from 1887, amounting to 419*l*. 8s. 7d., making a total of 42,585*l*. 4s. 6d. Out of this sum three ad interim dividends of 6d. per share (free of tax), amounting to 35,250*l*., have already been paid, and the directors now propose to pay off the entire balance of preliminary expenses (992*l*. 13s. 11d.), and to declare a final dividend of 3d. per share (free of tax) for the year 1888. This will be equal to a total dividend of 8¾ per cent. (free of tax), and leave a balance of 467*l*. 10s. 7d. to be carried to the credit of the current year. Although the actual results of the past year have not equalled the expectations formed, there is no reason for any discouragement or doubt as regards the future. The fortnightly crushings for the year 1888, and the results obtained were as follows:—Tons crushed, 22,344; gold obtained, 24,599 ozs. 3 dwts. 9 grs.; amount credited, 84,974*l*. 0s. 10d. This statement shows the average yield of gold per ton of quartz to be 1 oz. 2 dwts., and the average value 3*l*. 9s. 1d. per oz.

PROGRESS OF THE COMPANY.

The Chairman: Gentlemen, the report and accounts, with the map and reports of the manager and mine managers, have all been sent to you, and I trust you will take them as read. You will recollect that on the last occasion I spoke of the discovery of rich ore in the bottom of the shaft, and told you what was about its value, but I think I told you at the same time that a certain period would be absolutely essential before that richer ore could tell on the average quality or amount. Now, as a matter of fact, it has taken much longer to open the levels ready for stoping, and continue sinking the shaft, than we then expected, and as regards the particular portion of the year which we have now been passing through, I will call attention to the fact that the earlier period, the first six months, were all of a lower average than the last six months, in a very gradual way as I admit, but at the same time in a way that is beginning to tell—during the last six months we have mined ore of a better quality, and had that quality been spread over the entire year, you would not have met to-day with any diminution of dividend, even in a temporary point of view. I told you from the first that we would not declare dividends, except so far as we were assured they were absolutely earned, and at the same time I assured you that whenever we had earned equivalent to 6d. per share, free of tax, we would not retain it in hand, but divide it amongst you. That met with your approval, equally with the former proposition. I told you that the result of the entire year would be seen in the balance of dividend we should present you with when the accounts were made up and audited. The result has been that we are now obliged to offer you a balance dividend of 3d. per share only. I hope that is the last dividend of that amount we shall have to bring before you.

ROSE OF ENGLAND.

We must look with very great interest not merely to the development of the lower portion of the ground originally belonging to us, but also to the Rose of England shaft. Some of the shareholders, I think, are under the impression that we have made rather too much of that property, but I assure you we have done nothing of the sort. We have gained, in fact, an increased area of 25 acres without any expense, with this result, that, in draining the shaft we have obtained a very acceptable supply of water, for there has been an enormous drought existing throughout the colony, and we have now drained that shaft — the latest information we have received being that the appearance at the bottom is of a very promising character. I have told you before, and I repeat it now, that through one shaft we cannot possibly expect to increase the output much; therefore, if from any cause whatever there is a falling off in the quality, we must be content for the time to wait until from No. 2 shaft we reach our own ground, and are able to open up ore of a quality, which would enable us to add to the quantity, and in that sense to a great extent compensate for the quality.

THE COLONISTS BUY.

That information I will give you later. As regards other points—I think it is extremely satisfactory to know that since our last meeting gentlemen conversant with colonial matters have commenced purchasing our shares. I do not think I am ever justified in giving names, but if I mentioned them they would be thoroughly satisfactory to you. Their purchases indicate that their advices from the colony point to the value of the property, and that from this date we are dawning upon that era of prosperity which we contemplated realising at a much earlier period—in other words, soon after the company was formed. That is an exceedingly satisfactory point to me and also to my colleagues. (Cheers.) It is not from one gentleman only, but from several, I have this information, and two of them are now on their way to the colony. I have had personal interviews with them, and they all assure me that the developments during the past year from their own knowledge indicate that this particular company has a distinct and brilliant future before it. That, to my mind and to your minds, ought to be very satisfactory. (Cheers.) If for the time we have to pause and wait for these results, I think that the knowledge that they are coming slowly, it may be but surely—then I say we have no cause for disappointment even as regards the present. (Hear, hear.) The report and maps are so complete that I do not think I need weary you with details about them, but they do not show you what I want to point out, and that is, that at the bottom of the shaft

THE REEF IS GRADUALLY BECOMING MORE VERTICAL.

Possibly you may gather that, if you follow this sketch closely, that is a very important point, because it adds very greatly to the value of our property, and you will thoroughly understand what I mean by it. If it becomes slightly more vertical, it must continue to a greater extent in our property. I should like to read you some very short extracts of letters, because they will all bear on what I have said, and will show you what the indications are upon the developments of the past year. The manager writes with reference to the stone in the eastern portion of the mine.

STONE IN EASTERN PORTION OF THE MINE.

"Really too much can scarcely be said as to the value of the finds of stone in our eastern ground. If the reef continues as at present, a new era of prosperity is now dawning on the mine. I have been feeling very dispirited at the poor returns obtained of late, but they are really a matter of small moment as against the value of the discoveries in the eastern portion of our ground." And again:—"The large make of stone in the eastern portion of the mine is of great importance, as there is a large extent of maiden ground in this direction."

So you see you must not run away with the idea that we are working out the mine; on the contrary, we are developing it, and we have the future before us—a future which as I have said, and my brother directors will fully endorse it, will tend to prove that had the original vendors known that this mine was going to open out as we believe, and as we know it is opening out, they would not have parted with it for even the admittedly large sum we paid for it, but that sum, so far as we can see now, will be justified by the final results. Mr. Lissner, our local director (and I am happy to say we have only one local director, which is quite sufficient), has also written to us. We do not want disagreements with local directors, but we wish matters to be referred to London, and for the decision to be made here.

GOOD PROSPECTS.

Mr. Lissner writes as follows:—"I never since my return from home have been more hopeful than I am now, that the much under-rated Day Dawn P.C. (in London) will be a good, or rather, a first-class dividend-paying mine, and a good profit to the shareholders."

A Shareholder: What is the date of that letter?

The Chairman: At the moment I cannot give you the exact date, but the extracts are leading gradually up to the end of the year. Later on the manager writes, with reference to the mine being fairly worked, and this is a point that I cannot too strongly impress upon you: we are not "rushing" our mine. We are doing nothing to create excitement in the shape of big returns, to be followed by a sudden diminution with all the odium which, justly or unjustly, would react upon the directors. We do not desire that, and so we are only too pleased to know that the manager writes thus:—

MINE BEING FAIRLY WORKED.

"If this should reach you before the general meeting, I would respectfully suggest that the chairman impress upon the shareholders the fact that the mine is being fairly worked. There is no rushing out of good stone, thereby picking the eyes out of the mine; good and bad comes out as met with, and the dead work is always going steadily forward, be the returns good or bad."

Then with reference to the strike, that in the Day Dawn Freehold Company's shaft—one or two shareholders blamed us for sending it out, and thought it was puffing the Day Dawn P.C. If we had not sent it I do not think we should have done our duty. I think we are bound to tell you from time to time the information we receive. (Hear, hear.) And you will know that every fortnight the manager's report, as received from the mines is invariably sent to the papers for publication. Not only that, but also the returns, for they are not retained in the office. At the earliest practicable moment they are sent round to the papers.

REEF STRUCK IN THE DAY DAWN FREEHOLD COMPANY'S SHAFT.

The manager writes:—"The cutting of the stone by the Freehold Company should enhance the value of shares in this company, as it proves that we have good stone right to our northern boundary." And again, a week later:—"The freehold shaft is still in formation. It is estimated that it has gone through about 9 ft. of reef, not in one body, but in several veins. The stone carries heavy gold, but is not highly charged with mundic. The striking of so large a body of stone, close to our northern boundary, proves the value of our ground in that direction, and should enhance the price of our shares considerably."

SUPPLY OF WATER.

As regards the supply of water he says:—

"Such seasons as those of the last three years cannot continue, and the company need have no fear of there not being always enough water to run the 40 heads of stamps."

That is with reference to the enormous scarcity of water, and we may consider ourselves extremely fortunate that we have been able to run our stamps without cessation. As regard the grinding and concentrates—I am trying to give you all the information now, but shall be happy to reply to all inquiries, but as far as possible, by the fulness of the details I am giving you, I am trying to forestall them.

GRINDING CONCENTRATES.

The manager writes:—"By adding more pans we could get an additional quantity of gold for some time, but I hardly think the step would be wise, especially as we may be able to decide very shortly as to the relative advantages of treating the concentrates by smelting, chlorinating or grinding."

That is not a process that we can have. Several plans have been tried. If we had rushed to a decision the chances are that we should have made a serious mistake, and considering the very large amount we have in reserve we wish to make the best of it in every possible respect. (Cheers.) As regards the mode of crushing, what I am looking forward to is the cabling of yields that will give satisfaction to us all. I am simply reading extracts from the managers' letters. And, without committing myself too much to prophesy, I do say that I and my brother directors have the greatest confidence with refereuce to improved returns. All we demand is a little patience and a little time. (Cheers.) So recently as the 19th of February last (and that will answer the gentleman's question as to date)

IMPROVED CRUSHINGS.

The manager writes:—"I am looking forward to the pleasure of cabling yields that will give satisfaction to all." And so recently as under date 19th January, 1889, the manager writes:—"I was at the mine yesterday, and found that in the main shaft, the reef which is 10 ft. thick, had improved somewhat in quality during the past week. In the No. 10 level there is 9 ft. of splendid quality stone. In the No. 9 level the reef averages about 8 ft., of good quality stone."

ROSE OF ENGLAND.

With reference to the Rose of England, he writes because he knows we are anxious about it:—

"At the Rose of England, about 20 ft. of the old underlie has been cleaned out, and the manager expects to reach the bottom in the course of a week or 10 days, when I hope to be in a position to report the finding of a reef in the bottom."

That is all I need trouble you with in regard to the extracts from the manager's letters. Now, there is a very important point upon which you will be surprised at the information I can give you.

AN AGREEABLE SURPRISE.

It is always assumed that small companies can work economically, whilst large companies work extravagantly, but I will give you the result in our own case. The average expenses of the old company for the last half-year ending the 4th April, 1887, were, as regards raising, crushing and grinding, 2*l*. 4s. 3d. per ton. What has been our experience? Our expenses, including those I have named, and in addition all London charges, directors' remuneration, and every possible expense, amount to only 1*l*. 18s. 1d. per ton of ore raised. (Loud cheers.) That shows an absolute saving of 6s. 2d. per ton. I hope that will dispel at once any doubt you may have as to extravagant expenditure. It will show you that economy of management is being practised, and that so long as that economy of management is not carried to the vital point of inefficiency, so long shall we endeavour to control in every possible way the expenses of the other side. As regards the accounts—the accounts are thoroughly well kept, as the report of the auditor shows. I think it will be very satisfactory to you to know, and it must be very satisfactory for our accountant in the London Office to know, that in a letter giving elaborate details, which the auditor always gives the directors, there was this very agreeable paragraph for him and for us, because it shows that in that appointment we made a wise choice:—

"We received every assistance and courtesy from your officials during the audit, and we think it only right to tell you that we found the books exceedingly well and accurately kept, and the statements and returns forwarded to you from the mines are also in perfect order."

The latest information from the mine is contained in the usual telegram (this immediately follows the present report). He is managing, in spite of all difficulties, to get extra ore out, and is crushing it so that it will tell upon the returns. At the No. 2 shaft on the head of the reef the depth is 230 ft., and he expects to reach payable stone in six months from the present date. You may see from the No. 2 shaft returns that these will tell in addition to those of the No. 1 shaft and the Rose of England. He says as a favourable appearance in the bottom of the shaft—I want to call attention to the mine manager's report, page 16, in which he says:—

"Two winzes have been sunk on this level during the half-year, which have shown some splendid stone from 3 to 8 ft. of good quality. All the stopes above this level are looking well; average width of stone, 4 ft., of good quality."

In the mine manager's report at the end of the report on page 14 is this paragraph:—

"In closing my report, I beg to state that the mine as a whole looks very well indeed, and the shareholders have reason to congratulate themselves on its promising appearance, which really warrants them in anticipating good profits for years to come, and the probability of better dividends for 1889. The grand body of stone between the Nos. 8 and 9 east levels, proved by the Nos. 3 and 4 winzes, from the No. 8 level, and the splendid stone in the end of the No. 10 east level warrant me in making these remarks."

Later on he says:—"I have sent for shipment to you 29 bags of ore from the No. 4 winze sunk below the No. 8 east level. This is for the purpose of your ascertaining from experts the best method of treating similar ore. In my opinion it should be crushed rather coarsely, and the tailings concentrated. The tailings would be fairly charged with galena, and ought to smelt well." We have been using our utmost exertions to have it assayed, and to-day I am able to tell you the result. It varies in result.

REMARKABLE RESULTS.

There is some as low as 2½ ozs. (I say as low, but we should be glad if it were all of that richness), and as high as 14 ozs. of gold per ton (in an assay of Johnson and Matthey), and we have offers for any quantity of stone of a similar description to the quality I am now speaking of, which has been treated at the rate of no less than 36*l*. per ton, showing that that smelter must be satisfied that the ore contains 10 ozs. of gold. I tell you these things because I am bound to tell them to you: if I did not, and results turned out as we hoped, you would say, Why did you not tell us? We have done all we can to ascertain the value of the rich stone, and I have given you to-day candidly all the varying assays as they have reached the directors—the latest being in our hands only to-day.

WHERE DOES THE STONE COME FROM?

Mr. John Wilson: Is that stone taken out of one small particular place?

The Chairman: Yes, the winze that he speaks of, but it shows you that the mine is developing well in the levels Nos. 8, 9, and 10! I am obliged to be very guarded in my statements, but I may say that if there is any quantity of this stuff, it is very brilliant indeed. Mr. Ievers tells me he does not consider it comes from any particular spot. I shall ask Mr. Ievers to second the adoption of the report, when he will speak to you about it. The burden of all this is that, notwithstanding any little temporary disappointment we may have had, so far as all the information which reaches us is concerned, we have a right to be perfectly satisfied.

HOW DIRECTORS WISH TO WORK THE MINE.

Do not ask us to rush the mine for we do not want to do it. We want it honestly laid open for a permanency, and if we have to wait a short time for the results we have to expect, I think all of us will be satisfied to give the property that probation. I beg to move "That the report and accounts now submitted be received and adopted, and that a final dividend of 3d. per share, being at the rate of 8¾ per cent. for a whole year up to the 31st of December, 1888, be, and is hereby declared, and the same to be payable on and after the 25th of March, 1889." (Cheers.)

CHAIRMAN'S VIEW ENDORSED.

Mr. George Maurice Ievers (director) said: The opening up of the mine by this company has developed a shoot of stone of immense value and extent, from the end of No. 7 level to the bottom of No. 1 shaft, a distance of about 1,000 ft.; the reef presents an unbroken face; this is a fact of great significance. The No. 2 shaft is now being put down quickly by means of rock-drills; in a short time the hauling capacity of the mine will be doubled, and we shall be able to work our top ground, also put in cross-cuts to thoroughly explore the country to the north. I am sure the increased output of quartz, coupled with the increase yield per ton from the new shoot, cannot fail to give results which must be highly satisfactory to the shareholders. I now beg to second the resolution.

SHAREHOLDERS CRITICISE AND COMMEND DIRECTORS.

Mr. Dangar: After your lucid and able statement it may look out of place almost for any shareholder to make what might be construed into a complaint. I do not intend to do anything of the sort. We are disappointed that our dividend has been reduced. But we hope that is only temporary. I have one or two observations to make, and a suggestion to offer. My chief complaint is as to the office expenditure, both here and in Charters Towers. One of the items especially is heavy, and that is the remuneration of the directors, 1,500*l*., or 300*l*. each. In Charters Towers I see the office expenses of one director and manager are 1,000*l*. With only one director in Charters Towers I fail to see how that great expense is incurred. Assuming the director there gets the same remuneration as the directors here, that will leave a very large item for the manager and auditor. Postages and telegrams amount to a large item, but I know the expense is incurred in a legitimate way, and that the directors take care to keep it as low as possible. I have

made a rough estimate that the cost of the quartz per ton is 2*l*., but I see that the chairman has made it less, and I assume that his figures are right, and mine are wrong, but he does not give us the whole of the gold returns. He has not told us as to the Rose of England shaft —whether this company has absolute control of that mine, and on what terms it has been purchased. I wish to ask further if the extra stone you contemplate raising can be treated with the present number of stamps? I would suggest, finally, that as many of the shareholders in this company do not see the returns published in the mining papers, a post-card should be sent to everyone of them every fortnight. (Cries of "No, no.") How often do the directors meet, once a fortnight, or once a month?

SUGGESTED NEGOTIATIONS.

Mr. Ross Robinson: I would like to know if any steps have been taken by the directors of this company with the view of working the lower part of the mine from the Freehold ground. I am aware, and I presume you are, that there has been very great delay, and expense in connection with the working of your underlie shaft. And I also know that delay and expense will continue from the nature of the ground to the end of the chapter. You have alluded to the dip of the shaft being sunk on the Freehold Company's ground. That shaft is sunk on the immediate boundary of your ground, and they have sunk through the reef from 10 to 12 ft. deep of really good stone, estimated to give from 1½ to 2 ozs. As far as I can see, and I claim to know something about it, you cannot reach this portion of your ground from your present shaft for years to come. But it is already reached for you by the Freehold Company. And I would suggest to you that negotiations should be opened at once between the directors of this company and the directors of the Freehold Company of Charters Towers. If such negotiations are entered upon I feel sure, from my knowledge of the directors of that company, that an arrangement could be come to between the two companies which would be highly beneficial to both, but especially to this company. You can go to work at once upon 10 or 12 ft. of highly payable stone. A shaft belonging to the Freehold Company is divided into four separate compartments, of which they only use two, and there is rapid and powerful winding machinery on the top, so that they can readily wind your stone as well as their own. By these means (if this plan be adopted) the output of your stone can be trebled immediately. You are on the boundary, and can work at once. I believe I am within bounds in saying that

YOUR DIVIDENDS WILL BE QUADRUPLED.

I think that a subject of this sort is worth consideration by the directors, and I leave it with them. I have a plan with me here which shows the exact position of the Freehold shaft. The map does not belong to any other of the companies interested.

The Chairman: I do not think the position of the shaft will materially influence the shareholders present.

Mr. Robinson: Shareholders will know the position, otherwise they cannot judge of the utility of my proposition.

The map was here produced and displayed.

Mr. Hewitt: What price have we paid for the Rose of England lease? Do the directors think they have sufficient funds in hand to continue the work already begun, and to increase the plant? I see the available funds only amount to some 10,000*l*. or 12,000*l*.

FRESH FROM "CALLAO BIS."

Mr. Pittard: I suppose these bills are good? (Laughter.) In what have you invested the 5,000*l*.?

The speaker was proceeding to make a personal attack upon the chairman, in reference to other companies, when

The Chairman rose, and said: I think you will scarcely allow these personalities. (Loud cheers.) I have answers to the questions that have been raised by everybody, or that may be raised. I am here in my capacity as chairman of the Day Dawn P.C. Company, and am prepared to deal with its business to the utmost extent. And I am not here to discuss the affairs of other companies, with which this one has nothing to do. (Loud cheers.) I shall first of all reply to Mr. Dangar.

DIRECTORS SAVE THE COMPANY 10,000*l*.

If he is an original shareholder he will know that by the prompt action of the directors a sum of 10,000*l*. was saved by this company, and that would pay the whole of their remuneration for the next five years. (Cheers.) When gentlemen accept the position of directors they do so subject to articles of association, in which the amount of their remuneration is stated. I am not going to refer to other companies, because I have no right to do so, but I say that our remuneration is less than that of other companies of a similar character and extent.

Mr. Pittard several times attempted to interrupt the chairman's explanation.

The Chairman: I am not going to allow any shareholder to interrupt me when I am making my reply upon the whole case. I am not fit to be chairman of any meeting if I allow such an irregularity. I shall have the support of the shareholders, and, if necessary, I shall ask for it. (Cheers.) My figures as to the costs were quite right—we save 6s. 2d. per ton over and above what the old company did, and, therefore, we claim, in spite of all our increased expenses, by our being a London company, to have worked more economically than the old one. The Rose of England reef is absolutely our own. We pay nothing for it but the ordinary rental of 25*l*. a year. As regards the stamps, we have 40, and we can have the use of 20 more if we require them, at the public mill, which will not cost us any more than if they were on our own mill. We shall be able to mill a further quantity at other mills without going to the expense of erecting an additional mill for the company, until the facts warrant us in doing so. The question was asked—how frequently do the directors meet? I am very glad that that question has been asked. As regards actual formal board meetings, they are held fortnightly on the receipt of the returns, but as an actual fact

WE MEET DAILY AT THE OFFICES OF THE COMPANY.

There is no mistake about that. I, with two other directors, am there every day of the week. Mr. Robinson put the question about working the lower part of the mine. I am not going to make any personal observations, but I say to him—does he or does he not know (because I think he must know) that an offer has been made by a gentleman to this company?

Mr. Robinson: You have my permission to name him.

The Chairman: I am very much obliged to you. Without your permission I should not have done so. It is Mr. Mills who has made an offer to this company for the use of the Day Dawn Freehold shaft, and it was on the basis of 25 per cent. of the nett amount of gold realised.

WHY, GENTLEMEN, WE ARE GETTING 50 PER CENT.

We should not be worthy of our position as directors if we even contemplated such an offer. If anybody will make an offer which, in the estimation of the directors will put more money in your pockets, we will accept it with the greatest pleasure in the world, but we will not even recognise any offer which would be tantamount to giving away your money, and that is what it means. We mean to keep our mine to ourselves, and I think the matter had better stand there.

Mr. Wilson: Is that the Mr. Mills of the Day Dawn Block and Wyndham Company?

The Chairman: Yes, it is.

Mr. Wilson: He knows the value of the property out there.

The Chairman: I think, in the face of what I have said, that Mr. Robinson in indebted to you for unsealing my lips, and I may mention, as he has done so, that Mr. Mills is becoming a shareholder.

Mr. Ievers: He is the largest shareholder in the Day Dawn Freehold Company.

Mr. Chairman: No doubt Mr. Mills's interest in the Day Dawn Freehold Company is to so great an extent that his proposed arrangement would suit him well if we would accept it. I am asked—are the bills good? Well, gentlemen, they are on the best banks, and they are unquestionable. As regards the reserve, it is in the Two-and-Three-Quarters per Cents. It was originally in Consols, but we were bound to convert it to the Two-and-Three-Quarters, because we could not help ourselves. The money is 5,128*l*. 2s. 6d., represented by stock held in that way.

MR. ROBINSON RETURNS TO THE CHARGE.

Mr. Robinson: I asked you, Mr. Chairman, if this board had taken any steps towards bringing about a very desirable result. You tell me Mr. Mills has made an offer, but Mr. Mills is not a director of the Freehold Company at all. What I want this company to do is to open negotiations with the Freehold Company at Charters Towers, in order that they may enhance their profits. I am certain that it can be done to the benefit of both companies, and it is a very simple thing for the directors to do. I knew Mr. Mills made the offer, but did not know what it was. I am entitled to speak both for Mr. Mills and myself, and I say that if the directors do not take these steps, they are not acting in the truest interests of the shareholders. The reply of the chairman has really nothing to do with the question I put. I hope that the suggestion I have made will be acted upon.

A VALUABLE OPINION.

I ought to have said that I went through your mine late in November of last year, and can fully endorse all that has been said by the manager, the managing director and the chairman. (Cheers.) I am in no way inclined to depreciate your property—quite the reverse. I know your property and the position of the Freehold Company, and am positive you will get much larger returns by coming to an arrangement with the Freehold Mine—not to work your mine on tribute, but to pay them a certain rental for the use of their shaft. (Cheers.)

The Chairman: The offer that was made to us we could not contemplate for one moment. It is not for us to approach the Day Dawn Freehold Company, but I say deliberately, if that company will make us an authentic offer of a reasonable character which will justify our entering into negotiations, we shall be delighted to do it. I cannot say more than that. As far as we can see we have sufficient funds to go on with the No. 2 shaft till it reaches paying ground. If we have to develop it further it will be only owing to such returns being made that we shall be justified in spending out of revenue a moderate amount to supplement the working capital we have at present.

The report was then unanimously adopted.

Mr. Sinclair Macleay (director) proposed the re-election of the retiring directors, Mr. Bladon and Mr. Clipperton, and said: As the chairman himself remarked, he is in daily attendance at the office, as also is Mr. Clipperton. I feel certain

YOU CANNOT LEAVE THE DIRECTION OF THE COMPANY IN BETTER HANDS.

(Cheers.)

Mr. Ievers seconded the motion, which was carried.

The Chairman, in returning thanks, said: As long as I am connected with this company I shall give it all the attention it requires. I have no other engagements except in connection with the companies of which I am a director. It is my practice invariably to attend daily at the office of every company I am connected with, and reasonable shareholders will not expect more than that. (Cheers.) If I can in any way promote your interests it will be my great pleasure as well as my duty to do so.

A Shareholder: I hope a full report of these proceedings will be sent to all the shareholders.

The Chairman: We shall be very pleased to do so.

Mr. John Wilson proposed the re-election of the auditors, Messrs. Monkhouse, Goddard, and Company, at a remuneration of 30 guineas.

Capt. Slaughter seconded the motion, which was carried.

The Chairman: It is our duty to give our offices up to these gentlemen for a lengthened period, and I am bound to say they carry out their business very systematically and thoroughly. The company is progressive. We are not rushing the mine, and I have been most anxious to-day not to make statements that I think cannot be borne out in the future. All I say is—give us a little patience and time, and you will have your full reward.

MR. BLADON THANKED.

Mr. Bawtree: I have much pleasure in rising to propose a vote of thanks to Mr. Bladon for presiding. I feel convinced (having been connected with mines for several years) that we very seldom find a chairman so lucid in his statements as he has been to-day, and I only hope it will be my lot to see him fill that chair for many years to come. (Loud cheers.)

The motion was seconded, and carried by acclamation.

The Chairman: I accept that resolution for myself and colleagues. We all have our hearts in our work. Mr. Ievers knows the property, and is of great value on this board. As regards Mr. Macleay and

Mr. Clipperton—they are in almost daily attendance with me, and if Mr. Ievers only came twice a year and gave us his advice he would be worth every penny we pay him.

The proceedings then closed.

LATEST TELEGRAM.

The following cablegram from the manager at Charters Towers gives the result of this company's crushing for the fortnight ending March 16th, viz. :—"890 tons, 916 ozs." (estimated value, 3,114*l.*) ; "am crushing at public mill with 10 heads of stamps."

CARLISLE GOLD MINING CO., LIMITED.

THE CAPT. RICHARDS' PARTY DEFEATED—NO COMMITTEE OF INVESTIGATION—TWO NEW DIRECTORS—BOARD WILL CARRY OUT VIEWS OF PROF. CLAYTON.

THE adjourned ordinary general meeting was continued at the City Terminus Hotel on Thursday. The notice stated as follows :—"Comments having been made upon the investment of part of the reserve fund in the debenture bonds of the Empire Mining Company, Limited, the directors have themselves taken over these debentures at cost price, and the amount paid has been added to the reserve fund in Consols. The resolution for adjournment was, as stated by the mover thereof, to give the shareholders an opportunity of considering the advisability of appointing a committee of investigation, and was not opposed by the board. The directors, however, consider such a proceeding would not be in the interests of the general body of the shareholders. Doubts having been expressed as to whether the chairman clearly explained the future policy of the board, the directors desire to repeat what is already clearly stated in their report, that they propose to carry out development work strictly in accordance with the suggestions of Prof. Clayton, and to be in all other details guided by his recommendations, and they repeat that they rely upon the shareholders to support and confirm such a course, as best calculated to promote the interests of the company. The directors hope that the development work recommended by Prof. Clayton will show decided improvement in the quality of the ore. In any case the proprietors will be kept informed as to the progress of the developments. The directors take this opportunity of stating that, if it is the desire of any large number of the proprietors to be represented on the board, they will with pleasure meet any deputation and discuss arrangements for carrying such desire into effect."

Francis Joseph Bladon, Esq. (chairman of the company), presided.

Mr. H. CAMERON RICHARDSON (secretary) read the notice calling the meeting.

EMPIRE DEBENTURES CLEARED OFF.

The CHAIRMAN, who was cheered on rising by a large section in the room, said : Personally I do not intend to say more than is absolutely necessary in introducing the business. In the first place I desire to tell you that of which you have already been informed by circular, that the directors have taken up and paid for the entire amount of the Empire debentures at par, and paid the amount to the company. That 1,000*l.*, and the other sum of 4,000*l.* we had received from the mine, and which was the amount of reserve set aside last year, has been invested in New Consols Two-and-Three-Quarters per Cent., the same stock as that of the original investment. We have at present therefore 8,000*l.*, which has been invested and has produced 8,205*l.* 6s. 8d. of stock. Now, as to the question of directors' additional remuneration.

NO FEES.

I told you at the last meeting we did not mean to take it, and I may add now that the accountant has been instructed to write off the entire amount from the liabilities, so that it does not absolutely exist. It cannot be taken, for it does not exist. (Cheers.) Some shareholders seem to doubt the position of Prof. Clayton as an expert, but we cannot help that. We thought he would be exceedingly acceptable. That his report is a most drastic one no one can doubt. If at all, he has erred on the side of caution, and I do not blame him. Having appointed him to report it is our bounden duty to carry out his recommendations. (Cheers.) We mean to do that, and have accordingly instructed our manager and cabled him to know whether he had received the professor's report. We have received the two following cables :—

LATEST FROM THE MINE.

Cable dated 3rd March, received 5th March :—"Have sunk on the vein 80 ft. from A 6, proving a continuance of ore body from G 6, of equal or even better grade. Have driven in east 75 from K 13 to meet winze from surface. Ore last 20 ft. proving better grade."

Cable dated 19th March, received 21st March :—"Clayton's report this very minute to hand. 21st February : Shall commence sinking as soon as possible, in accordance with his instructions. It is absolutely necessary to complete new development mentioned in my cable, 3rd March, by as many [men] as you can get, so as to open up fresh bodies of ore. So far have proved pay ore, and to extract ore reserves mentioned by Clayton."

No information received from the mine, which we, as directors, are justified in communicating to the shareholders, shall be withheld from you, and I do not think you can expect me to say more. (Cheers.) The directors are well aware of the feeling of the general body of shareholders, that there should be a re-construction of the board. (Hear, hear.) I have now to announce to you that in accordance with that intention, and to comply with that feeling, Sir Nicholas Elphinstone and Mr. Joseph Crick have sent in their resignations. Those resignations have been accepted—(A VOICE : Why not the others ?)—because they do not intend to retire until it is the manifest wish of the shareholders that they should do so. (Loud cheers.) I want the general body to be represented on the board and no particular section. My suggestion is that two new directors be elected in this way—the board will receive the names of any gentlemen who desire to sit as directors, and those names can be sent in by the end of next week. They will then be submitted to the shareholders, and those having the largest number of votes will be elected. They will be able to see all documents, papers, minutes, and agreements, and everything that they like, so that practically you will have a committee of inquiry or investigation in the proper form, who will act in the true interests of the general body. (Cheers). I have only, in conclusion, to say that a very grave responsibility rests upon you to-day, and with these remarks I will call upon Mr. Nelson who moved the adjournment of the meeting to say whether he desires to offer any observations before I put the adoption of the report.

NEW DIRECTORS.

Mr. NELSON : I am hardly prepared to make special observations. Have the gentlemen named retired by rotation, and will the shareholders have the power to nominate more than two directors ?

The CHAIRMAN : They have not retired by rotation, and it will not be competent at this moment to appoint more directors. It is competent to this meeting to refuse to re-elect the directors who do retire, and I am one of them. We are here to work this matter in the proper spirit, and I hope we shall be harmonious throughout.

Mr. NELSON : I was not aware that you were one of the retiring directors, but it seems that the new directors will be in the minority.

The CHAIRMAN : There will be two directors out of five. I will supplement that by saying that the new directors will have access to all papers, and certainly they would not consent to act if they found anything inimical to the interests of the shareholders. I suppose that if they did so they would retire, giving their reasons, or better still, would call a meeting of the shareholders—in other words, the minority is a majority for all effective purposes.

Mr. NELSON : I should prefer to say no more. I moved the adjournment, because I thought it the proper and necessary thing to do under the circumstances.

LEGAL POINTS.

Mr. TEETHER (solicitor for Capt. Richards) : There are two retiring directors to-day, and it rests with the shareholders to say whether they will re-elect the old directors or not.

The CHAIRMAN : I have already told you that we want two perfectly independent directors, and I hope the shareholders want the same, but we want something more, namely, that they should be the choice of the whole body of the shareholders, and not of a section, Personally, we shall refuse to recommend anybody as a director.

The SOLICITOR (Mr. Hilliard) : The question is whether it is competent for this meeting to elect a candidate recommended by the board. It appears to me not, because the articles provide that in the case of special business, certain notice shall be given to all the shareholders before that business is brought up, and the articles further define what is not special business. The election of new directors is not put in that article, and, therefore, being omitted, comes under the category of special business. Therefore, in my opinion, it is quite clear it is not competent for the board to recommend to this meeting, without previous notice to the general body of shareholders, any candidate to be elected on the direction.

VIEWS OF CAPT. RICHARDS.

Capt. RICHARDS : We are here for the purpose of considering if it is desirable to appoint a committee of investigation, and I will say that it is not only desirable but imperative. The position I have taken up in this affair is this—I have publicly expressed my belief that the original subscriptions were not adequately made by the bonâ fide public before allotment, and also that the bonâ fide public have been brought in since by trickery, and I have expressed a want of confidence in the board. I have said that they have consulted the interests of the vendors to the injury of the shareholders and the public. No remarks that have fallen from the chairman have modified that opinion. We have from Mr. Bladon a statement that on the prospectus 60,000 shares were subscribed for by the public, and I accept that statement. He says that 100,000 were previously applied for, and that subsequently the vendors took 20,000 shares. Mr. Bladon says that was a mark of confidence on the part of the vendors, but a view which gives satisfaction to him does not do so to me. It may be legal. I am not here to settle legal points, but I simply say this,—it showed the confidence trick, and I will show you the injury it did me.

SHARE MARKET.

I applied at the company's office about two months afterwards, and was told that this company was fully subscribed, without any intimation being made to me that the vendors had taken more than 20,000 shares. I had no intimation that there were stags of 100,000 shares, or I should not have gone on buying shares when I must have known that 140,000 must come on the market before there could be a rise in the shares. I went on buying, in the implicit belief that I was competing against the public. I have no doubt this is all legal, but it will not be an inducement to the public to take shares on the faith of prospectuses. We get now to the actual facts. We are told in the prospectus that we are taking over a fully developed concern, that it was being worked at a profit, and was all right in every respect. What took place. (Cheers.) You heard nothing of this company until the September return, which was the first published. September was good, October was better, and November and December, and a meeting was held in March when the company was shown to be earning profits of from 30 to 36 per cent. Everybody was delighted, and we all went away rejoicing. Mr. Longmaid sent over a telegram that we were to get $25,000 a month, and we had it for April and May. The month of May was the apex of this company's greatness. In May we had $25,000, and on the 9th of June a mining newspaper gave the whole of the previous nine months' working. I am sure it only did it with the best intentions—just as it would publish particulars about Rio Tinto or any other company. That was highly satisfactory, but on the 12th November a circular was sent round enclosing this extract and signed by a Mr.

Chemery. I will ask Mr. Chemery before you all—did he circulate that report by his own impulse, or did he circulate it at the instigation of anybody else. (No reply.) At the end of June the shares began to fall, and there was a panic in them, though the reason we were quite ignorant of.

MR. LONGMAID CAME HOME AND SOLD HIS 4,000 SHARES.

The register shows they were sold on the 5th of July, and on the 18th the board published Mr. Longmaid's remarks, with which you are all familiar. He said he sold part of his shares, but did the board know he sold them all, if they did they kept back valuable information from the public, which they ought to have given. They ought to have said "We do not like this—the manager has cleared out; we will send out an expert immediately. They, however, kept us in ignorance. You all remember the first eye-opener we ever had about this company, was the August return, which was not published until about the 8th of September. Then we come to a period at which the directors can no longer refrain from sending out an expert. It is no good—it has to be done. They sent Professor Clayton, but why should he meet Mr. Walton, brother-in-law of the vendor on the mine.

The Chairman: Permission was asked for by several shareholders to see the mine, and it was given in every case.

Capt. Richards: I thank you, sir, your explanation is most full. Here is a letter from a shareholder in Cornwall. (The letter was not read.) When these shares began to tumble he applied to the board to send out a friend to see this mine.

A Shareholder rose to interrupt the speaker, but was called to order by the Chairman.

Capt. Richards: I was saying that the gentleman from Cornwall applied to the board that an expert ought to be sent out. The board replied that there were 1,100 shareholders, and if each one wished to send an expert it would lead to much diversity of opinion. It is to me an act of treachery that we did not send out an independent expert. He was met at the mine by the vendor's brother-in-law—one of the experts on whose opinion the prospectus was based. I think it is the most astonishing thing any body of shareholders were ever told. I think it shows the most utter disregard of our interests. I have no doubt Prof. Clayton's report is that of an honest man, but what were his intructions. He goes out of his way to make excuses. Was he there to plead for the prospectus and for the vendors? Otherwise, why does he make excuses. He was there to give an account of the mine and not to make excuses for other people. I say

THE WHOLE THING DEMANDS A SEARCHING INVESTIGATION.

and we should among other things like to know how Mr. Longmaid acquired his 4,000 shares. Mr. Walton's interest is naturally that of the vendors. The board have had a copy of questions I have addressed to them for a fortnight that demand full answers. I have been told that the vendors have nothing to conceal, and that their books are open. That is perfectly true, but we must judge people by their acts rather than by their words. I say, that the honour and the reputation of the board and the vendors are at stake, and that instead of burking this enquiry they should do everything they can to facilitate it. I now propose that the following persons be and they are hereby appointed a committee of investigation, with power of adding two to their number for the purpose of making an investigation into the affairs of the company, the circumstances under which it was initiated and brought out, and the conduct of its affairs by the directors, along with the nature and value of the company's property; such committee to report to a meeting to be subsequently held. The names are Samuel Richard, Victor William Chemery, of 83, Gracechurch Street, and Mr. George Hakewell, of Throgmorton Street, a stockbroker.

The Solicitor: I am sure the mover and seconder of this resolution will agree with me that the terms are larger than I can advise the board to put to the meeting without notice. (Oh.) I am the solicitor to the company, and not to the board, and it is my business to sit here and try to keep the company in order. I see no reason why we cannot alter the resolution, so as to practically obtain all the meeting requires, because they have the right to make the fullest investigation. The words to which I take exception are "the circumstauces under which it was initiated and drawn out." (Oh.) The meeting was only adjourned for a special purpose.

THE PROSPECTUS.

Mr. Chemery: We wish the resolution to remain as it is, because we are very well advised as to what we are doing. I think the first thing we have to do is to put personal feeling on one side. Let us look at this matter from a judicial point of view. Capt. Richards has gone over a great deal of ground that I intended to cover, but I wished to call attention to the prospectus and its principal clause, No. 2, which I will read:—"The principal claims are the Carlisle, Homestead, and Colombia. The Carlisle, which is the developed property is well known as the most important producer of gold in the district. The main lode has been regularly opened up by shafts, drifts, and levels, and is capable of an output within a few months to supply 100 stamps regularly with ore. At present it is only worked to keep a 20 stamp mill on the property, consequently constantly running, but it is estimated by Mr. Longmaid that there will be 362,000 tons of ore above the 400 ft. level which will be sufficient to supply 100 stamps for the next four years, and the 212,000 tons of ore are all prepared for stoping above the 300-ft. level sufficient to run such stamps for more than two years." I have waited in vain for the directors to give a reply to the questions put, and more particularly to the one as to the sale by Mr. Longmaid of his 4,000 shares. This prospectus runs on the lines of Mr. Longmaid's report throughout, and if he had the 4,000 shares given to him I can quite understand his report. I will compare the prospectus with Prof. Clayton's report. If you notice in the prospectus they plainly say the principal claims are the Carlisle, Homestead, and Colombia. But Prof. Clayton says "The Carlisle lode is the only one of the group of mining claims here that is known to be of any value. There are a few spurs on other claims, but they are of no importance." If you turn to page 29, he says, "If this work (development) does not developed some good strong ore bodies that will pay moderately well for working. I should advise the abandonment of the mine altogether."

PROF. CLAYTON SHOULD HAVE BEEN SENT EARLIER.

I should have supposed that instead of sending Prof. Clayton at this stage to report upon the mine, they should have sent him earlier, and then we might have been saved our money. Knowing that Mr. Walton was related to the vendors it would have been only right and honest on the part of the directors if they had stated that in the prospectus.

The Chairman: I did not know. It is only quite recently I knew there was the slightest connection between them.

Mr. Chemery: The prospectus says, "The success of the present 20-stamp mill has led the owner to order another 20-stamp, which is now being erected, and will be ready and at work before the date fixed for the company to take possession—the cost being included in the purchase." Who was the owner I should like to know? I quite agree with what Capt. Richards has said that this is an opportunity for the directors to clear themselves from all imputations by accepting a committee of investigation. And I for one should only be too happy to give them a clear sheet. This is a question of money, and it resolves itself into the further question—have we been swindled. If we have been, then I say we will prosecute the directors, the vendors, and everybody else.

MR. CHEMERY SIGNS.

Capt. Richards has referred to a circular of mine, but the circumstances were these. I was very busy one day, and one of the directors sent round to me that circular written on a slip of paper, and asking if I would sign it. The shares were then about 22s. 6d. I understood the mine was a capital one, and I had known this director for many years, and I put my name to the circular without thinking any more about it. (Laughter.)

Mr. Cavendish (director): I feel considerable diffidence in addressing a large assembly like this, because I am afraid that, from my experience in speaking to such a body of people, I shall not be able to give proper expression to the sentiments with which I am animated. I will ask you, and I hope I shall not ask in vain, to give me your indulgence, your patience, and your courtesy. (Hear, hear.) I am equally as anxious as any gentleman can be studiously to avoid saying anything that can in anyway be considered personal. And I would exhort others who follow me to copy that example. (Cheers.) We are met here to do the best we can in the interests of the company. As regards a committee of investigation, I have not the least objection to it. You can have one to-morrow if you like, but I do object to anything which is inimical to the interests of the shareholders as a body. (Cheers.) You must know as well as I do that such a committee means a serious interruption to the course of your business, and an outlay of money, because accountants and solicitors will not work for nothing (I do not blame them), and I know that such a proceeding could not advantage the shareholders one iota. I should like to draw your attention to the condition and prospects of the company and its financial condition. You know what the report of Prof. Clayton has furnished us with. It is discouraging; but I have been told he is, as a rule, prone to take a pessimist rather than an optimist view. I do not blame him for that, because I think in the exercise of such a profession as mining he is very wise to do so. Therefore, considering him an eminently careful man, I do not think for one moment that a person of his calibre would have advised you to spend anything like so large a sum as 5,000*l.* on development work unless he thought you were going to reap something from it.

WHAT ARE THE LATEST FACTS?

The latest report from the mine shows considerable improvement. On the east side of the main shaft there have been discoveries which, in my humble opinion, are most important, and will, I think, add not only considerably to the quantity, but also to the value of your reserves. You have a mill and machinery in excellent condition; you have ample means to carry out these developments, and you have according to Professor's Clayton's report a staff willing, energetic, and capable of doing it, and you have also no liabilities. (Cheers). Do not forget that on this side you have a cash balance which is amply sufficient for your present requirements, and you have 8,000*l.* invested in Consols.

PLAIN FACTS.

Last year you received a dividend equivalent to 10 per cent., and this year, although the returns have not been such as we desire, at any rate they are progressive; that. gentlemen, to my mind does not represent anything like a deplorable state of affairs. I would like to refer to a circular that a shareholder issued asking for proxies for this meeting. That was accompanied by a paper with a long string of questions which to my mind was injudicious. If the intention were to secure proxies it signally failed, because from my position I am able to inform you that the total response to that appeal was equivalent to about 7 per cent. of the total shares on the register, and your directors have received proxies to considerably over 25 per cent. (Cheers.) It is within your recollection, because it was part of the contract that half a million dollars was to be paid by the vendors for this property. I am not standing here as their champion, but they undertook to pay for the extra 20 stamps and other improvements, and all the preliminary expenses. This was perfectly well-known to you at the time. Every intending investor had the right to see these contracts, and every man has the right now to see them if he chooses to go to the Somerset House and pay 1s. for the privilege. (Cheers.) Now what is the policy of the board? It is to carry out as rapidly as possible the developments which Prof. Clayton has told you are necessary. We have told you we wish you to elect two members to fill the vacant seats, and this will practically be a committee of investigation, and here I re-echo the words of my chairman. As far as I am personally concerned, I should gladly have retired from this company months ago for many reasons, not the least amongst which was the consideration of my own comfort and interests, because you can readily understand that if in addition to the anxieties and responsibilities of doing my best to carry on your business, I have to be harassed by this endless correspondence, I occupy by no means a bed of roses. (Cheers.) My advice to you is, do not sacrifice your interests. Do not be led away by hysterical clamour of imaginary grievances—(loud cheers)—but listen to the dictates of common sense and reason. Gentlemen, our ship is in troubled waters. Let us bend our backs to the task, and I am sure, at least, I sincerely hope, we shall weather the storm, and ultimately bring this company into the calm and unruffled waters of prosperity. (Loud cheers.)

Mr. Tether wished to know the state of the proxies?

The Chairman: I cannot give you the numbers voting but the board have received

PROXIES FOR 52,000 SHARES,

and Capt. Richards sent in the first instauce 15,344, and later, 7,887, or a total of 23,231. I must tell you that the proxies of Capt. Richards are totally illegal.

Mr. TETHER : I admit that they are.

A SHAREHOLDER : Are you going to use your proxies.

The CHAIRMAN : Undoubtedly. (Loud cheers and uproar.) Capt. Richards has come here with the avowed inteution of destroying the board, and the board having appealed to the shareholders, and finding a majority iu their favour, will defend themselves. (Loud cheers.)

Mr. TETHER : Your proxies are unattested.

The CHAIRMAN : They are perfectly legal, and we have taken opinion upou the point.

Mr. SHAW : I do not think personal matter ought to be iutroduced. and those who have most deprecated it have most indulged in it, (Hear, hear.) Capt. Richards, for example, talked of trickery. Now, I confess that I bought these shares at 23s. 6d. on my own judgment, and I hold them now, and intend to do so. When Mr. Chemery read from Prof. Clayton's report "Carlisle is the only lode," he ought to have read further on : "The Carlisle lode is very large and strong, and direct in its course." (Cheers.) The directors are no friends of mine, and I shall vote for a committee of investigation, but

IT IS RIDICULOUS TO HOLD THEM RESPONSIBLE BECAUSE THE LODE GIVES OUT.

I know a seam of coal that gave out in two days, aud we have never found it from that day to this, although it is 15 years since. As to Prof. Clayton being influenced by the brother-in-law of the vendor, he is not the man we take him to be if he would allow himself to be moved in any such way from his duty. I still believe this mine will pay, and I shall not part with my shares.

Mr. CHAPLIN believed that some modus vivendi could be found which could meet the views of all parties.

Mr. H. C. RICHARDS : I think we as shareholders have to face what is best to be done. If we have any right against the directors we should exercise that right. Shareholders have already threatened that the directors will be prosecuted, but action ought not to be taken at the expense of the shareholders, particularly those who came in later. We want to get what money there is to be got out of the mine. We do not want to be fools because Capt. Richards went about and bought shares with which he is now landed, only asking the opinion of his wife and Mr. Teether. (Laughter.)

COMMON SENSE.

Do not be landed in litigation or the wrecking of the company will follow. If the directors have issued a false prospectus theu let those who care to do so prosecute them, and I hope we shall have no national protest meeting wheu they are put in prison about their not being allowed to have their trousers. Do not be coerced by a minority in this corner of the room who want to briug this company into disrepute. (Cheers.) If you believe Prof. Clayton's report you must go on with the work of development; if you do not believe it, then by all means have this committee which will wreck your shares, wreck your mine, and leave everything worthless. (Cheers.) If the statements made by Capt. Richards and Mr. Chemery are true, the compauy must be wrecked, and that will be the result of the iuvestigatiou ; but if the statements made by Prof. Clayton are true, we ought to go on with the work he had commeneed, and spend the money, not iu prosecuting the directors, but in working the miue. (Cheers.) I think our chief business is to find out two geutlemen who know something about mining, and put them on the board, and then if they fiud that there are to be any dark doings, we can turn the other directors out, but do not let us have a committee of investigation, for the mining papers will publish a report, and dowu will go our shares. (Cheers.) Let us be practical and business-like.

WE ARE NOT HERE TO SYMPATHISE WITH SHARE SPECULATORS.

I appeal to you as men of common sense, do not wreck this company to oblige a clique. Let us accept the olive branch which the directors hold out. (Uproar.) Then call it an ultimatum if you will—I say, let us accept the ultimatum, and if we find hereafter we have been misled, by all means let us "go for them." Let us do our best to carry out the views iu Prof. Clayton's report, and not those in this document of Capt. Richards', which reads like a solicitors' clerk's first attempt at making iuterrogatorics. (Cheers.)

"NORTHAMPTON ELECTION."

Mr. TEETHER : I advise you to reject Mr. Richards as the Northamptou electors did.

A SHAREHOLDER : I protest. What have we to do with the election for Northampton?

SHAREHOLDERS WARNED.

Mr. J. STEWART WALLACE : Mr. Teether has monopolised the principal part of this meeting, and are we to waste our time in listening to a man who has nothing later to tell us than the news of the Northampton election. (Laughter.) It is remarkable how the same fact will appear to different minds. (Laughter.) Mr. Chemery innocently admitted that he signed a document in good faith, because he was told the statements were true. The directors accepted the prospectuses in the same way, and Mr. Chenery is the first man to come down upon them. (Laughter.) I have always found that a committee of investigation means the utter destruction of the company that appoints it, but on the other hand the strengthening of a board I have frequently found to be of great advantage. I see no reason why the two new directors should not fiud out whether this mine has been conceived in innocence and brought forth in rectitude, or whether it has been conceived in sin and shaped in iniquity. If the worst comes to the worst, there is a considerable amount of property which may be saved, but if we have a committee of investigation and an army of wreckers—the wreckers will make money, and we will get nothing. (Cheers.)

Mr. WILKS proceeded to read a long paper on the affairs of the company, but the meetiug declined to hear it. He moved a vote of want of confidence iu the directors, which the solicitor ruled out of order.

The discussiou was closed by a SHAREHOLDER, who pointed out that they had no funds to support the expenses of a committee, but just euough to carry out Prof. Clayton's recommendations.

The CHAIRMAN then put the motion for a committee, when 39 were found to be in its favour and 87 against it—the anuouncement being received amidst great applause.

The CHAIRMAN : I delare the amendmeut lost.

Mr. TEETHER : We demand a poll.

The CHAIRMAN fixed the poll to be taken at once.

RESULT OF THE POLL.

The CHAIRMAN : Capt. Richards, in a very fair manner, has stated that seeing the majority is so distinctly in favour of the directors he wishes to withdraw from the contest, and not to detain you any longer. (Loud cheers.) The poll therefore is against the amendmeut, and the board now come to the adoptiou of the report.

The motion was then put and carried unanimously.

The CHAIRMAN : The next business is the election of retiring directors.

Mr. CLIPPERTON : I propose that the two retiring directors, Mr. Francis Joseph Bladon and Mr. George William Cavendish, be re-elected. I can only say that, as directors, we are at the office every day doing the best we can in your interests.

Sir CHARLES CRAUFORD seconded the motion, which was carried unanimously.

The CHAIRMAN : I have only to repeat that when the day comes, when I think I can serve you no longer, that will be the day on which I will retire.

The auditors, Messrs. Cooper Bros., were re-elected unanimously.

VOTE OF THANKS.

A cordial vote of thanks was proposed to the chairman, and carried amidst much applause.

The CHAIRMAN : I beg to thank you, and I am only sorry that there should have been apparently any discord amongst us. We will work harmoniously with the new directors, whoever they may be, and no effort on our part will be wantiug to do our best in your iutcrests.

The proceedings of a two hours' meeting then closed.

THE COLORADO GOLD AND SILVER EXTRACTION CO., LIMITED.

THE COMPANY HAS ALREADY MADE A NAME FOR ITSELF IN COLORADO—NEW TERMS WITH THE MANAGING DIRECTOR—THE BOARD AUTHORISED TO RAISE FURTHER CAPITAL IN ORDER TO ERECT MORE MACHINERY, AND BUY ORES, AND COMPETE WITH THE SMELTING COMPANIES.

AN extraordinary general meeting of the Colorado Gold and Silver Extraction Company, Limited, was held at Cannon Street Hotel, E.C., on Thursday, nnder the presidency of Richard Birkin, Esq., for the purpose of considering, and if thought fit, passing the following resolutions :—

(1.) "That the directors be, and they are hereby authorised, to vary in such mauner as they may think fit the terms of the agreement dated 23rd May, 1888, made between this company, of the one part, and A'Court William Granville Birkin of the other part, so far as regards the remuneration payable to the said A'Court William Granville Birkiu, as mauaging director of the company." (2) "That the capital of the company be increased to 110,000*l*., by the issue of preferenco shares up to 10,000*l*., upon such terms and conditions, and with such rights and privileges annexed thereto as the directors shall determine, and further that the directors shall, at their discretion, have power to issue in lieu of the whole or any part of the said increased capital, debentures to the like nominal amount, upon such terms and conditions and with such rights and privileges annexed thereto as the directors shall determine."

Mr. C. WALLINGTON (secretary) read the uotice convening the meeting.

VARYING THE TERMS OF THE MANAGING DIRECTOR'S AGREEMENT.

The CHAIRMAN : Gentlemen, you have heard the notice read. The directors of the Colorado Gold and Silver Extraction Company thought it right to ask the shareholders to be kind enough to meet them here to-day so that they might have an opportunity of explaining their reasons for requestiug permission to make the variations suggested in the notice calling this meeting. As I know none of you wish to remain longer than is necessary, I shall at once go into the matter by telling you the reasous why the directors wish to vary the terms of the agreement with Mr. A'Court Birkin, and afterwards why they wish to increase the capital of the company. In the first place, when the present manager of the Colorado Company made an agreement with this company and went out to Colorado to establish the Newbery-Vautin process there, his remuneration uuder that agreement was confined to auy excess charge which he could obtain from miners and others over and above the minimum charge made by the company for the use of their barrels. This practically limited the Colorado Company to a charge of 25*l*. per annum per barrel for the use of those barrels, and the remuneratiou of the mauaging director was dependent upon any excess price upou that figure. That, however, has beeu found to be an objectionable arrangement—for this reason, that instead of charging 25*l*. for the barrels the managing director has to say "You will have to pay 35*l*., 45*l*., or 50*l*. per barrel ;" and that is found to cramp business and make the thing too expensive for the miners to undertake the liability of paying such a heavy charge. That being the case, when Mr. Johnson, one of your directors, went out to Colorado he thought it was undesirable to continue that arrangement, and I believe he himself suggested to the manager that instead he should be paid a moderate salary, and should be interested in the results. The directors, on consideration, thought that a wise alteration, and they now come to ask your sanction for making it.

A TRIBUTE TO THE STAFF.

There is no iuteution of giving a large salary, but I may say with truth that the management of the company in Colorado has been so satisfactory—so good in every respect, that the parties there, from the manager down to the office boy, are certainly worthy of the support of the shareholders in this company. (Hear, hear.) If you, gentlemen, could read the voluminous correspondence which has been received by your board from the Colorado Company every

week, I am quite sure you would see at least that very great industry and very great talent have been employed in bringing the company out in the way that it has beeu brought out iu Colorado. When the staff went out there, the Newbery-Vautin process was opposed by a great many American miners, who, as you know, are about the clevcrest mining men in the world. They thought that this was probably a similar thing to many others that had been put before them, and that like them it would prove a failure. It wanted a great deal of energy and talent to face these gentlemen, and tell them that for once they were mistaken.

OPPOSITION FROM THE SMELTING COMPANIES.

The company met with eonsiderable opposition from the wealthy aud clever smelting compauies which exist in Denver and Colorado. They did not hail with very great pleasure the advent of a company who proposed to supply a new process for gold extraction at a lower eost than their own, and they are men of such wealth and determination that anything they could do to prevent this company succeeding they were willing to do, and, iu a quiet way, have done. It has, therefore, beeu obligatory on the part of the management out there to aim at these points—first of all to avoid conflict with these powerful corporations, the smelters at Denver, as far as possible ; aud it has also been necessary for them to practically examine the ores of the whole State of Colorado—no light job, gentlemen, to do. At the present time I thiuk I may say that they have practically examined the whole of the ores likely to be suitable for the working of the Newbery-Vautin process, and they have examined them with remarkable success. (Cheers.) That I am sure you will be very pleased to hear.

ORES WHICH THE SMELTERS CANNOT TREAT.

They had found ores—telluroid ore for instance—which the smelters canuot treat, except at great expense. I am happy to say that the Newbery-Vautin process is able to treat that ore at a very moderate expense—something under 1*l.* a ton. In addition to that, owing to the fact that the Newbery-Vautin plant costs very much less than the smelting plant, they are able to treat low-grade ores at a less cost than the smelting process, and it puts an enormous field of low-grade ores also at their service. Auother thing is that the plant eosting comparatively so little can be placed where smelting companies canuot be, on account of the enormous expense of putting down smelting works. There are now many offers to the Colorado Company for such plants to be placed in various points. I mention these things, gentlemen, to show you that at any rate industry has existed amongst the staff at Colorado. Intelligence has also existed, for certainly the correspondence which your board receives, in my opinion, reflects credit upon our employés, and would reflect credit upon the very best men in the world wherever they came from. That being the case, I do not thiuk you will refuse to the directors that which, iu their judgmeut, they deem advisable, namely, to vary the contract which was made by the manager out there to a moderate extent, and you may depend upon it that the directors will not only have their own interestat heart, but your interest also. The directors themselves are very large shareholders in the compauy, haviug paid sovereigus for all their shares, and that being the case, I think their own interest will be a guarantee to you that your interests will be studied iu regard to the proposed change which is brought before you to-day.

NEED FOR INCREASED CAPITAL.

With regard to the secoud propositiou—that the capital of the company be increased to 110,000*l.* by the issue of preference shares up to 10,000*l.*—the reason why your board ask you to sanction that is this : First of all the capital which was raised to start this company was only about 15,000*l.*, and those who are acquainted with the expeuse of buying a site and putting down machinery and establishing in a comparatively foreign country works of that description know that 15,000*l.* does not go a very long way. However, the bulk of the expeuses had been got over, but now comes the time when it is necessary for the Colorado Company to go into the market and buy ore. Denver, as probably you know, is the centre where ore is sent from all parts of the State of Colorado for sale. It is crushed there, sampled there and sold there by auction, and the man who bids the highest price gets the ore, and having bought the ore it is the rule of the place to pay down a cheque there and then. These smelting companies are people who can pay for any amount of ore, and it is absolutely necessary that the Colorado Company shonld be able to go into the market and do the same for any ore which they may require. Perhaps it would be well for me to read from a letter which the board received to-day from the managiug director in Colorado, which partly touches upon this subject, and which may explain to you why they ask for further capital to enable them successfully to complete the business which is already so well begun.

LETTER FROM COLORADO.

The Chairman read as follows :—

March 7th.—I note that the directors approve of the coutract for rolls purchased from Messrs. Heudey and Meyer for $2,380.40, and the same are now erected and will be running to-morrow for the first time. We were fortunate in getting them up without any accident, but were somewhat delayed in getting the machiuery delivered, as we had to get the steel rolls cast in Penusylvauia, and oue or two parts of the machinery from Chicago, and they were uot delivered until about one week ago. Re agency : I note your remarks re agencies outside of the State of Colorado. By this time you will have received a letter giving our views on the matter, which we think are very fair, of which more hereafter. I notice by your letter of the 23rd that the reports I mailed you were safely received. With regard to your observations as to proving that our works are a success in Denver, I am glad to tell you that in several cases we have accomplished this with some prominent gentlemen, and are at the present moment negotiating with three different parties, whose uames I mentiou below, who will, I think, without a doubt, erect our plant ou their own properties. We have also been in correspondence for some time with a local mining company, with whom the parent company has also had recent correspondeuce. We have treated and experimented on their ore, and were able to send them a very favourable report. This company is a very wealthy one, and will, I feel sure, from the correspondence we have had with them, through Mr. Higginbottom, erect the Newbery-Vautin plant in Dakota, in which State their mine is situated. With regard to Mr. Scudder, of St. Louis, he represents a very wealthy syndicate there, and although they are negotiatiug to put up works on the Newbery-Vautin system, they (and also Mr. Dumont) make a stipulation that this company shall build and erect their plant for them and turn it over to them complete in every respect. Of course arrangements for payment would be made secure by us in every way ; however, before complying with such a request, and before we can do anything of this kind we have got to have some money at our command. There is another matter which I wish to bring before you. You will notice that in the case of Mr. Scudder, providing he agrees to use our process, it will be with the understanding that we erect the plant for him. This is one reason why it is most essential that we should have capital at our eommand. You say in your letter :—" First prove the Denver works to be a success, aud get people to take the barrels." So far as proving the Denver works a suecess, we are doing this daily, and shall most fully demonstrate it very shortly by making money. We must also have more money to go into the ore market to buy ores with. We have got to have, or at any rate should have, at our works from 500 to 1,000 tons always on haud in reserve, for the reason that some days, even perhaps a week, may elapse before we eau get just the thing we want in the Denver market, or in the Pueblo market. On the other hand, we may occasionally be able to pick up a quantity of several hundred tons of ore, which is very suitable for us. We, of course, must pay cash down for these purchases. Then, again, we shall invariably have the product of from 10 days to two weeks always locked up iu the charcoal before it is reduced, and in the meantime we may work up anywhere from $5,000 to $20,000 or $30,000 worth of ore, depending, of course, on the richness of same. We must not stop our works because we have run out of ore. This would never do. What we made one day would be lost the next. The works should run, and never stop, if we are to make any amount of money here."

HOW THE FUNDS HAVE BEEN EMPLOYED.

The Chairman : I do not know that I ean add very much to that, except, anticipating possibly a question which might be asked by some shareholder, as to what we have done with the money we have had already, I think it desirable to tell you the way in which the money has been spent. For machinery, tools, assay office and roasting furnace, $15,716 ; land which it was uecessary to purchase, $2,400 ; buildings and office furniture, $9,000 ; purchase of ore, $1,300; general expenses, salaries, wages and legal expenses, $1,100 ; fuel, &c., $1,100 ; balance at bauk at Denver, $7,106 ; aud I may say that the company had in the bank in London on the date this account was made up, 1,874*l.* Since then 1,000*l.* of that has been sent to Colorado to put them to a moderate extent in funds to purchase ore with, which practically makes their bank balance 2,400*l.*, and ours 874*l.* I am happy to be able to assure you that the prospects of the Colorado Company are of the most cheering description ; aud, further, to tell you that, owiug to the popularisation of the process in America by means of the Colorado Company, it has become a most

IMPORTANT FEEDER TO THE PARENT COMPANY.

in the way of inquiries for purchase of rights, which I think will probably lead to a very considerable business, and the parent eompany have to thank the Colorado Company for that very grand development of their business. Anyway, gentlemen, this company has made for itself a uame iu Colorado already. As I said before, 15,000*l* is not a great deal of money to establish a thing of this kind with, and I do not thiuk you will refuse to allow the directors, iu some way or other, to raise more money to supply funds to the management ont there.

A REASONABLE SUGGESTION.

As to the best method of raising it, you see the board's suggestion. We know very well that if we could place the 10,000 unissued shares at par, that would be better than raising the money, either by preference shares or debentures, aud by way of a suggestion, might I say that I think the gentlemen who have become shareholders in this company through the distribution of shares by the parent eompany are the very gentlemen, having practically paid nothing for those shares, to take up these 10,000 shares. I merely offer it as a suggestion to those gentlemen who are in this company at practically no cost to themse lves, that the board would consider that they would not only do their duty but also themselves a great benefit if they would consent to take up these 10,000 shares. We must have money, and we think the better plan of raising it is to endeavour to do so first by preference shares, and, if we fail in that, by debentures. We have property there on which we could raise mouey, but we do not want to. As far as preference go, no doubt you all know that that which is pledged in a preference share is simply the income of a company and not its property. I will now ask Mr. Johnson, one of your directors who went out to Colorado, and who, I think, has the reputation of being as smart a man of busiuess as exists in London or out of it, to move the first resolutiou. I am sure when you hear what he has to say abont the company you will be exeeedingly satisfied. I can assure you it was a great pleasure to me to hear Mr. Johnson on his return remark. " All I can say is it is oue of the best managed places I have seen for a very long time. (Cheers).

VIEWS OF A DIRECTOR WHO HAS VISITED THE PROPERTY.

Mr. Johnson, in proposing the first resolution as above, said : This varyiug of the terms of the agreement is my suggestion, for I had not been there many days before I fonnd that the original proposition was acting as a tie, aud hindering the bnsiness. We want to be liberal with the miuc owners, and give them the best terms we can. In addition to Mr. Birkin, Mr. Rose, the ehemist, and the rest of the staff are very efficient indeed, and I am inclined to think that we have a better staff out there than the parent company has in any of its branches. In auother year's time probably the results will speak more eloquently than I can on the matter. (Cheers).

The motion was seconded by Mr. J. B. Sands, and carried unanimously.

MUST HAVE MONEY.

Mr. Johnson then proposed the second resolution, as above, and said : We must have money, and I think 10,000*l.* is the very least we can do with. In a business like ours the wages are going on day by day, and all transactions, as regards buying ore, are cash before delivery. We must not allow our works to be cramped for want of this very moderate capital. Considering that the smelters, our competitors, have hundreds of thousands of pounds in works aronnd us, this capital that we are asking for, 25,000*l.* in all, is exceedingly

moderate, and I think there should be no difficulty in raising this money on preference shares. I prefer preference shares to debentures.

Mr. C. G. HILL seconded the motion, which was carried unanimously.

On the motion of Mr. GEORGE REID, seconded by Mr. CRICK, a vote of thanks was passed to the CHAIRMAN, who briefly replied, and the proceedings terminated.

LEEDS FORGE CO., LIMITED.

CAPITAL FULLY SUBSCRIBED—PLENTY OF BUSINESS—AN INTERIM DIVIDEND—THE COMPANY SETTLING TO WORK—A BRILLIANT FORECAST—THE QUESTION OF COMPETITION.

THE statutory meeting of this company was held on Tuesday at the City Terminus Hotel, E.C.—John Scott, Esq., C.B. (chairman of the company), presided.

Mr. J. S. Walker (the secretary) read the notice summoning the meeting.

A FULL SUBSCRIPTION.

The CHAIRMAN: Gentlemen, as you are aware from the circular which has been distributed among you as shareholders, and from the words that the secretary has just read, this is the statutory meeting of the (New) Leeds Forge Company held under the Companies Acts. I have great pleasure in informing you on behalf of myself and colleagues on the direction, that the share capital of the company of both descriptions and the debentures were very fully subscribed, and I have also pleasure in stating that the amounts of those respective denominations have been very fully-paid up by those to whom they were allotted. This has placed the directors of the company in a position to take over from the vendors the property which they have acquired, and at the same time it has enabled them to issue cheques in payment of the amount of cash, which they were bound to hand to the vendors, and to order the issue of the amount of shares of both denominations which they had further to supply them in fulfilment of their obligations. (Cheers.) As you know, at a meeting of this description no accounts have to be presented, and in fact, from the nature of things, it would be impossible to do so; but I have very great pleasure in stating that the forge works, which are now your property, have been, since they have been working in behoof of the new company, in the very fullest state of activity. (Cheers.)

BIG ORDERS.

Possibly at this moment there is a larger amount of work on hand there than has ever been the case in the history of the old firm, and I am glad to state that that work is not only large in extent, but, as far as the directors know, it is profitable in quality. (Cheers.) Since the commencement of this year and the issue of the prospectus of the new company fresh orders have been received to a very considerable extent, which will enable the works to be carried on for a considerable number of months to come, even if we do not get another order at all; but I am glad to say that from week to week the full quota of what we expected to come to us in the ordinary course of business is being received. Since the works have been taken over by this company several important additions have been made to the plant for the further development of the company's business, and I trust that these will bear fruit at a very early period, and most of them are now in full operation. Orders have recently been given by the directors, as foreshadowed in the prospectus, for a very large area of buildings, in which

THEY INTEND TO DEVELOP THE RAILWAY-PLANT BUSINESS.

I may say this class of business is pressing very earnestly on your directors' attention, and their most sanguine hopes are being fulfilled by the manner in which the railway companies in this country and some from abroad are approaching them in reference to extensive orders. (Cheers.) Some amount of work has already been undertaken, and I trust when the new buildings and machinery which would be placed in them were in full operation a very large and lucrative business will be enabled to be carried on from this branch of business, which for the moment is entirely separated from the business of the manufacture of corrugated flues, which up to this date has formed the staple production of the Leeds Forge. (Cheers.) It will be in the recollection of the shareholders from the perusal of the prospectus under which they subscribed for shares in this company, that—possibly rather differing from many companies which are launched on the London market—this business was carried on for the behoof of the shareholders from September 1st last, and that consequently, at the end of last month, six months' work for the behoof of the shareholders had terminated. I am glad to say, from the provisional accounts which have been laid before the directors, these six months have been of considerable prosperity as far as profit-earning has been concerned. I may say now it is the intention of the board that the financial year of this company shall date from September 1st of each year until August 31st of the succeeding year, and that consequently one year's transactions will have to be closed on August 31st of this year. To enable stock to be properly taken, and to have the audit carried through in a satisfactory manner, it will be necessary to permit a period of two months to elapse before the annual meeting can be held; but it is in the expectation of the board that by November 1st next year they will be able to lay before you full and completed accounts of the company from September 1st, 1888, to August 3rd, 1889. This will enable the final dividend which may then be declared for the year to be settled on November 15th next. But the board have taken into consideration, with a very great amount of care, the statements which have been laid before them of the operations of the company from August 31st up to the end of February, and they have taken the figures which those accounts show in a necessarily provisional manner, and I am glad to be able to state to you that the board have determined to issue a circular which will

ANNOUNCE THE PAYMENT OF AN INTERIM DIVIDEND

for the six months which will elapse at the end of February. That dividend—subject, naturally, to the final adjustment of the accounts when the year shall have been terminated—shall be at the rate of 20 per cent. per annum—(cheers)—on the paid-up amount of the fully-paid up ordinary share capital, and at the rate of 7 per cent. per annum on the amount paid up of the preference share capital. (Cheers.) It might have been possible, had we called in the assistance of our able accountants, to make a calculation from the absolute date of the paying in of the instalments of the share capital by the respective shareholders, to have made an interim distribution in this fashion; but, looking at the excellent way in which the share capital has been paid up, they thought, instead of endeavouring to distribute the amount—which will be at their disposal by a pro rata interest account, possibly at a larger rate of interest than they now intimate, it would be much simpler to declare an interim dividend upon the fully-paid up amount of each shareholder's share. Now, I do not know that I have very much more to add, except to assure you of the regularity of the conduct of the business at the Leeds Forge, and the activity which reigned there augurs a fair prospect for the continuance of good business. (Cheers). It is an open secret now that there is a very large boom going on in the metallurgical trade. The steam works of the country are better employed now than they have been for many years, possible than ever before, and I believe the New Leeds Forge Company will participate in the prosperity which has attended the whole of its neighbours. (Loud cheers.)

SHAREHOLDERS SATISFIED.

Mr. GEORGE TUNLEY, F.S.I., thought they could none of them fail to be satisfied with the position of the company up to now. There was one point he wished to inquire about, and that was with respect to another company similar to this which had been advertised.

The CHAIRMAN said he had seen some correspondence in a financial newspaper, which stated that a prospectus would be issued; but he was not aware that it had been issued. But he could assure the shareholders the board had considered the claims put forth by the promoters of that scheme, and they were quite ready to resist any claim which that company might put forward to a title of making a corrugated flue such as this company made. (Hear, hear.)

CORRUGATED FLUE QUESTION.

Mr. SAMSON FOX said he was not sorry this question had been put. The shareholders should know something of the difficulties that had had to be got over in order to make something like 30,000 corrugated flues and put them on board ship within the last 10 or 11 years. When a company had worked well for their customers, as this company had for years, it was not likely they would be very easily injured by a small matter such as they had seen mentioned in certain newspapers. The corrugated flue was that bit of the marine boiler which was the most important for the profitable working of a ship, because if they could not run safely and economically at high pressure they would not now be in the running. Consequently, that flue which could be depended upon to carry the greatest pressure with the thinnest material was the one that would do the most service to the man who worked it. The Board of Trade, Lloyd's, and the Admiralty considered that the corrugated flue was the one that could be trusted with the thinnest material. It cost about 6d. in the £ on the price of the ship, or 2½ per cent.; and what man in his senses would leave a well-tried apparatus to go to another one because it might be a little bit cheaper?

VALUE OF THE INVENTION.

The company was in a position to say that no life or limb had ever suffered, or disaster occurred to the boiler of a ship where corrugated flues had been fitted. (Cheers.) He was sure the best flue would be used in spite of anything that somebody might say of another, and if anyone came and said he had a better one than theirs, either he had got his (Mr. Fox's) invention, or he would make more money than the company. (Laughter.) The question was as to the material. The owners of their corrugated flue had never been able to make it succeed until they got the proper material. They had a great deal of trouble, but at last found out how to make material that was thoroughly reliable, and he ventured to say no man could succeed in that class of apparatus without he had full control of the mixture and material it was necessary to employ. As to their material, the column in the Board of Trade test-book, in which the word rejected might be written, had remained perfectly clear. (Cheers.) All the Governments, without exception throughout the world, who possessed a high-pressure boiler had that fitted with Fox's corrugated flue—(cheers)—and there was no possibility, so far as the management knew, of a superior apparatus existing, and it would have to be a superior one to affect them. With regard to the company's waggon business, he thought that would come very much to the front, and very shortly too, and that they would ere long get profits out of it, such as they now got out of the flue. (Cheers.) Hitherto the load of a railway waggon had been considerably under the weight of the waggon that carried it. The average load on railways was found to be about 31 cwt. per waggon per journey, but the waggon itself weighed about 5 tons 15 cwt. He had photographs of this company's waggon, which weighed about a ton less than those generally in use, and if they get a ton off the weight of the waggon, and so get it nearer the average load, they were bound to get a very large field for their manufactures. (Cheers.) Mr. Fox concluded by moving that Mr. Alfred S. Kirk, who has been appointed by the board, but whose appointment now required confirmation by the shareholders, be elected a director.

Mr. BELLAMY seconded the motion, which was unanimously carried.

Col. LEAN moved a hearty vote of thanks to the chairman.

Mr. TATE seconded the motion, which was carried by acclamation.

SPECIAL MEETING.

The meeting was then made special.

The CHAIRMAN said the first resolution related to the title of the company. When the company was registered the Registrar at Somerset House took objection to register it in the name of the same company that had carried on the business until the old company, the Leeds Forge Company, had been in liquidation; consequently, it was registered as the (New) Leeds Forge Company. Since then, however, the old company had formally liquidated, and the objection of the Registrar would now be removed. As regarded the other alterations, the necessity had arisen on the application to the Stock Exchange for a special settlement and a quotation, the committee taking exception to one or two details of the articles as registered. The alterations

they proposed were of a very simple nature, and did not involve any principle which might be deleterious to the interests of any shareholder in the company, nor did they call for any remark. The chairman then moved—"That the name of the company be altered from 'the (New) Leeds Forge Company, Limited,' to that of 'the Leeds Forge Company, Limited.'"

Mr. William Kettlewell seconded the motion, and expressed a hope that the company would continue the successful career of the old company.

The motion was carried unanimously.

The Chairman moved—"That article 15 of the company's articles be altered, so that it shall read to the following effect:—'One month's notice of any call shall be given, specifying the time and place of payment, and to whom such call shall be paid. In any future issue of capital no calls shall exceed 25 per cent. of the nominal amount of the share capital, or shall be made payable in less than two calendar months from the time the preceding call was payable.'"

Mr. Sinclair Scott seconded the motion, which was carried.

The Chairman moved, Mr. Kirk seconded, and it was carried, "That article 58 of the company's articles shall read as follows:—'That the directors may, whenever they shall think fit, and they shall upon a requisition, made in writing, by members holding not less than one-tenth of the nominal amount of the issued capital, convene an extraordinary meeting.'"

The Chairman moved, and Mr. J. S. Hyde seconded, "That article 87 shall read as follows:—'Notwithstanding the last preceding article, no director shall vacate his office by reason of his being a member of any corporate body or company which has entered into or may enter into contracts (but when not shown the nature of the contract must be disclosed), or may do any work for the company, provided, nevertheless, he shall not vote in respect of such contract or work, or if he does so his vote shall not be counted; but this proviso shall not apply to the agreement referred to in article 5 of these presents.'"

This was carried.

The Chairman proposed, Mr. Spencer seconded, and it was agreed: "That article 125 of the articles of association shall read as follows:—'Notice of all interest or dividend that is payable shall be given to any member entitled thereto.'"

It was intimated that a special meeting to confirm the foregoing five resolutions would be held within a month.

The proceedings then closed.

THE TRANSVAAL LANDS CO., LIMITED.

A LEGAL POINT—MEETING REQUIRED BY AN ACCIDENT—A FORMAL MATTER.

An extraodinary general meeting of the Transvaal Lands Company, Limited, was held at the City Terminus Hotel, Cannon Street, E.C., on Thursday, the 21st of March, in order that the following special resolutions might be proposed. The notice stated: "Should the resolution be passed by the required majority, it will be submitted for confirmation as a special resolution to a second extraordinary general meeting, which will be subsequently convened."

RESOLUTION.

"That the articles of association of the company be amended as follows, namely:—By the addition of a further clause between clauses 8 and 9, to be numbered 8A. Clause 8A.—The company may at any time by special resolution sub-divide the shares in the capital of the company, or any of them, in such manner as may seem expedient. Clause 23.—By inserting the words, 'in the usual common form,' after the word 'deed.' Clause 24.—By omitting the word 'or' in the sixth line, and also the last phrase in the clause, from the words 'in their absolute discretion,' down to the end of the clause. Clause 49.—By inserting the words 'not fully paid' after the word shares' in the first line of the clause."—Mr. W. J. Thompson presided.

Mr. A. W. Heron-Maxwell (secretary) read the notice.

The Chairman: Gentlemen, I must, in the first instance, apologise that we have had to call you together again through a mistake on the part of the executive. The law requires that there shall be 14 clear days before the confirmation of a resolution after it has been passed, and, unfortunately, the meeting was called on the 14th day instead of the 15th, which compelled us to come together again, and to ask you to pass the resolution which the secretary will now read.

The Secretary then read the above resolution.

The Chairman: I beg to propose the resolution which you have heard read. Will any gentleman second it?

Mr. H. Pasteur seconded the resolution.

THE QUESTION OF FOUNDERS' SHARES.

Mr. White said, before the motion was put he should like to ask a question as to the division of the 1*l*. shares into eighth shares. He could see no object for it, unless it was to favour the founders.

The Chairman: No.

Mr. White said he presumed that many shareholders, like himself, were well able to hold shares of the nominal value of 1*l*. each, without any necessity for sub-division.

The Chairman said that they had no such intention. It was only a general resolution, and was not intended in any way to affect the shares held by the ordinary shareholders. It simply had reference to the founders' shares.

Mr. White said that he wished to protest, not as regarded that company itself, but as to the general system that was growing up for the issuing of founders' shares. He considered it a reprehensible practice, and against the true interests of the general body of shareholders.

ONE OF THE PUBLIC.

The Chairman: You speak as one of the public, and your remarks will doubtless be recorded by the reporters who are present, and you will thus have the means of bringing your views before those who are launching fresh enterprises. I now beg to put the resolution to the meeting. Those in favour will signify the same in the usual way; on the contrary. Carried unanimously.

DATE OF CONFIRMATORY MEETING.

We shall have to call a confirmatory meeting, which will take place on Saturday, 6th April, when we shall ask you to confirm what we have passed to-day. That is all the business, gentlemen.

A vote of thanks to the chairman concluded the meeting.

YURUARI CO., LIMITED.

The mid-monthly mail from the mines, dated Chile, 19th February, arrived on Saturday. In it the manager states:—Water shaft: We started the pump on Monday, the 11th February, but after a few hours work the packing of the pole gave out. I have accordingly given instructions to fix the steam pump to redeem it. We hope to be able to start again to-morrow, and in a few days the Cornish pump will be at work. I regret this delay, which, however, is consequent on this shaft having been allowed to stand in water for over 12 months. The shaft requires re-timbering, which work is being vigorously proceeded with as far as the water level. I am pleased to say I succeeded in obtaining at Callao a competent white man to take charge of the timbering. Mine: I have pleasure in forwarding you the following interim report. Capt. Rogers' report for the full month will follow, as usual, by next mail. Since last advices we have commenced stoping in the western winze between Nos. 9 and 10. Our object in this is to further test the lode. When we commenced stoping the ground looked poor, but as the stope advanced east and west of the winze, the quartz is daily improving towards the footwall. Of course, the quartz broken during the present month in this part of the mine will, no doubt, continue poor, but I feel satisfied from present indications that we are nearing the end of the poor drift through which we have been passing during the last three months, and that better returns may shortly be anticipated. Mill: So as to keep this supplied with quartz, we have been stoping between levels Nos. 9, 10, 11 and 12 east, the latter (which is near the bottom of shaft) showing at times visible gold. The stope between Nos. 9 and 10 east has not given the results we expected from indications when opening out. I must confirm, however, Capt. Pearce's opinion that we have a splendid lode in this place, and the quartz is of good appearance, although visible gold has not been so apparent during the last fortnight. The only unfortunate circumstance at present is the continued scarcity of miners, so that I have been unable to commence driving No. 8 drift west, which promises well. This will be proceeded with vigorously as soon as we have men to spare for the work. At the request of Mr. Sprick (of Messrs. Sprick, Lewis and Co., who represent Venezuela at the Hamburg Exhibition), who was specially anxious for specimens of quartz from this mine, I have promised to send a collcetion to the exhibition, which I hope you will approve. The manager's letter is throughout the most encouraging the company have received since his return to the mines.

The assistant secretary advises receipt of a long letter from the company's attorney, at Guacipati, from which the following is an extract:—The quartz at your mines continues to improve, and the work is being excellently carried out by Mr. Aikman. All the staff have every belief that at an early date this enterprise will prove indisputably the first in the country. The tailings despatched from the mine for treatment here have unfortunately been landed at Southampton, but are expected in London to-day, and the results of the treatment will be duly reported.

We are advised by the assistant-secretary that the tailings despatched from the mines several months ago have now been assayed by Messrs. Johnson, Matthey, and Co., the result being that No. 1 bag shows about 9½ dwts. per ton, while the average of the nine bags is about 6½ dwts. per ton. In the opinion of experts, the tailings would pay well to treat, and double the result at present obtained from the quartz. The directors have accordingly decided to send out a plant as soon as possible, as with the additional produce thus obtained, even the lowest grade rock in the mine will more than cover working expenses, while it is estimated the average will show a large margin of profit. Provided the amalgamators sent out prove a success, the tailings on surface, estimated at not less than 100,000 tons, should increase the value of the property by at least 50,000*l*.

THE CAPE COPPER CO., LIMITED.

DIVIDEND IN TWO INSTALMENTS.

21st March.—I am instructed to inform you that in consequence of the present position of affairs connected with the copper market, the directors have resolved that it is desirable, in the interests of the company, that the dividend lately declared shall be paid in two instalments, viz., 2s. per share on 25th inst., and 2s. per share on 24th June next, both free of income tax. The above instalments will be paid on Coupons Nos. 3 and 4 respectively, and to the shareholders who were on the books of the company on 8th March inst., as already notified.—J. C. Leaver, Secretary.

Publications Received.—"The Sugar Convention," by Sir T. H. Farrer, Bart. (Cassell and Company, Limited, London); "Speech on the Shipbuilding Vote of Navy Estimates, 1888," by Lord Charles Beresford, M.P., Captain Royal Navy, in the House of Commons, December 13th, 1888; with a Summary, showing the Navies of Europe from Official Returns, June, 1888. (E. S. Boot, 38, Gracechurch Street, E.C.); "Antimetallism," by Maximilian Praschkauer, F.S.S.; London, 1889 (Published by the author, 109, Fenchurch Street, E.C.); Institution of Civil Engineers: Paper on "Indian Railways, the Broad and the Narrow-Gauge Systems contrasted," by Mr. Francis John Waring, M. Inst. C.E.

Holloway's Ointment and Pills.—Notable Facts.—Intense heat augments the annoyance of skin disease, and encourages the development of febrile disorders; wherefore they should, as they may, be removed by these detergent and purifying preparations. In stomach complaints, liver affections, pains and spasms of the bowels, Holloway's Ointment well rubbed over the affected part immediately gives the greatest ease, prevents congestion and inflammation, checks the threatening diarrhœa and averts incipient cholera. The poorer inhabitants of large cities will find these remedies to be their best friend when any pestilence rages, or when from unknown causes, eruptions, boils, abscesses, or ulcerations betoken the presence of taints or impurities within the system, and call for instant and effective curative medicines.

COLON GOLD SHARES (17s. 6d. Paid)

Now at 7/ to 8/, are rising, and may possibly before long reach £5 or £6.

ORDERS SHOULD BE TELEGRAPHED AT ONCE.

See Mr. THOMPSON'S MINING AND INVESTMENT CIRCULAR.

PRESS OPINIONS OF THIS CIRCULAR.

"Life," 21st February.

"Colon Gold Mine shares are likely to rise."

"Fair Trade," 15th February.

"The Tetuan Gold shares, which we recommended as a mining investment some week or two ago, have thoroughly fulfilled our prognostication. Colons can be had for 2s. 6d. to 3s. There ought to be a big rush to be in this swim."

"Society Herald," 26th February.

"The interest which has been displayed of late in Colombian Hydraulic Mines continues. The favourite of the hour appears to be the Colon Mines, which are in the immediate vicinity of the Tetuan, Orita, Maravilla, and other famous Colombian mines worked by the hydraulic process. I am assured, on the same good authority which aided me in predicting so accurately the course of Tetuans months ago, that the advance in the price of Colon shares has only just made a beginning, and that they may be expected to cross 20s. within a very short time. Be it observed, I by no means mean to imply that they will not go very much higher than the figure mentioned, but my policy is to advise my readers step by step, so that those who have bought at low prices may turn out their shares whenever they have a good, respectable profit."

"Society," 2nd March.

"Colon Gold shares are likely to have a considerable rise. It is even wise to buy these shares and carry them over from account day to account day. They should, however, be acquired and put by until they show dividends—a time not far distant. The Colon Mines are situated in Colombia, a district now where the mines are significantly productive. All those who are investors should read the report of Mr. Welton, the engineer of the Colombian Hydraulic and Orita Mines. He is a great authority, and in his conscientious statement exhibits what this really legitimate property should produce to the Colon shareholders."

"Stock Exchange Times," 2nd March.

"COLON.—None should stop buying these shares."

"The Hawk," 19th February.

"Colon Gold shares have come with a rush in the last few days. The mine is undoubtedly one of the richest in the gold-paved district of Colombia, consisting of auriferous gravel deposits which are worked on the hydraulic system. It is a near neighbour of the celebrated Orita Mine, already cleaning up to the tune of £1,200 a month. Major Ross, a director of the Orita Mine, has just joined the board of the Colon, and his presence signifies that the works will go forward with redoubled energy."

"Country Gentleman," 2nd March.

"It will be remembered that last week and the week before last I had a good deal to say about Colon Gold mines, and stated that it would not be long before a report, which would astonish even those who believed most firmly in the mine, would be forthcoming. This report is now to hand, and, reading it, it really appears as if the engineer, Mr. W. S. Welton, who is responsible for it, had been drawing upon his imagination; but I am assured that this is far from being the case, and that Mr. Welton has underrated the brilliant prospects of the mine. One thing should be remembered, and that is that Mr. Welton is a well-known and highly-respected gentleman, and anything that emanates from him should be received with the respect that it deserves. Mr. Welton can lay claim to having seen his reports regarding other mines fully borne out by actual results."

"Country Gentleman," 23rd February.

"I can but repeat the advice I gave last week regarding Colon Gold mining shares, and that is to buy them at once. Since I first mentioned them they have risen from 3s. to 11s. 6d., and it is highly probable that they will go as high as 15s. and over. The property, which has only recently come into such great prominence, is situated quite near the famous Colombian Hydraulic and the Orita. It is stated by thoroughly competent authorities that the deposits cover over 1,000 acres, the property really consisting not of one mine only, but of five mines equally rich and promising."

"Country Gentleman," 16th February.

"COLONS.—The jump has been as smart as I prophesied, and I hear that the top has by no means been reached. The mine has suddenly been found to be far richer than was ever believed, and consequently the shares, of which there are not very many about, are in the most active demand. An enormous amount of business has been done in them during the week, and they close to-day very hard and firm. In fact, the movement in Colons has been *the* feature of the week."

"Country Gentleman," 9th February.

"Rumour says strong financial combination has wrought a change in the management of a mine for some time before the public, and that the shares, now at 3s., will have a large and smart rise. My readers will do well to watch for this. I may not mention the name at present, but next week shall be able to give full particulars."

"Financial Chronicle," 20th February.

"Colon Gold shares promise a further advance."

"Financial Chronicle," 23rd February.

"COLONS.—The rise has only begun."

"Rialto," 16th February.

"Colons seem to be good for a big rise in price."

"Bullionist," 2nd March.

"COLONS.—Investors and operators should buy at present prices An excellent report has been received upon the Colon Mines from Mr. W. S. Welton, one of the most experienced hydraulic miners of the day."

"Bullionist," 2nd March.

"Colons are steady, and should be bought. From all we can learn regarding this property, there is no doubt as to its great value, and when the results of the operations now being carried out under the new management become known, we quite anticipate the present price to quickly double itself."

"Stock Exchange."

"Colons will soon be better. Those who should know are buying the shares again quietly. Our readers might do worse than follow this example."

"Stock Exchange," 16th February.

"The feature of this market during the past week has been a great rise in Colon Gold shares. Early on Wednesday morning these shares—then only at 3s. 6d.—began to spring away by leaps and bounds, and in but a few minutes a rise of 5s. was to be recorded. Judging by the prospects of this undertaking, now that some important changes have been effected in the management, the shares ought to have a much further rise, and doubtless but a few days will see them several shillings higher than now."

"Stock Exchange," 23rd February.

"Colon Gold shares have met with great demand during the current week. The reports from the mine are of a very satisfactory character, and, we consider, justify a further advance. Reports say that these shares will go a good deal higher."

(Continued on following page.)

THOS. THOMPSON'S INVESTMENT CIRCULAR.—*Continued from previous page.*

"Iuvestors' Guardian," 23rd February.

"Colon Gold shares are very firm, and there are many indications of a further advance in price. It would not surprise us to see them go to double the present quotation."

"London and Brighton," 17th February.

"The Colar Mines are of the same nature as the Tetuan, being hydraulic, and comprise something over 1,000 acres close to the well-known Colombian Hydraulic and Orita Gold Mines. The advantage these cheap-priced shares present to the mining speculator is that there is plenty of room for a rise, while the possible fall is very limited, aud at the worst the loss is infinitesimal compared with high-priced shares which, if they have a chance of a rise of one or two points, have also the probable contingency of a drop of four, five, or perhaps more, at any time."

"London and Brighton," 20th February.

"Colon Gold shares are certainly good to buy for a rise."

"Mining News," 2nd March.

"In the case of Colons, one of the popular speculations, we feel sure prices will advance, and these shares offer an excellent investment medium at their current price. Colons will go much higher than now selling."

"Stock Exchange Times," 2nd March.

"We are confident that the shares will yet see from £3 to £4 each."

"Court Circular," 2nd March.

"Things speculative have been more or less depressed during the last few days, and even the shares of the Colon Gold Miues have had a slightly backward tendency, in common with the rest of mining investments. This is, however, not a bad thing for those who want to speculate, since the report from the mines would show Colons to be very good business, and, if they are a shilling or two cheaper, all the better for the buyer, seeing that they can be so thoroughly recommended."

"Financial World," 16th February.

"Colon.—A pleasant surprise awaited those connected with this hitherto unknown enterprise last week. Very little has been heard of this modest placer mine, until a demand sprang up in the middle of the week for the shares, which forced them upon the attention of the market, and, as a consequence, the shares rose iu one day from the insignificant price of 2s. 6d. to 8s., an advauce equally as important as some which have had to be recorded with respect to the Witwatersrand properties, when we consider how little has been done to bring them into prominence. As a thread of the gossamer will show the direction of the wind, the results which have lately been made by several well-known placer properties may be taken as giving in some degree an indication of what is yet in store for those whose faith is pinned to properties of this description, in preference to those of the quartz miues. A company whose shares can advance in one day 6s. ought to possess a property destined to make some flutter in mining circles."

"Financial World," 2nd March.

"Colons.—These shares, we believe, have now reached their lowest ebb, and those who want to secure an interest in this ought to do so when the price stauds at something reasonable. The decline in the price was due to indiscriminate selling by speculators who desired to realise."

"Mining World," 16th February.

"We need not pursue the matter further, for we have shown that the attention which is now being paid to Colombian mining is based upon accomplished facts, and not upon sanguine prospects or market manipulations. We look for a steady advance in the returns in the uear future, and for a corresponding advance in the prices of the shares of the companies which have been established on a sound basis, and are mauaged with honesty and ability."

"Mining World," 16th February."

"Hydraulic mines have been to the fore, and particularly the share of the 'Colon,' of which we publish some particulars this week. The shares, commencing at nominal prices, rushed up to 10s. and 11s., and are generally thought to be worth buying for a further rise. Telegrams poured in to purchase from all parts of the country, and sellers, though at first shy, being tempted by the splendid profits they saw before them, begau to appear. Many thousands of shares changed hands, and Mr. Thomas Thompson, the sponsor for the new venture, was warmly congratulated upon having scored another success."

"The Capitalist."

"The most remarkable has been Colon Gold shares, which are now quoted 10s. to 11s., with every prospect of a still further rise."

"Financial News," 14th February.

"The feature of the mining market yesterday was the rise in Colou Gold shares. The Colon Gold property is a close neighbour of the Colombian Hydraulic, the Orita, and the Tetuan, and, if we may judge from the reports, a worthy competitor with them. Among the directors of the undertaking we notice Mr. Sankey, of the Colombian Hydraulic, and Major Ross, of the Orita—an ample guarantee that the management will not be lacking in enterprise or iutelligence."

"Financial News," 15th February.

"In another column will be fouud the report of Mr. B. Anderson, a well-known American hydraulic miue engineer, upon the Colon mines, which we had occasion to mention in our yesterday's issue. According to Mr. Anderson, a sampling of the gravel gave, under hand washing, a profit of $1,351 the amount of water used being only 4 to 6 miner's inches. The mine, we understand, has been worked more or less systematically under the hand process, or sluicing, and always with results similar to the above. The new directors of the company have determined to work the mines in a more energetic manner, and have already entered into a contract for the construction of the works necessary to bring 500 miner's inches of water on to the miues at a cost of £14,000, this sum being only half the amount of working capital still remaining intact with the company."

"Financial Chronicle," 2nd March.

"Colons.—We may shortly expect to commence moving again."

THE INGERSOLL DUPLEX HAND-POWER

ROCK DRILL.

A SAVING OF 300 PER CENT. OVER ORDINARY HAND-LABOUR.

Send for full description, testimonials, &c., to

WELLINGTON & CO. (Successors to CLARK & WELLINGTON),

MANUFACTURERS.

It is perfectly automatic, and bores holes from ½ to 2½ inches diameter at the rate of 1 to 2 inches per minute in hard rock. It will work equally well in any direction or on any uneven surface. No skilled labour required to run it. No expensive repairs. Made in two sizes, and can be worked by electric motor if desired. Hundreds of these Machines are at work in all parts of the world in Mines, Quarries, and for all kinds of rock excavating. It is the only *effective* and *durable* hand-power Rock-drill ever made.

Telegraphic Address—

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

ABSURDLY LOW PRICE OF QUEENSLAND SHARES—STRIKING FACTS—INDIANS UP—SOUTH AFRICANS BETTER—GENERAL FOREIGN SHARES INACTIVE—HOME MINES DULL.

We think it high time to call the attention of our readers to the ridiculously low price of Queensland Shares in the face of the returns that many of the mines are making. We will take Gympie Gt. Eastern, to whose affairs we drew special attention some months ago, when the shares were looked at askance on the market at three or four shillings. The last three returns of this mine have shown that the profits are verging upon 30,000*l.* a year. The return we publish below shows a profit of 2,500*l.* for the four weeks ; the previous four weeks showed a profit of 2,300*l.*, and the 24 days previous to that a profit of 2,400*l.* ; and yet the shares are selling at 50 per cent. discount. The public must either be ignorant of these facts or strangely neglectful of them. Other Queensland mines are also making very good returns, and the aspect of affairs from this quarter has decidedly improved within the last few weeks. There has been a large amount of business in Etheridge United shares, and a telegram may come at any moment announcing the result of the first crushings. We understand that there is no shortness of capital, and that the position of the company is sound in every respect.

Indian shares are "firming up," as they say, upon the market, and as we have been saying for months past. The remarkable returns from these mines are now beginning to strike the public imagination, and shares should be bought rather than sold. The rise in Mysore and in Ooregum Preference and Ordinary shares has been the noteworthy feature in this department. It is thought, however, by those who have gone carefully into the matter that the preference shares are relatively lower than the ordinary. The market expects greatly improved returns, and these will probably be announced about the time we next go to press.

The African market has, for the time, seen its worst, and the semi-panic has subsided. Buyers are to the fore and sellers receding. Prices have improved, and though we do not advise the purchase of the higher-priced shares, yet there are a few others that seem worth looking at.

General Foreign shares have been dull. The shares of American mines are likely to be in good demand about a month hence, for then the season for active work will have fairly set in. There has been some quiet buying, though not to an extent that has influenced prices.

In view of the very satisfactory advices received from time to time, the shares in the Colon Gold Company ought to be considered exceedingly cheap. At the present time the shares are at only about 8s., but upon the following letter from Mr. Frombes, a Californian mining engineer of great experience, they ought to be at several times that figure. Mr. Frombes says : "From the prospects we obtained from the series of mines covering an area three miles in length, and from ¼ to ½ a mile in width, and named El Descubriencnto, Nuevo Potosi, Colon, Colombia, and the old Spanish mine Margarita, good results. (These five mines comprise the property of the Colon Gold Mines, Limited.) I have no hesitation in saying that I consider them superior to any alluvial mines I have examined in Colombia. Were they situated in California they would readily sell for one hundred to five hundred thousand dollars each, and from my mining experience of 15 years in California and Nevada, I am positive in asserting that by the application of hydraulic machinery to these mines, they would yield to the owners immense profits. The gravel at points where it can be seen ranges from one to two hundred feet in thickness."

We believe the shares of the Yuruari Company have been largely oversold, and the rumour repeatedly circulated for several months past has accordingly been revived, that a call of 6d. per share is about to be made, for which we are informed there is no foundation.

Home mines have been dull to the point of stagnation. They have scarcely been mentioned during the whole week.

Africans.

During the week more business has been done in this market than for some time past, and several of the best properties have had a considerable advance. We see no reason why such mines as Crown Reefs, Goldfields of South Africa, and Moss Rose should not all go higher very shortly. It is the high-priced shares, such as De Villiers—the Board, by the bye, are going to sub-divide their 1*l.* shares into 5s.—City and Suburban, Ferreiras, Salisburys, and Simmer and Jack, that we caution the public against holding.

South Africa is undoubtedly very rich, but there is not one of the above properties worth the present quotations, and this opinion is upheld by nearly all the better class of South African men whose opinion is worth anything.

The following show a rise :—$\frac{1}{16}$ in Moodies. 10s. paid and fully-paid ; $\frac{3}{16}$ Bothas ; $\frac{1}{8}$ Central Langlaagte ; $3\frac{1}{2}$ City and Suburban ; $1\frac{1}{8}$ Crown Reef ; $\frac{1}{8}$ Croesus ; 20s. De Villiers (Robinson) ; $\frac{5}{8}$ Goldfields of South Africa ; $\frac{1}{4}$ Kleinfontein ; $\frac{1}{4}$ Moss Ross ; $\frac{1}{4}$ Oosthuzen ; $\frac{1}{2}$ Royals ; 20s. Salisbury ; $\frac{1}{4}$ Stanhope ; $\frac{1}{8}$ Teutonia ; $\frac{1}{8}$ Western Langlaagte ; whilst a fall is shown of $\frac{1}{8}$ in Piggs Peak, Shebas, Johannesburg Waterworks, and Bantjes ; $\frac{1}{4}$ Durban Roodepoort ; 20s. Ferreiras ; $\frac{1}{16}$ Great Britain ; $\frac{1}{2}$ Heriot ; $\frac{1}{2}$ Henry Nourse ; $\frac{3}{4}$ Jubilee ; $\frac{3}{4}$ Jumpers ; $\frac{1}{4}$ Knights ; $\frac{7}{16}$ Langlaagtes ; $\frac{1}{4}$ Main Reef ; $\frac{1}{8}$ Modderfontein ; $\frac{1}{8}$ New Grahamstown ; 20s. Copper.

There has not been much doing in the copper market during the week, but it exhibits certainly a far more healthy tone than it did when last we wrote. To all appearances prices have now touched the bottom, and an improvement may be looked for.

A fall is shown in Cape Copper of ⅛; Mason and Barry, ¼; and 20s. Rio Tinto. The only rise has been in Quebradas of ¼.

Australians.

A somewhat dull week has been experienced in Australian shares, notwithstanding that several of the mines are doing remarkably well, and at any moment may have a substantial rise. Gympie Great Eastern have again made a good profit—2,500*l.* on the month. Etheridge United may at any moment send over a crushing which would put the shares several shillings higher, and yet such shares are neglected. A fall is registered of ¼ in British Broken Hill, 1s, Livingstone, 6d. Mosman, 6d. Mount Morgan, and 1s. Mount Shamrock, whilst a slight rise is shown in Day Dawn P.C., and Etheridge United, also 1s. in Gympie Great Eastern.

Foreign Shares.

There has not by any means been a busy week in general Foreign shares, consequently prices show very little change. Montana shares rose on the meeting, and should be held for higher quotations. Palmarejos have gone up purely on a market rig, and not on the value of the property, or what is being done at the mines. La Trinidad, New California, and Potosi, although somewhat lower, should be purchased for a rise.

The following have risen :—Carlisle, 6d.; Montana, 1/16; Monte del Oro, 1s.; Palmarejo, 2s. 6d.; St. John del Rey, 6d., whilst the undermentioned have receded :—Alamillos, ¼; Colombian, 1/16; Don Pedro, 1/16; El Callao, ½; La Trinidad, ¼; Linares, ¼; New California, 6d.; New Spitzkop, 1s.; Old Lout, ⅛; Potosi, 6d.; and Viola, 6d.

Indian Mines.

There has been a large amount of business done during the past week, and now that the crisis in the copper market has to a great extent blown over, investors appear to be giving their attention to the more solid properties that are not so liable to fluctuations. Hence Indians—a rise in which we have of late repeatedly foreshadowed—are improving, Rumours have been current that the Mysore Company have sold a portion of their mine. Nothing of the kind, however, has happened. The Goldfields of Mysore are about to dispose of a small portion of their vast estate, which we think, should greatly improve quotations. Ooregum Preference have had a sudden rise of 10s. above the ordinary shares. The mine is doing remarkably well, and prices should improve considerably ere long. Colar Centrals have not risen yet, but apart from their merits, we look for an early improvement in price in sympathy with other Indian descriptions. An improvement has taken place in Balaghat, partly and fully paid, which show a rise of 1s. Goldfields of Mysore, ⅛; Mysore, ½; ditto Reefs, 1s. 6d.; ditto West, 3d; ditto Wynaad, 6d.; Nine Reefs, 1s. 6d.; Nundydroog, ⅜; Ooregum, ⅛; ditto Preference, ⅛; and South-East Mysore, 4s.

Diamonds.

The market for diamond shares has been somewhat lively during the past few days, and notwithstanding the news which comes over by every mail regarding De Beers Consolidated, the market has put the shares a shade firmer. English shareholders should sell at present prices, for prices will most likely decline in the near future. London and South Africans appear cheap to purchase, seeing that they carry a dividend of 5s. and the right to call 35 Bultfontein shares at par for every 100 shares held. This should make London and South African shares worth about 19*l.* per share before long.

A rise of ⅛ is shewn in Anglo-African, ⅜ Bultfontein new shares, 20s. De Beers, ¼ Griqualand West, 1s. 6d. New Consolidated, 20s. New Jagersfontein, ⅛ United, 20s. London and South African Exploration, ⅛ Read's Drift, and 1/16 Burma Ruby Mines. No other changes to note.

The following are the closing quotations :—

LATEST FROM THE MINES.

Indians.

Indian Gold (Glasgow).—Phillips cables March 25th:—"Crushed 180 tons, 45 ozs. Stamps only."

Colonial Mines.

Gympie Great Eastern.—The directors have received a cablegram from the mines, dated March 28th, giving the result obtained during the past month, viz., "24 days, 600 tons, 1,019 ozs.; value, 3,560*l.*; profit, 2,500*l.*"

Midas.—Cables from the mine:—"Yield for week ending 16th inst., 31 ozs." (127*l.*) "Yield for week ending 26th inst., 23 ozs." (94*l.*)

Phœbe.—Telegram from the manager at Charters Towers, viz.:—"372 tons 748 ozs.; value, 2,522*l.*"

Ravenswood.—During the month ending 2nd February, 66 tons of quartz have been raised. In the holidays the boiler and machinery were overhauled, and the former tested.

Foreign Mines.

Alaska.—Mr. Samuel Bayliss has resigned his office of director of the Alaska Mining and Exploration Company.

Anglo-Saxon.—Notice is given that the directors have declared an interim dividend of 2s. per share.

Consolidated Esmeralda.—Rich ore continues in 375-ft. level. The quantity is small, but indications are favourable for improvement. Mill running all right.

Gravel Gold Mines of Colombia.—Mr. Sydney A. Cobbett (secretary) writes that the share certificates are now ready to be delivered in exchange for the allotment letters and banker's receipts.

Great Remance.—The following telegram has just been received from the president of the company, Mr. George W. Stetson:—"Letter from Louis Janin to me just received says, including all questions of wood and water which have as direct bearing upon the value of the property as the quality of the vein itself. I do not hesitate to say the Great Remance vein is one of the most extensive it has ever been my fortune to see."

Gold Hill.—46 ozs. gold sold at Charlotte, North Carolina, on the 13th inst.

Humboldt.—Certificates of shares in the Humboldt Electric Power and Mining Company, Limited, are now ready for delivery in exchange for the banker's receipts, for payment of deposit, allotment and first call, at the offices of the company, 63 and 64, New Broad Street, E.C.

Original Pittsburg.—Advices from mine state that the new mill has been completed and taken over from the contractors and accepted. The local directors are very much pleased with the mill, which is reported to be "the very best mill for working rock on the coast," and is working most satisfactorily.

Orita.—Cablegram of the returns for February:—"We have cleaned up after a run of 740 hours. The gross returns are 800*l.*; the net profit is 550*l.* We shall re-commence washing on the 22nd."

Pinos Altos Bullion.—The directors have received telegraphic advice that the out-turn for the week ending 23rd inst. was $11,000.

United Mexican.—Telegram received to-day, San Cayetano property:—"Gross returns, week ending March 23rd, $8,500; expenses, week ending March 16th, $7,300; loss, week ending March 16th, $100. El Cubo property:—Gross receipts, week ending March 23rd, $1,100; expenses, including capital expenditure, week ending March 16th, $5,200."

Victory.—Mr. Larchin, one of the directors, who, at the request of the board, visited the mines, has returned to England, and will present his report to the directors at their meeting on Monday next, and it will be issued to the shareholders without delay.

Home Mines.

Gawton.—The statement of accounts for the half-year to 28th Febrnary shows a credit balance on the six months' working of 2,015*l.* 4s. 7d. The directors consider there is reason to expect that the output of arsenic soot will be maintained, and possibly increased during the next six months.

Great Laxey.—The directors state that they anticipate being able at their meeting in April to again increase the usual dividend to 8s. per share.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES

SEE PAGES 536 AND 537.

Metals.

Copper has been active and prices well maintained. Consumers are understood to have bought largely, taking advantage of the great drop in prices. Our market has been comparatively steady. G.M.C. warrants sold from 42*l.* to 39*l.* 10s. cash. G.O.B. Chili Bars realised 5s. to 10s. per ton over G.M.C.; three months' is about the same price as spot; last price, 39*l.* 5s.; at the close yesterday, 39*l.* 12s. 6d. cash was paid for 100 tons G.M.C., and to-day 39*l.* 10s. taken for cash, and 39*l.* 7s. 6d. for three months. A sale of 150 tons Rio Tinto was made by auction yesterday. 100 tons cakes realised 42*l.* 10s., and 50 tons ingots 43*l.* 7s. 6d. to 43*l.* 10s. in warehouse Swansea. Wallaroo and Burra are quite nominal. We quote English tough, 45*l.* to 47*l.*; best selected, 47*l.* to 49*l.*; strong sheets, 53*l.*; Indian sheets, 50*l.*; yellow metal sheets, 5¼d. to 5½d.; regulus, ore, &c., 8s. to 10s per. unit.

Tin rather easier. Straits sold from 94*l.* to 93*l.* 10s. cash, closing 93*l.* 15s. three months. Rules 15s. to 20s. over cash, and Australian commands 22s. 6d. to 25s. premium over Straits. To-day 94*l.* 5s. was taken for three months Straits. The Dutch market has been steady at about 57fl. for both Banka and Billiton. The Trading Company's sale yesterday of 25,826 slabs went at an average of 56⅞ for the Banca; 3,000 Slabs Refined realized 57fl., and 1,000 Slabs Billiton 57¼fl. English ingots, 96*l.* to 96*l.* 10s.

Tin Plates are firm, and we quote for ordinary cake Liverpool 13s. 3d. to 13s. 6d.

Spelter dull, 17*l.* to 17*l.* 2s. 6d. for ordinary brands, ex ship here.

Lead has been lifeless. We quote soft Spanish, 12*l.* 7s. 6d. to 12*l.* 10s.; soft English, 12*l.* 12s. 6d. to 12*l.* 15s. L.B. China pigs, 13*l.* 7s. 6d.

Quicksilver.—Rothschild's quote, 7*l.* 15s.; second hand parcels, 7*l.* 9s. to 7*l.* 10s.

Antimony, firm, 49*l.* to 50*l.*

London Metal Exchange.

4.35.—Closing official report.—Copper: G.M, Brands, cash, 39½, 40; three months, 39¼, ¾; best selected, 46, 7; strong sheets, 52; English tough, 45, ½. Tin: Fine foreign, cash, 93⅝, 4⅛; three months, 94¼, ¾; Australian, 94⅝, 5⅛; English ingots, 96, ½; Spelter, 17, ¼.

Glasgow Pig Iron Market.

3.19.—Business at 44s. 8d., 44s. 9d., 44s. 8½d. cash; 44s. 11d., 45s., 44s. 11½d. one month; closing buyers, 44s. 8d. cash; 44s. 11d. one month; sellers, 1d. more. Market steady, fair business. Middlesbro' done 38s. 2½d. cash; 38s. 5½d., one month; closing buyers, 38s. 2½d. cash; 38s. 5d. one month; sellers 1d. more. Hermatite, done, 48s. ½d., 48s. 1½d. cash; 48s. 4d., 48s. 4½d. one month; closing buyers, 48s. 1d. cash; 48s. 4d. one month; sellers, 1d. more.

COMMERCIAL NOTES.

Railways.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year:—Increases:—Caledonian, 3,154*l.*; Eastern and Midlands, 66*l.*; Great Northern, 2,050*l.*; Great Western, 9,440*l.*; Hull and Barnsley, 617*l.*; London and North-Western, 11,387*l.*; London and South-Western, 3,669*l.*; London, Chatham and Dover, 1,871*l.*; Manchester and Sheffield, 426*l.*; Metropolitan, 439*l.*; Midland, 11,740*l.*; North British, 4,765*l.*; North-Eastern, 20,247*l.*; and North Staffordshire, 600*l.*

The Brighton Railway traffic return for the past week shows an increase of 3,188*l.*, and the South-Eastern an increase of 2,630*l.*

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (27th March).—The lode in the 40-fm. level east of junction produces 7 tons of mixed ores per fm., and in the same level west of Haley's winze 4 tons of mundie, together with some good tin work. The stopes generally in the back of the 40-fm. level east are producing their usual quantity of ores. Cook's stopes below the 30 east of cross-course are again opeuing into a profitable lode. The stopes below the 30-fm. level at the junction : A fair quantity of mixed ores that will work at a good profit. There is no other change to advise in the past week.—T. Gregory.

CARPUAN (26th March).—We have completed collaring up the shaft, and commenced sinking in the lode, which is presenting a splendid appearance, being highly charged with mineral, and worth 20*l*. per fm. and improving in depth.—R. Knott.

D'ERESBY.—It is expected that the preparations for sinking the Gors shaft will be completed in about a fortnight. The agent thinks that we never had such prospects before us for sinking as we have now, as we have the lead close to the shaft, and should there be no lead iu the shaft, owing to the necessity of keeping it in straight line, lead can be raised in the meantime by opening the ground with a winze near the shaft. Other points in the mine are much the same as reported last week.

DEVON UNITED (28th March).—Willesford's shaft : In the 132 east of shaft the lode is 3 ft. wide, very promising, and worth 3 tons of copper ore per fm. In the 132 west the lode is 4 ft. wide, equally promising, and is also yielding 3 tons of copper ore per fm. In the winze sinkiug below the 120 west the lode is 2 ft. wide, composed of capel and quartz, with peach and copper ore, worth 1 ton of the latter per fm., and a speedy improvement may fairly be expected.—I. Richards.

DRAKEWALLS (28th March).—The lode in the 147 east on the south part is producing 4 tons of mundic per fm. ; ground continues hard for exploriug. Nothing has been done in the 147 east on the north part iu the past week, the men having been engaged in breaking mundic. The lode iu the 147 west will produce 10 tons of mundic per fm., with a little copper ore and occasional small veius of tiu. In the 132 west the part of the lode carried (4 ft.) is composed of capel, mixed with copper and mundic orcs, peach, and rich specimens of tin, altogether looking very promising. The lode in the winze sinking below the 132 west of the shaft will yield 10 tons of copper and mundic ores per fm. for length, 9 ft. The stope in the back of the 132 west will produce 5 tons of copper and mundic ores per fm. Fair progress is being made in the rise in back of the 117-fm. level west. The arsenic soot sold weighed 21 tons 12 cwt. 3 grs. Capt. Rodda.

EAST BLUE HILLS.—In the 30-fm. level west the Baldhu lode is reported to be worth 12*l*. per fm., and stope in back of the level worth 16*l*. per fm. A cross-cut is being driven north of this level, near the engiue shaft, with the hope of cutting the lode above the Heave. Should the lode be cut good at that poiut a large extent of stoping ground will be laid open. This part of the mine is considered very promising. The deep adit level is being driven east on the Pink lode, which looks promising. An improvement on this lode, which may be expected, would materially enhance the value of the mine.

GREAT FORTUNE.—There is no particular point to report this week ; but the tinstuff has improved during the last few days, and a good parcel of tin is expected next week.

MARKE VALLEY (27th March).—The progress made in siukiug Bellingham's shaft has not been so satisfactory during the past month in consequence of the weather previously referred to. We have a fair channel of ground coming in from the south side, which requires to be close timbered, while the granite in the bottom of the shaft continues as before. The 25-fm. level is being driven south. with the view of getting under the same run of ground, as the 15 is being driven through, and is now set at 4*l*. 10s. per fm. The 15-fm. level : The lode has been disordered, but is now 1 ft. wide, and carryiug a more regular wall, with favourable ground by the side, set at 4*l*. per fm. In the 15 west the part of the lode carried (5 ft. wide) is of a very promising character, at present worth 7*l*. per fm. ; price for driving, 5*l*. 10s. There is one stope in the back of this level worth 10*l*. per fm. In the midway level west the lode is producing a little tin, but not at present to value ; price for driving, 3*l*. 10s. per fm. We have one stope working from this level worth 12*l*. per fm. for width carried. The stope east in back of this level is worth 6*l*. per fm. The driving of the adit west is suspended for a time while a trial is being made in the bottom. There are two stopes below this western drivage each worth 8*l*. per fm., aud two stopes below the adit east worth 6*l*. and 8*l*. per fm. respectively. The men have nearly secured the recent run from the surface.—W. George, F. Renals.

MID-DEVON.—Report for week ending 23rd March. Surface : Weather favourable. Machinery working at five revolutions per minute. A shaft : The water is still quick, and is now being augmented by drainage from the heavy snowstorm and rainfall in early part of month. C shaft : The 60 east driven by nine men 5 ft. 6 ins. ; total distance from shaft 34 fms. ; the strata is unchanged in its composition ; a little yellow ore and arsenical mundic is being saved. The preparatory work for trip-plat and tramway, worked on by six men, is progressing. The shaft has been sunk the required depth, 9 ft., as per contract, and the excavation for plat commenced. The 50 east stopes, Nos. 2, 3, and extreme point of drivage, worked on by 6, 6 and 2 men, are worth respectively 2¼ tons, 3¼ tons, aud 2 tons per cubic fm. for copper ore.—J. Neill.

PRINCE ROYAL.—Good progress is being made in clearing the adit level, and, it is expected, in the course of a week all will be ready to commence pumping, when every effort will be made to get the water out of the mine with as little delay as possible.

PRINCE OF WALES.—The sinking of the engine shaft below the 155-fm. level is being vigorously continued in a lode worth 16*l*. per fm. The aggregate value of five points in operation is 50*l*. per fm. In the 90-fm. level east the ground is getting more settled, and the lode impoving in value. All other works are proceeding satisfactorily.

ROMAN GRAVELS (28th March).—The work in connection with the fixiug of the new pitwork is progressing at a very satisfactory rate indeed. The new lifts from the 125 to the 65 are now fixed, and the bottom of No. 2 plunger column in place at the latter level. The men are now taken out the other lifts above the 65, aud we hope to have the said plunger column complete to the 40-fm. level before the end of the week. We are preparing to take out our 60-in. cylinder so as to have everything in readiness for fixing of the new one by the time it reaches the mine. The water has not yet risen above the 110-fm. level, but is to-day within 50 fms. of this forebreast. The lode at the 80 north-west on eaunter is 2 ft. wide ; worth 1 ton per fm. The 65 north-west on this lode is about 1 ft. wide ; worth ¾ ton per fm. We see no change to note on the stopes above the water. We have to-day sold 100 tons of lead ore for 848*l*. 15s., and are sending out samples of 50 tons of blende for sale this day week.—A. Waters and Son.

SOUTH CONDURROW (27th March).—Good progress is being made in sinking Marshall's shaft below the 108-fm. level. The 108 end west is worth 5*l*. per fm. The rise in the back of this level yields low quality tinstone. We have started to rise the back of the 66 towards Pendarves shaft. The 93 east of King's is worth 7*l*. per fm. The back of the 80 east is worth 6*l*. per fm. The back of the 70, on the north part of the lode is worth 20*l*. per fm. The 60 end east is worth 12*l*. per fm. The stope in the back of the 60 is worth 15*l*. per fm. The 50 end east is worth 8*l*. per fm. The 40 end east is worth 10*l*. per fm.—W. Rich, W. Williams, H. King.

SOUTH DARREN (28th March).—The 142 end west is not looking so well. A joint has crossed the forebreast, which caused a falling-off in value, which I hope is only temporary. Up to now it has been worth 2 tons of silver-lead ore per fm., and we shall have to cut through the joiut before we can value it again. The cross-cut in the 130 west has cut the lode fully 2 fms. south of the drivage ; it is leady, but not to value. The drivage is being continued through the lode. We have no other change to note iu any other part of the mine. On Saturday next we intend to sample 25 tons of silver-lead ore.—J. Mitchell.

TIN ERA (25th March).—We are forcing on the deep adit crosscut north as fast as possible. We appear to be got through the branches referred to iu my last week's report, charged so highly with lode stuff, but at auy day a more important change may be expected.—R. Knott.

VAN (28th March).—I am pleased to be able to give you a very satisfactory account of the mine. In the south eross-cut at the 135 we have reached the country rock at a distance of 78 yds. south of the main lode. We have here a well-defined joiut nearly perpendicular, and a leader of lead ore worth 40*l*. per fm. I should have said silver-lead. I send you a sample, which I should be glad if you would have assayed, and let me know the result. The cross-cut south from the footwall in the 120 east is also looking very encouraging, now yielding good stones of lead and sufficieut blende to pay the cost of driving. I have no change to report from the stopes this week.—W. H. Williams.

WEARDALE.—Report on Weardale Mines for week ending 23rd March. Weather unfavourable for surface work on account of frost and snow. Ore raised for the week, 67 tons ; ore dressed for the week, 82 tons ; ore, &c., smelted for the week, 132 tons, produciug 67 tons of pig lead.

WEST CARZISE.—There is no particular change to report, but all the lodes are producing tin more or less. A sale of tin is expected next week. The agent reports that a lode of the average value of 5*l*. per fm. only would put them all right, and this may soon be expected. The ground is very easy for driving, and the tin of rich quality. The water in the new shaft on the north lode is now drained so that they will be able to siuk on it, and as it now produces spleudid stones of tin this may open something of value.

WEST WHEAL GRENVILLE (27th March).—We have succeeded in forking water with drop clack in forking lift, and have put main clack right iu the same. Since doing this the plunger lift has been made good from the 50 to the 28-fm. levels, and drawing lifts that were working above the 70 are done away with. We are now making good progress in forking water which rose while about the above work, and when in fork shall put in timber to secure shaft, and make ready for dropping forking lift as soon as possible.—T. Hodge, J. Skeat.

WHEAL CREBOR.—The bottom levels continue to yield small quantities of copper and their usual produce of arseuical mundic. Three stopes in the back of the 156-fm. level west of shaft will produce 7 tons of copper ore and 9 tons of arseuical mundic per fm.

WHEAL METAL AND FLOW.—As the Metal lode is being opened on in the 35-fm. level, the water is increasing, and the promisiug appearance of the lode continues.

FOREIGN MINING INTELLIGENCE.

ASIA MINOR (March 9th)—54 men driving, 204 men stoping, value of stopes 12 tons 15 ewt. ; four men cross-cutting, six men rising, four men sinking, 151 labourers, &c. Production to the 15th March, 828 tons erude ore ; produced 88¼ tons rich silver-lead ore.

BALAGHAT-MYSORE (5th March).—Fortnightly report : North engine shaft : The cutting of the ground for plat, &c., at the 410-ft. level is being pushed forward as fast as possible, and in the course of a few days I hope to have it completed ; the work is already so advanced that only one rock-drill is now necessary, the other machine is employed in driving the 410-ft. level north ; this level is now 21 ft. 9 ins. from the shaft ; the lode is at present poor, and the ground hard for driving. The 330-ft. level north has been extended 21 ft. 6 ins., or 365 ft. from the shaft ; the quartz is about 15 ins. wide, and assays 2 ozs. 10 dwts. 22 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 7 ft. 6 ins., or 11 ft. 6 ins. below the level ; the quartz varies from 2 ft. 6 ins. to 1 ft. 6 ius. ; at present it is about 18 ins. wide, and assays 19 dwts. 13 grs. of gold per ton. The stopes in the back of this level yield quartz of from 9 ins. to 1 ft. wide, and assays 4 ozs. 2 dwts. 7 grs. of gold per ton. The No. 3 winze in the bottom of the 270-ft. level north has been sunk 4 ft. 9 ins., or 46 ft. 6 ins. below the level ; the quartz is about 6 ins. wide, but assays this week only 1 dwt. 7 grs. of gold per ton. The No. 2 cross-cut east at this level has been driven 3 ft. 9 ins., or 71 ft. 3 ins. from the level. The No. 2 cross-cut west has been advanced 4 ft. 11 ins., or 27 ft. 6 ius. from the level. The stopes in the back of the 270-ft. level north produce quartz of from 1 ft. to 15 ins. wide, and assays 3 ozs. 11 dwts. 21 grs. of gold per ton. The 165-ft. level north has been driven 4 ft. 9 ins., or 465 ft. 6 ins. from the shaft ; the quartz is about 2½ ft. wide, and assays 3 dwts. 22 grs. of gold per ton ; this shows a decided improvement on the last assay, and I hope the quality of the quartz will soon further improve. A stope in the bottom of this level (north and south of No. 2 winze) yields quartz of about 1 ft. wide, and assays over 4 ozs. of gold per tou. Surface : The clean up for last month is as follows :—146 tons of quartz, yield-

ing 258 ozs. of gold. The mill was started again yesterday.—Capt. Pryor.

BRATSBERG (18th March.)—Hoffnung Mine: No. 2 adit level for the present is unproductive, but we are daily expecting an improvement. The rise iu the back of this level is worth 1½ tons per fm., and the winze in the bottom of the same 1 ton per fm. No. 3 adit level is producing 1½ tons per fm., and the rise in the back of this level 1 ton per fm. The mid level at Ball's is worth ½ ton per fm. The rise at No. 4 level will be holed in a few days; lode now worth about ½ ton per fm. The No. 5 level west is poor, and the same level east yielding ouly saving stuff, but the lode is looking very promising. At the mid-level at Murehison's the lode is worth 1 ton per fm. The rise at the shallow workings continues to open up pretty regularly, but produces only ½ ton per fm. Johannes mine: The cross-cut is advancing at the rate of about 3½ metres per week. Howard's lode has been cut through, and proved to be fully 3½ metres wide; it has a very good appearanee, and will yield 1 ton per fm. The most ore is found against the hanging-wall, although it is otherwise disseminated throughout the lode, and we hope that on developing east and west it will be found to greatly increase our resources, and eventually prove to be a most valuable discovery. The winze was sunk about 2 metres during the past week. Næsmark Mine: Barker's shaft was sunk about 2 metres during the past week. The lode is producing more ore now than for some time past, and we expeet a further improvemeut as we go down, therefore we are most anxious to sink a few metres further before we commence to drive.—J. D. Holman.

COLOMBIAN HYDRAULIC (18th Feb.)—The following is an account of the operations during the month of January:—The mine is, of course, most seriously affeeted by the drought we are now suffering from, for although we more or less anticipated something of the kiud at the end of last run, we hardly thought we should pass an entire month without a single drop of rain. Run No. 154 (incomplete): I regret to say that owing to the falling-off in our water supply, I have been compelled to coutinue running over the usual time, we have now less than half what we usually use, and with this supply it would be a most expensive operation to attempt to clean down. Another reason is that, as we could not clean down the cuts, we should be unable to push these ahead while eleaning up and bloeking the sluce; and, of course, the wear and tear on the bloeks, &c., is very different to what happeus with a full head of water. I think it is hardly necessary to say more about this shortuess of water. Communication is stopped on the river for everything but a cauoe, or raft, and nearly all articles of food are about three times the price that they were a year ago. The rich streak: Early this run I set a gang of men to work the lowest portion of this, and ou driving back—that is, down the sluice—we were surprised to come on a good face of paying gravel, and this we are now excavating on eontract. This gravel, or cement, seems to give from a little over 3 to over 5 ozs. to the cubic yard on washing in a batea, but I hardly think we shall save that in the sluice. All this cement is thoroughly broken up.—T. P. Sharman.

CORTEZ (9th March).—Ore hauled to mill, 222 tons; ore treated at mill, 165 tons; pulp assays of same for week, 93 90-100 ozs. silver per ton; shipments, 26,000 lbs.; bi-products, 17,000 ozs.; shipments 15 bars bullion; bi-products, 17,000 ozs.; total silver, 34,000 ozs.—Welsh.

DAY DAWN P.C.—Annexed is the report of Mr. Thos. Lester, this company's mining manager, for the fortnight ending 2nd February:—The output of quartz is 1,639 trucks, estimated at 864 tons. The amount of stone hauled from eaeh level and shaft is as follows, viz.:—Shaft, 140 trucks; No. 10 level, 650 trucks; No. 9 level, 440 trucks; No. 8 level, 201 trucks; Nos. 6 and 7 levels, 208 trueks; total, 1,639 trucks. No. 2 shaft has been sunk a further depth of 7 ft., making a total depth of 193 ft. from the surface. No further change siuce last report. The air compressor and air reeeiver are being placed in position with all possible speed. We expeet to be able to make a start with the rock-drills about the latter end of next week. Maehinery in good order. The report generally is of an encouraging character.

DEVALA-MOYAR (4th March).—The winze sinking below the deep tunnel is down 34½ ft.; the lode is fully 6 ft. wide, contains more quartz than heretofore, and the free gold is much coarser; will yield 2 tons pyrites to the fm. The tunnel east of cross-eut is 34 ft. in length, and we expect to conuect with the pyrites winze in two or three weeks. No. 2 winze has been commenced in the bottom of the 48, and sunk 1½ ft. There are 4 tons pyrites to the fathom here.—J. Williams.

DOURO.—The manager reports this month that in driving the level from No. 7 shaft towards the great main lode he interseeted a cross-course 20 ins. wide, and having a strong south underlie: this indieates that the main lode has a similar dip, whieh would aceount for the level not having yet reaehed it. The level is now driven a distance of over 300 ft. from 7 shaft, and there is a eonsiderable quantity of quartz appearing in the end, from which, and the nature of the ground, Mr. Johnson thinks he is not far from the footwall of the main lode.

EAGLEHAWK CONSOLIDATED.—Abstract of reports received from the mine, dated 9th February:—Sinee my last report the shaft work has been eompleted; all is working well, and the water has been taken up and turned into the cistern, so that the bottom of the shaft is nearly dry. This has enabled us to sink 7 ft. in four days, making a total depth from the No. 8 plat of 30 ft., or 581 ft. from the surface. If the shaft continues dry, I am eonfident it ean be sunk from 18 ft. to 20 ft. per fortnight. The drive at the 450-ft. level south has been extended 15 ft.; total from shaft, 97 ft. There is an improvement in this level—a splice made on the east side, about 2 ft. wide, nice-looking seamy quartz; this may lead on to payable gold.

EASTERN MYSORE.—Under date of the 5th inst. the mining superintendent writes:—Mining operations: Nora shaft, cross-eut east: Distanee from shaft, 25 ft. 6 ins.; ground eut during the few days at work, 3 ft. 6 ins. Owing to the eholera and stampede, our work at some places has beeu entirely suspended, but we have now a full complement of coolies, and I hope by the end of the month to have cut one, if not two, of the lodes. James' shaft, north end: Distance from shaft, 11 ft. 6 ius.; cut 4 ft. 6 ins.; the lode eontinues about 2 ft. wide, with branches of quartz. I have for the preseut suspended it. Having proved this lode by driving on it, I am of opinion we are fully justified in makiug preparations for sinking of shaft to open out the mine. Cross-eut east: Distance from end north, 33 ft.; ground cut, 8 ft. 6 ins. Within the last 4 ft. we have intersected the east and west counter, or lode; at present about 18 ins. wide, which is looking promising. Air shaft: Depth from surface, 91 ft.; sunk during the month, 24 ft. 6 ins. The lode shows fluetuations; sometimes 2 ft. wide, and then a small branch only. At present we have struck iu the hanging-wall. St. Stephen's shaft—Winze: Depth from bottom of old works, 20 ft., sunk during the month, 6 ft. We have a good pare of men; the ground is full of small strings of quartz and clay seams, holding forth every prospect that we shall before long come upon the lode. Stope in back: Ground cut, 16 ft. The lode is large, and yielding a quantity of quartz; the average width is about 5 ft., strong and well-defined. Muscoom stope: During the month we have stoped 32 ft. in a lode varying from 2 ft. to 3 ft. wide, and expeet we shall find the shoot of ore more to the east than it was supposed to be. We are breaking a considerable quantity of quartz. Hodgson shaft: Depth from surface, 66 ft. 6 ins.; sunk during the month, 33 ft.; all lode in a decomposed state. We shall commence a eross-cut west from the bottom of the shaft; the ground being very favourable for driving, I think we can drive from 15 ft. to 18 ft. per week. There is no doubt the former workers had sluiced away the surface down to the bed-rock.

GARFIELD.—Report from Mr. Hooper, the superintendeut:—The mill has beeu working as usual. It is with feelings of great regret that I had to eable you the results for February, following as it does two bad months; and I can assure you it has been a period of great anxiety to me, and indeed is still. The Atherton and Lincoln ores at the beginning of the month were very low, and the western fell below its usual average. Moreover, the number of tons crushed has averaged about 10¾ tons per day only, partly beeause the ore is harder, and partly beeause the shoes and dies are gettiug worn. If it were not for the bad impression the eablegram will make in England, I should not feel so anxious, as I feel sure that matters will shortly straighten out again.

GOLDFIELDS OF MYSORE (5th March).—Fortnightly report: The west cross-cut at 165 ft. in bridge shaft has been driven 3¾ ft.; total length, 13¾ ft.; the end is in country. The west cross-cut from the south level at 105 ft. has been driven 4½ ft.; total length, 15½ ft. In this cross-eut we have passed through several stringers of quartz, and about 12 ft. from the level we cut what we believe to be the main lode; it proved to be quite 2 ft. of solid blue quartz, but only worth about 1½ dwts. This is about where the lode should be, from a survey I have just made in the old workings above. The east cross-cut from the south level, 105 ft., has been advaneed 1½ ft.; total, 7½ ft.; and as nothing has been intersected, it is now stopped. The north level, 105 ft., has been advanced 4 ft.; total distance, 71 ft. from shaft. The end is in country. Driving north of middle shaft, at 175 ft., an advance of 5½ ft. has been made; total distance, 71¾ ft.; the lode is the full width of the level, but of very poor quality. The south level at 175 ft. has been advaneed 5¼ ft.; total length, 67¾ ft.; there is a small brauch of lode on the footwall about 4 ins. wide, but of low grade. The north level at 108 ft. has been advanced 3¼ ft.; total length, 136 ft.; there is about 2 ft. of low grade ore in the end. The south level at 108 ft. has been advaueed 4 ft.; total distance from shaft, 301½ ft.; the end is in country with a small branch of lode of low grade on the footwall; the air is very close in this end, aud we are only able to work oue shift per day. The eross-eut east from 94 ft. in the new shaft, south of middle shaft, has been driven 18¾ ft. from shaft; nothing has been intersected as yet. The new shaft, south of bridge shaft, has beeu sunk 3¼ ft.; total depth, 73¾ ft.; bottom in country. The Champion lode: Coromandel shaft has been stopped to allow the plunger pole to be fixed, and the pitwork, &e., put in. Driving south from the west cross-cut at 150 ft., an advance of 11 ft. has been made; total distance, 91 ft.; a brauch of low-grade quartz in the end. This end has now been stopped. The south level at 100 ft. has been advaneed 16¾ ft.; total distauce, 89¾ ft. Old works in back of level and about halfway down the end; this end has also been stopped. Prospect shaft has been sunk 4¼ ft.; total depth, 203¼ ft.; bottom in eountry. Level north at 200 ft. has been driven 1¼ ft. from shaft. We have a small brauch of quartz in the end, about 3 ins., and worth by panning, 8 dwts. The prospecting shaft near Balaghat: The west cross-cut has beeu advaneed 8½ ft.; total, 11¼ ft., and the last cross-eut 9 ft.; total, 11½ ft. The ends of both are in country, and nothing has been intersected as yet in either.—J. Samborne.

JOSEPHINE.—Extract from superintendent's letter, dated 7th March:—The result of February run of the mill will, I thiuk, be pleasing to you, as it gives an average of, say, $10 per ton, with expenses of mining and milliug, only $4.44. I have always said that the expenses of working could be kept under $5 per ton. In running the east 300 drift we came upon a change of ground from grey slate to blaek slate, and at same time a stringer came into the hanging-wall. I made some assays of this, giving me $346.53, and then $701.20 per tou. Hardly believing these assays, I took a sample from the breast of the drift aud sent it to Prof. Priee, of San Francisco, whose assay certificate I send you, showing a value of $1,651.59 per ton. This is without doubt the richest quartz ever struck in this part of the country. The streak of quartz is small from 2 to 4 ins. wide, but I think we are ouly just getting into this ore body, and it will improve in size as we go on. The west stopes look very well, the ledge in plaees being over 4 ft. wide of solid quartz: and in regard to the Easteru shoot of quartz, as the trend of the ore shoot is very flat, we may have several hundred feet of ground to drift through before getting through this shoot of rock. In conclusiou, I can only say that I think present prospeets are very encouraging, and I sincerely hope to pull the mine through into a dividend concern. For the month of March I hope to crush nearly 1,400 tons of $9 to $10 rock, and with expenses not to exceed $4.50 per ton.

MESQUITAL DEL ORO.—Mine captain's report, dated 22nd February.—Work done in the mine during the week was as follows: Aerada, east of Sans: Six men, driven 8 ft. 6 ins.; total, 124 ft. 6 ins. Reef is 4 ft. thiek, but a good deal of country rock mixed up with the ore during past week. The 85 level east: Six men, driveu 6 ft.; total, 575 ft. The reef is 4 ft. 6 ins. thick on a fair average ore. The 137 level east: Six men, driven 3 ft. 6 ins.; total, 561 ft. The reef is 5 ft. thiek on good milling ore. The 137 level east, winze C: Six men, sunk 3 ft.; total, 56 ft. This winze is now completed to the 190 level, and we have commenced to drive west of the winze to communicate with 190 east. Reef 3 ft. 6 ins. thick on fair quality ore. Driving west with six men, driven 3 ft.; total from winze, 3 ft. The 137 level east rise B: Six meu, risen 4 ft. 6 ins.; total, 11 ft. 6 ins. We are

carrying the reef 5 ft. wide, and still more standing. The 190 level east: Six men, driven 1 ft. 6 ins.; total, 385 ft. The reef is 3 ft. thick of good quality ore, and showing free gold. The 190 east winze B: Six men, sunk 2 ft. 6 ins.; total, 21 ft. The reef is 4 ft. thick, but rather low grade ore at present. The 190 level west, south part: Two men, driven 2 ft. 6 ins.; total, 293 ft. Reef is 5 ft. thick on good milling ore, and shows free gold. The 256 level east: Six men, driven 7 ft. 6 ins.; total, 246 ft. Reef 5 ft. thick, but rather low grade ore at present. The 256 level west: Six men, driven 7 ft. 6 ins.; total, 180 ft. 6 ins. No alteration to notice since my last report. Sans shaft: Cutting station at 190 level on contract, not completed. San Miguel tunnel: 14 men, driven 11 ft. 6 ins.; total, 1,725 ft. Stope 137 east: 20 men on day work. The reef still averages good quality ore, and about 7 ft. thick.

MONTE CHRISTO.—The manager reports under date 28th January:—Since my last report I have been busy getting the necessary piping fitted to the pump, and got it started, but unfortunately the old boiler was found to be unable to supply sufficient steam to work both that and the ordinary pump. I attribute this to the density of the atmosphere caused by the wet season. I have, therefore, had to erect one of the 5-h.p. boilers, which I had brought up for the endeavour, to supply steam to the Tangye pump.

MONTE DEL ORO (19th March).—Fortnightly report.—Taylor's engine shaft: Rapid progress is made in driving the 186-ft. level south of the cross-cut east, 20 ft. being driven since the last report, thus making the total length of the level 196½ ft. For this drivage 2½ ft. is the average width of the lode, 18 ins. being solid quartz, and the remainder slate and quartz intermixed. Not meeting with any more quartz, the driving of the cross-cut west was suspended on reaching a distance of 63 ft. from the engine shaft. Immediately operations were stopped in the cross-cut just referred to, the men were set to drive a level north of it, which has been extended 10 ft. on a lode varying from 8 ins. to 18 ins. in width, and composed principally of solid quartz. Shaft No. 6: In my last I mentioned a pare of men were engaged in cleaning out in the bottom of the level near the shaft, in order, if possible, to reach the bottom of the old workings, and I am now able to report this was accomplished after cleaning out about 12 ft. In this place I find the lode is running very flat, that it barely averages 12 ins. in width, and its composition is quartz and soft flookan. On completing this work, the men resumed the clearing out of the ancient workings north of the shaft, the total extent of which is now 84 ft. At present we have a branch of quartz in the west or hanging-wall left by the ancients, which is 1 ft. wide, and is so hard that it has to be blasted. Shaft No. 5: In cleaning out north of this shaft we have apparently reached the end of the old workings, the present end being in solid ground carrying a vein of quartz, the average width of which is from 3 ins. to 7 ins. Shaft No. 2: The intermediate level north of winze No. 1 has been extended 15 ft. during the fortnight, and the lode, which is large, being about 4 ft. wide, carries branches of quartz.—J. Roberts.

MYSORE (5th March).—Mining operations.—Monthly report.—The rock-drills continue to give satisfaction perfectly; last month they were employed stoping, rising and driving. The 466-ft. level north of Taylor's shaft was driven 42 ft. 4 ins.; total, 512 ft. 1 in.; the lode is 3 ft. wide, assaying 4 ozs. 18 dwts. Driving the 400-ft. level north of Taylor's shaft 50 ft. 2 ins.; total, 607 ft. 4 ins.; the lode got disordered, but the sample taken last Thursday assayed 4 ozs. 1 dwt. 11 grs. I am unable to say anything about the lode to-day, as there is barren rock in the forehead. I think, however, that it is only temporary, and hope to report satisfactorily next week. The 296-ft. level was not driven last month; there is a good lode in the end, and operations will be resumed to-morrow. The 236-ft. level north of Taylor's shaft was driven 50 ft. 6 ins.; total, 441 ft. 3 ins.; the lode is small but tolerably rich. We think it is getting near to old workings; there is a small branch of quartz in the end, 6 ins. wide, assaying 1 oz. 15 dwts. 22 grs. Driving the 296-ft. level south of Plummer's shaft on the west branch 8 ft. 2 ins. were out; total, 86 ft.; the quartz is 4 ft. wide, worth about 15 or 16 dwts. to the ton. In the 236 south of Plummer's shaft there is no change. The 152-ft. level south of McTaggart's shaft contains a mixture of quartz and schist; it was driven 27 ft. 10 ins., making a total of 331 ft. 8 ins.; the quartz assayed 10 dwts. 10 grs. The 220 ft. south of Schaw's was driven 8 ft. 2 ins.; total, 56 ft. 6 ins.; the lode is 4 ft. wide, assaying 13 dwts. 1 gr. The 160 ft. cross-cut south of Schaw's has been driven a total distance of 86 ft. 6 ins.; there are small strings of quartz, but in the past month only 10 ins. were cut owing to the scarcity of labour. We suffered greatly from this cause owing to the serious sickness which prevailed last month, and none of the places have been much advanced in Tennant's Mine. The 180 ft. south end was driven 5 ft. 10 ins.; total, 64 ft. 6 ins.; the lode is 6 ins. wide. The 180 ft. north end was driven 7 ft. 8 ins.; total, 62 ft. 6 ins.; the lode is 6 ins. wide; no assays were made from either of these places. The stope in the back of the 466 ft. north of Taylor's on the wide lode, 7 fms. 5 ft. 6 ins. were cut; the lode is 3 ft. wide, worth about 14 to 15 dwts. to the ton. The stope over the 466 ft. north of Taylor's shaft south of the cross-cut, owing to the accumulation of the stuff, has not been measured, and the men are removed to work in another place; the lode is 3 ft. wide, worth from 1 to 2 ozs. of gold to the ton. Stoping below the 400-ft. level north of Taylor's shaft, 16 fms. 1 ft. 10 ins. were cut; the lode is 3 ft. wide, assaying 3 ozs. 18 dwts. 9 grs. No. 1 stope in the back of the 400 ft. north of Taylor's shaft, 13 fms. were cut; the lode is 5 ft. wide, assaying 1 oz. 19 dwts. 14 grs. No. 2 stope in the back of the 400 north of Taylor's shaft, 8 fms. 0 ft. 9 ins. were stoped, and 1 fm. 5 ft. 3 ins. were driven; the lode is now 3 ft. wide, assaying 1 oz. 4 dwts. 10 grs. The stope in the bottom of the 296 ft. north of Taylor's shaft, 15 fms. 2 ft. were cut; the lode is 3 ft. wide, assaying 2 ozs. 2 dwts. 1 gr. The stope in the bottom of the 296 south of Plummer's shaft, there is a lode of quartz 3 ft. 6 ins. wide, worth about 1 oz. 5 dwts. to the ton; the place is nearly exhausted, and of little consequence. Sinking in the bottom of the 466 north of Taylor's shaft 9 ft. 9 ins., in a lode 6 ft. wide; no assay was made; the quartz is of small value. Sinking in the bottom of the 466-ft. level north of Taylor's shaft, immediately below the Italian stope, 7 ft. 5 ins.; the lode is 2 ft. 6 ins. wide, assaying 13 dwts. 1 gr. Rowse's shaft was sunk 9 ft.; total, 79 ft.; these men have been employed part of the time erecting poppet-heads, and putting down skip roads, it is completed and the stuff is now lifted with a small steam engine; we have also completed the air pipes from the compressor to the shaft, but the rock is not of a character that rock-drills can be employed to an advantage, as soon as, however, it becomes compact and free from clay joints then the drills will be set to work. Schaw's shaft was sunk below the 220 ft. 16 ft. 3 ins.; total, 57 ft. 9 ins.; there is a good looking lode 2 ft. wide, assaying 9 dwts. 3 grs. Tennant's shaft was sunk 6 ft. 6 ins.; the lode is 1 ft. wide, but no assay was made. Last month two rock-drills were employed in the back of the 296 ft. rising towards Rowse's shaft; it was put up 39 ft.; total, 52 ft. At this height it struck into old workings. The old workings are about 30 ft. in height, making a total of 82 ft. from the back of the 296; there is a large lode of quartz in the back of the old workings, but before the drills can be set to work upon it, timber must be put in and the débris cleared away. At surface the work is progressing in a satisfactory manner, and on the 20th we stopped the tailings machinery to put in the new steam engine; this will shortly be completed. Health: I am glad to inform you that the health of the camp has been satisfactory during the past week, and the work is going on more regularly than it did.—B. D. Plummer.

MYSORE WEST.—Capt. Tregay reports for the fortnight ending 5th March.—Walker's, 300 north: This heading has been advanced 10 ft. 8 ins., making 21 ft. from cross-cut. We have as yet met with no reef here. Still driving on the fault. The 300 south: This heading has advanced 6 ft. 8 ins., making 21 ft. 4 ins. from cross-cut. The reef here is 4½ ft. thick of fine-looking quartz, but has given no result in the assay. The 300 west: This heading has advanced 4 ft. 6 ins. from shaft. This cross-cut has been started in search of the west vein, which having been faulted is probably shifted in this direction. The rock is very hard. The 225 north: This heading has been advanced 8 ft., making 123 ft. 4 ins. from shaft. The reef here is 6 ft. thick of fair quartz, but has given this week no result in the assay. The 225 south: This heading has been advanced 4 ft. 6 ins., making 108 ft. 3 ins. from cross-cut. The reef here is 2½ ft. thick, giving a trace of gold in the assay. The 159 north: This heading has been advanced 17 ft. 3 ins., making 334 ft. 7 ins. from cross-cut at Walker's. The reef here is 2 ft. thick of promising quartz, yielding a good trace of gold in the assay.

MYSORE-WYNAAD CONSOLIDATED.—Report for fortnight ending 5th March.—We got the pumping engine at work on Tuesday evening, 26th ult., and got all the water out of the mine by Friday morning. Since then we have been clearing the accumulated muck and timbering, and have this day set a pare of men to sink the engine shaft by rock-drills. The rock is exceedingly hard. Machinery: This is all working perfectly well. Mysore West reef: As this reef has not been found near the surface in this claim, and as it should have been found within about 150 west from the present engine shaft, it will be wise to cross-cut in that direction for it, at the 100, and again at the 200-ft. level, when that depth is attained. There are so many breaks in all the reefs on this field, and that seeing this reef at, not a great distance, south from our boundary, and, again, at a much less distance north from the north boundary, the prospects are that it will be found in a depth at no great distance from its original line of strike. This work at the 100 can be done while the engine shaft is being sunk without any hindrance thereto. Please observe that within four weeks from the time the engine and pitwork was commenced to be taken out from Mysore West we had put boiler, engine, and pitwork into thorough repair, and had it all at work on Mysore-Wynaad.—Capt. Tregay.

NEW EBERHARDT.—The mine manager reports, under date 9th March, as follows:—South drift: There has been assorted and put on the ore dump 8 tons for the week. Assay value of same $50.28 per ton. There is no change to speak of in this drift, as there is but little variation. North shaft No. 1: The sinking of this shaft has been advanced 6 ft.; total depth 69 ft. The bottom of this shaft is still in hard black lime, though somewhat more broken. North shaft No. 2: Drift westerly from bottom of this shaft has been extended 4 ft.; total length 60 ft. There still continues some quartz mixed in with the lime in this drift, but the grade is about the same as reported in my number 21 ($10.99). North shaft No. 3: Drift southerly from bottom of this shaft has been extended 5 ft.; total length 35 ft. As no change was encountered in this drift during the week I have now started a drift to the north with the same force. East drift from bottom Gore incline has been advanced 8 ft.; total length 174 ft.; the face still remaining in hard quartzite.

NEW EMMA (9th March).—I have to report work carried on at the mine for the week to-day as follows:—Level No. 1 easterly, advanced 10 ft.; total, 210 ft. Not any change, character of the ground continues the same as per my report of the second inst. Raise from No. 1 extended 9 ft.; total, 17 ft. Nothing new to report; the seam of gelena continues, but is narrow; rock on either side is soft and heavily charged with iron, also shows occasional small nodules of gelena ore. Drift from No. 1 toward hanging-wall, advanced 8 ft.; total, 44 ft. Rock a little harder, otherwise no change. Level No. 1 north-westerly, advanced 14 ft.; total, 220 ft., continues in old workings, nothing new to report. Level No. 3 south-easterly, advanced 10 ft.; total, 355 ft. Rock shows no change, the narrow seam of oxidised iron continues, and the ground in face of level very much stained with iron. Level north-westerly from uprise from Attwood's winze, advanced 9 ft.; total, 127 ft. This level shows a little improvement, seam has opened out to about 14 ins. of vein matter and ore intermixed, but as yet not sufficient to save as first-class ore.—H. C. Wallace.

NINE REEFS (5th March.)—Mining operations: Malleson lode, main shaft—310-ft. level north has been advanced 3 ft., a total distance from shaft of 93 ft. 6 ins.; the vein 6 ft. wide. Morrison's shaft, sinking under the 185-ft. level, has advanced 3 ft. 9 ins., a total depth under the 185-ft. level of 35 ft. 3 ins.; the part of the vein carried is 6 ft. wide. Baynard shaft: 310-ft. level north—The men employed in this drift have been engaged in putting a stope over the bottom of the level to make it correspond in depth with the 310-ft. level from main shaft. This work is now completed, and the drivage will at once be resumed; vein 5 ft. wide. 310-ft. level south—The men employed in this level have also been engaged in lowering the bottom of the level to make it correspond with the level north of the shaft. This work is also now completed, and the drivage will be at once resumed; vein 5 ft. wide. Stopes:—No. 1 stope in the back of the 185-ft. level north of main shaft: Vein 6 ft. wide. No. 2 stope in the back of the 185-ft. level north of main shaft: Vein 6 ft. wide. No. 3 stope in the bottom of the 185-ft. level south of Baynard shaft: Vein 3 ft. wide. No. 4 stope in the bottom of the 185-ft. level south of main shaft: Vein 4 ft. 6 ins. wide. No. 5 stope in the back of the 310-ft. level north of main shaft: Vein 6 ft. wide. Champion

lode, Vyvyan shaft : The cross-cut east at the 145-ft. level south from Vyvyan shaft has advanced 4 ft. 4 ins., a total distance of 16 ft. 4 ins. ; the ground in this drift contains several small branches of quartz ; pannings from the smalls broken in the drift show gold. The main part of the vein is not yet intersected. Stopes : North end of south stope in the back of the 145-ft. level south of Vyvyan shaft : Vein 20 ins. wide ; assay, 14 dwts. 8 grs. gold per ton. South end of south stope in the back of the 145-ft. level south of Vyvyan shaft : Vein 20 ins. wide ; assay, 9 dwts. 3 grs. gold per ton. North stope in the back of the 145-ft. level north of Vyvyan shaft : Vein 1 ft. 6 ins. wide. No. 2 lode, 95-ft. level north and south of cross-cut east, south from Vyvyan shaft, has advanced 7 ft., a total distance of 28 ft. ; the vein is 3 ft. wide. The new shaft south of Vyvyan shaft has advanced 10 ft.. a total depth of 30 ft. This shaft is still in old workings, and from the surface and the surroundings. The old workings at this part of the mine are very extensive, and were presumably very rich.—Capt. BENNETTS.

NORTH MEXICAN (8th March).—The shaft will be all cleared and timbered to-morrow evening to the 100-ft. level, and next week we begin to take out all water below this 100-ft. level, and put up the hoist.—R. J. CARLISLE.

NUNDYDROOG (5th March).—Mining operations : The stope in the bottom of the 370 south of Webb's shaft is at places 3 ft. wide, assaying 3 ozs. 12 dwts. 6 grs. ; at other places, where the cross-course intervenes, it is barren. The lode in the bottom of the 300 north of Webb's shaft near the south boundary is 3 ft. wide, assaying 2 ozs. 17 dwts. The intermediate level is about 30 ft. from the south boundary ; the lode is 2 ft. wide, assaying 1 oz. 3 dwts. The stope in the bottom of the 230 south of Webb's shaft the lode is 1 ft. 8 ins. wide, assaying 18 dwts. 12 grs., and the lode in the middle level is 1 ft. 8 ins. wide, assaying 3 ozs. 18 dwts. The stope in the bottom of the 166 the lode is 1 ft. 6 ins. wide, assaying 1 oz. 13 dwts. 6 grs. The rise in the back of the 230 north of Webb's shaft, the lode is 18 ins. wide, assaying 13 dwts. 6 grs. The shafts and the cross-cut have not been measured this week, but Englishmen are employed with rock-drills sinking Taylor's shaft and Webb's shaft. Italians are employed with a rock-drill driving the cross-cut west in the 370. Two Eurasians are working a rock-drill in the stope below the 300 and two Italians will immediately commence to work with one rock-drill in the stope in the bottom of the 166. Weekly samples from the mill :—Rough quartz, 3 ozs. 0 dwts. 6 grs. ; smalls, 2 ozs. 1 dwt. Health : From time to time there has been a good deal of time hindered by sickness. —B. D. PLMUMER.

OOREGUM (5th March).—Fortnightly report :—Main shaft : The 250-ft. level south has been driven 20 ft. 10 ins., or 201 ft. 11 ins. from cross-cut west ; the lode continues good, is 3 ft. wide and yields, as per assay, 6 ozs. 17 dwts. 4 grs. of gold per ton of quartz. The 250-ft. level north has been driven 14 ft. 4 ins., or 135 ft. 2 ins. from cross-cut west ; the lode here is still pinched. A sample taken from the small veins of quartz gives an assay of 3 dwts. 6 grs. of gold per ton of quartz. The stope in back of the 250-ft. level south of cross-cut west, 174 superficial ft. have been cut ; the lode is 2 ft. 6 ins. wide, and yields, as per assay, 3 ozs. 5 dwts. 8 grs. of gold per ton of quartz. Low's shaft : The 270-ft. level driving north, north of shaft, 3 ft. have been cut, or 103 ft. 11 ins. from shaft ; the lode is a little larger, now 1 ft. wide and yields 1 oz. 17 grs. of gold per ton of quartz. The 270-ft. level driving north, south of shaft, 8 ft. 6 ins. have been done, or 13 ft. 9 ins. from cross-cut west ; the lode is 1 ft. wide, and yields 1 oz. of gold per ton of quartz. The 270 ft. level driving south, south of shaft, 6 ft. 6 ins. have been done ; the lode here is at present pinched, which we think is only temporary. A sample taken from it gives an assay of 1 dwt. 2 grs. of gold per ton of quartz. The 200-ft. level driving north is still poor ; 4 ft. 7 ins. have been cut, or 283 ft. 3 ins. from shaft. At Probyn's shaft at the 166-ft. level south we have a good lode, which we hope soon to intersect here ; the piece of ground between these two points is only 135 ft. The winze sinking in bottom of the 200-ft. level, north of shaft, 2 ft. 8 ins. have been cut, or 45 ft. 2 ins. below the level, this winze is still poor, is being sunk to ventilate the 270-ft. level below which we hope soon to effect. The 200-ft. level south, south of shaft, 9 ft. 9 ins. have been cut, or 141 ft. 10 ins. from cross-cut west ; the lode is 2 ft. 3 ins. wide, and gives an assay of 8 dwts. 17 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 200-ft. level south of shaft 2 ft. have been done, or 5 ft. 6 ins. below the level ; the lode is 1 ft. 6 ins. wide, and yields as per assay 1 oz. 6 dwts. 2 grs. of gold per ton of quartz. The stope in back of the 200-ft. level south of shaft the lode is 2 ft. wide, and yields, as per assay, 15 dwts. 6 grs. of gold per ton of quartz. The stope in bottom of the 200-ft. level at the end of cross-cut west south of shaft the lode is 1 ft. 9 ins. wide, and gives an assay of 2 ozs. 8 grs. of gold per ton of quartz. The stope in back of the 200-ft. level north of shaft, the lode is 1 ft. 3 ins. wide, and yields 4 dwts. 8 grs. of gold per ton of quartz. Probyn's shaft has been sunk 4 ft. 9 ins., or 27 ft. 9 ins. below the 300-ft. level ; the lode is 3 ft. 6 ins. wide, and yields, as per assay, 7 ozs. 12 dwts. 10 grs. of gold per ton of quartz, and is looking well. The 300-ft. level driving south of shaft, 2 ft. 6 ins. have been cut, or 16 ft. 3 ins. from shaft. The piece of lode carried is 4 ft. 6 ins. wide, with more lode standing in the footwall, and yields an assay of 6 ozs. 19 dwts. 9 grs. of gold per ton of quartz. The 300-ft. level driving north of shaft, 4 ft. 3 ins. have been done, or 16 ft. 3 ins. from shaft ; the lode is 3 ft. wide, and gives an assay of 4 ozs. 2 dwts. 18 grs. of gold per ton of quartz. The 230-ft. level driving south, 2 ft. 9 ins. have been done, or 94 ft. 7 ins. from shaft ; the lode is 2 ft. 9 ins. wide, and gives an assay of 12 dwts. of gold per ton of quartz. The winze sinking in bottom of the 230-ft. level south of shaft, 4 ft. 6 ins. have been sunk, or 23 ft. 3 ins. below the level ; the lode is 4 ft. 6 ins. wide, and gives an assay of 13 dwts. 2 grs. of gold per ton of quartz, with more lode standing on the footwall of winze. The 166-ft. level driving south, 5 ft. 2 ins. have been cut, or 202 ft. 3 ins. from shaft ; the lode is 4 ft. 6 ins. wide, and gives an assay of 3 ozs. 5 dwts. 8 grs. of gold per ton of quartz. The rise No. 2 in back of the 166-ft. level south of shaft, 2 ft. have been cut, or 4 ft. above the back of level ; the lode is 2 ft. 6 ins. wide, and yields, as per assay, 4 ozs. 2 dwts. 18 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 166-ft. level south of shaft, 1 ft. has been cut, or 17 ft. 9 ins. below the level. The lode is the width of the winze carried 4 ft. 6 ins., and gives an assay of 2 ozs. 8 grs. of gold per ton of quartz. The stope in bottom of the 166-ft. level north of shaft : The lode is 2 ft. wide, and yields, as per assay, 3 ozs. 18 dwts. 9 grs. of gold per ton of quartz. The stope in bottom of the 166-ft. level south of shaft at the north end of No. 1 winze, the lode is 2 ft. wide, and gives an assay of 2 ozs. 3 dwts. 18 grs. of gold per ton of quartz. The stope in back of the 166-ft. level south of shaft : The lode is 3 ft. wide, and gives an assay of 10 dwts. 21 grs. of gold per ton of quartz. Stamps : These were cleaned up last Friday ; the gold produced from 482 tons crushed was 927 ozs. troy. The mill was re-started yesterday ; is now working well. We hope the returns for month of March will be as much in advance of the last month's return as that month was of January last. All pitwork and machinery are working well.—W. MARTIN.

OSCAR (22nd March).—Oscar lode : We have no alteration to call attention to in the two bottom levels or shaft, as the men have been employed timbering the shaft, which work we shall try and get ready this week, when sinking and driving will be resumed. The No. 3 lode continues to improve ; the quartz being over 2 ft. wide, and is being treated separately in the mill. Daw's Mine : We have opened new levels north and south about 50 ft. below the bottom (370 ft.) levels. The quartz is about 12 ins. wide in the south end, and 8 in the north, both levels having the appearance of leading into productive ground. The 370-ft. level south has been poor for several days ; some decomposed rock having taken the place of quartz. The quartz in the stopes in the back of this level varies from 5 to 12 ins., producing some fair stones, with visible gold. In the same level north, with rise and stopes in back, there is no alteration to note.—J. DAW, junr.

ORITA (16th Feb.)—The following are the details of the operations during December and January :—Run No. 39 : On the 6th inst. I cleaned up after a run of 772 hours, of which 247 was with a very short water supply, and 271 devoted to cleaning down. The result was as follows : from 290 ft. of main sluice, $5,525.30 ; tail sluice below undercurrent, $562, with $14 bought gold from tailings, gave a total of $6,101.30. Although we have the costs of two months, December and January, against this run, we have yet a profit of $2.193.68½. Tail sluice : The above $562 is the first clean up made here, and I believe the greater part of this came from what passes over the upper dump with heavy tailings, and is not treated on the first undercurrent. Sluice cost $408, so we have a profit of $154, and roughly speaking may count on (while our returns are as at present) to clear at least $100 each month. I will not be surprised if our returns from the lower undercurrents (when made) will be better than from the tail sluices per foot area. And as the cost of blocking in the sluices is considerable, we will do better by putting in short sluices and large undercurrents. Run No. 40 : Started on the 13th inst. with a very poor water supply, not over 700 in. We are doing all possible with this supply, but working under great difficulty. It is impossible to say when we will clean up, as all depends on the water supply. However, all is in very good shape to move ground fast the moment we have an increase. At present, I am sorry to say, there is not the slightest sign of rain. New water route : I am happy to say that on the 4th inst. we turned on the water by the new route, since when the two new ditches and syphon have been working, giving perfect satisfaction, and have not required the slightest alteration whatever. There has been 3,000 ft. of mine pipe laid on the new pipe line, and you will see by the mine diary the loss of time in moving, jointing, timbering, &c., the above pipe was only a little over four days. As all this work is new, we may in heavy rains have to clear out the ditches now and again, but I can safely say the work is thoroughly well made, and ought to cost very little to keep in order. You have no tunnel to keep open and very little flumes to keep. In fact, the only flumes are to receive the water from the Despensa ravine, and to discharge into the bulkheads. On the ditch line there is not one single foot of flume. So it will be clear I found a very good water-line.—H. J. PRENDER.

PESTARENA UNITED (16th March.)—Caunter lode, 90-fm. level east : Lode 80 centimetres wide ; all good milling ore, worth 8 tons of 18 dwts. ore per fm. The 90 west holed to level east from cross-cut from No. 1 lode, improving ventilation and opening out a good section of stoping ground. The 100 east produces 5 tons per fm. at 1 oz. per ton. The 110 east produces 8 tons of 18 dwts. ore per fm., and the 110 west 8 tons of 14 dwts. The 110 cross-cut has traversed a a lode 1 metre wide, with two well defined walls, but containing no pyrites ; the cross-cut will be continued, but if nothing further is met with this lode will be driven on north to ascertain its value. No. 1 lode : The 130 south is giving a little low-grade milling ore. The 130 winze is holed to the 140 level, and a winze will now be sunk below the 140 level. The 110 cross-cut has intersected two irregular divisions, each showing a little pyrites. The 140 north produces 4 tons per fm. at 10 dwts. The 150 has been repaired, and driving is about to be resumed. A cross-cut from the 70 is now being started to cut the caunter lode. Six mills are idle from want of water, but it is expected they will be set to work again in a few days. Val Toppal : The end north on eastern branch at Zero level yields 8 tons per fm. at 6 dwts. The intermediate drive south on flat lode over No. 2 level has improved, and yields 10 tons per fm., at 10 dwts. Other points in operation present no features of importance. The stopes have improved a little in quality, and the returns of gold will exceed somewhat that of last month.

ROCKY BAR WIDE WEST (8th March).—Extension level west No. 2 has been driven 1½ ft. : total, 151½ ft. The stopes over this level continue the same as last reported. Extension level No. 2 east has been extended 8½ ft., showing a fair size lode of good ore in breast, and every indication leads us to believe there is a good body of ore ahead of us. Mill : Everything here is in good order, 15 stamps are being run steadily. Machinery : All runs well in this branch, and all machinery in perfect order.—J. N. THOMAS.

RUBY AND DUNDERBERG CONSOLIDATED.—Report for week ending 24th February. Dunderberg : Little change to report in the mines since my last communication with you. The pipe of ore between the 500 and 600 levels is not looking quite so well as it did last week, and at present we have no ore in any large body in the mine. The Eagle's raise has been hard during the week, but to-day there are indications of the ground getting softer. We have 26 tributers and six contractors at work in the mine. Lord Byron : No change. We have eight tributers at work here.

SANTA BARBARA.—The directors are in receipt of advices from Mr. T. S. Treloar, dated Pari, 31st January, 12th and 20th February.—The mineral delivered on the spalling floors from the mine during the month of January amounted to 1,797 tons, of which 328 tons were rejected as refuse stone, and 1,469 tons, together with 62 tons of inferior stone laid aside formerly, in all 1,531 tons treated at the stamping mills. The total produce obtained was 4,046 oits. of amalga-

mated gold, or equal to 2.642 oits. per ton stamped. This produce of 4,046 oits of gold, valued at 8s. 6d. per oit., amounts to 1,719*l.* 11s. sterling, and the estimated working cost for the month at exchange, 27¼d., being 1,649*l.* 4s. 4d., leaves an estimated profit of 70*l.* 6s. 8d. during January.

SOUTH-EAST MYSORE (5th March).—Mining operations: Lavelle's shaft, end north. During the last month we have driven here 58 ft. The distance from the shaft was to the 1st of the month, 191 ft. 6 in., leaving 53 ft. 6 in. before effecting a communication with Roger's shaft. I expect to complete the distance in two weeks. The lode at this place has fluctuated considerably in size and value during the month, in size from 5 ft. to 2 ft., which is the present width of it. Sometimes the quartz shows very free in visible gold, and at other times rather poor. When communication is effected with Rogers' shaft we shall at once commeuce to pump out the water from the winze, and put a drill to sink, and stoping in back and bottom of the level will be proceeded with. We have a long shoot of ore that will pay handsomely for milling, and as soou as these two shafts are holed any number of coolies can be employed stoping quartz in a good lode. (Note—By telegram, as at foot, this communication has been effected.) Roger's shaft: Sunk during the past month, 10 ft. 6 ins.; total depth, 282 ft. 9 ins. Lode is looking very much better; branches of quartz 6 to 9 ins. wide. This is the beginning of the quartz as seen at Lavelle's, which is dipping north so fast. I am sorry to say that coolies are very backward in coming to work; we are sadly in need of them, and until they come in we shall probably have to work our stamps half time. Assays: For the past week no assays have been done, owing to the accident to our assayer. Machinery working well, and health of the establishmcut continues good.—J. M. Rogers.

— Mr. Hodgson (representative of the board in India) writes as follows:—Rogers' shaft should go down rapidly. I firmly believe we have a good shoot of paying ore between this and Lavelle's shaft, and that in the next level we shall have it richer. We have a long run of the quartz, and if we can only get Rogers' shaft down we shall be able to break good stuff, and plenty of it for the mill. I have been carefully over the surface, and find that the old working south of Lavelle is a very large one. Its total length is some 135 ft. (one of the longest on the field); of this length about 370 ft. lie to the south of Lavelle's shaft. Supposing, therefore, that the ore shoot was dipping north at an angle of 45 degs. we cannot be deep enough by nearly 100 ft. in Lavelle's to havc cut all the shoot, while, as a matter of fact, the shoots, as a rule, have a steeper dip. So we have a lot more good ground to look forward to in depth. There are no difficulties to surmount in the treatment of our ores; they are as free milling ores as any on the field.

— The following telegram, dated March 25th, has just been received:—"Have communicated with Lavelle's and Rogers' shafts during month April; good results."

TOLIMA.—The directors have received advices by the mail of the 27th March, from their mines, of which the following is an abstract:—Friars: January cost, 1,056*l.* 3s. 9d. Friars: January returns, 1,054*l.* 1s. 9d; difference being, loss 2*l.* 2s. The underground agent reports 35 fms. 3 ft. 4 ins. of ground expended, of which 26 fms. 3 ins. were productive, leaving 9 fms. 3 ft. 1 in. of unproductive ground. The superintendent attributes the loss incurred to the deficient supply of water, and the consequent reduction of the motive power. But for this circumstance the quantity of ore brokeu in the mine would have furnished returns showing a fair profit.

SOUTH AFRICAN NEWS.

LATEST TELEGRAMS, &c.

Vogelstruis.—Cable from the mauager at the mine:—"10-stamp mill working spleudidly.

Henderson and Forbes.—The letters of allotment and regret were posted last Tuesday evening.

Great Britain.—This company, of Witwatersrand, will open a London agency for the transfer of shares early next month, at 46, Holborn Viaduct.

Gordon Diamond.—Return of work done at mine for week ending 23rd inst.:—7,900 loads of blue hauled; 6,100 loads of blue washed; value of diamonds produced, 1,700*l.*

Durban Roodepoort.—It will next week be proposed by the directors, "That the capital of the company be increased from 90,000*l.* to 100,000*l.* by the creation and issue of 10,000 shares of 1*l.* each."

Pondoland.—Mr. Alexander Gordon, one of the directors of the Pondoland Exploration Company, and Mr. J. Read Girling, together with a party of mining experts, have left for the scenc of operations by the Grantully Castle.

South African.—The following particulars of work relate to the week ending February 23rd:—Blue ground hauled, 2,985 loads; blue ground washed, 3,099 loads; lumps washed, 1,913 loads; diamonds obtained, 1,231 carats; estiuated value, 1,240*l.*; reef hauled, 1,655 loads.

Manica.—We are requested to state that Mr. Vaughan Williams sailed yesterday with instructions from the directors of the Manica Ophir Mining Company, Limited, to equip expeditions at Kimberley, to prospect and locate the company's claims. Mr. Vaughan Williams has already had some ten ycars' experience in South Africa.

Sheba.—The information respecting the yield for the month of February, has been received by cable from the mine:—"900 tons of ore raised at the mine; 674 tons crushed at the mill, 500 tons being low-grade; 20 stamps at work during 20 days; yield 633 ozs. of gold; partial wash-up only." The general manager was instructed by cable on the 24th of January last, to transport no low-grade ore to the mill, owing to the present high cost of transport. This order does not appear to have been followed. There is without doubt high-grade ore in sufficient quantity to render the crushing of low-grade ore wholly unuecessary.

African Gold Share Investment.—The offices have been removed to No. 8, Old Jewry, and Mr. E. H. Wolseley has been appointed secretary. The offices of the following companies have been removed to the offices of the African Gold Share Investment Company, Limited:—Moodie's Gold Mining and Exploration Company, Limited; the George Walker (Moodie's) Gold Mining Company, Limited; Moodie's Golden Hill Gold Mining Company, Limited; the Weltevreden Estate and Gold Mining Company, Limited; the Jubilee Gold Company, Limited; Star of Normandy Gold Mining Company, Limited, and the South African Gold Mines Agency, Limited.

Transvaal Gold Exploration and Land.—The following particulars are from manager's advices of February 25th:—Bullion: A shipment of seven bars, melted gold, weighing 310 ozs. 14 dwts., value 1,180*l.*, has been made through the Standard Bank. Mines—Theta vein: The weight extracted during week was 70 tons, assaying 4 ozs. 15 dwts. gold per ton. The vein continues without any material change. Transport of ore is being well maintained. Columbian Hill: During week bore-hole No. 4 was sunk 23 ft., and No. 5 sunk 15 ft., but nothing of any value has yet been cut through. Beta vein: The men who were engaged on this vein have been employed during week in cutting a new channel for the mill race, to divert it towards the new flume which will shortly be erected. Brown's Hill Mill—Battery: The battery was at work for 106 hours, and crushed 48 tons Zeta ore, assaying 3 ozs. 4 dwts. per ton, and 65 tons Theta ore, assaying 4 ozs. 5 dwts. per ton. The clean up from the former yielded 127½ ozs. of amalgam from plates, and 51 ozs. from mortar boxes. Partial cleau up from Theta ore yielded 229 ozs. amalgam from plates. Pans: The pans ran for 115 hours during week, and treated 40 tons of tailings from Theta ore, assaying 5 ozs. 10 dwts. per ton. Clean up on Saturday yielded 257¾ ozs. of amalgam.

New Spitzkop.—Mr. E. O'Dwyer, in a circular dated March 25th, states:—The board had the honour of handing you, ou 19th October last, a very full and able report of Mr. C. O. Heanan, your manager, on your property at Spitzkop, setting out his views as to the proper mode of developing the same, and the probable expenditure which will have to be incurred in doing so. Your board's time, as well as the company's finances, have since that date beeu taken up and heavily taxed in finally and satisfactorily disposing of the very heavy litigation connected with Mr. Franck's claim of 5,800*l.*, as well as the diggers' (Silo, Tate and Stanley) claim against the company, based upon an old award in their favour. The time has now arrived to try and do our best in developing the property in your interest, and you have seen by Mr. Heanan's report that the same cannot be undertaken in a proper, intelligent and business-like manner without your further financial assistance, and your approval of and assent to the course of action suggested by your magager. Under these circumstances the board have thought it their duty to instruct Mr. Heanan to come to London to lay his full plans before you at a meeting to be called for that purpose, and to explain to you the present conditiou and prospects of the undertaking. The board have been informed by cable that Mr. Heanan will probably arrive in London about the last week in April, and they have therefore decided to lose no time in giviug you this information, so that you may be prepared to attend the annual general meeting which will be held on Mr. Heanan's arrival. Due notice will be given you of the exact date of such meeting, and the board trusts that every shareholder will make it convenieut and his duty to attend on that occasion, so that no delay may occur in carrying out whatever resolution may then be arrived at.

Nooitgedacht.—The following report has been received from Mr. Swcet, 26th February:—Machinery: You will bc glad to learn that a portion of the 15-stamp battery has arrived on the mine, and I am daily expecting the remainder. The taking out of the ground for the mill and turbine is nearly completed, and I trust to have everything in such order by the time the latter arrives that nothing will be left to be done but the fixing of the pipes, screwing the turbine down on its bed, and setting it in motion. Buildings: These are going up fast, and, although not nearly finished, have already put a new and business-like aspect on the place. Race: In a fortnight's time I trust to be able to report that the race is completed. Button's reef, No. 3 section: The lode in main level after improving, has again fallen off, and is now thin and poor. The 90-fm. level east is driven about 100 ft.; vein 2½ ft. thick of friable furrugin and quartz, worth about 2 ozs. gold per ton. The two levels west of main level show no alteration. The quartz in No. 1 level east is over 5 ft. iu thickness, and the quality is improving as the ore advances. No. 1 drive west has a vein 2 ft. thick, but much mixed with slatc, and consequently of low grade. No. 4 section: The water in the main drivage has lessened somewhat, and we have been enabled to effect better progress in driving: lode continues strong, 3 ft. thick, and improves as depth is attained. The 80-ft. level west has 2 ft. of ore, carrying an admixture of heavy irony matter, and is of fair grade. In the 80-ft. level east the reef has widened out to 4½ ft.; quartz slightly pyretic and very productivc—a finc lodc. Davidson's reef: The cross drives east and west of No. 2 continues to yield excellent ore. No. 3 level is going south in fair-grade ore, but lode thinned to 1 ft. The 80-ft. cross drive east has a lode fully 3 ft. thick, and of high grade. The vein in the 80-ft. drivc west is 2½ ft. thick, with ore of higher grade than when last reported on.

REPORTS OF MEETINGS.

THE DICKENS CUSTER CO., LIMITED.

(In Liquidation.)

RESOLUTIONS CONFIRMED—NEW DIRECTORS APPOINTED.

An extraordinary general meeting of the members of the Dickens Custer Company, Limited (in liquidation), was held at Winchester House, yesterday, for the purpose of confirming the following resolution, which was passed as a special resolution at an extraordinary general meeting, held on 14th March last :—

"That the liquidator be, aud he is hereby authorised to consent to the registration of a company, to be called the Dickens Custer Mines, Limited, and, in accordance with section 161 of the Companies Acts, 1862, to enter into an agreement for the sale of the company's property in Idaho to a new company, for the consideration and upon the terms specified in the draft agreement signed by the chairman for the purpose of identification, and submitted to this meeting, and with such modifications or additions as the liquidator may determine, not being substantial variations therefrom."

Mr. C. T. Gladstone (liquidator) presided.

The notice convening the meeting having been read, the minutes of the previous meeting were read and confirmed.

Mr. Samuel James then proposed the resolution, as above.

Mr. Bythesea seconded the motion.

Mr. Thomas Thompson said that it was desirable at this meeting to introduce some new blood into the directorate, and he was about to suggest the name of a gentleman, when

Mr. Lott rose to a point of order on the ground that this subject was irrelevant. (Voices : "Sit down," aud "Let him speak.")

The Solicitor pointed out that the election of directors for the new company would be proceeded with after the formal business had been completed.

Mr. James put the motion, which was carried unanimously.

NEW ARTICLES OF ASSOCIATION.

The Solicitor said that, under the resolutions just agreed to, the liquidator was instrueted to form and register a new company, and, in doing so, he would have to file certain articles of assoeiation with the memorandum of association. That document he (the speaker) had prepared, and he proposed now to call attention to the salieut points contained therein. In the first place, the company was to adopt and carry iuto effect an agreement in the form of a schedule attached to the articles to acquire the ruining claims, property, and rights thereunder. That agreement they had just given effect to. The next article of importanee was with regard to an increase of capital, which it was provided should not be done unless by the company in extraordinary general meeting. A reduction of capital was provided for in precisely the same manner. The calls were to be 1s. on application and allotment, and 6d. per share at not less intervals than one month, 14 days' notice being given. Borrowing powers were also provided for, upon the security of the company's property, real or personal, the total amount not to exceed at any one time the sum of 10,000*l*., unless the company should otherwise determine by a resolution previously passed at au extraordinary general meeting. That would give the directors a free hand up to a certain figure. As regards the directors—the first board was to be elected by the shareholders of the Dickens Custer Company, Limited, in liquidation, present at the meeting convened by the liquidator, and which was now being held.

NEW DIRECTORS.

The election of new directors was then proceeded with, the Chairman stating that he had had put into his hand a paper giving names of several gentlemen who were willing to serve on the board :—Mr. Edwin Jennings Ball (Metallurgist Royal School of Mines), Mr. James Charles Bolton (one of the late directors), Mr. Hy. Lord, J.P. (chairman of the Salford Gas Company), Mr. Harry Chesterman Masters, Lieut.-Col. John James Robinson, and Mr. Edwin T. Wolseley.

An objection was raised to some of these gentlemen, and the names of Mr. Thomas Gilbert and Mr. William Furber were also suggested.

The name of Mr. E. T. Wolsely was put, and carried unauimously.

A SHAREHOLDER WITH STRONG VIEWS.

Mr. Lott protested against the waste of any more time in the election of directors, and urged that a better board than the six gentlemen the chairmanhad submitted to them could not be formed. (Laughter, and "oh oh." Money had been wasted in the past, and he considered it important that they should have at least half new blood on the new board. If the six names submitted to the meeting by the chairman were not elected, they would simply retire from the thing altogether, aud have nothing whatever to with it. (Laughter ; cries of "Set down," and ironical cheers.) This matter had been very carefully considered, and people who represented at least 150,000 shares had put them forward, and they would see that they were carried. (Renewed laughter.) He understood that Mr. Lord had had great experience. (Cries of "Ingas." Then, as regarded Mr. Ball, no one put forward by any section of shareholders had had more experience in the work that this board would be required to perform, than he.

A REASONABLE SUGGESTION.

Mr. James protested against the general body of shareholders being dictated to by one man in this manner. The last speaker held a threat over their heads that if the six gentlemen whose names had been read by the chairman were not elected, they would retire. He argued that the names of any gentleman fit for office should be put forward, one by one—(hear, hear)—and the meeting alone should decide by their votes.

It was then decided that the names should be put separately.

The name of Mr. Furber was then submitted, when the Chairman declared that 42 had voted for, and 26 against him.

Mr. Edgar Holland demanded a poll.

The Chairman said a poll should take place at the end of the meeting.

Mr. E. J. Ball was put and carried unanimously, and with acclamation.

The name of Mr. S. P. Gilbert was next voted upon.

The Chairman declared that 37 voted for, and 38 against this gentleman, but, as there might be some uncertainty in the count, and the difference being so small, he allowed a second vote, after which he said there was again only a difference of one—39 for and 40 against.

Mr. Lord's claims were again urged by Mr. Nicholson, who said he held 20,000 in his own name, and represeuted altogether over 60,000 shares. (Applause.) Mr. Lord would stand with 2,000 shares behind him as soon as the company was re-constructed. He had Mr. Lord's authority for saying so. Mr. Lord would really represent the North of England shareholders, who very numerous. (Hear, hear.)

Ou being put to the vote there were 39 for and 26 against.

Mr. Henry Chester Masters was then submitted to the vote, when he was carried by an overwhelming majority.

Ou Mr. James Charles Bolton being put forward, 37 voted for, and 25 against him.

Col. Robinson created some considerable dissension. When the show of hands was taken, however, the Chairman decided that there were 21 for and 46 against him.

Mr. White demanded a poll on his behalf.

The election of directors having concluded, with the exception of the polls,

THE REMUNERATION OF THE BOARD

was next considered.

The Chairman said that the articles of association provided that the qualification of a director should be 500 shares, and it was proposed that their fees should be 1,000*l*. per annum, or such other sum as the shareholders might determine.

Major Cotton said he thought the directors were gentlemen of such standing, and held such a large stake in the concern, that they would not desire such large fees uutil the shareholders got something. (Hear, hear.) He therefore proposed "That the remuneration to the directors should be 500*l*. a year, with 5 per cent. of the net profits over and above a dividend of 10 per cent. to the shareholders, and after that, that their remuneration should be 2,000*l*. a year."

Mr. James seconded.

Mr. Lott opposed the motion, and moved an amendment, "That the chairman, who had to do much extra work, should be allowed 200*l*. a year, and the other directors 100*l*. each per year.

The amendment was seconded, aud on both being put to the vote, 28 voted for Major Cotton's motiou and 31 against it.

The amendment was then put and carried.

NEW BOARD—RESULT OF THE POLL.

The polls, of which notice had been given, were then taken. The proceedings lasted until late in the evening, when the following gentlemen were announced as being duly elected as directors of the new board—namely, Messrs. E. T. Wolseley, E. J. Ball, J. C. Bolton, H. Lord, H. C. Bolton, H. Lord, H. C. Master, and Col. Robinson.

The result was applauded by the few who remained to hear it.

OCEANA TRANSVAAL LAND CO., LIMITED.

RESOLUTIONS CONFIRMED—THE CHAIRMAN INTENDS VISITING THE PROPERTY.

An extraordinary general meeting of the Oceana Transvaal Land Company, Limited, was held at Cannon Street Hotel, on Friday, 29th March, noon, when the following resolutions, which were passed at an extraordinary general meeting held on the 12th March, were submitted for confirmation as special resolutions.

(1.) "That each of the existing 5*l*. shares of the company shall be divided into five shares of 1*l*. each." (2.) "That the articles of association of the company be altered as follows, namely : Clause 23. By substituting '5s.' for '1*l*.' Clause 54. By substituting '2,500 shares' for '500 shares' in the tenth line of the clause. Clause 59. By rescinding the whole of this clause, and substituting the following : '59. Every shareholder shall have one vote for every share registered in his name.' Clause 72. By substituting in the third line, the words 'shares to the nominal value of 500*l*. at least' for the words 'at least 100 shares.' Clause 73. Sub-section 1. By substituting the words 'shares to the nominal value of 500*l*. at least' for the words 'at least 200 shares.'"

Mr. H. Pasteur presided.

Mr. Samuel C. Fox (secretary) read the notice convening the meeting.

The Chairman : Gentlemen, you have heard the resolutions which are going to be submitted to you for confirmation, and as there is no need for me to make any remarks upon them, I shall now simply move the first resolution.

Mr. Thompson seconded the motion, which was carried unanimously.

The Chairman then moved the second resolution, which Mr. Thompson seconded, and was also carried.

The Chairman : Gentlemen, that concludes the business of the meeting, and I have to thank you for your attendance. I should just like, however, to tell you that we are endeavouriug to arrange for the

FORMATION OF A COMPANY

to prospect and develop one of the large blocks of farms belonging to this company. If no unforeseen events should occur, I hope it will not be long before we are able to lay a scheme before you. I should also like to say with regard to our Koppieskraal property, that we have made arrangements with an eminent engineer, Mr. C. Algernon Moreing, to prospect and report upon the Black Reef. Many of you will know Mr. Moreing, of the firm of Bewick and Moreing, and will be aware that his report will be of very great valuo to us. We have an offer for a small portion of the Black Reef out in Heidleberg, and if we are able to sell a portion of the reef, there is every prospect of there being able to sell other portions. I propose to leave for the Transvaal in a few weeks on a tour of inspection, and I intend not only to see the Heidleberg farms, but I hope also to be able to pay a visit and inspect the large blocks in the Waterburg and other districts. I shall have the pleasure of having in my company Sir Frederick Young, who is largely interested in the Transvaal. I shall also have with me six or eight young gentlemen in good position, who are going out to settle in the Transvaal, which shows you that the tide of emigration to that country is getting hold of the best class here. I have nothing further to add, but I hope the coming cool season will witness great activity, and be a great suceess. (Cheers.)

Mr. Thompson, on behalf of the shareholders, wished the chairman god-speed, and said that his visit, accompanied by Sir Frederick Young, would be of immense advantage to the company.

The proceedings then closed.

MINES.

Mining offers to the Investor, who uses care and good judgment in making his purchases, by far the most profitable field for the employment of capital to be found in this country. It is not necessary to cite the host of mines that have returned, or are returning, to their shareholders enormous profits. All persons must be fully convinced of the profitableness of Mining Investments, when judiciously made, but great profits are contingent on the exercise of care and judgment in the selection.

F. W. MANSELL & CO., having been established upwards of 30 years, are able, by their lengthened connection with the markets and their extensive knowledge of mining affairs, to afford profitable advice to intending Investors and Speculators.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

A.M.—The firm in Palmerston Buildings is highly respectable, and has been established very many years.
L.G.P.—Hold Yuruari. It is false to say that a call will be made. See Mining Market. (2.) Have not heard of a call yet, but one should be about due. A rise may be looked for, as all Indians are going up. (3.) Copper shares are not likely to rise just now. It is a very good company. The accident is not thought to be serious. (4.) The preference shares are more likely to rise than the ordinary. They are low as compared with the ordinary shares, but both should be held. It is impossible to foreshadow the return, but the mine is doing well, and looks the best of the Indian group.
Coal Trader.—The offices are 103, Cannon Street, London, E.C.
Sam P.—Put the matter in your solicitor's hands.
Etheridge United.—First crushing daily expected.
Austrian Reader.—You would get about 3*l.* for the whole lot, so we think it better to keep them, and wait until the next mail arrives.
Anxious.—You can demand the return of your money. Send us the document, together with authority, to receive the cash.
Libiola.—A very good investment.
Bellite.—Demand the return of your money.
C. W.—Etheridge Uniteds are good to purchase.
Emma Shareholder.—Very wrong to sell. Wait till July.
B. E. A.—Sell them without delay.
Birmingham.—No. Have nothing to do with them.
Minerals (A.P.)—We advise you to hold. Emmas good.
G. W. R.—Remingtou type-writer is the best. We use three.
J. Wilson.—Take your profit.
J. Painter.—Very respectable, and we think he will settle in the ordinary course.
R. T. (Bath).—Certainly, join the re-construction.
Rail (S. T.)—Cannot go much lower. They look a good purchase.
St. Stephens.—Unsuited to our columns.
J. Kerr.—We have already written to your friends.
King Solomon.—Impossible to insert your letter. Parts of it cannot be read.
Doubt (L. P.)—They are a fair speculation. Send transfers, &c., to us.
Inquirer.—The meeting is called for Wednesday next. The shares may improve after it.
J. Canton.—Do not listen to such a man as he is, but take our advise, and sell at once.
Craze (Willesden).—We will enquire and reply to you in our next issue, if possible.
H. S. A.—The report you mention we have not yet seen, Send us further particulars about the transaction.
G. D.—Sell No. 1. No. 2 will make a call of 6d. in about a week. Hold No. 3. Do not believe that Yuruari will make a call.

The Mining World.

LONDON: SATURDAY, 30th March, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

THE POSITION OF THE COPPER COMPANIES.

There has been a further fall in the price of copper during the past week, until a point has been reached almost as low as that from which the rise began eighteen months ago. Yesterday, however, the tone of the market was firmer, and a speedy recovery, if only to a slight extent, seems likely. There is no doubt that the statistical position of the metal is improving, for, at the lower range of prices, consumers are making large purchases. Still, there is a vast accumulation of copper on hand, and stocks will have to be considerably reduced before the market resumes anything like a healthy condition. We have said so much lately about the metal itself that we need not pursue the matter now, further than by mentioning that apart from the decline of about 30s. a ton, the position remains practically unchanged. With regard to the future, much depends upon next week's settlement on the Paris Bourse, which commences on Monday and closes on Wednesday. This will be the first monthly settlement since the collapse took place, for the mid-monthly account in Paris is of little importance in counection with securities of the more speculative description. The events of the next few days, therefore, must have a considerable influence on the prices of copper shares. If the settlement is adjusted without much difficulty, confidence will be restored, and an advance in quotations may be expected to follow. If, on the other hand, heavy embarrassments are disclosed, it is safe to predict that a lower level of prices will result. The success of the Russian Conversion loan seems to indicate a strengthening of the position of the Bourse, so that the settlement is anticipated hopefully. In London there is such a large "bear" account, not only in copper shares, but in most international securities, that there can hardly be any further fall, at all events, to a serious extent. Our object, however, is to consider the position of the copper companies, a subject which is, of course, inseparable from the condition of the metal market.

In this connection we must say that matters do not seem to us quite so gloomy as they are generally considered. There has, it is true, been a very heavy drop in the price of copper; but in the past 18 months very handsome profits have been made, which, while providing shareholders with largely-increased dividends, have materially strengthened the financial position of the companies. The holders of copper shares have thus benefited by the speculation set on foot in Paris; while the position of their properties is certainly no worse than it was in the autumn of 1887. There is the prospect now, which there was not then, that the large producers of the metal, both in Europe and in America, will decide upon a basis of operations so as to secure reasonable profits for the owners of copper properties, while encouraging the consumption of their produce. It has been pointed out that the restriction of output is an economically unsound operation, and in strict truth this may be so. But economic soundness is scarcely practicable unless it is universally adopted. If the copper produced by British companies were admitted into other countries, as the produce of foreign mines is into this country free of duty, we should have no cause for anxiety, for it is indisputable that such properties as Rio Tinto and Cape Copper, only to mention two of the leading undertakings, are capable of being worked at as low a rate proportionate to the output as any mines in the world. We are not advocating the adoption of Fair Trade doctrines: we are merely pointing to facts which are patent to all thinking men. On the subject of economic soundness, too, we would point out that it is inconsistent with right principles that 21 millions sterling, which is about the amount represented by the copper mining companies which have raised their capital in the United Kingdom, should be employed in producing a metal of world-wide consumption at such a miserable margin of profit as that which is possible with copper at 40*l.* a ton. We have not hesitated, therefore, to recommend those who have the direction of these companies to combine for their mutual advantage, and we sincerely trust that they will do so while there is yet time.

We have mentioned above that the nominal capital represented by British formed copper companies is about 21 millions sterling, and it

may be of interest to show how that amount is distributed. This information is supplied in the following table, giving round figures only, and lumping together share and debenture capital :—

	£
Rio Tinto	6,620,000
Mason and Barry	1,850,000
Tharsis...	1,380,000
Other European Mines	1,500,000
United States, Canada and Mexico ...	5,000,000
South Africa	780,000
Asia and Australia	1,000,000
In various countries	2,750,000
	£20,880,000

As we have said, these figures are taken roughly, but they are near enough for practical purposes. Of this amount a considerable proportion, though not such a large proportion as is generally assumed, has been raised since the "boom" in copper began. The nominal capital of these companies amounts to about 3,700,000*l*., but from this has to be deducted nearly a million sterling, representing the capital of companies re-constructed during the period. We subjoin a list of the copper companies registered between September, 1887, and the present time, as given in a recent issue of the *Statist* ;—

Date of Registration.	Company.	Country.	Nominal Capital.
Sept. 7, 1887	Barancannes ... ... (Oct. 29, 1888, reconstructed.)	Portugal ...	£100,000
Nov. 10 „	Mexican Copper ...	Mexico	250,000
— 17 „	Coosheen Copper ...	United Kingd.	30,000
Dec. 8 „	Penas de les Pintas ...	Spain	15,000
— 9 „	Buller and Bassett Tin and Copper	United Kingd.	100,000
— 16 „	Namaqua Copper ... (April 23, 1888, re-constructed, 200,000*l*.)	Cape	210,000
Jan. 16, 1888	Palmerston Copper ...	Australia ...	160,000
— 21 „	Skytmyr	Norway... ...	120,000
— 27 „	Val d'Elsa	Italy	75,000
Feb. 6 „	Bratsberg ... ... (Re-construction.)	Norway... ...	120,000
April 4 „	Tilt Cove	Newfoundland..	160,000
— 5 „	Sicilian United ...	Italy	100,000
— 24 „	Algerian Copper ...	Algeria	12,000
— 30 „	Cape Copper ... ... (Re-construction.)	Cape	600,000
May 5 „	Rich Knob Copper ...	U.S.A.	200,000
— 8 „	Libiola Copper ...	Italy	252,000
June 13 „	Quebrada Copper and Silver	U.S.A.	4,000
— 28 „	Cantabrian	Spain	75,000
— 30 „	Boccheggiano... ...	Italy	8,000
Sept. 26 „	Excelsior Copper ...	Canada	450,000
Oct. 20 „	Portuguese Consolidated	Portugal ...	100,000
— 22 „	New Zealand	New Zealand ...	150,000
Nov. 30 „	Camarones	Chili	200,000
Total...			£3,491,000

As we have said, the future of the companies is inseparable from the future of the copper market, and that depends mainly upon the arrangements which the producing companies may be able to come to. The outlook, though far from cheerful, is, we think, less black than it is generally painted. Shortly, however, we hope to be in a position to speak more definitely on a subject which is of such vital interest to a large section of our readers.

FACTS ABOUT MINING.

The mineral statistics for the United Kingdom for the year 1888 have just been issued. The celerity with which these returns are now prepared, and issued, is in striking contrast with the dilatory manner in which they were published in Mr. Hunt's time. The number of persons employed in and about all the mines in the United Kingdom of Great Britain and Ireland, together with the Isle of Man, in washing and coking coal on premises adjacent to or belonging to the mines, amounted to 592,656, of whom 5,680 were females above ground. The number of persons employed in and about all the mines, exclusive of those employed on private branch railways and tramways, and in washing and coking coal, was 578,417, of whom 5,357 were females, the aggregate increase being 10,391. The total number of fatal accidents was 885, and the total number of deaths occasioned thereby, 960 ; being an increase of four in the number of fatal accidents, and a decrease of 91 in the number of lives lost, compared with the totals of the preceding year. The summary shows also the ratio of fatal accidents and deaths to persons employed, the death-rate per 1,000 being 1,660 as compared with the higher ratio of 1.850 of the year 1887. This death-rate is more favourable than in any preceding year. The total number of persons employed in and about the mines under the Coal Mines Regulation Act was 534,945, of whom 3,935 were females working above ground. There were 821 fatal accidents and 888 deaths, the number of accidents being nine less than in the preceding year, and the number of deaths being 107 less. There was one fatal accident for every 652 persons employed, and one death for every 602 persons employed. These ratios are more favourable than in any preceding year.

The total quantity raised was 182,660,163 tons, of which 169,935,219 was coal and 8,635,032 ironstone, the rest being fire-clay, oil shale, and other minerals, being a total increase of 9,610,368 tons compared with the preceding year, the increase of coal being 7,815,407, and of ironstone, 1,065,114 tons. The coal miner's occupation is now more than twice as safe as it was at the commencement of the inspection, the average ratio for the first ten years ending 1860 being one death in every 245 persons employed ; for the ten years ending 1870 one death in 300 ; for the ten years ending 1880 one death in 425, whilst for the present year it is one in 602, a much more favourable ratio. A summary shows the ratios of accidents and deaths to the number o persons employed and tons of mineral wrought in each of the dis ricts, namely, 222,485 tons of mineral wrought for every fatal accident, and 205,698 tons for every death, as compared with the lesser quantities 208,494 and 173,919 tons respectively in the preceding year.

MONTANA MEETING.

In the midst of dealing with companies that are reporting deficits, or adopting the drastic policy of re-construction to meet urgent financial necessities, it is like a healthful breeze from the sea to come to the consideration of the Montana Mine, the eye of whose prosperity is not dimmed, and the natural force of whose productiveness is not abated. It is quite true the directors of the Montana Company have hard work, but it is pleasant work. Mr. Crowther says he gives to it the bulk of his time and the affection of his heart ; but he must remember that Montana is worthy of the one, and, at least, has some claim to the other. To work for a mine like Montana must be a labour of love ; and many are the directors who envy its prosperous condition, though few of their concerns there be that attain it. Working for a *successful* mine is so fascinating and so exhilarating, that though anxiety is added to the task, the compensating influences outweigh all others, and business life, in this direction at least, becomes a pleasure, and a half-yearly meeting of the shareholders an occasion to be welcomed and enjoyed. Mr. John Bayliss yielded to the soft influence until the dictates of ill-health compelled him to retire ; but he left his colleagues still under the spell of a mining enchantress, who, however fickle she has proved to other concerns, has at least been true to Montana. Perhaps she wavered somewhat in her affections in recent months when the mine has not given such large returns as of yore ; but once again Montana is re-asserting herself, and the story which the directors had to tell was one of a prosperity likely to be considerably accentuated in the immediate future.

The able speech of Mr. Stewart Pixley, the esteemed chairman of the company, may be said to have dealt with the past ; the forcible address of Mr. F. P. Crowther with the present and the future. The most important sentence uttered by the latter gentleman, and the one which touched the throttle valve of the whole matter was this :—"I consider that this report, whilst it conveys to you the lowest scale of profit recorded for many years past, virtually contains information of the greatest value to you as shareholders." His first announcement that the profits for the present quarter are roughly estimated at 21,600*l*. evoked a hearty cheer from the meeting. Out of this sum there will be liquidated the suspense account of 4,442*l*., and the expenditure on capital account of 2,000*l*., leaving 12,675*l*. to pay the increased dividend of 7½ per cent., and 2,783*l*. to carry forward. The reserve fund is invested in the business, and must remain there unless the shareholders choose to raise fresh working capital, of which the mine would be destitute but for its own resources.

The remarkable character of the workings of this mine may be judged from the fact that the lineal underground developments now measure 4½ miles, and as Mr. Bayliss intends to increase the number of his drills, and the directors to send him a fresh air-compressor, these developments will, in the present year, experience rapid expansion. Stress was laid upon the East Drumlummon vein, which, in a comparatively small space of ground, has added over 30,000 tons to the reserves. In fact, the reserves have increased in the six months from 182,000 to 215,000 tons. In the 700 level appearances at the last meeting were not encouraging, but in the 800—the present bottom of the mine—there is a shoot which is gradually increasing in size, about 100 ft. the whole distance—the ore body maintaining the average width of 15 ft., and assaying from $25 to $30 per ton. The counsels of the amateur critics of Drumlummon Mine are therefore in a fair way of being turned to foolishness, and Montana is triumphant once more.

The policy of the board is not to make sensational, but true, reports ; not to declare fanciful dividends in one half-year, and microscopic dividends in another ; not to force the shares to a fictitious price, and then let to them down to almost no price at all. If the shareholders want directors to do this they must change the board. The present administration will do no more than develop the mine in a proper manner, and keep the milling well within the reserves.

All the shareholders have not remembered that Mr. R. T. Bayliss, their esteemed manager, has been labouring under the difficulty of

having to put machinery into the new shaft, which debarred him from access to the lower parts of the mine. The inference from this is so obvious that we do not dwell upon it, but pass on to draw attention to Mr. Crowther's remark, that the mine is now earning from 17 to 18 per cent., whilst it is only paying 7½, the difference going to capital expenditure, by which the shareholders will in future largely benefit. On one point we certainly cast in our lot with Mr. Pixley as against Mr. Crowther, for we think that the visit of a director to the mines once a year is highly beneficial, from many points of view, which, when dealing in former issues with cognate subjects, we have been at pains to set forth. Unquestionably the visit of au expert of such great experience and high repute as Mr. John Darlington would be of more value than that of a director not possessing his mining qualifications; but we contend that one of the best ways by which the administration in London can keep touch with the direction abroad is by showing, through the medium of these occasional visits, that the directors appreciate the services of their manager, and enter into the spirit of his work. The shareholders were well advised at the meeting not to part with any portion of their holding, but rather, as one of them said, to take the preseut favourable opportunity of increasing it.

LIBIOLA COPPER CO.

At the meeting of this company, held yesterday, the most agreeable business submitted to the shareholders was the authorisation of the final dividend of 3s. per share, making a total distribution of 8s. for the year, or, as Mr. James said, at the rate of about 13 per cent. per annum. The present position of copper is discouraging, but Libiola shareholders will draw heart from the statement made, that even with this metal at 38*l*. per ton, a very substantial dividend can be paid, for the basis of calculation is made on what the mine actually did during the very worst periods of the copper industry, anterior to the advent of the Paris syndicate. We kuow that for years copper was about 40*l*. per ton, and that under the state of things produced by this abnormally low price many mines were obliged to shut down. It is therefore most re-assuring to hear responsible gentlemen like Mr. Dunnington Fletcher, Mr. Weir, of Henry Bath and Sons, Mr. K. H. James, and Mr. Arehbold, concurring in the statement that this company can pay satisfactory dividends even if copper should go below that price. The mines, meanwhile, exhibit no falling off, and they have the great advantage of being accessible to a port, and of being cheaply worked. We have proofs almost weekly that shareholders in mining compauies do not always know the precise geographical situation of their properties. It was therefore not without a touch of humour that Mr. Fletcher was at pains to describe where the mines really are. We wonder how many of the shareholders, prior to his explauation, could have taken honours in an examination on this point.

THE TRANSVAAL GOLDFIELDS.—4.

By a Cape Colonist.

To eomprehend the position of the Transvaal as affecting railways, it is quite as necessary to understand the political relations of South Africa as to consult the map. I will assume that my readers have a map of South Africa before them, and will therefore direct their atteution more particularly to the political position. It must be strictly borne in mind that the Boers, who are the governing power in the Transvaal, are blood relations to the Boers of Natal, the Free State, and the Cape Colony. The Boers in Natal are few iu number, and may be left out of the reckoning, and the Boers of the Frec State are so isolated and unprogressive that they may also be taken as of but little accouut. But the Boers of the Cape Colony are numerous, and owing to the Cape Colony being the oldest settled state iu South Africa, there has spruug up from these Boers a large and influential party who really are not Boers at all; they have become educated; mauy of them are highly intelligent, and have attained exalted positions on the Bench and in commercial circles: in a great measure they have almost abandoned the *patois* of the country, and write and read English fluently, and they have thus become a power in the land. Many of these have combined with the Boers proper, and formed a powerful political institution, known as "the Africander Bond." This institution was established about eight years ago, and at the outset it was intended to embrace the Dutch Africander element all over South Africa, but two incidents brought about a split which still exists. In the first place, the Transvaal Boers were angry with their Colonial cousins, simply because they were living contentedly under the British Crown when the War of Independence took place, and when the Gladstone Government, in a week moment handed back the Transvaal to the Boers after the Majuba affair. And in the second place, about three years ago, the Cape Colonial Government, at the instance (strange to say) of the Cape "Bond" faction, imposed a heavy tax on Transvaal tobacco brought into this colony for consumption. Although all this irritated the Transvaal Boers, the probability is that no severe friction would have occurred but for the recent gold discoveries. When these gold discoveries became an acknowledged and well ascertained fact it was at once seen that there must be railway communication between the new auriferous country and the older and more settled portions of South Africa. It was then that the Paul Kruger party played a card which is now bringing about a serious amount of ill blood, and it is because I believe it to be so necessary for English capitalists to understand this position that I lay these details before them. Having the power in their hands this party determined to get at the sea coast by rail through the Portuguese territory, the outlet being Delagoa Bay. And for this purpose they granted a concession to a syndicate to construct a line of railway from Delagoa Bay, through Barberton to Pretoria. The history of this concession is so long and intricate that it will be necessary for me to pass it over, and merely show the position of affairs as they stand at the present moment. A line has actually been constructed, and was opened last year, from Delagoa Bay to the Komati River, a distance of 52 miles, and that line is now the cause of uo end of bother and worry. There are various causes for this. To begin with the line is practically useless. It runs from a fever-stricken port into a wilderuess; it carries so little one way or the other that it does not earn sufficient to pay the wages of the employes; there is no commerce to feed it, and it is fast going to ruin. Besides all this it runs into a *cul de sac*. As far as the Komati River the constructiou was a very easy matter, but between the Komati and Barberton there are some 50 miles of mountain barriers. In these days of engineering wonders, mountain barriers present no obstacles, but in this case they are more formidable thau physical geography presents. In the first place the syndicate is said to be composed of German and Holland capitalists who do not appear to be able to raise the money. In the second place, British capitalists are very wary of sinking their money in a country where the Government is in an unsettled state. In the third place in order to spite the Cape Colonial Government, the Transvaal Government inserted clauses in the concession which handicap the colonial merchants. Iu the fourth place it is very questionable whether the concession is not in conflict with the London Convention, to which I alluded iu my last letter, and, in the fifth place, there is uo getting over the fact that although it is universally admitted that Delagoa Bay is the natural outlet for the Eastern portion of the Transvaal, it is well-known that the climate of Lorenzo Marques is so deadly that no Europeans can live there.

Taking all these circumstances into consideration, we naturally turu to the subject of approaching the auriferous regions of the Transvaal, by way of Natal on the one side and the Cape Colony on the other. It will be easily understood that the business men of both colonies have large interests in the Transvaal Goldfields, and are fairly running a race as to which shall reach that country first. So far as the colony of Natal is concerned the matter is comparatively easy. It is a Crown colony, and having only one trunk line running inland, they have quietly decided on extending their line to the Transvaal border with all possible dispatch. In this colony the case is far different on account of the political cousiderations. We have three ports which are the termini of our railways—Cape Town, Port Elizabeth, and East London. The western line from Cape Town runs right up to Kimberley, the Diamond Fields capital, and, at present, the nearest terminus to the Transvaal. Then we have the Midland line from Port Elizabeth, with a junction at Naauwpoort, which joins the Western line at De Aar, aud then the Eastern line, which runs from East London to the Free State border. During the last Session of the Cape Colonial Parliament the questiou of railway extension was keenly discussed. An effort was made to effect a junction between the eastern and western lines, aud so enabling the latter to get to Kimberley, but for local reasons it failed. Then the Transvaal was approached by this Government under the belief that they would gladly meet us by influencing the Free State to run a line through that country, and thus join our railways with a line to Johannesburg, the centre of the Witwatersrand gold-bearing district.

(*To be continued.*)

WEST ARGENTINE AFFAIRS.

The shareholders of the West Argentine Gold Company took a practical and businesslike view of the position of affairs as presented to them on Wednesday last. On the eve of great prosperity there has come a sudden falling off in the yield of ore to which the vicissitudes of mining have long accustomed us. The consequence has been a straining of the financial position; but the shareholders, like reasonable men, did not belabour the directors with their tongues for an occurrence utterly beyond their control, but were eager to cooperate with them in retrieving a position which we hold to be the reverse of hopeless. The property owned by the company embraces an area as large, if not larger, than the Principality of Wales, and it is only a small section of it, called "Carolina," that has yet been tested to any appreciable extent. From this property there has been raised 6,540 tons of ore, which, when crushed with a 10-stamp mill, produced 4,938 ozs., or, in money, 17,000*l*. Three subsidiary companies have been formed, and are working with every token of success. In these companies the West Argentine proprietors own 53,000 shares—an asset of considerable value, seeing that the original discovery on the Carolina reef advanced the shares of the parent enterprise to over 2*l*. 10s. each. To further test the Carolina reef, an adit level is being sunk 150 ft.; but the main

hope of the directors and shareholders is centred in the "seventh department," ore taken from which has yielded well in the Carolina mill, and later reports have confirmed the earlier intelligence. In the 'seventh department" greater facilities exist for working than on the Carolina reef; and the Buena Fé and the El Brillante Mines have been scarcely touched. The reefs are reported to be massive, and the mining prospects generally cannot be described by the impartial critic as other than highly promising. It is also to be remembered that the initial difficulties of setting on foot in a strange country a totally new enterprise have been overcome. The mill is there, all the mining appliances are there, an excellent and self-sacrificing manager is on the spot, and only in a single matter is the company deficient—the one thing needful.

To provide the needful, the old expedient of re-construction has to be resorted to, and the scheme submitted by the directors, and unanimously adopted by the shareholders, is so reasonable in its details, and so just in its consideration of the interests involved, that it cannot fail to meet with the cordial assent of those who were not present, but yet who will have the opportunity of reading our full report of the proceedings. The scheme, as briefly described by Mr. Jennings, the managiug director, is to take power to issue 100,000 5s. preference shares, bearing a cumulative interest of 10 per cent.; and if one half, or even less, of these shares are taken up, the financial position of the company will be strong, and the directors can address themselves to the work of developing the mines without the fear of having the bailiffs in the office. Only on one point could we offer a suggestion. It is proposed to make the calls payable 2s. on allotment, and 1s. on the 1st October next. The scheme would probably be more successful if the 2s. call were reduced to 1s.—in other words, if the directors showed the same consideration for the pockets of the shareholders as they have displayed in meeting the just claims of all interested. Mr. Hopwood, having summed up the position, asked the crucial question—Is this mine to be abandoned? The answer of the shareholders was "No." The logical sequence of such a reply is an application for the new shares.

FACTS AND RUMOURS FROM PARIS.

Although the markets have been well maintained at higher prices, and confidence seems quite restored, the actual approach of the settlement at Paris, at one period so much dreaded, appears to be creating some hesitation there, to say the least of it. Active dealings are abstained from pending the development of the situation for the better or worse, and the tendency at the close to-day was certainly dull. It is stated that a judicial inquiry has been ordered as to the position of the Comptoir d'Escompte. The report of the administrators affirms that the directors are responsible, but this has to be settled by law. A telegram, however, states that in view of this, the directors have agreed to hand over 20 million francs as a set off against all further liability. The Comptoir will, it is stated, be relieved from its contract with the copper syndicate, and it now depends upon the satisfactory realisation of the various assets as to what amount will be divided amongst the shareholders. Optimists assert that the difficulties are over, that the syndicate will be reformed, and that in less than a year's time all will be as before the recent crash. Without going to the other extreme, it is certainly safe to say that recent events, although carried through without such serious consequences as might have been, and, indeed, were expected, will leave their mark behind them.

THE NEW BOARD OF DICKENS CUSTER.

When the shareholders of the Dickens Custer Company met yesterday, it was their evident determination to have a good working board. In the gentlemen selected, we think they have secured men who will justify the wisdom of their choice. They have wisely retained a proportion of the old directors, as well as secured the infusion of new blood, upon which shareholders are ever ready to fall back on the first occasion of their misfortunes, and when pecuniary salvation is the question of the hour. They have retained the services of the best members of the old board men like Mr. Wolseley, Mr. Bolton, and Mr. Masters—whose experience will be invaluable to their new colleagues, and the gentlemen—whom the latter have displaced—notably Mr. Bentinek, M.P.—will, as the old song says, "never be missed." It would have been simply suicidal not to have re-elected Mr. Wolseley, Mr. Bolton and Mr. Masters, and we congratulate the shareholders on the discretion they showed in electing as their new colleagues Col. Robinson, Mr. Ball and Mr. Lord. Col. Robinson is widely known, and universally respected, and his name will give confidence, not merely to the shareholders, but to those hereafter who may join the company in that capacity.

THE INDIAN BUDGET.

The Indian Budget proposes a New Sterling Loan for 3,750,000*l*., probably 3 per cent., under the Oude and Rohilkund Railway Act, besides an Internal Loan of Rs.2,500,000 for dock works at Calcutta and Bombay, and municipal waterworks. It also proposes to draw during 1889-90, 14,690,000*l*. of council bills, or 600,000*l*. more than for 1888-89, but assumes that the rupee, as a matter of exchange, will rule at the lower rate of 1s. 4⅛d. The surplus is estimated at Rs.160,000, including Rs.1,103,000 for special defence works. The deficit for 1888-9 was Rs.202,000, including Rs.818,000 for works, and that for 1887-8 has been closed at Rs.2,028,000, of which Rs.1,059,000 was the expense of the conversion of the Four per Cent. Sterling Debt, whilst Burma military expenses, opium and salt have all been unfavourable.

NORTH AUSTRALIAN MINING CO.

A DISAPPOINTMENT.

Not wisely, but too well, have the shareholders in the North Australian Miniug Company invested their money. We are afraid the prospect of seeing auy of it back is remote. The prospectus was couched in the major key; the speech of the chairman at the meeting on Thursday in the minor. In fact there was very little major, and a good deal of miuor at the meeting throughout. The reports of the manager, originally couched in the language of rejoicing, have latterly breathed nothing but the blackness of desolation. The former have been put on the shelf to cool, and the latter are now submitted for the consumption of the shareholders with what appetite they have. The eulogistic report of the Hon. J. C. F. Johnson, one of the Australian directors, has not borne fruit; and though the whole of the territory possessed by the company is distinctly metalliferous, yet the property seems to be, like a tree waving with golden fruit which is scarcely within the shareholders' reach. Wherever success has been predicted, failure has resulted, and the slight gleam of success that was referred to at the meeting has turned up from a totally unexpected quarter. The manager is made the scapegoat, though the shareholders will not hold the board guiltless. No permanent or payable lode has been found upon the property, and meanwhile the company is eating off its head. The working expenses are going on, the capital is being reduced, and the returns are nil. Is there any truth in the remark of a shareholder, that the boards in London and Australia are at variance? Of all the gentlemen who spoke at this meeting we know but of one who is capable of seizing the reins and conducting the team with anything like business ability and commercial aptitude. That gentleman is Mr. Hodgkinson, and the sooner the shareholders press him into their service as a director the better, though it is open to doubt whether he will consent to serve. We note the remark of Mr. Kenneth Haweis James, that miniug is a gamble, but the directors did not say so when they endorsed certain specific statements in the prospectus respecting which the shareholders have every right to demand an explanation.

BRITISH WATER-GAS SYNDICATE, LIMITED—AN INVESTMENT OF PROMISE.

The favour with which the British Water-Gas Syndicate, Limited, has been received by the public, and by the discerning portion of the Press, certainly appears to be merited when the prospectus is subjected to close scrutiny and analysis. In the first place, it has a strong and influential board, and in the next, the official appointments from first to last are calculated to give confidence to investors. The object of the syndicate is to secure and work a number of well-known water-gas patents for improvements in the manufacture of gas for illumniating, welding, glass smelting, and all metallurgical purposes which Mr. Samson Fox, the chairman of the company, has purchased, and also other patents set forth in the prospectus. Only failure has attended the efforts hitherto made to manufacture and apply water-gas on a commercial scale, but it is claimed for these combined inventions that they have, beyond all doubt, proved that "pure water-gas, when used as an illuminating medium in combination with the Fahuejelm Magnesia Comb, the English patent rights of which are secured to this company, gives a light in every way superior to coal-gas, and yet having all its convenience of application, and rivalling in brilliancy the electric light, can be manufactured at under 4d. per 1,000 cubic ft., after allowing for cost of production, wages, wear and tear of plant, and all contingencies."

Mr. Samson Fox, the well-known inventor, has erected the first plant of the kind in this country at the Leeds Forge, and has revolutionised the previous means of working mild steel, production of steam, and the illumination of works. An enormous saving has been effected by this plant, which, in that establishment alone is calculated at over 10,000*l*. a year, although it is well known that in Leeds the price of gas is as low or lower than in any other populous centre in the kingdom. Water-gas is, in fact, of universal application, and testimony has come from all parts alike to its efficiency, its economy, and its utility. In addition to the large revenue that may be expected from patents so valuable, and of such general service, the company will grant district licenses, though with a distinct view to the formation of subsidiary companies. Negotiations with this view are already on foot with important manufacturers for their respective localities. In securing the patents of Mr. Alfred Wilson, of Stafford, the company is to be congratulated upon a good purchase for the list of works and firms employing his generators, as given in the prospectus, is as solid a testimony to their worth as could be adduced. This gentleman's services have been secured as general manager for five years, and the shareholders may be satisfied that the scientific and practical direction of their affairs is in able hands. At the same time Mr. Bernard Dawson, whose patents have also been secured, will act as London agent. The purchase price has been fixed at 217,250*l*., payable in shares and cash. The capital of the company is 300,000*l*. in 60,000 shares of 5*l*. each. The list will open on Monday, and close the same day at or before four o'clock, and we understand it is the avowed intention of the directors, as far as possible, to deal

with all applicants for shares in a just and impartial spirit. The investment seems to be one that for all reasons can be recommended.

THE SILVER MINES OF THUNDER BAY.

The new silver region of Thunder Bay, near Port Arthur, Ontario, Canada, bids fair to create no little sensation in the commercial world. A report to the effect that ore has been discovered of the value of $22,000 to the ton seems scarcely credible, but geologists and mining experts of repute assert it as a fact. It is not, therefore, to be wondered at that many mouths have been made to water, or capitalists are flocking into the country. At present the field is chiefly occupied by the 'cute and enterprising Yankee. One mine alone, we are informed, is making a daily output of $30,000—equal to about 160,000*l.* a month. Our readers may gather some idea of what this means, when we say that properties with ore yielding $7 to the ton, are considered splendid investments. There appear to be excellent facilities for working the properties in this district, timber being abundant and cheap for all purposes, and water never failing. The Port Arthur district looks as if it would very shortly become one of the most important mining districts of the Dominion.

THE MONEY MARKET.

City, Friday Evening.

During the week the Money Market has been easy, contrary to expectation and precedent, for the close of the financial year is generally preceded by a demand for, and an advance in the value of money. It is true that yesterday, assisted by pay-day on the Stock Exchange, and the fact that the payment due on 2,200,000*l.* of Treasury Bills withdrew on balance between 600,000*l.* and 700,000*l.* from the market, the inquiry for money at call and for short loans drove many to the Bank; but against this must be set the fact that discount relapsed another $\frac{1}{8}$ per cent., making the quotation for three months' bills only $2\frac{1}{2}$ per cent., or $\frac{1}{2}$ per cent. under the minimum. The Bank's resources have been strengthened, and a large amount of gold is on the way from different quarters, so that when the year has turned the position promises to be one of extreme ease, if only temporarily. The dividends due on the Funds on the 5th will be payable on the 6th April with such proportion of the Reduced Three per Cent. as the public may by the 30th inst. (to-morrow) elect to receive in cash at the premium of 2s. 6d. per cent., probably about four millions. The exchange have receded, especially with France, and the rate in London have fallen back to 25.25. the nominal par. The bank return shows an increase in the stock of bullion of rather less than the amount imported, viz: 352,000*l.* and as the note circulation has increased 570,000*l.* the reserve is less by 243,000*l.* at 15,126,000, or $41\frac{3}{8}$ per cent. being nearly 1 per cent. worse. The puplic deposits have declined, but the private deposits have augmented 376.000., and the private securities, 480,000*l.*

Rates for money have further receded to-day, and that for loans is now more in unformity with discount quotations, which for three, four and six months' bills are $2\frac{3}{8}$, while as to short money this afternoon was not better than $2\frac{1}{2}$, recent borrowings and Treasury disbursements having for the time being flooded the open market. The Paris exchange is cabled at 25.26.

The Bank has bought to-day 11,000*l.* in gold, and the India Council specially sold a small amount in bills on Madras at 1s. 4 11-32d. Bar silver was flatter at $42\frac{3}{8}$d., and dollars at $41\frac{1}{4}$, while rupee paper was steady.

Business at the Stock Exchange during the past week has been restricted by the arrangement of the fortnightly settlement, but as stock proved scarce, contangoes light, and money in plentiful supply, prices quickly advanced and continued fairly buoyant. On Foreign Government Bonds contangoes ranged from 2 to 4 per cent., with a "back" on Russian of — per cent., and on American Railway Securities from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. was obtained. There has been no striking alteration in political affairs, but the week has unfortunately been marked by the "homegoing" of John Bright, a man universally respected, even by those who were his political foes, and expressions of sympathy with the family have been received from the highest to the lowest in the land. The public have been chary in dealing with Foreign Government Bonds, although a greater amount of confidence has been expressed with regard to the financial crisis in Paris. The official liquidators of the Comptoir d'Escompte are endeavouring to make the directors responsible for the loss made by that establishment, and a judicial inquiry has been ordered, but no decision has been arrived at with regard to the Société des Metaux. The Funds and Indian Government Securities have risen $\frac{1}{8}$ to $\frac{3}{8}$, and Colonial Inscribed Stocks, $\frac{1}{4}$ to $\frac{3}{4}$. Foreign Government Bonds rallied $\frac{1}{4}$ to $\frac{1}{2}$, with special advances of $2\frac{1}{2}$ in Greek and Egyptian Preference Loans, and $1\frac{1}{2}$ in Hungarian and Ottoman Defence Loans. South American Loans were also firmer, and the difficulties between the Finance Minister and the bourse at Buenos Ayres are in a fair way to a settlement, but the Ministerial decree respecting operations in the gold premium will still remain in force. Home Railways have shown more buoyancy than all the other markets, and Brighton Deferred have risen 5; South-Eastern "A," $3\frac{1}{2}$; North-Eastern, $3\frac{1}{4}$; and Chatham, Sheffield, South-Western, Midland, and Great Western, $1\frac{1}{2}$ to $2\frac{1}{2}$, and the rest, $\frac{1}{2}$ to $1\frac{1}{2}$ per cent. American were dull and listless, and but trifling alterations are recorded. Grand Trunk Stocks were very good, and Mexican and the bulk of the Miscellaneous department closed at slightly enhanced value. Cable Stocks being very good on dividend rumours.

The tendency to-day has again been upward, but not to such a marked extent as characterised yesterday's markets; the buying being more of an "inside" character. The Funds were easier, the cash price for Consols going to $98\frac{1}{4}$, $\frac{3}{8}$, or $\frac{1}{8}$ below yesterday's price. The Chancellor is said to be offering to the general public $\frac{1}{2}$ per cent. better terms for the conversion of Reduced into Local Loan Stock, than he has offered to bankers and brokers. Foreign Government Bonds were good, the feature being the advance in Egyptian Unified, which at one time rose to $90\frac{1}{2}$, finally closing $\frac{3}{4}$ higher. This is due to the rumour that the Bank of England will pay the coupons, hitherto cashed by the Comptoir d'Escompte. The Preference Loan, however, was a shade weaker, but other International issues were $\frac{1}{8}$ to $\frac{1}{4}$ better. Peruvian Bonds lost ground. A Reuter's telegram from Buenos Ayres states that the Exchange on London is $29\frac{1}{16}$d., and on Paris 3.06f., both for paper currency. Home Railways were irregular, but the majority of the movements were favourable, Chatham Preference taking the lead with a rise of $1\frac{1}{2}$. South-Western, Midland, and North-Eastern following with a rise of about 1 and the others about $\frac{1}{4}$, excluding Brighton "A," which lost $\frac{1}{2}$ per cent. of yesterday's advance, and Taff Vale, which fell 7, and Hull and Barnsley, $\frac{1}{4}$. American Railway Securities were lifeless, and closed weak in response to New York quotations. It is now stated that the directors of the Union Pacific will "pass" the dividend at least for the present, and the shares have fallen $2\frac{1}{2}$. In other cases the decline ranges from $\frac{1}{4}$ to $\frac{3}{4}$, excepting Denver issues, which closed remarkably firm, the Preferred issue improving $1\frac{1}{8}$. Graud Trunk and Mexican Stocks were neglected, but firm in tone. Brewery Shares were in request for investment purchases, but the whole of the Nitrate group fell $\frac{1}{2}$ to 1, with a reduction of $2\frac{1}{4}$ in Primitiva Nitrate Shares.

Annexed are the final quotations to-day:—Consols Account, $98\frac{1}{4}$, $98\frac{3}{8}$; Egyptian Preference, $104\frac{3}{4}$, $105\frac{1}{4}$; Egyptian Unified, $89\frac{7}{16}$, $89\frac{11}{16}$; French Four-and-a-Half per Cents., $103\frac{1}{2}$, 104; Hungarian, $85\frac{3}{4}$, 86; Italian, $95\frac{5}{16}$, $95\frac{7}{16}$; Mexican, $94\frac{1}{4}$, $94\frac{3}{4}$; Peru Five per Cents., $13\frac{3}{8}$, $13\frac{1}{2}$; Peru Six per Cents., $14\frac{15}{16}$, $15\frac{1}{16}$; Russian, 1873, $102\frac{3}{8}$, $102\frac{5}{8}$; Portuguese, $65\frac{9}{16}$, $65\frac{11}{16}$; Spanish, 75, $75\frac{1}{8}$; Turkish, 1871, 90, $90\frac{1}{2}$; Turkish Defence, 102, $102\frac{1}{2}$; Caledonian, $115\frac{1}{4}$, $115\frac{1}{2}$; Great Eastern, $74\frac{1}{4}$, $74\frac{1}{2}$; Great Western, $155\frac{1}{2}$, $155\frac{3}{4}$; Brighton "A," $148\frac{1}{4}$, $148\frac{1}{2}$; North-Western, $180\frac{1}{8}$, $180\frac{3}{8}$; Metropolitan, 85, $85\frac{1}{2}$; Metropolitan District, 37, $37\frac{1}{4}$; Midland, $139\frac{1}{8}$, $139\frac{5}{8}$; North British $56\frac{3}{4}$, 57; North-Eastern, $169\frac{1}{8}$, $169\frac{3}{8}$; South-Eastern "A," $113\frac{3}{8}$, $113\frac{5}{8}$; Hull and Barnsley, 34, $34\frac{1}{2}$; Grand Trunk, $11\frac{5}{8}$, $11\frac{3}{4}$; Ditto First Preference $73\frac{3}{4}$, 74; Ditto Second, 54, $54\frac{1}{4}$; Ditto Third, $29\frac{1}{4}$, $29\frac{1}{2}$; Canadian Pacific, $51\frac{7}{8}$, $52\frac{1}{8}$; Mexican Ordinary, $44\frac{1}{4}$, $44\frac{1}{2}$; Denver, $16\frac{7}{8}$. $17\frac{1}{8}$; Erie, $27\frac{15}{16}$, $28\frac{1}{16}$; Milwaukee, $63\frac{1}{4}$, $63\frac{1}{2}$; Lake Shore, 103, $103\frac{1}{4}$; Louisville, $62\frac{3}{8}$, $62\frac{5}{8}$; Atlantic First, $33\frac{1}{8}$, $33\frac{3}{8}$; Ontario, $16\frac{7}{8}$, 17; Ohio, 21, $21\frac{1}{2}$; Norfolk and Western, $50\frac{5}{8}$, $50\frac{7}{8}$; Reading, $21\frac{1}{2}$, $21\frac{3}{4}$; Reading Bonds, $82\frac{1}{2}$, 83; Union Pacific, $62\frac{1}{2}$, $62\frac{3}{4}$; Wabash Preference, 26, $26\frac{1}{4}$; Ottoman Bank, $11\frac{7}{8}$, $12\frac{1}{8}$; Anglo-Telegraph, $50\frac{1}{4}$, $50\frac{3}{4}$; United Telephone, $15\frac{1}{4}$, $15\frac{1}{2}$; Hudson's Bay, $21\frac{3}{8}$, $21\frac{5}{8}$; Suez Canal, $88\frac{1}{2}$, 89; Guinness, $30\frac{7}{8}$, $31\frac{1}{8}$; Allsopp's, $8\frac{3}{8}$, $8\frac{5}{8}$; Bryant and May, $12\frac{3}{4}$, 13; Nitrate Railway, $24\frac{3}{8}$, $25\frac{1}{8}$; Hyderabad (Deccan), $9\frac{1}{2}$, $9\frac{3}{4}$.

MORUYA GOLD AND SILVER MINING CO., LIMITED.

The directors have pleasure in advising receipt of the following cablegram from the manager at the Moruya Mine, relating to the official assays obtained from the Big lode in No. 2 shaft: "The Sydney Mint assay of this sample gave 4 ozs. of gold and 15 ozs. of silver per tons of ore, and the Mines Department assay gave 4 ozs. of gold and 33 ozs. of silver per ton of ore." On the 24th November last, the value of the lode, for the length of the No. 2 shaft only, was estimated at 160*l.* per fm. for gold and silver; but according to the above assays the value is now 294*l.* per fm. Should the mine continue to improve in this manner, the capital necessary to develop the property will be but one fourth of the amount that was originally contemplated.—W. M. Borradaile, Secretary.

HYDERABAD (DECCAN).—Advices from the company's representative state that the Nizam's Government, under the advice of the Government of India, have agreed to the terms provisionally arranged in England, in December last, between the Nawab Mehdi Hassan and the Concessionaires, with some additions, which will in all probability be arranged. The chief points agreed are:—That the concessionaires are to provide 150,000*l.* additional capital to be represented by deferred shares. The prospecting period is, at the option of the company, to be extended for an additional two years. All claims between the Government, the company, and the concessionaires, arising out of the obtaining of the concessions, the formation of the company, or dealing in or with its shares, are to be released.

Messrs. Garle and Harris, of 4, Tokenhouse Buildings, notify that they have taken into partnership Mr. David Russell, and the style and title of the firm will in future be Garle, Harris and Russell.

Commission on Mining Royalties.—In the House of Commons last night Mr. Conybeare asked the First Lord of the Treasury whether he could now state the terms of the reference which he would propose for the Royal Commission on Miuing Royalties; and how soon he proposed that it should be constituted and commence its labours. Mr. W. H. Smith said that he was not yet in a position to answer the question.

Mutual Reserve Fund Life Association, of New York.—The year's record reveals the following prominent figures:—New business: 13,251 applications were received, aggregating insurance for 8,457,535*l.*; 12,124 policies were issued, covering aggregating insurance for 7,783,737*l.*; 777 applications were rejected, covering aggregating insurance for 458,962*l.*; 350 applications were held for further information, covering 214,836*l.* Total income for 1888, 557,836*l.* Mr. W. H. Hayward is the general manager for Great Britain.

Publications Received.—The Institution of Civil Engineers: "The Use of Heavier Rails for Safety and Economy in Railway Traffic," by Christer Peter Sandberg, Assoc. M. Inst. C.E. (25, Great George Street, Westminster, S.W., London); "Worthington on the Permanent-Way of some Railways in Germany and in Austria-Hungary;" "Powles on the Motive Power of the River Rhône at Geneva;" "Lopes on the Reparation of Betchworth Tunnel;" "Gloyne on the Discharge of Sewers;" "Capper on the Speed Trials of British War Vessels;" "Aspinall on Friction of Locomotive Slide-Valves."

REPORTS OF MEETINGS.

THE ROBURITE EXPLOSIVES CO., LIMITED.

RAPID PROGRESS OF THE BUSINESS—IMPORTANT ORDERS GIVEN AND EXPECTED—LANCASHIRE SHAREHOLDERS IN OPPOSITION—REPORT ADOPTED BY LARGE MAJORITY—ADJOURNMENT OF A FORTNIGHT FOR CONFERENCE.

THE third ordinary general meeting of the company was held at Cannon Street Hotel, London, E.C., on Tuesday, "to receive the report of the directors, and the accounts to the 31st December, 1888, to elect directors and auditors, and to transact the general business of the company."—Lieut.-Genl. Sir John Stokes, K.C.B. (chairman of the company), presided.

Mr. H. A. KROHN (secretary) read the notice calling the meeting, and also the minutes of the last meeting.

INCREASING MANUFACTURE.

The CHAIRMAN, who was received with cheers, said: I propose, "That the report of the directors be adopted, and the accounts passed." This report naturally comes down to a few weeks ago, and I think it will interest you to hear the progress the company has made, which is to be measured, I suppose, by the amount of sales that we make in the time. In the year 1888, 835 lbs. per working day had been the highest made in any month: as a matter of fact, only one month had given that high total. It had ranged from 320, 390, 715, up to 835 lbs., which would be really the highest amount per working day of any average of months in the past year; whereas in January, 1889, the average rose to 875, and in February to 1,158 lbs.; and for the first 22 days of this March it has been 1,221 lbs.—showing a very steady increase during the present year. (Hear, hear.) On that subject I think it will be opportune for me to say that in commencing a new business you cannot jump into very large sales.

OBSTACLES AT THE START.

You have to make way with certain people, and against certain people. You have to make way with the people who own mines and quarries, &c., who want to employ your explosive. You want to persuade them to use what you have to offer them, and you have to work also with the men they employ, for they are full of prejudices, and unwilling to take a new thing. In our experience we know that they put forward most fanciful and untrue objections to the explosive. even after we have proved the fallacy, the utter want of foundation of their allegations, but still these same objections crop up, and they object to use this new stuff. We have a very remarkable instance of that quite recently. As announced in a pamphlet you received, but a few weeks ago, there had been a very great outcry in a colliery against roburite on account of the poisonous nature of the fumes, which we have always maintained to be an unjust accusation. The fumes are harmless, and that is one of our strong points. 1,700 men went out on strike and refused to work until the stuff was withdrawn from the mines. The owners held out against this. The matter was settled, and the contending parties came to an agreement that the question of noxious fumes should be investigated, and an eminent analyst was to be consulted. That investigation has been made, but as the report has not been published I am not in a position to give it to you, but we know that the allegations of the men, and the poisonous nature of the fumes has not been sustained. That gives you an instance of the difficulties we have to contend with in getting the miners themselves to take it. In spite of that we have that increase, because the owners are confident that it is the right stuff to use.

COMPETITION.

Then, again, I said we had to contend against certain parties, and those are naturally the people interested in the use of other explosives. They are doing all they can to discredit roburite, and we have still, and have had a constant fight against them. I have shown you the daily average has increased, and in the third week of March we sent out 4¼ tons—the highest quantity we have ever delivered yet in a week. During last week at first the issue was only 1 ton, less than a ton, 1½ tons, 2 tons, and so on per week. We began with 2 tons in January, 3½ in February, and here we have in the month of March 4¼ in one week. (Cheers.) As that has gone on increasing it will, I hope, continue to increase, and certainly we have every belief in the value of our explosive. It will interest you to know that we have largely advertised in the newspapers, though I am not certain that we have got much benefit from that, but we have adopted the expedient of sending men to experiment in the different mines and quarries.

EXPERIMENTS.

We have sent experts during the time the stuff has been available to 142 collieries, quarries and mines scattered over different countries; for instance, there have been 46 of these experiments in Lancashire, 32 in South Wales, 26 in North Wales, 8 in Durham, 14 in Yorkshire, 8 in Cumberland and Westmoreland, making 142 in all, and they have in that time expended nearly 1 ton of roburite, and nearly 5,000 detonators, and that there were many experiments in each of those places. In one place the man remained 23 hours and fired 80 shots. In Scotland there have also been experiments conducted by a trained man, and another agent is a mining engineer who carries through the experiments for himself.

WE HAVE NOW 153 ACCOUNTS

opened with the users of roburite, some of them embracing from 16 to 18 collieries in one account, so that I think the active pushing of the stuff will give you satisfaction. With regard to the colonies, we are not getting on so well as we could wish. The great difficulty with them is this—the great pull which roburite has over other explosives is that we can send out the chemicals to the colonies as chemicals, and not as explosives, and thereby save a great deal of expense; but when we do so we must have the means of mixing the ingredients and selling them on the spot, and therefore agents in the colonies are not what we require. We require the establishment of branch companies which will undertake the cost of setting up small factories for the mixing and distribution of the ingredients when we get them. We get our profit either by charging a royalty on what they take, or on the prime cost of the ingredients we send out to them. We stipulate that they shall take all the ingredients from our factory in England. Therefore we get our profits on the stuff sold in the shape of ingredients, instead of in the shape of mixed roburite. This will eventually bring in a very large profit, but the very fact that we have to take all these preliminary arrangements, and send out the stuff, and have experiments made in the colonies operates against our immediate success; but business is coming, and I think we have all the elements of a commercial future in the colonies. In very close connection with this part of what I have to say we had the prospect of obtaining from the late chemist of the company a very inexpensive mode of producing the nitrate of ammonia of which the bulk of your ingredients is composed, but the offer was shackled with a very large demand in cash and shares for the patents.

CHEAPENED PRODUCTION.

Well, we did not like to swallow this demand, and called in Dr. Roth, and on his advice we rejected that system altogether, and he himself devised a system which we are now putting up in our factory by which we shall reduce the cost by some 12*l*. or 14*l*. a ton, which of course means either a much larger profit to the company or (which I think the wiser course) a large reduction in the price of roburite, which will enable us more effectually to compete with other explosives. Dr. Roth has given us his services for some months in order to improve and cheapen the cost of roburite, and he has other things in view, which he is going to hand over to us by which we shall overcome a very great difficulty with regard to detonators. I must say that Dr. Roth has very liberally placed this new invention at our disposal free of charge. (Cheers.) He at first asked for a sum of money, but we demurred to that, and put it at our service free of charge. My modesty ought not to allow me to say it, but the condition which he annexed to it was that I should remain chairman of the company, because he thought I was working the concern to the best advantage, and therefore I do not hesitate to mention that point—(cheers)—though I would rather not have done so.

LARGE PROBABLE ORDERS.

You are aware that we held patents under our original purchase in Great Britain, India and the Colonies, but some of the patents in foreign countries are in the hands of the original vendors. We have the offer of these patents for a certain sum in money or shares, and the countries offered to us are France, Spain, Italy, Greece, and Turkey, and as we have also openings of larger increase of business in Spain and Italy, we were extremely anxious to acquire these patents, but we did not wish to embark in them a large amount of capital until we had secured the business. Therefore, we have obtained, at a very moderate rate, the option of purchasing these patents for three years, and the right to sell roburite in those countries on the payment of a royalty. Thus, you perceive that any expenditure we had incurred is dependent on our getting large orders, which of themselves will put us in a position to pay the royalty, and to make very handsome profits for you. We are already in negotiation for orders in those countries for over 1,000 tons. That simply means 10 per cent. on the ordinary shares, and, therefore, the importance of this branch of the work which we have carried out to you within the last few months must be obvious. We have touched in the report on the question of the profits hitherto made on the sale of roburite. Of course if we could have jumped at once into a big business we should no doubt have had large profits to show you, but you cannot expect when you have to contend with the influences I have been mentioning suddenly to have a large business. (Hear, hear.) When you get a business growing at the rate ours is growing it

HOLDS OUT THE VERY BEST HOPES THAT YOU WILL REAP A DIVIDEND SHORTLY.

Certainly if we get these orders that I have alluded to that dividend will come. You will be like Achilles springing armed from the sea, but I do not see how any gentleman can suppose that after working under great difficulties for four months in the year they could expect a large profit to divide. It is not in the nature of things.

WHERE THE ORDERS COME FROM.

There is one thing I should like to say about the orders received, and that is, the locality for which we have got them. It is a very striking testimony to the activity of our employés at Gathurst, especially of our general manager, that more than 50 per cent. of all the roburite we have disposed of has come from the district immediately around our factory. It shows that the miners and mine owners of this district have been thoroughly well worked, and that they have been left to appreciate what we have to offer them. I ought again to call attention to the report of the Home Office Inspectors. One of the most difficult points an explosives company has to deal with lies in the relationship with the Government. The Government are, of course, anxious that there should be no danger or accident, and they lay down the most minute regulations not only for the working and manufacturing of the explosives, but for its transport to other places, and the mode in which it is given out, and every possible detail. You do not move a finger without having to conform to some regulations, which if you do not your company will be fined. I think in presence of such stringent regulations the testimony borne by Col.-Major Cundill and Col. Majendie that minute attention is paid to the minor details of your factory is most important. (Cheers.)

Col. GERARD SMITH (director) seconded the motion.

ACCOUNTS.

Mr. GOLDBERG: Will you permit me to ask you some questions as to the balance-sheet. First, why have the calls in arrear, 7,521*l*., not been called in? How long have they been in arrear, and what steps have been taken to collect them? On what date was the loan from the bankers obtained, and for what purpose—2,500*l*.? What are the stock-in-trade and stores, 6,074*l*., and have they been taken at cost or selling price? How much is stock, and how much plant? Of

what do the bills receivable consist? If they are ordinary trade bills I am satisfied. What are the travelling expenses—415*l.*? In the trading account on the debtors side you will find unproductive labour, 480*l.* What does that mean? and what is the item of experiments and gratuitous supplies?

ASTOUNDING CALLS REDUCED BY ONE-HALF.

The Solicitor: The amount of calls in arrear since December 31st has been reduced to about one-half. Some of the arrears are from last November, and some from the previous June or July. Proceedings have been taken against all shareholders with the exception of two. I am getting in the calls as fast as possible, and hope still further materially to reduce them.

Mr. Sneath (Price, Waterhouse and Co.): As your auditor, it is rather unfortuuate that these questions should be asked without notice, because, had notice been given, I would have had all the documeuts with me as to the bankers' loan—it existed on 31st December, and so appeared in the accounts, but I cannot remember the date it was drawn.

The Chairman: That is a floating account—sometimes more, and sometimes less. In a business of this kind, where you have to buy iugredients much in advance, you will understand that to get accommodation from your bankers is a convenience. A few days afterwards it was only 1,000*l.*

Mr. Sneath: The roburite is taken at cost, and not at selling price. To that effect I have the assurance of the manager.

Mr. Bigg-Wither (manager): Aud I reaffirm that assertion. It is stock and stores.

Mr. Sneath: I cannot separate the items. The bills receivable have been taken by the directors with interest from shareholders in payment of calls. Travelling expeuses represent the expenditure under the head of managers, directors and agents. As to unproductive labours, you have watchmen and various other men not actually employed in manufacturing. As to the experiments, that represents the cost of some condemned roburite.

Mr. Goldberg said he believed they had a very good property, which only required prudent aud economical management to achieve great success. He objected, first of all, to the balance-sheet, and next to the matter. As to the form, they gave a trading account, and that account, if not intended to mislead, was apt to mislead. They had spent uearly 8,000*l.* to earn 1,600*l.* He quite agreed with some of the expenditure in the establishment of the business of the company would not recur, and might be distributed over a number of years, but expenditure such as recurred every year ought not be put to the trading accouut. He would ask any business man here if they would allow an accountant to make up such a balance-sheet as this and such a trading account; and he was astounded that a firm like Price, Waterhouse and Co., should have drawn up such an account. No doubt they had sheltered themselves behiud a proviso they had made in their certificate, "uuder the special circumstauces of the company's business during the year." What were the special circumstances? They were the circumstances which ordinarily occurred in carrying on any business, and why directors' fees, 2,500*l.*, should be charged to capital account he could not understand. Now, a word about the matter.

RECEIPTS AND EXPENDITURE.

The directors have received 174,000*l.* in cash and spent 155,000*l.* He assumed that that expenditure had been properly made. What had they done during the eight mouths? 19,000*l.* was left. They had spent 13,000*l.* to earn 157*l.* and to make a loss of 7,000*l.* or 8,000*l.* They have spent a large sum in directors' fees, which the directors might have forborne during the earlier stages of the company. They took their emoluments knowing all the time the company was losing capital to a large extent. (No, no, and Hear, hear.) He thought the calls in arrear had been satisfactorily explaiued, but he would like to know if the bills given by shareholders who were debtors were likely to be met. It struck him that the loan from the bankers of 2,000*l.* was made to show the company in a good position at the end of the year. The balance-sheet showed 2,500*l.* from the bankers, and the cash in hand showed 2,585*l.*—therefore the company's money was 85*l.* They had all received a circular from the Laucashire committee, which reproached the directors with having badly managed the concern, though he was quite sure the directors desired to do the best they could for the concern. He was certain they all desired to make the company a success, but they had not managed to achieve it. The answer they made was somewhat ludicrous. They said "If we have mismanaged your affairs we have satisfied the Government inspector." It was not for him to lay down a scheme of management—(laughter)—but he thought the directors should tell them what they intended to do in the future, and how they would cut down their expenditure. They must tell how they proposed to increase their receipt. and then they would approach the question with open minds and fairly consider what there was to be done. He was afraid that a very active opposition had been pressing hard upon the directors for some time, and that they had been asleep—aud a very expensive nap it had been. (Cheers.)

AN AMENDMENT.

Mr. Malcolm Guthrie: I rise to propose an amendment:—"That the accounts be received, but not adopted." The chairman has given you a very spleudid dividend in hope, but not in cash. Lancashire shareholders are not satisfied with that kiud of payment. The chairman says you cannot jump into a big business all at once, but why then did he put up such immense works at Gathurst? It is the ordinary course of businesses to be developed on the gradual scale. The Lancashire shareholders have been in communication with each other lately, and had arrived at certain opinions, and were prepared to make certain recommendations as to the future conduct of the company. Circulars have set forth what these recommendations are. We think that a business of this kind cannot be conducted properly from London when the centre is at Gathurst. The orders all go to Gathurst, and the management should be there. Nine directors are not required, and four or five at the outside would be ample. These gentlemen are all capable, able and respectable, but they rather hinder one another. I think if we tried we could get men more acquainted with the mining industries than the present board. These gentlemen do their best, but the organisation of the company is not what it ought to be. The saving effected by the removal of the management to Gathurst would almost be a dividend in itself. We believe they could save from 2,000*l.* to 2,500*l.* a year in the working expenses.

MANAGER ATTACKED.

The general manager at Gathurst is most estimable, industrious, well-liked, and thoroughly honourable, but I do not think he is the right man to have been put in that position. He should have been a man acquainted with the mining industries. If an utter stranger comes into a good business, and does not know the "ropes," he stands at a disadvantage. Therefore, it will be far better to engage a man who knows more of the trade. There is a conspicuous weakness in the arrangement of our agencies. I do not say there are not some good men in the right places, but the general opinion is that the agencies are not sufficient, and that you have not the right men. The colonial business has not been well-managed, and altogether we make four-tenths of a penny profit on the roburite out of all the expenses that have to be paid. We can only come to the conclusion that the business has not been as well-managed as it might have been. I mean my amendment to imply a change of policy, which also implies a change of management. I do not wish the directors to take this as a vote of censure on themselves. If the amendment is not carried I shall demand a poll.

Mr. Barnes: I second the amendment. The mistake of the board has been that they have not established depôts in the collieries. If they had done so they would be getting some first-rate orders, for it is a great thing to have the stuff on the spot. I believe the inventiou is almost unique, and that it is for certain purposes superior to any other explosive now before the public.

THE OTHER SIDE OF THE CASE.

Admi. T. L. H. Colomb (director): Perhaps you will allow me to say something on the other side, now that the formal attack has been delivered. There is an old saying that "You should not swop horses in crossing the stream." Shareholders are asked to perform that operation, not when we are in the middle of the stream, but when our ponies are just getting their feet upon the opposite bank. I have always said that although we formed our judgment on materials which we did our best to collect, that any new explosive was highly speculative, and it always seemed to me that some difficulty would arise about roburite to show that we had not gone deeply enough into the matter. But the hitch has come from the Lancashire shareholders in a way that I never anticipated. I thought there might be a difficulty in roburite itself (which has never yet showu the least sign of existence), but

I DO SEE A GREAT DANGER

from the course which has beeu pursued by a section of the Lancashire shareholders. (Hear, hear.) There is no use disguising the fact—the attack is ou the chairman. (Hear, hear, and cries of "No.") If it is not so, I withdraw the remark. We are told that we ought to have better management, and the better mauagemeut is to come from the gentlemen who are moving in this matter. I must say that I am disappointed in the part that Mr. Guthrie has taken to-day. I wrote to him, and we had an interview, and I thought I showed him that the directors only wanted to be in full sympathy with the shareholders in Lancashire, and to do their best for the whole body. The fact is that

MR. GUTHRIE AND HIS COMMITTEE HAVE NEVER APPROACHED THE DIRECTORS

at all, although the directors would have been glad to have seen them. It has been said that the directors have not attempted to put forward any defence, but why? Because we know there is nothing to defend in the balance-sheet. What are the charges you bring against the management? You say—they took their fees; they are too large a board; they have put up too extensive works, aud they have employed Mr. Bigg-Wither as the manager at Gathurst. At the last anuual meeting you knew that we were going to do all this, and you raised no objection. The board have had arduous work to bring matters to their present position, and shareholders at the last meeting never said that they were over-paid. Knowing the value of my own time, I am sure I have not been over-paid. It is said that we are too large a board, but how is it that we come to be so?

TABLES TURNED ON LANCASHIRE.

By the pressure that has been put upon us by Lancashire, for we added two members to the board at their instigation. It was not the wish of the board. It is said that in six months we are not making 3 tons a day, and it is perfectly fair for you to complain of our policy, and particularly that of setting up the works. We were sure of the goodness of the explosive we had, and that has been confirmed by Mr. Barnes. But what would have been our position if when the business came we had not the works to supply the orders? (Cheers.) The circular states that the orders were trivial in amount, but do you mean to say it is trivial to make a business of 400*l.* a week in six months? (Cheers.) The Lancashire shareholders say they did not meet the board, because their proposals were too drastic, but Mr. Guthrie knows that we talked over the whole thing together, and there were only two points raised of a too drastic nature, one being that the office should be transferred to Manchester; but even if it were transferred you could not save anything.

Mr. Guthrie: The conversation was confidential.

Admi. Colomb: I am quite prepared to treat it as such, if you wish it. You are asked to re-constitute the board, but I am perfectly sure there is not a body of men to be found anywhere whose knowledge is equalled by that acquired by the directors, both of the markets, aud of the whole business of the company. The board have taken every sort of measure to ascertain where the markets are, and where the roburite will be worked, and where it will not. As to our fees, I am sure (and I speak for my colleagues) that if you had dropped the slightest hint on the subject at the last meeting we should have met you in any way you could have wished. I say that now. (Cheers.) It is very unfair to speak uow about our remuneration, when you might have done so at the last meeting, and arranged the matter on your own terms. You could not save expeuse by going to Manchester. You must have a secretary and staff, but although you would save nothing, I will tell you what you would lose—you would lose touch of the larger classes of business. (Cheers.)

A FALLACY EXPOSED.

There is nothiug more fallacious on the face of the earth than to take the charges of last year while the business was being made, and speak of them and think of them as the charges for this year and for

all future time. (Cheers.) The general manager has reduced the cost by 1d. a lb. already, and it is still going down. At the present moment the works we are putting up will reduce the cost tremendously. We are told that we must write off 6,800*l*., and these writings off are spoken of as if the shareholders were going to lose the money. I agree, as a matter of account, the 1,812*l*. preliminary expeuses are lost, and that 2,000*l*. depreciation, of course, is lost ; but when you come to the patents and goodwill, what reason have you to suppose that your property is going down? As far as I can see, it will be entirely the other way, but it is for the shareholders to say what they will do with the 3,000*l*. You are being misled into the supposition that the cost of keeping a business going is the same as making a business, whereas they are two totally different thiugs. I have the most complete confidence that if we go on as we are doing we shall make the company a success, but if you change everything, if you go down to Lancashire, and if you get rid of the man who knows best about the business, you will be taking a course the result of which it is easy to predict. (Loud cheers.)

Mr. Sneath defended the accounts, and maintained that they were made up in accordance with the articles of association and on the generally recognised rules.

Mr. Newton supported the auditor in this contention, though in certain respects he agreed with the Lancashire committee.

DR. ROTH'S LETTERS.

Mr. Cockson read letters he had received from Dr. Roth, stating that he would not object to the transfer of his pateut from Sir J. Stokes to the company, if his interests were secured in a reasonable manner, and requesting Mr. Cockson to use his proxy in favour of Sir John as chairman.

MODERATION AND CONCILIATION.

Col. Gerard Smith (dirccor) : I represent the largest amount of subscribed capital, with the exception of the vendors, by any one shareholder in the company. I think there is as much capital represeuted by me and my Yorkshire friends as there is in the whole of Lancashire. I rise, therefore, with some confidence, and also with some diffidence, in the face of an opposition which has been conducted with singular moderation, though I might take exception to some of the remarks that have been made. I rise to counsel moderation and conciliation. We are partners, and there is not one who does not desire to do his best in the interests of the company. I appeal to Mr. Guthrie whether we cannot come to an arrangement. If the ameudmeut is carried we shall, of course, as men of self-respect, retire. A suggestion was made as to the voluntary reduction of directors' fees, but it is an absolute fact that those fees were reduced 500*l*., as and from the 1st of January. We are willing to make a still further reduction — to one-half the amount stated in the articles. (Cheers.) I should be willing to return my cheque.

The Chairman : We have not had any. (Laughter.)

Col. Smith : I will do all I can for the company at any personal sacrifice. (Chcers.) Admi. Colomb was a little reticent as to the eost of production of fiuished roburite, and I appreciate his reticence. We are in competition with other companies, and it is not wise to let too much of your business bc known. The nitrate of ammouia works are rapidly approaching completion, and the profit we shall make from them will soon coiue into play. I am well aware there is a good deal to be done in the matter of agencies, and we are doing it.

UNWHOLESOME COMPETITION.

We have to deal with great difficulties, because our competitors sometimes pay considerable sums to underground viewers to use their production—a species of blackmail to which we will never consent. (Cheers.) If the thing is not good enough to stand on its own merits we had better let it alone. You must advertise largely, and you must employ travellers. But if you employ the manager it is generally donc at the neglect of the works. Therefore you must trust us to look at the question as a whole. I think you are a little hard on the directors to raise this objection after four months work—you might at least have allowed us a period of 12 months, and the manager also.

Capt. Lousada : How many shares do the Lancashire shareholders hold ?

Mr. Guthrie : About 27,000*l*.

Capt. Lousada thought it unsatisfactory that more progress had not been made in the colonies. It was impossible to expect the colonies to start companies for themselves. He had tried to get this explosive introduced into the Transvaal. He got an engineer to go and look at the Gathurst Works, and he was very much pleased with them, and thought the explosive would be valuable for the Transvaal. He trusted they would not abolish the London office, because if they did so they would be making a great mistake. If they wanted to sell their explosive to foreign Governments, they must have a central office to deal from.

Mr. Maynard (director) said the board had made arrangements with au agent to act for them in Kimberley, but it required mouths to get these matters into working order. He had no doubt the consumption of roburite would be large both in Kimberley and at the Transvaal Goldfields.

Mr. Weatherley : I came here with a blank mind, and think now

THE LANCASHIRE GENTLEMEN HAVE FAILED TO MAKE OUT THEIR CASE.

The first complaint was, why put up these large buildings ? but if orders were received how would the directors bc dealt with by the shareholders if they had to confess they could not execute them ? As a Londou shareholder I decidedly object to the office here being closed ; and as to the general manager, I fail to see that any ground for complaint has been sustained against him. In justice to the manager, 12 months ought certainly to have been allowed him before speaking of him in the manner in which he has been referred to to-day. I blame the committee very much that they did not go and see the directors when they were invited to do so. How did they know that their measures were too drastic for the directors ? They ought to have met the directors and stated the result to-day. He did not understand how it was that their engineer was connected with these gentlemen, and why he was now turning round. He did not know Mr. Heenan.

Mr. Heenan : I am Mr. Heenan. (Laughter.) This gentleman had been sitting side by side with Mr. Weatherley throughout the meeting.)

Mr. Weatherley : This gentleman has made remarks to me during the meetiug of which I do not approve, but I suppose they were confidential like those of Mr. Guthrie. If the committee wanted to help us, I do not think they should employ a gentleman who was formerly connected with the company.

Mr. Heenan : I have brought a great amount of capital to the company.

SIR JOHN STOKES REPLIES.

The Chairman : I have, too, to acknowledge the courtesy which has characterised the opposition, but I must remind Mr. Guthrie that the purpose of his amendment would be served by voting a direct negative to the adoptiou of the report. (Hear, hear.) I do not think it is necessary that I should go into all the matters that have been raised, for the major part of them have been already dealt with very ably by my two colleagues, Admi. Colomb, and Col. Smith. Mr. Goldberg, however, raised a question as to the accounts aud the preliminary expenses. The articles of association give us power to charge those to capital accouut, because they are incurred for the establishmeut of the busiuess. It appeared to us that it was only fair to the company that these expenses should bc so charged, because they have really been expenses in making the business. We are of opinion that they are fairly and properly chargeable to capital to be redeemed over a series of years. I should propose to redeem them, commencing with a small amount, and going to a larger one as we grow in prosperty, and that I think is the common-sense way of dealing with such an item. (Hear, hear.) Mr. Goldberg says that accounts are misleadiug, but I fail to see how accounts could be more fairly or more properly put before shareholders. The onus of all has been the directors' fees, but there is no mystery about that, because it is put at the very head of the accounts. We volunteered to reduce the fees last year, and you have been told we did so. A further reduction was made when, at the request of the Lancashire shareholders, we took on two fresh directors, and made the distribution amongst nine that had formerly been made amongst seven. (Hear, hear.) That was the first reduction, and the second has been already named. You now have an offer of a third reduction, which we are wiliing to make, and I do not see what more can be expected from us. (Cheers.) I fail to find in anything that has been said or written

A SINGLE SPECIFIC CHARGE OF BAD MANAGEMENT

that we can deal with. (Hear, hear.) The board have urged this Lancashire committee to meet them, and to give them the benefit of their advice, but in vain. They have also had with them a Lancashire shareholder as a director, but though we have urged him to give us the benefit of his advice, I can safely say we have never had one grain of assistance from him during the 12 months. I shall tell him this when I see him, and I hope this will be conveyed to his ears. Mr. Guthric speaks of our dividends in hope, but it was on a basis of hope this company was established, and there are very few that are not so established. (Hear, hear.) Our hopes in this case are well grounded, because we see the means of gratifying them. We have no hesitation in raising your hopes on the basis of what we have done and what we expect. Then we are accused of having put up works of undue magnitude, but we have set up works to give you 10 per cent. dividend on your ordinary capital, and I think you will say we did right to do so. Mr. Heenan was the very adviser and counsellor of these works. (Laughter.)

Mr. Heenan : I am there with you altogether. (Cheers.)

THE REPLY DIRECT.

The Chairman : If the works have cost more than we expect, Mr. Heenan has had the greater part of the expenditure through his hands.

Mr. Heenan : That I do not deny.

The Chairman : We put up the buildings to make 3 tons a day, and that they have cost more than we thought has been due to the extreme requirements of the Homo Office. We have left a margin to extend the works to the capacity of 10 tons a day when the business requires it. We must put up a reasonable amount of building and plant to give a proper return, and to supply orders. (Hear, hear.) We are told we ought not to have giveu so much for the patents, but every gentleman knew all about what we were doing. That was arranged before the prospectus came out, and formed part of its contents when it did come out. We are told that we ought to have given shares and not cash, but that matter has been dealt with at three former meetiugs, if not four. (Hear, hear.) Then Mr. Guthrie is anxious to have a local board, but that, I think, would be

A DISADVANTAGE RATHER THAN AN ADVANTAGE.

Give your manager proper powers aud see that he does his duty, but do not have directors constantly interfering with him. Of course, directors must have touch of the business, and that we claim to have. If you take this office elsewhere you will save nothing, and moreover you will be throwing away most important business. In London the directors are in touch with the foreign Governments, the chief mining companies, and the people likely to give large orders. In Lancashiro the whole affair would

DESCEND TO THE LEVEL OF A LOCAL COMPANY,

and I advise you to make no such change as that. (Cheers.) If you have simply an agent in London you will get iuto all manner of difficulties, and you will lose the touch of the chief part of the commercial world. Mr. Newtou has asked to have a Laucashire shareholder on the board, and having had one I have told you the result. You have not received a divideud, but you have sustained no loss. You will be recouped for your present absence of dividend as the business grows. As to the Colonial business—the reason we are bound to have these mixing companies is because we cannot send the explosive ready made except at an immense expense. But wo are ready to accept the facilities the shareholders can offer us. If we atteuipted to form these mixing companies ourselves we should fail for want of capital.

A CHALLENGE.

In conclusion, I challenge Mr. Guthrie to state who he will appoint as general manager, assuming we get rid of our present one.

Mr. Guthrie : I have no one in view. (Laughter.)

The motiou for the adoption of the report was then put and carried on a show of hands by an overwhelming majority.

Mr. Guthrie demanded a poll.

Col. Smith, after this expression of opinion, appealed to Mr.

Guthrie that he would not further divide the shareholders. It was a serious matter for the shareholders, and would certainly knock down further the price of the shares.

Mr. Goldberg suggested that this advice should be taken.

The Chairman endorsed the appeal of Col. Smith, and said the directors would be happy to meet the Lancashire committee at any time that might be arranged to discuss the whole matter.

THE ISSUE OF THE WHOLE MATTER.

Mr. Guthrie, after consultation with his friends, said that if the chairman would grant an adjournment for the purpose of conference with the directors, he would not go on with the poll. The adjournment might be for 14 days.

The Chairman: Then the position is this—the meeting has adopted the report and accounts, and on the motion of Mr. Guthrie, seconded by Mr. Barnes, the meeting is now adjourned for 14 days at the same time and place. (Hear, hear.)

The proceedings closed with a vote of thanks to Sir John Stokes for presiding.

The shareholders met at 12 and parted at three.

THE LIBIOLA COPPER MINING CO., LIMITED.

PROSPEROUS CONDITION—THE COMPANY CAN PAY GOOD DIVIDENDS WITH COPPER LOWER THAN IT IS NOW—FACTS FOR INVESTORS.

The first ordinary general meeting of the shareholders was held at Winchester House yesterday, to receive the report of the directors and a statement of accounts, showing the operations of the company for the year ended 31st December, 1888. J. Dunnington Fletcher, Esq., chairman of the company, presided.

Ralph S. Archbold, Esq. (secretary), read the notice calling the meeting.

DISPOSAL OF PROFITS.

The Chairman: Gentlemen, I presume we may take the report as read, but I think that a slight statement as to our financial position will not be out of place before I submit it for your adoption. The company, as you have heard, was registered on the 8th May, but we have first to deal with the profits which have accrued since the 1st of January up to May, 1888. As regards those profits we treated them as a reserve fund for working capital and for general purposes, and they amount to 11,234*l.* 8s. 8d. What we have to deal with now are the profits from the 8th of May to the 31st December, 1888, amounting in all to 20,801*l.* 5s. 11d. From these you have already had two interim dividends of 2s. 6d. each, amounting in all to 12,600*l.* and our present consequently disposable balance is 8,201*l.* 5s. 11d. From this the directors recommend the payment of a final dividend of 3s. per share amounting to 7,560*l.* In order to give time for transfers to be certified the directors propose to give till Wednesday next at four o'clock for all such transfers to be presented—that is, supposing it be agreed to distribute the 3s. dividend. (Cheers and laughter). The books will then be closed in order to make out the list for dividend. We have thought this advisable so that you may be prepared as regards the transfers, and also that we may be prepared (if you agree to this 3s. dividend) to pay it. I suppose we shall not be ready before the middle of April, but if you agree to it we shall be prepared about that time. Now, gentlemen, beyond the information contained in the report we have nothing to communicate respecting our present state or prospects, or as regards the copper trade. I will not venture to hazard an opinion as to the latter, but two of my co-directors are gentlemen well acquainted with the metal trade, and if you wish them to throw any light on this subject, or give you any information they will williugly do so.

PRECISE LOCALITY OF THE MINE.

Perhaps you may not all know (particularly the new shareholders), the position of the mine as to its precise locality. Perhaps in the prospectus you may have read, but may not altogether know correctly where the mine is located. First, it is about 3½ miles from the port of Sestri, in the north of Italy, not far from Genoa.

DIRECTORS VISIT THE MINES.

With the exception of Mr. Kenneth James all the directors have visited the property on several occasions, and we can only say that should any of you desire to make a visit to those parts you will be delighted at the appearance of the mine, and also with the neighbouring country. There is only one other subject to which I feel I ought to allude, and that is the death of our very valued friend and former director, Mr. Charles Bath. Since the year 1867 he has been co-operating with us, and always has been of the greatest assistance. I also feel bound to recognise the great services which have been rendered by Capt. Pill and Capt. Jenkins, as well as the other *employés* on the estate and at home. (Hear, hear.) I will now move the adoption of the report and accounts, and close with an offer to answer any questions that the shareholders may wish to put.

Mr. Charles Hemery (director) seconded the motion.

PROSPECTUS PROMISES FULFILLED.

Mr. Reeves: Do you consider, Mr. Chairman, that the prospects held out in the prospectus are likely to be realised, or have they been realised?

The Chairman: Yes; they have been realised.

Mr. Reeves: You said that at 38*l.* per ton we should get 7 per cent.

The Chairman: 8 per cent.

Mr. Reeves: Have you still that "happy hope?"

The Chairman: That depends. I will refer to that part of the prospectus which may be of some assistance to you:—It gave the published accounts of the Libiola Company and the net profits during the three worst periods in the copper trade. "The average price realised for the last year was 13s. 6d., which, if maintained, will produce a dividend of about 16 per cent."

A Shareholder: That was at the time when copper was from 72*l.* to 75*l.*, but with copper at 7s. 10d. per unit I take it that you would give us an average of 8 per cent.

Mr. Berthaud: I cannot understand how, with copper at 13s. 6d. per unit, we have not obtained the result which you foreshadowed in the prospectus. You had 13s. 6d. the whole of last year. Last year closed with copper at 80*l.*, and therefore 13s. 6d. per unit, being 67*l.* 10s. per ton, I cannot see a 16 per cent. dividend in what has been declared, or at that rate.

The Chairman: We got 11,234*l.* for the four months from the 1st of January, and 32,035*l.* on 252,000*l.* of capital.

Mr. Weir (director): When you draw up a prospectus you always speak subject to the mine delivering ore of the same class and quality. Of course, we cannot guarantee that a mine will deliver the same quality of ore each year. We can only give you our estimate of what it may be expected to do. The gross proceeds of the year are 32,000*l.* odd. and they are part of the profits whether you divide them or whether you put them to capital.

Mr. James (director): The actual percentage was within 725*l.* of 13 per cent.

Mr. Berthaud: Will you give us an idea of what we are to expect in the future?

PROBABLE OUTLOOK.

Mr. James: With copper at about half the price I think you may expect a profit of 16,000*l.* Presuming the ore sells for a little more than half the value, that is what you may expect, and hence it will give you about 6 per cent., and that will be a very fair dividend upon the present value of the shares.

Mr. Berthaud: To what extent has the lay of the ore fallen off?

Mr. James: I have so recently joined the board that I cannot answer you on that point. No man can tell you what you will get out of a mine. Everybody who has a mining share must know that the veins sometimes run richer and sometimes poorer.

Mr. Berthaud: Can you give us any report from the mining captain?

Mr. James: He says in his last letter—"I notice what you say as regards economy on account of the low price of copper, and we will do our utmost in that direction, but having always done so under all circumstances, I fear that what we can do now will have but little effect on the balance-sheet." The letter is dated the 23rd of March, and he refers to the current year's balance-sheet. He finds patches of rich ore, and patches of poor ore, but taking the average we may fairly calculate the mine will turn out about what it has been doing. There have been variations, and unfortunately last year the ore was not quite so rich, but the secretary tells me that since the 1st of January the yield has been fairly equal.

ACTUAL POSITION.

The Secretary: Lately we have been selling a good deal of ore on the spot to various smelters in Italy and other places, and they have not dressed it to the high percentage shown by that coming to this country. Hence there has been a larger production of a lower class of ore. There has been more ore produced, but it is not so rich, and I take it that the same thing is going on now. If the ores were to cease being sold in Italy, they would be dressed to a higher percentage and sent here, but then there would not be the quantity. It is a question whether we shall have the larger quautity and the lower percentage, or the lesser quantity and the higher percentage.

Mr. Berthaud: Then the quantity produced last year was 800 tons of copper, which is about the same average production as for the last 10 years.

The Secretary: As for some years past, certainly. I have every reason to believe it will continue the same. The production scarcely varies from one month to another to any appreciable extent. It is very steady. (Cheers.)

The report was then unanimously adopted.

DIVIDENDS DECLARED.

The Chairman proposed "That a dividend of 8s. per share be declared for the year ending 31st December last, and that the interim dividend of 2s. 6d. per share declared on the 27th of August, and 2s. 6d. on the 10th December be considered as part thereof, and that the balance of 3s. per share be declared payable on and after Tuesday, the 16th of April."

Mr. Weir seconded the motion, which was carried.

The Chairman proposed "That Mr. Kenneth H. James be elected a director of the company."

Mr. Emery seconded the motion, which was carried unanimously.

Mr. Hollingsworth proposed the re-election of the auditors, Messrs. Cooper Bros,, and Co.

Mr. Woods seconded the motion, which was carried.

Mr. James: I beg to thank you for kindly re-electing me without a dissentient voice as a director. I trust that the prospect we feel justified in holding out will be realised. We cannot prophecy until next year, when we will tell you what we have done. (Laughter.)

The proceedings closed with the usual compliment to the chairman.

THE GOLD HILL MINING CO., LIMITED.

SHAREHOLDERS DECIDE TO GO ON—AN EXPERT THINKS THE MINE SHOULD BE PROSECUTED.

The third ordinary meeting of the shareholders of the above company was held at Cannon Street Hotel, yesterday. Mr. F. W. Snell (chairman of the company) presided.

The report, which was taken as read, stated that during the year the quantity of ore crushed was 439.189 standard ozs., which realised 1,687*l.* 3s., or an average price of 3*l.* 16s. 10d. per oz. The directors regretted that the decision of the Lords Justices' of Appeal (that shares issued at a discount were illegal) had prevented them from raising sufficient capital to work the mine in a proper manner. The directors delayed taking any steps, in consequence of this decision, as a Bill was introduced and read a second time in the House of Lords, giving relief to all persons holding such shares. In consequence, however, of the lateness of the session, this Bill was withdrawn, and, in an amended form, will again be introduced in the present session. The present position of the company, however, was such that it was incumbent upon the shareholders to consider what course should be

pursued with regard to the future. The directors had given the present financial position of the company their serious consideration, and they had formulated a scheme, which, if carried out, would enable further operations to be continued upon a large area of the company's property, which had not yet been explored. But in order to do that it would be necessary that the present company should be re-constructed. The directors also submitted to the shareholders an exhaustive report from the superintendent of the mine, Capt. Harvey, which gave an excellent account of the present condition and the future prospects of the mine.

THE BOARD HAMPERED.

The CHAIRMAN, in moving the adoption of the report and balance-sheet, stated that the old shareholders would know that the present board came into office in August, 1887, having been appointed as a committee to carry out the business of the previous company, but since 1887 they had not met with success. The shareholders applied for a large number of new shares, but not sufficient to represent the capital it had been decided to call up; but when they were about to apply to the public the Court of Appeal gave a decision, referred to in the report, as to the liability of shareholders when shares were issued at a discount, which had, for a time, crippled the directors. This view of the judges was absolutely at variance with the opinion given by Sir Horace Davey, Q.C., and Mr. Rigby, Q.C. The various companies combined to get a case taken to the House of Lords, but so far there had been delays in the matter, whilst legislation was now contemplated. The receipts of the company last year were 1,687*l*., and the expenses 6,351*l*. The mine was a very extensive one, and he believed there was much good work in it. The present meeting would have to decide as to the future. They had present Capt. Rickards, a former manager, who would tell them what he knew of the mine. He moved the adoption of the report and the balance-sheet.

Mr. W. H. HARTON seconded.

STRANGE QUESTION.

Mr. MAJOR inquired if the directors had not rendered themselves liable for receiving calls on the shares after the decision of the Court of Appeal.

The CHAIRMAN replied that he did not think the decision of the Court affected the question. All the shareholders were liable to pay up their calls as they became due. All the money they had received had been spent at the mine. The directors had not used it. (Hear, hear.)

Mr. ARCHER asked if they were likely to get anything for their money if they raised more capital.

The CHAIRMAN replied that Capt. Harvey, their present manager, had not reached the bottom of the Barnhardt Mine, which was known to be a good mine, but Capt. Rickard had worked it some few years ago, and if they entertained the question of reconstruction at the extraordinary general meeting, which would immediately follow this, he would tell them what he knew of it.

A SHAREHOLDER asked how many new shares were issued.

The CHAIRMAN: About 48,226.

The report and balance-sheet were then adopted by the unanimous vote of the shareholders.

Messrs. Boyle and Harton, two of the directors, who retired by rotation, were then re-elected, as were also the auditors, Messrs. Cooper Brothers and Co.

SPECIAL MEETING.

The extraordinary general meeting was then held to consider resolutions relative to the re-construction of the company.

The SECRETARY (Mr. R. L. Hobbs) read the re-construction scheme, which showed that the company should be called "The New Gold Hill Company, Limited," with a capital of 350,000*l*., in shares of 1*l*. each, and that liquidators of the old or existing company should sell and transfer to the new company all the property and assets of the old company; that the new company should pay all the liabilities of the old company except the debenture debt thereof, but the liquidator should be at liberty to retain any of the monies or assets of the old company until the debts, liabilities, and expenses of the old company were paid, and sufficient provision made for payment of any sums which might be claimed by dissentient shareholders. That the new company should allot and issue to the liquidator, or as he should direct, 191,038 shares in the new company of 1*l*. each, upon which there should be credited the sum of 17s. 6d. per share, as paid-up thereon; and 62,536 shares in the new company of 1*l*. each, upon which there should be credited the sum of 1*l*. per share, as fully paid-up; that the liquidator should distribute such partly paid shares among the shareholders of the old company in the proportion of one share in the new company, with 17s. 6d. paid up thereon in respect of every share in the old company fully paid, and every shareholder accepting the same shall pay to the liquidator, or the new company, a sum of 3d. per share on each of the shares accepted by him within 14 days after the posting of the notice informing him of his right to them, and pay 3d. per share on allotment, and the remainder, 2s. per share, by instalments, not exceeding 3d. per share at intervals of not less than three months.

DECISION LEFT WITH SHAREHOLDERS.

The CHAIRMAN, in moving "That the Gold Hill Mining Company, Limited, be wound up voluntarily under the provisions of the Companies Acts, 1862 and 1867," simply said it now rested with the shareholders as to whether they would go on with the mine or not.

Mr. HARTON seconded the motion, and in doing so, replied at some length to the shareholders who had inquired whether there were any reasonable prospect of success if they decided to go on with the mine. He said that he had communicated with Capt. Harvey several times, and that gentleman said he could not say much about the Barnhardt shaft, as it was under water, and he had never been to the bottom of it; but he had heard it well spoken of by those who had, and if the water was cleared off, he had no doubt some good paying quartz would be found. As regarded the Randolph, or Old Field, he said that the convergence of different veins led him to believe that a similar mine to the old celebrated Gold Hill remained to be developed, which could be done at a small cost. Some of the veins in the mine had not been worked at a depth of more than 130 ft., and he believed there were some rich veins underlying that depth. Capt. Harvey was a very cautious man, and must have some very good reason for saying that. (Hear, hear.) Capt. Rickard worked the Barnhardt mine in 1882, and as he was present, he would no doubt tell them what were his impressions of that part of his property.

AN EXPERT SPEAKS.

CAPT. RICKARD, who was applauded on rising, prefaced his remarks that he was at present in no way interested in the Gold Hill Company, nor any one connected with it. Therefore, what he had to say was purely disinterested. He then proceeded to describe the Barnhardt mine, and expressed an undoubted conviction that there were several reefs there containing gold in paying quantities, whilst there was lying between the old and the new workings a large area of hitherto unexplored ground, which promised to be rich in ore. All that was wanted was for the water to be drawn off the Barnhardt section, and to extend their explorations and sink deeper levels, and then he believed a good success would meet their efforts.

A SHAREHOLDER asked what would be the cost of draining the Barnhardt shaft.

Capt. RICKARD answered that he should think 300*l*. or 400*l*. would be sufficient.

Another SHAREHOLDER said if they could reach a vein of gold so prolific as Capt. Rickards indicated, the directors would be more than justified in spending the sum named in fresh works. No doubt the Barnhardt would be that part of the property that would revive the company to its old prestige.

In answer to a question,

The CHAIRMAN said that the re-construction scheme would leave the directors with about 4,500*l*. available cash. He considered that they had done remarkably well to get any money from the Randolph shaft at all. They need not altogether despair of that part of the mine yet, but he thought that in starting afresh they should for a time, at any rate, concentrate their energies upon the Barnhardt portion of the mine. (Hear, hear.)

RESULT.

After some further discussion,

The CHAIRMAN moved the following resolution: "That pursuant to section 161 of the Companies Act, 1862, the liquidator be, and is hereby authorised to sell and transfer (subject to due provision being made for dissentient shareholders, if any) all the property and assets of the company to a new company upon the terms of the scheme of reconstruction now submitted to the meeting, and identified by the signature of the chairman, and to enter into all necessary arrangements for that purpose."

The motion was seconded and carried unanimously.

A vote of thanks to Mr. Rickard for his information, and to the chairman for presiding, brought the meeting to a close.

The No. 1 coupon for the half-year's interest to March 31st on the debentures of the Assets Realisation Co. will be paid by Messrs. Martin and Co., 68, Lombard Street, on and after the 30th inst.

A branch of the Alliance Bank will be opened at the corner of Cavendish Road, Brondesbury, as soon as the necessary alteration of the premises is completed.

Messrs. Baring Brothers and Co. and Messrs. C. de Murrieta and Co. are prepared to deliver part-paid and fully-paid scrip certificates of the Argentine Government Four-and-a-Half per Cent. Conversion Loan in exchange for letters of allotment.

HAYTOR IRON MINE TO BE LET.

THIS Valuable Mine is situated 3 miles from Bovey Tracey Railway Station, South Devon. Shipping ports, Teignmouth or Dartmouth.

The ore is magnetic, and the quality proved by many years' working. There is also ochre on the property, a lease of which would be granted to the lessees of the Iron Mine, if required.

Further information can be obtained from Mr. Hatherly, 23, Brunswick Place, Brighton, Sussex.

TO BE SOLD, pursuant to an Order of the High Court of Justice, made by his Lordship, Mr. Justice Chitty, in the Matter of THE CENTRAL WYNAAD GOLD MINING COMPANY, LIMITED (in Liquidation), A LEASEHOLD INTEREST IN LANDS (with Mining Rights to search for Gold under portion thereof, known as the Manakan Kotay Mala, adjoining Needle Rock Peak, situate in the Davolah District in South-East Wynaad, Madras Presidency, about 45 miles from Ootacamund, and 80 from the Coast of Calicut).

The Land is held under lease from the Rajah of Nilamboor for 45 years, from January, 1876, at an annual Rental of Rs 2 per acre for 36 years, and Rs 2½ per acre for the remaining nine years, with agreement as to renewal.

The boundaries of the land (comprising about 1,560 acres) are shown in the lease.

The Mining Rights on this land are secured under a separate lease for 36 years from August, 1879. The lease specifies only 5 acres at an annual rental of Rs 25 per acre, but the lessor has agreed to grant any additional acreage required for mining purposes on the same terms, if applied for before November, 1891. Twenty-five acres of the land comprises a coffee plantation, which has been cultivated for the past few years by Alexander Wright, Esq.

To be sold by Public Auction on TUESDAY, the 9th day of April, 1889, at One o'clock in the afternoon, at the Auction Mart, Tokenhouse Yard, London, E.C., by Mr. John Matthew Klenck (whom the Judge has appointed to sell).

Particulars and conditions of sale may be obtained of Thomas Stephen Evans, Esq., 5 and 6, Bucklersbury, London, E.C., Official Liquidator of the said Company; of Messrs. Snell, Son and Greenip, 1 and 2, George Street, Mansion House, London, E.C., Solicitors for the said Official Liquidator; of the Auctioneers, Messrs. J. M. Klenck and Co., 42, Bishopsgate Street, London, E.C.; and at the Mart.

PORT PHILLIP AND COLONIAL GOLD MINING CO., LIMITED.

VALUABLE GOLD MINES IN VICTORIA.

PARTICULARS AND CONDITIONS OF SALE
of the
VALUABLE GOLD MINES, MINING RIGHTS, PLANT, MACHINERY, AND OTHER PROPERTY OF
THE PORT PHILLIP AND COLONIAL
GOLD MINING COMPANY,
LIMITED (IN LIQUIDATION),
Situate in
TALBOT COUNTY, COLONY of VICTORIA
Consisting of the well-known
"Clunes Mine" and "Criterion Mine,"
Together with the
LARGE AND VALUABLE
PLANT, MACHINERY, TOOLS, AND EFFECTS
Suitable for Gold Mining.

TO BE SOLD BY TENDER, AS A GOING CONCERN, IN ONE LOT.

Tenders must be sealed and addressed to "The Liquidator of the Port Phillip and Colonial Gold Mining Company. Limited, 57, Moorgate Street, London, E.C.," on or before the 12th April, 1889.

Particulars and Conditions of Sale may be had of Messrs. Kerly, Son and Verden, Solicitors, 14, Great Winchester Street, London, E.C., and of the Liquidator, J. H. A. Smith, Esq., at the Office of the Company, 57, Moorgate Street, London, E.C., where photographs of the surface works and buildings, a view of the crushing works, and plans and sections of the underground workings, aud a surface plan, may be seen.

THE NEW CONSOLIDATED MINING COMPANY, LIMITED.

NOTICE IS HEREBY GIVEN, that the Transfer Books of this Company will be closed from FRIDAY, the 29th day of March, until FRIDAY, the 12th day of April, 1889, both days inclusive.

By order,
ERNEST H. COLLINS,
Secretary.

MINING MACHINERY

Of Latest Approved Designs as developed in American Practice.

The ultimate success of the African Goldfields must depend on large economical Mills, crushing the maximum quantity of ore with the minimum outlay for fuel and labour.

As an illustration of what can be done with superior machinery reference is made to the Montana Company's Mill. This consists of three rock-breakers, 60 stamps and 24 Frue Vanner concentrators. It crushes daily 120 tons of hard quartz, burning six cords wood (3 tons coal) per 24 hours, and employs 15 men in the 24 hours. The engine has been run four months at a stretch without once stopping.

The following extract from the "Engineering and Mining Journal" shows the difference between Fraser and Chalmers' Mills, and those of less experienced firms :—

"STAMPS AND STAMPS.—The El Callao Company has two mills of 60 stamps each; the new one supplied by Fraser and Chalmers representing the best modern designs and workmanship. Both mills are run under one management, and the old mill has been much improved on its original condition.

"Old Mill crushed 31,770 tons in 48½ weeks, cost 24.60 fcs. per ton.
"New Mill crushed 29,000 ,, 25 ,, ,, 8.60 fcs. per ton.
"New Mill will probably crush 60,000 tons in 51 weeks. The rock is a very hard quartz."

The cost of freight and erection is nearly as high for a poor mill as a good mill. The difference in first cost between ordinary mills and the best mills can be made up in the extra saving on a month's run. The large masses of low-grade ore in Africa cannot be worked to a profit with expensive fuel and labour except by improved mills. The days of small mills and rich rock are numbered, as proved by experience in all other goldfields.

SUPPLEMENT.

The Mining World AND ENGINEERING RECORD.

ESTABLISHED 1871.] SATURDAY, MARCH 30, 1889. [ESTABLISHED 1871.

REPORTS OF MEETINGS.

THE MONTANA CO., LIMITED.

GRATIFYING DEVELOPMENTS—LARGE ADDITIONS TO THE RESERVES—MONTANA A GOLD RATHER THAN A SILVER MINE—INTERESTING DETAILS AND BRIGHT OUTLOOK.

THE tenth ordinary general meeting of the shareholders was held at the Terminus Hotel, Cannon Street, on Wednesday. The business of the meeting was "to receive and consider the statement of income and expenditure, the balance-sheet and report of the directors and auditor for the past half-year; to elect two directors in place of those retiring by rotation, and an auditor; to consider, and if thought fit, to pass, a resolution increasing the number of directors by one, and to elect an additional director; and to transact any other business which, under the articles, ought to be transacted at an ordinary meeting."—Stewart Pixley, Esq., chairman of the company, presided.

Mr. THOS. NEAL (secretary) read the notice calliug the meeting.

GRATIFYING STATEMENT.

The CHAIRMAN: Gentlemen, you will all doubtless have carefully perused the report and accouuts for the half-year ending 31st December last. We have endeavoured to embody in our report all the information which we considered might be interesting alike to our old shareholders and those who have more recently become members of the Montana Company, and have supplemented our report with one from Mr. R. T. Bayliss, the resident director at the mine, and one from Mr. G. H. Robinson, both of which enter into technical details in a most exhaustive and explanatory manner. You will, I am sure, feel gratified at the improved appearance of the mine and the encouraging prospects it offers. I need scarcely remind you that we were heavily handicapped last year, inasmuch as during seven months ending December we were occupied in making the necessary alterations in, and additions to, our hoisting machinery. We were uuable to make any progress in our exploratory works below the 400-ft. level at No. 1 shaft, and were mostly restricted to the upper levels for our supplies of ore only a limited quantity of which was treated by pan amalgamation. Nevertheless, a sufficient sum was earned to enable us not only to meet the heavy outlay consequent upon new plant and works, but to continue the exploratory work above the 400-ft. level, and from No. 2 shaft below this level, also to pay a moderate dividend at the rate of 5 per cent. per annum. I will not recapitulate the details connected with the mining operations; they are fully and succinctly set forth in Mr. R. T. Bayliss's aud Mr. Robinson's reports. I must, however, draw your attention to the fact that the exploratory works of last year point to the existence of three, if not four, distinct lodes on your property. Accompanying the reports will be found a longitudinal section, showing the workings on each of these lodes; also statements of the work done to the 31st December last. You will no doubt have noticed that the developments on the East Drumlummon, or Castletown, lode, show that this lode is second only in its importance to the Drumlummou lode, both as to its width and value of its ore.

INCREASED RESERVES.

Although the West Side lode is narrow, averaging about 1 ft. in thickness, yet the ore is of high grade quality, ranging in its assay from $30 to $100 a ton, and our reserves have been materially increased, inasmuch as they showed 215,852 tons on the 31st December, 1888, as compared with 183,287 ou the 30th June, 1888. The North Star lode has not yet been sufficiently developed to determine its value as an ore producer, but samples of ore have assayed $25 a ton mostly in gold. This leads me to draw your attention to the table given on page 5 of our report, showiug the proportion of gold and silver obtained during the six years we have been at work. The average production during these six years has been, gold 58 per cent., silver 42 per cent. The total assay value of the ore raised amounts to 1,256,968*l.* 7s. 4d., of which amount gold must be credited with 731,223*l.* 14s. 11d. If this sum is represented by metallic weight it will approximate to 184,000 ozs.

TURNING FROM SILVER TO GOLD.

This shows that the Drumlummon is a gold rather than a silver mine. Moreover it will be noticed that year by year the proportion of gold has been increasing, and that of silver diminishing. The price of silver, I am sorry to say, is still very much below the theoretical staudard. This affects us considerably, for, as I have before reminded you, a reduction of every ¼d. per oz. in the market value of an ounce of silver diminishes our profit by about one-quarter of 1 per cent. The increase in the monthly returns for the months of January and February, together with the estimated production for March of this year, may be considered a practical proof of that returning prosperity which Mr. R. T. Bayliss so confidently predicted would commence in January, 1889, and warrants us in declaring a first quarterly interim dividend for the half-year ending 30th June next at the rate of 7½ per cent. per annum.

LEEDS SHAREHOLDERS.

There remains one matter touched upon in our report which demands a few explanatory remarks—I allude to the questiou of appointing an additional director. We recently received an intimation that a large influential body of our shareholders residing in Leeds and the North of England desired that one of their number should have a seat at our board, and I was asked to take steps to carry out their wishes. The gentleman who wrote to me was requested to meet the board, and explain his views. He did so, and stated that he and his friends had perfect confidence in the board, individually and collectively, but they wanted to be more directly represented than they were; and at a meeting of shareholders, held at Leeds, three gentlemen had been chosen, oue of whom they wished to be on the board, and were willing to leave the selection to us. We stated that we had no desire to place ourselves in antagonism to any large and influential body of shareholders, and we felt that in such a case individual opinions must be subservient to the general good of the concern in which we were all so much interested; we would therefore meution the matter in our report and place it on the agenda for the consideration and decision of the shareholders at the forthcoming general meeting. We added that we should be happy to co-operate with Mr. E. Crowther, one of the three gentlemen nominated by the north country shareholders, aud we have therefore, in deference to their wishes, brought this matter before you, as one of them will doubtless presently submit a resolution ou the subject.

HONOUR TO WHOM HONOUR IS DUE.

Before sitting down I should wish to place on record the high opinion your directors have of the great ability that Mr. Bayliss and Mr. Robinsou and all the officers of the company have shown in the administration of the affairs of the company; they have been ably seconded by their staff of workmen, and I may say that a better body of men does not exist than the employés of the Montana Company. I will now conclude by expressing a hope that at our next half-yearly meeting the rate of divideud will be increased, and by moving "That the directors' report and balance-sheet to the 31st of December last be received aud adopted." (Loud cheers.)

Mr. THOMAS PHILLPOTTS: I have much pleasure iu seconding the resolution.

The CHAIRMAN—after a pause—If any gentleman has any observations to make, I shall be glad if he will kindly do so now.

JUSTICE TO THE BOARD.

Mr. JOHNS: I am sorry that some other shareholder does not rise at the present moment to accord to the board what I consider is only their just due, namely, the credit that the mine has been extremely well managed in the past by the gentlemen who sit round the table, with the result, as must be evident to anyone who knows anything about the mine, that it is a larger, a more valuable, aud a more lasting property at the present time than it has ever been at any former period of its history. I would, however, suggest one thing in passing to the engineer of the company, and that is, if he would make the 400-ft. level a little more prominent on all his future plans, it would be an advantage to those gentlemen who do not understand mining as showing the level, which is the daylight level, and as the standard one for all the rest, because then we cau speak of what is above and what is below with a better understanding of the facts. There is one point which I had intended to ask for an explanation about, and which I see is mentioned iu the *Financial News* this morning—that is with regard to the suspense account. That, I think, should be explained by the board. I have no doubt it is perfectly correct; but when there is a suspense item in the account, it may include many things which the shareholders, perhaps, ought to know. I will not go over what has been so ably dealt with in the report, because I think that it would only weary the meeting.

A SATISFIED SHAREHOLDER.

Everything that I can see there, from beginning to end, in the report I mark as good, and particularly the conversion, which I have alluded to at former meetings, of the mine from a silver to a gold mine. I am

very glad to see that it is still persistent in that direction, and that our average of gold from every ton of ore is more now than it has ever been, and I think, unless mining is going to alter its form in this partieular, that that will go on increasing as we get into depth in the mine. That is all I should like to say by way of commendation. Now I am going to cavil—(laughter)—but not ill-temperedly or ill-naturedly, because I do not know, and have not a word to say against, the gentleman proposed to be added to your board.

OUGHT THERE TO BE A NEW DIRECTOR?

We should know, first of all, whether that is going to increase the expenses of management, because I am sure that that is undesirable. We are standing here and in Montana at something like 10,000*l.* a year management expenses. That is a very big iteu, and no matter what your mine is or may be, if the charge of 10,000*l.* for management is sustained before anybody puts his hands intoithe pot (that is without taking into account wages of miners) it must be a very good mine to stand such a charge. Then, sir, are we going to be mulcted still further by the addition of this director? We shall, of course, have to pay his travelling expenses. Are you going to share with him the fees you divide amongst yourselves at the present moment, or are you going to ask us for a further allowance? Then, again, I think it is vicious in principle, if I may use so strong a word, that any body of shareholders in oue particular division of this country should ask for a director to represent them. (Cheers.) We do not want directors to represent any particular body of shareholders in this company; we want directors ito represent the whole of the 3,000 shareholders that exist at the present moment, and I think, sir, we have a right to ask the board to give us some very strong reasons why this appointment should be made. Now, what is the object of a director representing any particular portion of this company? It is that that particular portion may have a ready means of information as to what is going on in this company. (Cheers.) I object to that. I say no section of shareholders should have a readier means of information than those they get as a whole, from the board or the secretary. If he is going to add to your capacity as a deliberative assembly there is some reason for his being there, but I have never heard it said, and do not know, that he is an expert in mining. Extend this principle, and see where it will lead you. Supposing the Leeds shareholders sell their shares, and the Birmingham shareholders buy them, is the Leeds director going to resign, and will a Birmingham director be asked to take his place? There can be no reason for it except what I say, that the body of shareholders in the North of Englaud are to have the means of getting information from their member that we as shareholders canuot obtain. Well, it is for the meeting to decide, just as it is for the people who have the franchise all over the world to say whether they are going to manage themselves or let somebody else manage them.

HOME RULE.

I am for managing our own affairs, and I hope that the sharcholders in this company will not support that appointment. At any rate I hope so, and for the reasons I have given. I have said this without attempting to disparage the gentleman who is proposed. We all believe him to be an honourable and upright man, but at the same time I do not believe him to be necessary for the management of this company, or for its existence. I have always looked upon Mr. Crowther, our director, as a representative of the north of England, and we all know he is a very efficient one. (Loud cheers.) We all know that if he has any information about this mine that he considers himself justified iu giviug we can obtain it from him very easily. If we go on with that principle, we have Mr. Pixley—(cheers)—and Mr. Phillpotts—(cheers)—representing the London shareholders, Mr. Crowther the North of England, and Mr. Darlington is a professional representative who represents nobody—(laughter)—rather I ought to say he represents everybody. (Loud cheers.) He represents uobody in particular, but everybody in general.

OLD TIMES.

I had the honour of nominating all the gentlemen of the present board at a committee of conference to meet the old board, and I did so with my eyes wide open, aud knowing that I was picking out of the company a number of the ablest men who were its sharcholders. The end was that they not only became the committee of conference, but they became the new board; and gentlemen, I daresay, are present in the room who remember that when it was sought that some of the old board should sit with these gentlemen, I was the one who said, "Make a clean sweep of it, and let them come in, and have their own policy, and carry it out from the beginning." Well, gentlemen, that has worked admirably for the miue. Now, if we are going to divide this board into sections of gentlemen representing various parts of the country, we are altering the original intention of its composition. If you want Mr. Edward Crowther as an additional director give him someone else's plaee, but do not put an extra charge upon us and increase your board. If you come to this division or sectional representation of the board you must carry it out to the end. London should have so many, Leeds so many, and Liverpool so many, and then there is reason and rhyme in it; at present there is neither. I will say nothing about the name of Mr. F. P. Crowther, the director, although he and I do not always hit it off. Hc thinks I havc done somcthing dreadful.

I HAVE NEVER DONE ANYTHING DREADFUL.

I do not think you would have been so agreeable to this division of the board if thc gentleman fixed upon had not been a brother of Mr. Crowther, and I give notice that if this thing is done we shall alter the name of the company to "Crowther, Bros. and Co." (Laughter.)

Mr. Crowther (director): I do not think you would do any harm by that. (Laughtcr.)

Mr. Pyke: After the very clear manner in which Mr. Johns has placed before the shareholders the proposition mentioned in your report, I can only say that I cordially agree with him iu all thc expressions he has used. It seems to me there can only be one object in a certain section of shareholders wanting to elect a man to represent their own special interests, and that is to obtain information not accessible to a very large number of shareholders. I really put the question, Is it or is it not desirable that such a state of things should exist? If the present board find that they require additional directors let it be announeed publicly, and let the general body of shareholders have the opportunity of selecting a candidate. (Cheers.)

INFORMATION WANTED TO DATE.

Mr. Arthur Bald: The report brings us down to the 31st of December, and what I should like to ask is, whether it is proposed to give us further information to date, which would no doubt be interesting to the shareholders? I think that has generally been given.

Mr. Crowther: It will be given.

The Chairman: I will ask Mr. Crowther to post you up as to the latest news we have from the mine.

INFORMATION SUPPLIED TO DATE.

Mr. Fredk. P. Crowther (director), who was received with cheers, said: Gentlemen, there are two or three things that I have to speak about, and if you will allow me I will take them in order. The first is the question which Mr. Johns has put in reference to making the 400-ft. level clear, so that it can be distinguished by everyone. We shall do that. Mr. Darlington has expressed his willingness to comply with that reasouable request. The second question is that of the "suspense account," which is mentioned in the *Financial News* this morning. We are glad our attention has been drawn to it, or anything which will teud to make more clear to the shareholders any item in our accounts. The suspense account, which is found on statemeut D, consists of 4,442*l.* 2s. 2d.

SUSPENSE ACCOUNT.

This item is the balauce of money expended on capital account during 1888, which is over and above the amount we charged agaiust revenue account for last year, and I will make plain my meaning. During the last half-year the expenditure upou capital account was 10,800*l.* Had we charged the whole of that sum against last half-year's account we should have landed ourselves into the position of paying no dividend at Christmas, and paying 12½ per cent. now. We thought it was in the interests of the shareholders (ourselves included), and a perfectly legitimate thing to do, to carry forward that amount of 4,442*l.* to a suspense account. There was another way in which we could have dealt with it; we could have charged it against reserve fund. Virtually it comes out of reserve fund, that is to say, the reserve fund supplies the money to pay this account, amounting to 4,442*l.*, in December, and we preferred to put it down in the way we have done, although Mr. Welton explained to us that it would no doubt invite criticism. We considered we did right, because we have a good case and an explanation sufficient to satisfy every reasonable mind. (Hear, hear.) Therefore we inserted it as suspense accouut. It is virtually dealt with and finished at the present time, because the quarterly financial statement which I hold in my hand shows that after deducting London charges during this quarter, estimating the ruu for March at a reasouable figure,

WE SHALL HAVE A PROFIT OF ABOUT 21,600*l.*,

which is quite near enough for the purpose of an estimate. (Cheers.) The first thing we deduct from that profit for this quarter is the suspense account of 4,442*l.*, which brings down the profit to 17,158*l.* During the present quarter we have incurred upon capital account a further expenditure of 2,000*l.* That is deducted also, and it brings the profit down to 15,158*l.* The dividend of 7½ per cent. per annum will absorb 12,375*l.*, leaving a credit balance to go forward to the next quarter of 2,783*l.* (Cheers.) I think that statement is clear, and will satisfy any reasonable individual. The next point I want to speak about is

THE RESERVE FUND,

for which we have been rather taken to task about a clause in the balance-sheet under the head, "Invested in stores and concentrates." It is right to say the reserve fund is not invested in concentrates. It was a mistake on our part to put it so. The concentrates are taken credit for on the other side of the sheet, and the item ought to have been "invested in stores and suspense account." (Hear, hear.) Then it would have been clear to you, and we are very much obliged to the *Financial News* for drawing our attention to it. We still have a reserve fund of 24,000*l.*, as we explained to you in the circular of the 27th June, 1888. We found it was nccessary to have a working capital. We could not carry on the mine without it, and virtually your reserve fuud is your working capital, as we explained to you at that time. We still maiutain it under the head of reserve fund, for, perhaps, no good reason, and it will be better if it were put down as working capital, but still we will maintain it as it is. Mr. John Bayliss left it there, and we look upon it rather as a legacy of his, which we do not like to change. The next point I have to speak about is the development of the mine.

THE LINEAL DEVELOPMENTS OF THE MINE ARE NOW 4⅓ MILES

iu extent—that is to say, the underground levels have an aggregate length of 4⅓ miles. (Cheers.) You will thus see it is a pretty large undertaking, but if we are spared we shall see it going to much larger figures thau thesc. The developments during the past half-year have been of a very satisfactory character. The first point I want to touch upon is the Castletown or East Drumlummon lode. Our workings on that lode are not very extensive, amounting to only 732 ft., yet we have developed in that portion of the miue

34,000 TONS OF ORE, WHICH WILL RUN FROM $25 TO $30 PER TON.

(Cheers.) That in itself is a very importaut fact, because, as Mr. Robinson explains to you in his report, you have some 1,500 ft. in length upon that vein. You must understand, however, that, although I have told you we have 732 ft. developed in the East Drumlummon, yet it is not all in a straight line. It is in various levels, and you have only developed some 200 ft. out of 1,500 ft. in your longest level, and in other levels very much less, and yet in that limited space of ground you have already developed reserves of ore equal to 34,000 tons. (Cheers.) Prof. Clayton drew our attention particularly to the East Drumlummon lode, and considered that it would produce large and profitable bodies of ore. We are glad to be able to tell you that that portion of the mine has developed extremely well. The next point I want to mention is the bottom level in No. 1 shaft, viz., the 800 ft. level.

APPEARANCES IN THE LOWEST LEVEL.

We were left in this interesting position at the last meeting, that just prior to the closing of the No. 1 shaft, before the new machinery was put into it, they had driven upon that level some few feet, and it had opened out to 8 ft. wide, showing high-grade ore Since the beginning of January we have got again into the 800-ft. level

and the latest information is that we have driven upon an ore shoot, gradually inercasing iu size, about 100 ft., and that for the whole of that 100 ft. the ore body maintains an average width of 15 ft., and assays from $25 to $30. (Cheers.) Now

THIS POINT IS HIGHLY IMPORTANT,

because our critics in the time past have pointed to the fact that the Drumlummon Mine was getting poorer in depth. In the 600-ft. level, No. 1 south, upon which we are driving, the shoot was only some 60 ft. in length, and 10 ft. in width, and it had an average value of $20 per ton. In the 700-ft. level it was from 50 to 60 ft. long, and its outside value was $15, and was 8 to 10 ft. wide, showing a decrease of value in the 700 below the 600. At the 800-ft. level

THE SHOOT HAS INCREASED IN SIZE

to over 100 ft. in length, with an average width of over 15 ft., and a value of from $25 to $30 per ton, showing clearly that the shoot at that point is richer instead of poorer, and not only richer, but that the only body of ore opened at this time and at that depth is very much larger in size aud contains a much greater tonnage of high-grade ore. (Cheers.) I want you to bear this fact iu mind, because we have told you again and again that we had every confidence in the Drumlummon Mine turning out as good in the future as it has done in the past. If you keep this matter before you all the croakers in the world will not shift you from the firm ground of confidence that we ourselves feel and stand upon.

CONFIDENCE OF THE DIRECTORS.

We have never lost confidence on this side of the table in spite of all the croakings that have gone on and the criticisms that we have been exposed to. We have been persistent in our policy, and have stuck to it through thick and thin—sacrificing dividends rather than swerving from a course which we knew in the long run would be for benefit of the shareholders.

A FIXED POLICY.

We will develop the mine as long as you leave us here. We will spend our time in developing it in a minerlike manner, and in milling ores, as they ought to be milled, in due proportion to their values. That is our policy, and to that we shall adhere until you move us from this side of the table. (Loud cheers.) If others take our places they can adopt a different policy if they like. We have laid down our policy, and we will not depart from it. Mr. Tennant Bayliss at the mine has been trying to keep up your hearts all through these months in which we have had low returns by stating that circumstances, over which he had no control, were preventing him from making better ones. I told you the last time I stood up here that if we were free to do so we could make the returns larger than they were, and the moment the time came, when the machinery could be put into the new shaft, and we could get to the lower parts of the mine, we should be able to prove to you that all we stated was correct, and that the returns would be increased. When you realise that at the present time (February)

THE MINE IS EARNING ABOUT 17 TO 18 PER CENT.,

and yet we are only paying 7½, you will understand our position. I have accounted for the difference—the difference has gone in capital account. That capital expenditure will benefit you over a period of years, and you must make a sacrifice temporarily for the sake of the future. Mr. Bayliss, in his reports, expects the returns will go on increasing. Of course he does not mean to say that they will go on increasing and increasing, because there must be a point at which that increase must stop. He is milling well within his reserves, and will no doubt fulfil his promise to you. I want to encourage you at this time, because the shares are low and some of you may be led to part with them, thinking that the future is not as full of promise as the directors believe. I consider that this report, whilst it conveys to you the lowest scale of profit recorded for many half-years, also virtually contains information of the very greatest value to you as shareholders. (Cheers.) Mr. Bayliss told you that he is increasing the number of his drills, and that implies that he is likely to increase the number of lineal feet developed in the mine during the coming half-year, and as soon as we can afford it we intend to give him an additional air compressor in order that he may increase the number still further, because we have an increased area of ground to work, and can attack it in so many different places, that we wish to carry forward developments as rapidly as possible in order to add to the value of our property. The reserves of ore have increased from 182,000 tons last June to 215,000 tons on the 31st of December. When we come to render you our next general half-year's statement, we hope that the reserves of ore will again be further increased. I may tell you that the No. 1 shoot between the 800-ft. and 700-ft. level has already contributed, since the beginning of the year, something like 10,000 tons. I have been asked a question in reference to the

JUBILEE SHOOT.

If you refer to Mr. Robinson's report as to the 500-ft. level, I think you will find a satisfactory statement in reference to the Jubilee shoot. The workings in the 600-ft. level are not sufficiently forward to enable us to say much about them, and we should prefer to say nothing until we can speak definitely. Mr. Bayliss says in his last report, "There is not any information that we can give you with regard to the Jubilee shoot in the 600-ft. level further than that which is contained in Mr. Robinson's annual report. There is a great deal concerning this ore body which we do not at present understand, and of which we can only obtain information by further and persistent development." The fact is that there is a large horse of slate in the 600-ft. level south, and we have to do more work before we can find out the true state of the case. The East Drumlummon lode is probably crossing and disturbing the Drumlummon lode at this point. There is, however, a very good body of ore in this level south. I do not think there is any other point in the mine that I need refer to except that we have driven the cross-cut from the 600 level south into the Castletown, or East Drumlummon, lode, and are beginning to drive upon the lode for the ore bodies which are in the upper levels. We have likewise completed the cross-cut from the 500-ft. level north into the West Side lode, and are running upon that vein. There are some 40 or 50 ft. to go before they expect to touch the rich ore body which they had in the upper levels.

THE PROPOSED NEW DIRECTOR.

I do not know whether I ought to touch upon the question of the directorship, but I wish to disclaim any feeling against Mr. Johns. I have never had any such feeling—very far from it. Mr. Johns has a perfect right to criticise, and I have a perfect right to answer him from this side. Sometimes if I am a little warm I answer sharply, but it is not in ill-nature. As regards my brother Edward and the directorship—Mr. Johns must first of all prove that I have any feeling in the matter. As a matter of fact, I have none. Three names were submitted to the board to choose from by those gentlemen in Leeds who are amongst the very largest shareholders in the company, and whose stake is considerable. The board out of these three names unanimously chose Mr. Edward Crowther, because they knew him and knew him to be an able man. Mr. Edward Crowther has a record in Yorkshire, and I have no doubt he knows more about mining than most of the gentlemen in this room. I want to leave that matter in your hands. It is not one of personal feeling. We want to do exactly what the shareholders wish. (Cheers.)

Mr. C. Thomas: Will Mr. Crowther tell us whether we may expect much trouble with the water?

Mr. Crowther: We have had no trouble with water, and have not much in the mine.

Mr. J. A. Mays: Is it in contemplation this summer to send any directors to the mine? It is always a pleasure to meet with directors who have been there.

DIRECTORS VISITING THE MINE.

Mr. Crowther: It is not our intention to send anybody to the mine this season. Probably the only man who could spare the time to go would be myself, and I will not assume the responsibility of making a technical examination when I absolutely know nothing of practical mining, and then come here and make a speech to you which may lead you astray, and which might do me very much harm. I will not take such a responsibility, and that is plain English. I am willing to do all I can, and my duties are defined, but when it comes to going to Montana that is quite a different matter. It is another matter if you send out Mr. John Darlington, because he is a professional man, and his views on underground mining are entitled to the greatest weight, but you will have to pay him if you send him. (Cheers.)

ATTITUDE OF THE BOARD.

The Chairman: I was only going to make one remark with reference to what Mr. Johns has said. We are perfectly neutral in the matter of the new director. We are willing to do anything that will advance the interests or add to the prosperity of the undertaking. We had not the slightest idea of adding to the expense of the board. If an additional director be appointed he will put his hand into the basket and draw his share. It will be a reduction of our present remuneration.

The report was then unanimously adopted.

MR. BEWICK RE-ELECTED.

The Chairman: I have great pleasure in proposing that Mr. Thomas J. Bewick be re-elected a director.

Mr. Charles Thomas: I beg to second the motion, and will remind the shareholders that Mr. Bewick came to the rescue of the property when it was on the point of being wrecked. Well has he served the shareholders since, and thoroughly does he deserve their confidence. (Cheers.) The shareholders must be gratified that they have a body of gentlemen like these to serve their interests, for more honourable men are not to be found in the City of London. They act with great prudence in the development of this property. I have perfect confidence that the mine will again return to its most prosperous days, and I should be more inclined to add to my interest than to part with any of it, even at a considerable advance upon what the shares are now standing at. I have much pleasure in seconding the motion that Mr. Bewick be re-elected.

The motion was carried unanimously.

Mr. Bewick: I thank you very much for my re-election. I shall continue to give the same attention to the business of the company that I have done during the last four or five years.

MR. F. P. CROWTHER RE-ELECTED.

Mr. T. Phillpotts: You are all well acquainted with Mr. F. P. Crowther, who retires by rotation. I need not comment upon his merits as a director, because you must agree with me that he is the proper person to be re-elected.

Mr. McQuie: I second the motion. Mr. Crowther is an old and valued friend of mine, but independent of personal friendship I know he has Montana interests at heart, and if anybody works for the benefit of the company it is my old friend.

The motion was carried unanimously.

Mr. Crowther: Gentlemen, I thank you very much for your continued confidence in me, and I will continue, as I have always done, to devote the bulk of my time, and the whole of my affection, to the Montana Company. (Cheers.)

AUDITOR RE-ELECTED.

Mr. Reid: I have much pleasure in proposing that Mr. Thos. A. Welton be re-elected at a remuneration of 70 guineas for the current year. I would draw attention to the fact that Mr. Welton has kindly proposed that his remuneration should be reduced to that sum from 100 guineas, in consideration of the fact that we have lately had rather meagre dividends, and that the directors who have had to work so hard have had to take considerably less fees. We cannot have a better man than Mr. Welton, and I hope by next year that our profits and his remuneration will alike be increased.

Mr. Pyke seconded the motion, which was carried.

A MOTION NOT PERSISTED IN.

The Chairman: We now come to the question of the election of an additional director. Mr. Lewis proposed, and subsequently withdrew, a motion for the election of Mr. Edward Crowther.

Mr. Johns: As the business of the meeting seems to be over, I beg to propose a vote of thanks to the chairman. We are all indebted to you, sir, for the very careful and anxious manner in which you devote your services to this company, and I am very proud to see the board remain as it is. I am quite satisfied it is all we want, and I am sure that reflection on the part of the shareholders in the north will bring

them to the same conclusion. If they do not think they are well served they are hard to please, and it is not our duty to try and please them. I propose a vote of thanks to the chairman and the board for their very able conduct of the affairs of this company.

Mr. Arthur Bald: I beg to second the motion. I think you have done quite right in not falling in with the suggestion from Leeds. We are satisfied with the board as we have it now, and I do not see why we should ask them to reduce their fees (which have already been reduced) when they are quite competent to manage the company themselves in a way that is perfectly satisfactory to us as shareholders. I have followed the company from the first, and am glad to see that we may now look forward to a period of increasing prosperity.

Mr. Johns put the motion, which was carried by acclamation—not (he said) even a Leeds man voting against it. (Laughter.)

The Chairman: This vote of thanks is a little out of order, but on behalf of my colleagues and myself I thank you very sincerely. We work very hard, and shall continue to do so as long as we have your confidence. I am sure we shall have that, because we have no other desire than to make this company the grandest on the market. I hope none of you will lose heart, but will stick to your shares, for I am a firm believer in them.

I ONLY WISH MR. JOHN BAYLISS HAD STARTED FOR NEW YORK A WEEK EARLIER,

for he would have been with us, and told us what he thought of the mine. I hope to see the Montana Mine myself, and in spite of what my good friend says, if I live to get out I mean to go scrambling over the whole of it, and into every corner of it, as I have done before. When I come back I shall tell you a plain, unvarnished tale of what I have seen, and if the mine suddenly changes its character, I have belief enough in your sense of justice that you will not say it is my fault. (Cheers and laughter.) The sixth and final resolution I shall move myself. "That the thanks of the shareholders be given to Mr. R. T. Bayliss for his administration of the affairs of the company in Montana; to Mr. G. H. Robinson, the assistant manager; and to all the officers of the company at home and abroad."

Mr. Charles Thomas seconded the motion, which was carried amidst loud cheers.

Mr. Johns: I rise to make a suggestion: you have been expending out of capital a large sum of money for the development of your mine. Well, everybody knows that you can pay that capital off as quickly as you choose, but it appears to me that if you borrow money from the revenue account for capital purposes you ought really to return that to revenue again, slowly instead of quickly—you ought to pass it over four or five years instead of taking it out of next half-year's dividends. I have a great objection to working for posterity. I am a great believer in the present generation, and should like to receive my dividends now.

Mr. Crowther: I do not agree with you, Mr. Johns. I do not think it is a question for the board. It is an impossibility to do it. You have no capital, unless we take it out of revenue, and where are we to get the money to pay the bills?

Mr. Johns: Create a suspense account.

Mr. Crowther: Then we shall have to borrow money from a banker. It will not work—it is an impossibility. We would gladly do it if we could, but we cannot.

The proceedings then closed.

WEST ARGENTINE GOLD CO., LIMITED.

THE COMPANY IN DIFFICULTIES—SHAREHOLDERS DISAPPOINTED, BUT NOT DISHEARTENED — ALTERNATIVE RE-CONSTRUCTION SCHEMES.

An extraordinary general meeting of the shareholders of the West Argentine Gold Company, Limited, was held at the Cannon Street Hotel, London, E.C., on Wednesday, under the presidency of J. T. Hopwood, Esq. (chairman of the company), to consider "the present position and future prospects of the undertaking."

Mr. W. P. Owen (secretary) having read the notice calling the meeting,

The Chairman addressed the meeting as follows:—Gentlemen, the board, I assure you, wish that they could have had a more agreeable task than has fallen to their lot in presenting the circular which has just been distributed amongst you.

SUDDEN FALLING OFF IN THE YIELD.

When last I had the pleasure of addressing you, we confidently hoped that at the next meeting we should be able to announce, if not an actual dividend, at all events that we were within measurable distance of one, and we had very good grounds for this expectation, seeing that they were based upon the carefully tabulated statement which you will find on page 1 of the circular. Had the 10-head mill gone on as it was doing when we were there, and after we left, we hoped to have been able to declare a dividend of 6d. in the £; with the 30-head mill, however, in the same proportion we hoped to have been able to declare a dividend of 12½ per cent. But when the ore began to fall off in this remarkable manner, of course, we were stranded to a certain extent. The failure of this Carolina Mine was as unexpected as it was disappointing; but still the ultimate verdict remains to be proved by seeing what the mine may really contain in depth—by deep sinking, and further prosecution of the works. At present we are engaged in sinking on the adit level to a depth of 150 ft. We hope by about the second week in April to have reached 75 ft., and a cross-cut will be made into the reef to ascertain its value. If that value falls off in depth, we think it will be wise not to continue the prosecution of that work any further.

GROUNDS FOR AND AGAINST HOPE.

The grounds against hope are that we have with great pains and trouble made cross-cuts into several of the reefs which run parallel with the Carolina—the No. 2 west and other reefs—and the result has been disappointing to Mr. Allan so far. The grounds for hope are that we have a great deal of reef matter still untouched, and at any moment, striking good ore, either in depth or along the drives, might instantly change the whole position of affairs. The best opinion concerning the Carolina reef has been that it was always regarded as a most valuable property. An enormous deal of native labour had been expended upon it, and it was not until we went there that anything of a definite character in the shape of mining was really undertaken. The reefs are massive, extensive, and have every appearance on the surface of being valuable. Capt. Morrish was exceedingly taken with the Buena Fé, which he thought was the most valuable bit of our property. I may tell you also that M. Boutan when he was there—a very eminent and clever mining engineer—would have been glad to have taken from us both the Buena Fé and El Brillante part of the reef if they had not been already bespoken by our own company for extended ground, and by the Extensions Company the Brillante part. Had it been otherwise he would have closed at once. He was very much disappointed, and threw it in our teeth that we had picked out the plums. The Buena Fé and the El Brillante have scarcely been touched at all. Our own manager when he went out there—of course it was his first view of the mines—found himself face to face with difficulties, and we were considerably handicapped when there ourselves by the mill breaking down two days after we arrived. We had dismissed an incompetent reduction officer, and whether from accident or design, the mill broke down, as I say, just after our arrival. As we had to send the crank shaft to Rosario the mill was not at work again until the day after we left. We only saw the mill about two days at work, and had no means of verifying the assays and crushings as we should have liked.

17,000*l.* WORTH OF GOLD EXTRACTED.

Up to the present time 6,540 tons of ore have been crushed, producing 4,938 ozs., which, taking the average value at 3*l.* 10s. per oz., amounts to upwards of 17,000*l.* This has been done with a 10-head mill. The driving north and south has been so far disappointing, but there are evidences of successful working, and as yet the Pinero and Brillante have not been driven under. Some people are inclined to believe that this Carolina is not a true fissure vein—that they are only large superficial deposits of ore containing gold, which may pinch out. Of course, this is only problematical; we have not yet proved it. There is an old Spanish proverb to the effect that "The eye of the master fattens the horse;" and the directors, bearing that in mind, did their very best when out there to see if they could not bring this mining venture to a successful issue; but it is beyond the power of any director to get gold where it does not exist. A very true remark was made by the chairman of a company a short time ago. He said, "The very best mines may be spoilt by a bad manager or by incompetent directors; but, if the ore falls off in value, what can either the manager or the directors do?" There was abundance of ore, as we thought from observation, capable of being stoped, and had it proved as good as we anticipated we should have been in a very different position to that we find ourselves in to-day. The certified value of the ore was believed until we had the October crushing.

A SERIOUS QUESTION.

I ask you, gentlemen, is a mine which has yielded so much to be abandoned when we have prospects which are certainly very valuable if we may ground any belief upon the reports that we have heard? We hold, of course, a large number of shares in the three companies—the Rio de la Carpa, the Central Argentine, and the Extensions Company—to the amount of 53,000 shares. I believe all these companies are making good progress, and in a short time I think one of them will be showing results. We are only 300 ft. down now on the adit level—not including the 75 ft., which I alluded to before—and we shall continue sinking if the ore at that point holds good.

SHORT OF FUNDS.

At the present moment, however, I must tell you that our capital is about exhausted. Some of you may be tempted to ask, "Why didn't you put all this before us sooner?" (Hear, hear.) I will tell you why, and what we have been doing. Shortly after the last meeting we began to receive letters from Mr. Allan, not of a very encouraging character. He said that if the mine continued to fall off in the value of its reef matter in the way it was doing—in other words, if it did not improve shortly, we should find ourselves in financial difficulties. After consulting with our solicitor, who obtained counsel's opinion, I took upon myself, personally, to invite some of the largest shareholders of the West Argentine Company to meet me, and consider what was best to be done. They came, and the meeting was held on the 16th January last. Unfortunately, I met with an accident and was prevented from attending, but Col. Howard kindly took my place, and explained the position of affairs. We were then negotiating with a gentleman out in Buenos Ayres, who had the option until the end of January of taking over the seventh department. His option expired on the 31st of that month, but, contrary to our wishes and instructions, our agents out there extended this option to the 28th February. I should tell you that the option was to take over the seventh department for the sum of 8,000*l.* We did not hear of this until about a week after the completion of the month of February, so that we have lost no time in bringing this subject before you. The opinion of the shareholders, whom I consulted upon the matter, was that we should do nothing just then, but await the result of the negotiations with this gentleman in Buenos Ayres, and if this business had been pulled off we should not have had to call you together at present. However, we heard about the end of the first week in March that the negotiations had not gone through, and that the seventh department, I may say now, fortunately for us, is free. Another company were also negotiating about it, and are at the present moment. They have sent their manager out to inspect the property, and we were told that we should get a definite answer about the middle of February. Up to the present time, however, we have not received it; so that we were driven at the last moment to call you together.

SUCCESS IN THE SEVENTH DEPARTMENT.

Now, on the other side we have this seventh department to deal with. It was always known to contain good mines, although they have been little worked, very much less worked than those of the Carolina. The board always hoped to finance this separately en bloc,

We never had an idea of working it ourselves, our capital being far too small, and barely enough, to work the Carolina Mine alone. Of course the circumstances entirely changed when the Carolina ore dropped in value. It is really fortunate for us that we have the seventh department to fall back upon. The former reports and assays weisomewhat discredited, but upon making subsequent examinations and careful crushings we find that there was great value in this department. Mr. Allan was not satisfied with assays and examinations, but took over, on mule's back, a considerable weight of ore, and put it through our own mill at Carolina in order to test it practically, and it gave exceedingly good results. So that the good reports that we have always heard of the seventh department have been latterly confirmed. Now, are we going to let these good properties lapse without making a strenuons effort? We only have the option of this seventh department up to September next, and if we fail to conform with the regulations of the province, we stand a good chance of losing it. Of course it will rest with you in a great measure what shall be done.

DESCRIPTION OF THE PROPERTY IN THE SEVENTH DEPARTMENT.

The surface is known to be very good in some of the mines in the seventh department, aud Mr. Allan confideutly expects that the surface ore crushed in a Roman mill will pay for the expense of driving an adit, and thus proving the real value of the mine. The facilities for working at San Francisco are far superior to what we have in Carolina, which is a rugged, barren country, about 2,000 ft. higher than San Francisco. In San Francisco there is plenty of water, wood is exceedingly cheap, and the chances, I fancy, in these mines are better. The seveuth department district is situated about 14 miles from Carolina, and the best way to get to it is through San Luis—a perfectly flat road. The reefs, too, partake more of the true fissure vein, and the quartz is more of a purely quartz character. At the Carolina it is a kind of dark blue, soft stone, and the gold in the seventh department is. with one exception, the richest quality gold known in the world. Now, we have called this meeting to afford an opportunity of exchanging views, and hearing an expression of wishes on the part of the shareholders. As I have told you, we are now short of capital. We have

WORKED EXCEEDINGLY HARD

to bring this company to a successful issue. It does not rest with the directors if the quality of the ore falls off in value. The board will welcome any addition to their number from any of the shareholders present. We invited last November any gentleman to join us, and we have asked in several directions since, but have not met with any success. I hope the shareholders are not going to let the whole thing slide. If that is their wish, of course, they had better do nothing at all; then the debenture-holders will step in and exercise their powers of entry and sale, and the shareholders would get little or nothing. But, if they desire to see it still continued and carried to a successful issue, they must put their shoulders to the wheel, and help to find us a little more capital.

THE COMPANY'S ASSETS.

Now, what are our assets? There is work goiug on in three or four different places—Canada Honda, Rio de la Carpa, New Carolina, &c.—where we hope soon to have results; we have royalties from each of these companies in prospect (the progress is slow, but no doubt is entertained of success); we have 53,000 fully-paid shares in other companies; and we have four or five good mines as yet untouched. The question is—Shall we throw all this away? The hardest part of the work is doue; all our machinery is there; all the stores are paid for; we have an excellent manager whom we can thoroughly trust; and an excellent staff; and the directors, I assure you, have done all that men could do. (Cheers.) Here I may just say a word abont where the

BOARD WAS VERY MUCH MISLED

by the assays which were sent over to us about Christmas time last year. We had reports of assays containing about 8 ozs. to the ton in some parts. Now these men were experienced, highly paid officers of the company, in whom we had placed implicit trust, and I say it is nothing more or less than almost criminal that they should have misled us in the way they did, because they must have known that au 8 oz. assay did not represent anything like the true average value of the reef.

RE-CONSTRUCTION SCHEMES.

Now, what is to be done? The board have had before them four or five schemes in order to raise money, and the two which I will propose to yon have found the best favour amongst us. In the first place we thought of re-constructing on this basis—100,000 shares in a new company, credited with 17s. 6d. paid up, and leaving 2s. 6d. liability. This would clear off all the debentures, which are a great deadweight upon the company. We have 10,900*l.* debentures still outstanding. The remainder have been exchanged for shares. In addition to that, we thought of asking for 100,000 shares, 5s. cumulative preference, bearing interest at 10 per cent. This would give us 25,000*l.*, and would raise the capital of the company to 125,000*l.* We thought, further, that if we could cusure 30,000 shares being taken up we should be justified in going on, and it is proposed by the directors to give the shareholders the opportunity of subscribing for these preference shares within a fortnight's time. If 7,500*l.* is not then subscribed we shall have to fall back upon

A MORE DRASTIC SCHEME.

You must remember that we have 53,000 shares in other companies, which are held at present by the company as an asset, and cannot be divided amongst the shareholders. We took counsel's opinion upon it, and as it was uot considered profit we could not deal with it. If we re-construct it will be upon the basis that all these shares are immediately freed. Therefore, roughly speaking, for every two shares you will take up you will have one in these new companies, so that it will be like paying 2s. 6d. for a new share. If that scheme is carried through we shall have ample capital to do what we want. A new company would take over the assets of the old company, with a capital of 100,000 shares, upon which 15s. only would be paid up, and the shareholders would have to pay 5s. upon each share. At the same time the 53,000 shares would be distributed amongst you. Those two schemes for reconstituting the company commend themselves to the board, and it rests with you to decide. That there is great value in the property, you have a large asset in shares in this new company, and you have the seventh department as yet practically nntonched. I think it would be a great pity to let so valuable a property go for waut of putting your shoulder to the wheel.

QUESTIONS.

Mr. WINDUS: Would the debentures be paid off under the second scheme?

The CHAIRMAN: Yes; the consent of the debeuture-holders would have to be obtained before either scheme could be carried out, but that would be a matter of easy uegotiation.

Mr. WINDUS said he thought the second scheme the better of the two.

A SHAREHOLDER asked how the shares in the subsidiary companies would be divided?

Mr. GASKELL suggested that instead of issuing new shares credited with 17s. 6d. paid up, they should be only 10s. shares credited with 7s. 6d. paid np.

VIEWS OF A DIRECTOR.

Mr. JENNINGS (director): There are two main objects to be attained. The first is to place the present shareholders in possession of that which is their right—their proportion of value of the shares in the other companies, which have been obtained by the preseut company through the sale of part of their land. We have a director of one of these companies here, and he knows that it is expected and believed that those magnificent alluvials in the Canada Honda Valley will give a good return some day, and from these the company will get its 2s. on every ounce of gold taken out. In the Carpa Valley they would get one share for every four they hold; in the Goldfields they would get one in every five they hold; in the Extensions (and I may say that the Extensions Company are now at work upon a mine which Mr. Allan thinks very highly of—a mine which will pay its expenses certainly, and anything more to the good will be so much the better) you will get one share in every nine you hold. To accomplish this end, the directors think the fairest way would be to re-construct upon lines which would do no more than give you your proportionate holding in the subsidiary companies—that is to say, if only 2s. 6d. per share is payable upon each share, you will get then your full proportion of these subsidiary shares transferred to each one of you, which cannot be done so long as debentures are outstanding.

THE DEBENTURES.

In addition to that you would retire the amount of 10,908*l.* outstanding debentures on which we are paying 10 per cent. interest, and thus you would save the parent company the annual expenditure of 1,150*l.* for interest only. It must not be forgotten that in October next year these debentures will fall due, and we shall have to find the capital to pay them off. But we have auother object in view, and that is to afford the means of carrying on the work in which we are engaged, and of proviug several mines which have already been prospected and reported upon by Mr. Allan, who has given the board ample proof of the earnestness and sincerity of his attachment to the interests of this company, even to an extent of

SELF SACRIFICE,

that I have never heard of on the part of any manager, considering the financial positiou of the company. Now, are we going to allow these properties to slide out of our hands? I think not. The board propose, therefore, that a certain amount of capital shall be raised. They propose to take powers to issue 100,000 5s. preference shares, such shares to be payable, 2s. on allotment, and 1s., say on the 1st of October next, and if 50,000 of these are taken, that would be ample for all the preseut purposes.

PROSPECTS OF SUCCESS.

As regards the prospects of success—there are one or two mines which Mr. Allen is very desirous of seeing properly attacked. (Mr. Jennings here read several extracts from the recent letters of the manager.) Continuing, he said, 12 dwts. of gold to the ton, assuming 600 tons crushed monthly will pay the 10 per cent. upon the preference shares, and 4½ per cent. upon the ordinary shares, and every additional 1 dwt. obtained above the 12 dwts. means an additional 1½ per cent. dividend on the ordinary shares. I do not think I can say anything more in the way of supporting the proposition which the board place before you—that you should so far give them provisional applications for these preference shares that should justify them in placing before you formally the first of these re-construction schemes. If that is not done, nothing remains but to fall back upon the heavier scheme with its grave risks.

Mr. WINDUS suggested that the subscribers to the new preference shares should have the option of exchanging them for ordinary shares.

A LEGAL QUESTION.

In reply to a shareholder,

The SOLICITOR said that the whole of this matter had been submitted to counsel, who was of opinion that these shares, if issued with 15s. credited as paid up, would, nnder all circumstances, be held as fully paid up as far as the 15s. or 17s. 6d. might be concerned.

Mr. LESLIE ANTILL said he was a shareholder who had purchased many of his shares at 45s., and he felt no uneasiness on the subject. They had a most valuable property, which only required time to develop. He felt certain that not a single shareholder had the smallest doubt as to the thorough integrity and honesty of purpose of every member of the board. (Cheers.)

THE LATE MR. WM. ABBOTT

was one of the keeuest critics as to the value of mining properties, and he was fully convinced of the ultimate success of the West Argentine Company, and that the shares would one day touch 5*l.*, or thereabouts. (Cheers.)

Mr. VEARS supported the board, and said that there was evidently valuable ground somewhere about their property.

Col. HOWARD said he stood in the dual position of trustee for the debenture-holders aud a member of the board, and he desired to place his resignation as a director in the hands of the shareholders. The shareholders, however, refused to entertaiu it, and the colonel consented to retain his seat.

The Chairman announced that one gentleman present had signfied his willingness to join the board, and they would welcome him with great pleasure.

NO. 1 SCHEME APPROVED.

Col. Howard, in order to take the sense of the meeting upon the question of re-construction, proposed, "That in the opinion of this meeting No. 1 scheme be adopted, with such modifications as may be desirable."

Mr. Hill seconded, and the motion was carried.

A vote of thanks to the chairman and directors closed the proceedings.

THE EDWIN BRAY GOLD MINING CO., LIMITED.

ALTERATION IN THE ARTICLES OF ASSOCIATION—THE STATUTORY MEETING—ORE ASSAYING OVER 14 OUNCES TO THE TON.

An extraordinary general meeting of the Edwin Bray Gold Mining Company, Limited, was held at Winchester House, Old Broad Street, on Wednesday, 27th March, for the purpose of confirming the following resolution, which was passed at the extraordinary general meeting of the company held on the 12th day of March :—

"The articles of association be altered in manner following :—(*a.*) In article 8, the word 'two' shall be substituted for the word 'one.' (*b.*) In article 23, after the words 'instrument of transfer,' the words 'shall be of the common form' shall be inserted. (*c.*) In article 30, after the words 'the company shall have a paramount lien on the shares,' the words 'not fully paid-up' shall be inserted. (*d.*) In clause 67, in the second line, the words 'after his appointment' shall be struck out, and instead, the words 'of the incorporation of the company' shall be inserted."

Mr. Browne Martin presided.

The Secretary read the notice convening the meeting, and also the notice convening the statutory meeting of the company, to be held after the conclusion of the extraordinary meeting.

The Chairman: This is merely a meeting to confirm certain resolutions which were passed at an extraordinary general meeting held on 12th March, with reference to certain slight alterations which the Committee of the Stock Exchange require in our articles of association. I will simply put the resolution.

Mr. Trubshawe seconded the motion, which was carried unanimously.

The Chairman: I might just supplement the remarks I made at the previous meeting by saying since that meeting we have received a letter from Mr. Vivian Trubshawe, one of our managing directors at Barberton, who states that the Government surveyor has surveyed the route for the wire ropeway, and that everything is going on perfectly satisfactorily as far as it is possible for things to go on the property. I also may tell you that we are signing the certificates for the shares, and that they will be issued in the course of a day or two. I do not think there is anything else for me to tell you. This concludes the business of the confirmatory meeting.

THE STATUTORY MEETING.

The Chairman: As you are all no doubt aware this is simply a meeting that is required by law at this early period of the company's existence. There is very little to state with reference to what has taken place other than what you already know, but if any gentlemen would like to ask questions I should be very pleased to reply as far as I can.

QUESTIONS.

Mr. Jay: I notice in the papers there is a report of a cablegram to hand, notifying that rich ore has been found in the Oriental property which adjoins the Edwin Bray mine. I should like to know whether the chairman can give us a confirmation of that? Another question I would like to ask is whether the shares will be transfered free of stamp duty? Next, what the transfer fee will be? When the special settlement is likely to take place, and how the mine is now being developed?

The Chairman: With reference to the confirmation of the cablegrams—the board has not heard anything further, but perhaps Mr. Trubshawe has had confirmation of it.

Mr. Trubshawe: I had notices that the Oriental were taking out good stone from the drive on their eastern boundary, and that the lode was of great width there—23 ft. to 24 ft.

The Chairman: With reference to the share certificates, I have already answered—they will be ready in a day or two. The directors desired to commute the stamp duties upon the company's shares, and to transfer them free, but the Inland Revenue have refused our application on the ground that as the company's shares stand at such a high figure, the Government would incur a loss thereby. The transfer fee will be 2s. 6d. With reference to the special settlement, I am unable to give a definite date. With regard to what has been done at the mine—as I said before, we are grassing as much of the stuff as we can. I may tell you we have no intention of crushing any ore until the wire ropeway is constructed. It would entail a large and unnecessary expense.

A Shareholder: How soon do you anticipate it will be ready?

The Chairman: We cannot tell you. We have contractors, who state they could put up a wire ropeway within two to four months.

Mr. Trubshawe: I do not think, Mr. Chairman, I have very much to add to the remarks I made at the last meeting. There is an old saying that "Good wine needs no bush," and I am afraid if one only reiterates statements it is more apt to do injury than otherwise. However, I see one or two gentlemen here who were not at our previous meeting, and I would just like to emphasise the fact that there is no question whatever that the Sheba reef traverses the whole of our property, and that cablegram which we received about 10 days ago, to my mind, greatly enhances the value of our property. (Cheers.) We always considered the Sheba end of the mine to be of the greatest value, but that cablegram proves that

OUR REEF IS VALUABLE THROUGHOUT.

I have had other confirmation of the value of our property in the shape of a call from a local subscriber at Barberton who holds 800 shares in our property. His instructions to his agents are on no account to sell any of his shares until we have made our first crushing. I was shown a letter from a gentleman who had spent five days on the Sheba and Edwin Bray properties, and he said—"You have

A THOROUGHLY SOUND AND STERLING PROPERTY

in Edwin Bray, and my advice is hold on to your shares." (Cheers.) At the last meeting I announced my brother had sent an eminent firm of engineers in Germany some quartz from Edwin Bray to assay. He sent me a parcel of similar quartz. He said that this stone was taken indiscriminately from the mine, but mainly from No. 2 drive. No. 2 drive is about the middle of the property. The assay of the gentlemen in Germany was 12 ozs. and some dwts. to the ton—(cheers)—at which I was rather surprised, for my brother said he did not think it would run very high. I retained some quartz which I sent to Messrs. Johnson and Matthey, and to-day I received the two following assays, which I hand to the chairman. The one is 14 ozs. 9 dwts., and the other 14 ozs. 3 dwts. (Cheers.) Gentlemen, if any doubt existed in my mind, and it did not, these assays, corroborating one another, proved to me more than ever the value of the property. We have a thoroughly sound and good mine, we have an immense body of ore, and as soon as we get to work we shall come not very far short of the Sheba itself. (Cheers.)

A Shareholder: Is it free milling ore?

Mr. Trubshawe: Messrs. Johnson and Matthey said nothing on that point, but the other firm distinctly say it is.

The Chairman: I think that is a very satisfactory statement, gentlemen, and quite confirms all we have heard of this Edwin Bray Mine. There is no question but that we have a very valuable property, and that it is far better to wait some short time until we can get our wire rope line finished than to pay away large sums of money to take a mill at the river. It is not as if it would be any considerable time—it will simply be a matter of a month or two. I have now to thank you for your attendance, and I trust when we meet again I shall be in a position to give you such information as will make that meeting a pleasant one.

The usual vote of thanks to the chairman closed the proceedings.

THE ST. AUGUSTINE'S DIAMOND MINE, LIMITED.

SHARP CRITICISM AND DISTINCT REPLIES — COL. McMURDO'S CONTRACT—THE MINE DEVELOPED AT THE COLONEL'S EXPENSE —SHAREHOLDERS SITTING ON THE RAIL.

An ordinary general meeting of the St. Augustine's Diamond Mine was held at the Cannon Street Hotel, on Monday, to receive the accounts and report, to elect auditors, and for such other business as may properly be discharged at an ordinary meeting—Col. Malleson, C.S.I., chairman of the company, presided.

Mr. G. H. Newman (secretary) read the notice calling the meeting.

COL. MCMURDO'S CONTRACT.

The Chairman: Gentlemen, there has been such a very large increase in the number of shareholders in this company since we last met that I think I should only consult the wishes of a great many gentlemen who were present if I were to tell them what the shareholders did at the last gathering. At that gathering, which was held about 18 months ago, the position was this:—That the company had exhausted its money, and that our agent on the spot had not yet arrived at a depth sufficient to find diamonds. However, he reported in such favourable terms of the prospects of finding diamonds if we pursued our sinking, that the shareholders then and there unanimously, and not only without one dissentient voice, but without a dissentient murmur, agreed to enter into a contract with Col. McMurdo, by which Col. McMurdo was to find the money requisite for sinking to a certain depth on certain conditions, which the shareholders there and then unanimously agreed to. That contract was carried out by Col. McMurdo, and expired in September last. Up to the present moment it has been a very bad contract for Col. McMurdo, because, although he found several thousands of pounds for sinking to the depth which was agreed upon, he did not, and has not up to the present moment, obtained any return for his money. Under the powers vested in the board by the articles of association,

YOUR DIRECTORS CONTINUED THAT CONTRACT

from the date of its expiration up to a date which may be terminated by a notice of seven days on either side—they continued it, I say, on terms somewhat more favourable to the company than those which the shareholders had sanctioned at the previous meeting, and I will tell you that since the date up to when this balance-sheet has been brought Col. McMurdo has expended upwards of 7,000*l.* in the further development of the property, not one penny of which I need not tell you has come out of the pockets of the shareholders. In the terms of the original contract Col. McMurdo agreed to make certain payments, and when this balance-sheet was made out there was a sum on the date at which it was made out, and to the date to which it had been brought, of 2,244*l.* 9s., which he had not paid. That item was made up of an overdraft on the Standard Bank of Africa on an advance which Col. McMurdo himself had made of 533*l.*; on creditors of debenture interest, 723*l.*; on miscellaneous account, 70*l.* 14s.; and the balance of 371*l.* in the directors' fees and the secretary's salary. Now I am very happy to inform you that very shortly after the date up to which this balance-sheet was brought, the whole of that money was paid off except the directors' fees and the secretary's salary, and

THE DIRECTORS' FEES AND SECRETARY'S SALARY ARE NOT LIKELY TO TROUBLE YOU.

(Cheers.) On the other side of the account you will see a sum of 150,000*l.*, which sum was allotted by the shareholders themselves at the last meeting to Col. McMurdo in consideration of his carrying out the contract, which he has carried out. Under the terms of the new contract, Col. McMurdo goes on sinking as long as he shall choose, although that contract, as I have said before, is terminable by notice of seven days on either side. Col. McMurdo is spending his own money for the benefit of shareholders, and, of course, for his own; but I may remind the shareholders that in accepting that contract, which may turn out well or may turn out ill—if he is a loser he will be a loser of several thousand pounds, and if he is a gainer he will share his gain in the proportion of the shares he holds. I may say that it is a contract that very few gentlemen would have taken. I am certain no one would have taken it unless he had the most absolute

faith in the future of the mine. In every other respect the balance-sheet is precisely the same as the balauce-sheet which was passed by the shareholders at their last meeting. It is made out in the same form and on the same lines. Up to the last meeting the shareholders

INCREASED THE CAPITAL OF THE COMPANY FROM 315,000*l.* TO 465,000*l.*,

and that positively is the only difference of the balance-sheet. I think myself that we are very near approaching success. I cannot tell you myself anything of the negotiations, which are said to be carried on, because your board have had no negotiations whatever. Whatever negotiations have been carried on have been conducted by those who were not on the board. and the results have not been communicated to the directors. But I have no doubt you will hear something about them in the course of the morning. If there are any points connected with the development of the mine or connected with this balance-sheet on which any of you require information, I shall be happy to give you that information to the very best of my power. I will only say that in consequence of the great transfer of shares that has taken place in the course of the last six months, your board have been able to pay off the greater part of the debenture interest without trenching upon the money of the shareholders. aud I do not know whether there are more than two or three items of debenture interest which are still unpaid, or, indeed, if there are any remain unpaid, but if there are I daresay those who are unpaid will speak. I beg now formally to move "That this report and this balance-sheet be adopted."

Mr. CADOGAN (director) seconded the motion.

BALANCE-SHEET CALLED DISGRACEFUL.

Mr. BLOOMENTHAL: I am only one of many here who hold that this report and balance-sheet are most disgraceful—the most disgraceful that have ever passed under my eyes. Whether your board or your auditors are responsible for it is best known to themselves. The chairman stated just now that the number of shareholders had very much increased in the last six months. He likewise said that these 150,000 shares which we willingly gave to Col. McMurdo for the development of the mine, and the extinction of the debts existing at that time were passed by the meeting, but do not the directors think on the face of this balance-sheet that matters look extremely strange? If I had not known you were honourable men do you know what opinion I should form of you? I should say that you seut out this balance-sheet for one purpose only, that of deteriorating the property, after selling it first at a high price in order to get it in a low price. That is my opinion on the face of the balance-sheet, but I have too much respect for the chairman to feel the least doubt about him, because I know he is innocent of any such thing. I may as well tell you that I am not a small shareholder. In round figures I hold between 50,000 and 60,000 shares, and with the exception of Col. McMurdo I do not think there is anybody who can say he holds as much. Therefore, I should know who has been the seller and who has been the buyer. I am satisfied of this, that the board have not sold. As for the auditors, I am not acquainted with them, but they have taken six months to bring up half a dozen figures, which ought to have been in our possession at the commeucement of the year. Here we have an account to the 17th of September only, and will the chairman tell us what has been the cause of this delay? No doubt he will answer "We could not get the figures from the mine." Well, we have uot to deal with a large mass of figures—we have to deal with 500*l.* or 600*l.*, and if that takes six months to get out, how long will it take when we deal with 150,000*l.*? I will pass over the balance-sheet and come to the report. I think this report belongs to you, Mr. Chairman, solely, and to your colleagues. You might have given to the world (for we are not all chartered accountants) the general effects of the balance-sheet, and of the 150,000 shares which have been created in addition to the existing capital, not expended, but merely placed to the debit of existing capital. It looks as if we had 150,000*l.* against which we have the value of diamonds 400*l.* That is how our balance-sheet looks.

WE HAVE 150,000*l.* ADDED, AND 400*l.* WORTH OF DIAMONDS AGAINST IT.

You do not explain how it was. I know it, but some of my friends and a greater part of the public do not know it. Those friends I have advised to buy shares, if they did not kuow me better, would be apt to say that I had intentionally put them in at a price, in order to raise the value of the shares. I have been dealiug in these shares.

MR. BLOOMENTHAL NOT A SAINT.

I am not a saint. I have been selling some of these shares, but what have I done really? I have bought far more than I have sold, and now my holding is at the same figure as it was three months ago. Therefore, I wish to impress upon you that what I am saying is from no unworthy motives. If people challenge me to deal in a block of shares, and I say I will deal with you at the price of 6d.—sometimes they get the better of me, and sometimes I get the better of them. The mine at the present time, in my idea, is promising. From independent sources I have information about certain negotiations, but the worthy chairman said they were not known to the board; to whom then are they kuown? Are they known to one of your directors? Who is our manager in the Transvaal—Mr. Fiulason? Somebody must have known of them. I do not wish to go into that matter; but all I can say is that I will leave the overtures which are supposed to have been made for the moment, and dwell upon the merits of this company. I have independent information as recently as yesterday from the Transvaal—that these people who ignored the idea and the possibility of diamonds existing in our property have sent orders to several of my friends to buy the shares. That iuformation I have seen myself only so late as last night. People who have circulated the report that there are no diamonds on this property have now confessed their guilt—(laughter)—and are making atonement by buying shares, and I recommend you to buy them.

MR. BLOOMENTHAL HAS DIGESTION AIDED BY A TELEGRAM.

That is from one of the best houses which received this telegram, aud with the chief representative of whom I dined last night, aud he showed me the telegram. I say we have one of the best mines which any company could possibly possess, but I certainly will not vote for the election of the auditors, as I am strongly against them. Their duty is to give to the public as explicit an account as they possibly can. Is this account explicit? No; and I will defy anybody to analyse it. It looks as if it had been done by people who have sold at 15s., and want to buy back at 5s. With regard to the royalty certificates—will you tell me how they are situated in the event of our earning dividends. Have they privileges or preferences, or do they rank equally with us?

TURNING THE TABLES ON MR. BLOOMENTHAL.

The CHAIRMAN: After the remarks made by Mr. Bloomenthal that "this balance-sheet is the most disgraceful he has ever seen," I think it incumbent upon me to make a few remarks upon that point, and I am very much mistaken that in making these remarks I do not turn the tables upon Mr. Bloomenthal. This balance-sheet was made up by two first-rate auditors and accountants, who are not speculators, and who, as far as I know, have no interest in the compauy. Whatever else it may be, it claims to be, aud is, an houest balance-sheet. It tells you the exact liabilities of the company, and plainly and frankly that 150,000*l.* was added to the capital last year, and that up to the present moment we have only received 400*l.* worth of diamonds. Mr. Bloomenthal was present at the last meeting. I hold in my hand the report, which was placed on the table aud accepted without one dissentient voice on that occasion. And it is in form precisely the same as that which is now presented to you. Mr. Bloomenthal raised no objection to it then, and I cannot for the life of me understand why he has raised an objection now—an objection which is

THE OBJECTION OF THE DISAPPOINTED SPECULATOR,

who goes in for a rise and has to meet a fall. The complaint which Mr. Bloomeuthal makes against this balance-sheet is that it is too honest. that it tells you exactly what your capital is, and what your receipts were during the past year. The auditors are present. and will answer for their department. I must remind them, however, that this is declared to be "a most disgraceful balance-sheet"—and I declare that a more disgraceful statement was never made at a public meeting, and, I repeat, it is the statement of a disappointed speculator. This is an honest balance-sheet, and I defy any gentleman in this room who knows anything about acconnts to point out in what part this balauce-sheet is deficient. With respect to the question asked by Mr. Bloomenthal regarding the royalty certificates, they are entitled to one-fourth of the gross out-put of the mine until they are paid off.

THE AUDITOR DEFENDS HIS CERTIFICATE.

Mr. LAKEMAN (auditor): As one of the auditors of this company, and responsible for the accounts with my co-auditor, and as having listened to the remarks of Mr. Bloomenthal, I wish to offer a few observations. I am also a shareholder, and hold 1,000 shares. The impression Mr. Bloomenthal made upon my mind was this, that he had clients in this room whom he was anxious to pacify and satisfy, clients who have responded to his appeals at a price before the balance-sheet came out, and clients who are frightened at the result which it discloses—a result which they have no real cause to be frightened at. Mr. Bloomenthal says the only result of the expenditure of 150,000*l.* is that the compauy has produced 400*l.* worth of diamonds. That is not the case, because the mine has been largely developed, and presumably improved by the work the contractor has done upon it. Therefore, that is the return the company has had for its 150,000 shares. Since the shares have been issued, and the capital increased, the shares have increased in value. as compared with what they were before this rise took place. I think that the statement of Mr. Bloomenthal is shown to be misleading, to say no more. I do not say intentionally misleading, but I apprehend that Mr. Bloomenthal has not sufficiently grasped the result. As the chairman has already explained, the chief items in the balance-sheet are those which appeared there a year and a half ago. aud the only difference is the expenditure incurred siuce. If you ask me any specific question about the accounts, I shall be pleased to give you all the information in my power.

A DEBENTURE-HOLDER SHOWS HIS TEETH.

Mr. MOSELEY: I wish to ask a question as to the debenture interest. I understood you to say that the interest was paid on Saturday last which was due on the 1st February, but the interest due to me has not been paid to my bankers, and I have had considerable difficulty in getting regular payment. When I remind the meeting that the debenture-holders really have this company at their mercy, it is necessary that whatever arrangement is made with Col. McMurdo, it should include the puuctual payment of the dividends on the debentures. Their security will be that upon default of the payment the debenture-holders could seize the property, when every share of the shareholders would be utterly worthless. Does this renewal of contract with Col. McMurdo iuclude the regular payment of the debenture interest, and would seven days notice given by him enable him to avoid the liability upon any previous amount due?

The CHAIRMAN: The extension of the contract makes the liability for the payment of the debenture interest fall upon Col. McMurdo, and if seven days notice were given to terminate the contract. he would be liable up to that time, but not beyond it.

Mr. MOSELEY: That would be for the proportion up to the time of notice.

The CHAIRMAN: That is so.

Mr. SAUNDERS: Would you tell us the leading heads of the contract?

The CHAIRMAN: They are precisely the same as the old contract, with this exception, that he does not get another 150,000 shares, and that he does not contract to pay the directors' fees.

Mr. SAUNDERS: What is going to pay him?

The CHAIRMAN: He gets three-fourths of the diamonds up to the time the contract lasts from the stuff he removes, because he pays to remove it. You will quite uuderstand it is an agreement not disadvantageous to the shareholders, because the moment they find the stuff there they can give the seven days' notice, and from that moment it belongs to them as before.

Mr. SAUNDERS: Is there any specified plan for him to work upon?

The secretary was about to read the chief terms of the coutract, when

VIEWS OF COL. MCMURDO.

Col. MCMURDO said: I think I can answer that question. I have agreed to advance the money, giving the directors the right to terminate the contract at any time after seveu days and retaining the same right

myself. I have not given any directions as to how the mine is to be worked. Mr. Finlason is the servant of the company, and it is left entirely to his discretion—the idea being that he should develop the mine as well as he possibly can. I have every confidence in Mr. Finlason, and I will go on for seven days, or 70 times seven days, until this mine is made productive. In regard to the interest on debentures —Mr. Moseley was a director.

Mr. Moseley: I have 500*l*., and my brother 1,000*l*.

Col. McMurdo: There are only three persons unpaid. Last Saturday my attention was called to the fact that some of the debenture interest was not paid. I said, "See me on Monday, and get a cheque." I have not seen the secretary until I came into the room, and I think it is very bad taste on the part of Mr. Moseley, who was a director, to bring that before the shareholders to-day. He was a director, and drew his fees.

Mr. Moseley: I am Mr. Moseley, and my brother (the director) is not in this room. At the same time, if you wish to say anything about him, I am here to answer.

COL. MCMURDO EXPRESSES HIS OPINION ABOUT MR. MOSELEY.

Col. McMurdo: I think it is bad grace that Mr. Moseley should speak as he has done.

Mr. Moseley: I spoke for myself, but when you asked about the debentures just now I answered your question, both as to my brother's holding and my own. I have not been acting in concert with him, but I am acting entirely by myself, and I think Col. McMurdo cannot have known that I have been pressing for payment for months, and still have the same complaint to make.

Col. McMurdo: Had the secretary seen me this morning you would have had your cheque. You have said that the shares are not worth a penny unless the debenture-holders are paid. The debenture-holders got their debentures with 400*l*. in shares for every 100*l*. they paid, and 10 per cent. interest besides—consequently they are shareholders unless they have sold their shares. I have endeavoured to buy up the debentures, and have endeavoured to buy yours, and was willing to pay par for the debentures to get them out of the way.

Mr. Moseley: The price was never mentioned.

Col. McMurdo: It is only within the last three or four weeks that I was told I could not get the debentures unless I paid 20 per cent. premium.

Mr. Moseley: The price was never mentioned. What I asked for was the dividend due last February, and the dividend due previously on the 1st of July, so that what I really ask for is par and one year's dividends.

A PLAIN OFFER.

Col. McMurdo: I am willing to buy anybody's debentures to-day at par and pay the interest on them, so that the shareholders need not have any fear that the debenture-holders will get their pound of flesh. (Cheers.)

Mr. Moseley: Will the directors see that Col. McMurdo pays punctually the dividends upon the debentures?

The Chairman: I think Mr. Moseley must be aware that when his brother was on the board he was not able to guarantee punctual payment, and I think after the offer made by Col. McMurdo, and considering the great advantage which has accrued to him already from the possession of shares, for which he has not paid, that

HE MIGHT GRACEFULLY ACCEPT THE OFFER COL. MCMURDO HAS MADE HIM.

He said that he was ready now to buy anybody's debentures at par.

Mr. Moseley: Does that include the payment of the dividend due last February? If Col. McMurdo will pay me 525*l*., he shall have my 500*l*. of debentures. (Laughter and cheers.)

Mr. Wytt: What about pending negotiations?

The Chairman: It is a great mistake in diplomacy to disclose what is going on between two negotiating parties, whilst negotiations are pending, and, therefore, my mouth is closed even if I knew anything.

The report was unanimously adopted, and the auditors were re-elected at a remuneration of 20 guineas.

COL. MALLESON'S VIEW OF THE FUTURE.

Mr. Bloomenthal: What is your opinion, privately, and in your capacity as chairman, of the future of this mine? Honestly, you will give it, because I know your character for honesty.

The Chairman: Gentlemen, I have been connected with this mine from the outset. I am one of those who have tried very humbly to further its fortunes. I need not tell you that I am not a speculator, but if I were I have so much confidence in this mine that I would go out now into the market and buy all the shares I could lay hold of. I do not think I can say more. I had the pleasure of knowing Mr. Finlason when he came from South Africa with this mine, and I felt quite certain that he was a thoroughly honest man. He has worked undespairingly at this mine for the last five or six years. There has been a feature about this mine which I am sorry to say is common to most others, and that is that it has cost more than was originally anticipated; but

THE MINE HAS BEEN DEVELOPED IN A THOROUGHLY SCIENTIFIC MANNER,

and Mr. Finlason is absolutely certain that it will prove to be one of the richest in Africa. That is my opinion, and I can only repeat that if I had funds at my command I would go out and buy shares at the present price, and at a much higher price. (Cheers.)

A Shareholder: Have the royalty certificates any preference over the shareholders?

The Chairman: They have under any circumstance three-fourths of the gross output.

A Shareholder: What with the contract with Col. McMurdo and the royalty certificates, the shareholders get nothing.

The Chairman: They will get nothing until they give seven days' notice to Col. McMurdo, but we shall know the moment the mine is found to be diamond-bearing, and at that moment we shall give the seven days' notice. If we did that now we should have to find funds to work it. As it happens, the mine has been worked for you by Col. McMurdo, and all he asks is that while that process is going on, what he brings out of it shall be his property, but at any moment we can claim the mine back as our own. Since last September he has expended 7,000*l*., and there is every probability of his having to expend 7,000*l*. more.

Mr. Bloomenthal proposed a hearty vote of thanks to the chairman, which was carried unanimously.

A SECRETARY "WORTH HIS WEIGHT IN DIAMONDS."

A Shareholder proposed a vote of thanks to the secretary, which the Chairman cordially endorsed as did the entire meeting.

The Chairman said: I have had to do with a good many secretaries, but I never had a better one than Mr. Newman. You have heard of a man worth his weight in gold, but Mr. Newman is worth his weight in diamonds.

The proceedings then closed.

THE CAMARONES COPPER MINING AND SMELTING CO., LIMITED.

PROGRESS OF THE WORKS—RE-ORGANISATION OF THE WORKS—A GREAT MINERAL DISTRICT—A DISSATISFIED SHAREHOLDER.

The statutory general meeting was held at Winchester House on Thursday—Wm. McAndrew, Esq., chairman of the company, presided.

Mr. Noel West (secretary) read the notice calling the meeting.

STATE OF THE MINES WHEN TAKEN OVER.

The Chairman: Gentlemen, this is a meeting of the company which is prescribed by statute, and we have, of course, neither accounts nor reports to present on this occasion; and, in fact, it is almost a pity that we are obliged to hold it, in order to comply with the Act of Parliament, because there is very little of interest to inform you of to justify putting you to the inconvenience of coming together. I may say, by way of explanation, how we stand at the present moment—that this business was taken over as far back as June 14th from the original owners, and in due time transferred to the company, as you are aware. The mines, when first taken over, were found to be of considerable promise. They had given proof of that in the past, but they had not been worked according to modern scientific and economical principles. The original native owner who possessed them was in pecuniary difficulties. He had not sufficient capital, and when they passed into our hands we found that the whole concern had to be re-organised. The re-organisation of a mineral district of that character is a work of labour and time. It is not a single mine or two that you possess, but a property which embraces a large area of ground on which there are many mines. Although they are proved to be of very great value, and although the lodes run into the others that have been less worked, or not worked at all, yet they must be considered to constitute our reserves for the future. We found that many of the shafts and galleries were of imperfect construction, and that it was absolutely necessary to clear out the débris on these various old workings, to bring them to the surface, to repair and timber the shafts, to drive new tunnels and new levels, whilst the appliances that were to be sent from this country for a proper scientific treatment of this great mineral district were on their way. The staff had to be organised, and that was not done without difficulty, because there was a scarcity of competent men to manage such a concern, but that has been overcome now, and they have been hard at work preparing to deal with these mines on a proper scale.

MACHINERY EXPECTED TO BE AT WORK IN TWO MONTHS.

The machinery is all now on its way, and some of it has already arrived. I hope that in a couple of months more it will be erected. Preparations have been made for laying foundations for the steam engine, and for things of that kind, and I hope in a couple of months the hoisting and smelting machinery will be in its place. Until that is the case we cannot arrive at a prediction of the quantities we anticipate, and to which we look for very favourable results. So far I may mention that we have—out of what has been collected from this débris and what little has been taken out of the proceeds—brought 4,300 tons of ore to the surface to be treated up to the 20th of this month, and about 230 tons of regulus have been produced. The produce has been sold locally to the extent of about 5,000*l*. (Hear, hear.) I think that embraces the total of what has been done outside preliminary work, which, of course, is most important. We hope very shortly to be able to arrive at something near the output that the prospectus held forth, but at this moment they are taking out about 800 tons of ore monthly and producing about 200 tons of regulus monthly. (Hear, hear.) That is no criterion of what we expect to have in about six months, so that the next time we meet you we expect to give you a favourable report along with the schedule of results. These results as to quantity we have not the slightest doubt of. Since the property came into your possession it has been seen and examined by various experts, besides our own officers, and they are unanimous in speaking of it as

"A VERY STRONG MINERAL DISTRICT."

That is one of the expressions they use, because the strength of the lodes and their continuity is such that they assure a positive future. It is not a thing doubtful in any way—there is the ore. There will be in a couple of months the appliances for raising and treating this ore, and the only thing that is left for us to consider is the probable market. Now, unfortunately, that has varied very much since the time this company was formed. It is familiar to you all, and I need say very little about it, but, if you recollect, the possible results of this company were shown to be various, according to the prices of bar copper, and those prices showed that with copper at 70*l*., 60*l*., 50*l*. and 40*l*. there would be left a margin for dividend. Now it has dropped down to 40*l*., but it is impossible to suppose that it can continue at that price; because there are very few mines indeed that can afford to sell copper at 40*l*. If it were continued to any length of time mines in all quarters would have to shut up, leaving only the very great mines of Lake Superior, and Spain, and the Cape that could produce copper at a lower rate than their smaller neighbours. We stated, and believed it was perfectly correct, that we anticipated the cost of our copper would be about 36*l*. per ton (bar copper) in this market, and that being so, you know the result. You know that until it falls below that price there will always be some margin. I should be glad to hear the observations of the new shareholders.

Mr. Jenkins (chairman of Mount Morgan Extended Mine): Do we compare favourably with other companies, and with the producers of Chili bars generally—in other words, can Chili bars be produced at a cheaper rate by any other mine than ours?

The Chairman: I do not think so. We have an exceptionally good set of mines, and the percentage of copper is far above what is worked in many of these Chilian mines.

Mr. Jenkins: I am only asking the question generally. Fuel must doubtless be an important item.

The Chairman: Fuel is certainly an important item.

Mr. Jenkins: Have you taken that into consideration that it has advanced very rapidly?

The Chairman: We have done so most carefully in our estimate.

PERTINENT QUESTIONS.

Mr. Stobart: In the prospectus you state that the output at that time was 1,500 tons of ore per month; now it is only 800. What is the explanation of the discrepancy between these two statements. Further on you tell us that "the mines are taken over from the 14th June, 1888," since which time everything has belonged to the company, and you have the working of the mines and reduction works resulting in a satisfactory profit, although the operations have been carried on at great disadvantage." Have we been making a profit since the 14th of June? and if so, as this is the end of March (nine months) I am surprised you have not told us what has become of those profits. You tell us that the mine is making a profit, and I ask you

WHERE IS THE PROFIT?

What is the amount? You say that our copper can be delivered at 36*l*. per ton, and I should like to ask if you are still of the same opinion?

The Chairman: I have said so. With respect to the profits, I prefaced my remarks by saying that we have no accounts, and it is impossible for us to concoct accounts without the material. Any money that has been taken for sales of copper including profits has been used up in the preparatory works. The reason there is not at present 1,500 tons of ore being raised is that various shafts and tunnels have had to be stopped to be cleaned out for the purpose of repair, and for hoisting appliances to be got in. It was necessary to clear the mines of water and rubbish, and while these preparatory operations are going on, it cannot be expected that the former output of these mines can be attained. As soon as we are in a position to work, then will be the time to find fault that the quantity of output is not what we anticipated.

A GOING CONCERN OR NOT A GOING CONCERN.

Mr. Stobart: Why did you take over these mines if they are full of rubbish? Evidently from what you say the mines were not in that condition which authorised you to bring them before the public.

The Chairman: I have explained that these mines were taken over from a native proprietor who had not funds to clear them and keep them going, or to buy the necessary machinery for working them. If you buy an old mine it is never handed over to you like a clean and newly-painted house. You have to take it as you find it, and it is only afterwards you get recouperated. Shareholders must have a little patience. This is not like a discount or trust company that enters at once into business. There is a great deal of hard work to be done, to which the directors are giving their best attention, and until that is done you cannot anticipate the results that we hope to be able to show you at the proper time.

Mr. Stobart: I understood we were buying a going concern, and I am now disappointed to find that we have done nothing of the sort.

Lieut.-Col. Walker called attention to a paragraph in the prospectus which foreshadowed the necessity of a good deal of repairing having to be done, though he confessed he never read the prospectus until he came to this meeting. (Laughter.)

SPECIAL MEETING.

The meeting was then made special for the purpose of passing the following resolution:—

"That article 137 of the articles of association of the company be, and is hereby altered, by substituting therein for the words 'one calendar month' the words 'two calendar months.'"

The Chairman said that this was one of the requirements of the Stock Exchange, which must be complied with if they were to get a quotation. It was of no importance. The article referred to calls, but as this company's shares were fully-paid, it did not apply to it.

Mr. Jenkins: Is the capital fully-paid?

The Chairman: With the exception of 330*l*. of arrears due to exceptional causes, the whole of 200,000*l*. has been paid up. (Hear, hear.)

Mr. Read (director) seconded the motion, which was carried.

The Chairman said that one of the works they had to do was to make a new road from the mines to the departmental capital, which had been a very heavy piece of work, but had been satisfactorily accomplished. The railway from thence to the port was in course of construction, though it should be understood that the company was making the road, but not the railway.

The proceedings then closed.

NORTH AUSTRALIAN MINING CO. LIMITED.

DISAPPOINTING REPORTS FROM THE MINE—SHAREHOLDERS UNEASY—AN EXPERT SENT TO REPORT UPON THE PROPERTY.

The ordinary general meeting of the shareholders of this company was held at Winchester House, Old Broad Street, E.C., on Thursday, under the presidency of Joseph Todhunter, Esq.

Mr. J. W. Jefferies (secretary) read the notice convening the meeting, and the report was taken as read.

THE CHAIRMAN REGRETS THE POSITION.

The Chairman, in moving the adoption of the report, said he regretted very much that the development had not been more rapid, and that they were not able now to report that satisfactory results had been obtained from the operations at the mine. The reports from the manager (Cap Trezise) up to the middle of November were most favourable, but since then they had been less hopeful—in fact somewhat discouraging. The directors here, in common with the Australian board were at a loss to understand this change of opinion on the part of the manager. They had with Capt. Trezise the highest testimonials from Cornwall, and he went out to undertake the management of the mine, arriving there on 23rd July with five English miners, whom he had selected. Before leaving he strongly recommended that a 10-stamp battery should be sent out, and after consulting the Australian Board, the battery was ordered and shipped, and it arrived in due course.

LOCAL DIRECTORS' REPORT UPON THE PROPERTY.

In the meantime, the Hon. J. C. F. Johnson, one of the Australian directors, visited the property, spent two days there, and furnished a report in which he said that they possessed a very valuable mineral property of large extent, which, lying as it did in one of the centres of the metalliferous areas, made the probability of success very good. He also inspected the copper lode in Block 18, but saw nothing except surface indications. There appeared to be a large outcrop; but it was merely scratched, and much could not be said about it. Since then, they had met with water, and were unable further to develop the lode. Mr. Bakewell, another of the Australian directors, had also visited the property, and the chairman read several extracts from this gentleman's report. It was not intended that the machinery should be erected until the lode was cut on Block 63, but Capt. Trezise had ordered it up on his own responsibility, had erected it on Block 239—naturally leading them to suppose that he could produce sufficient ore there to make the battery available. He also ordered three steam engines, a quantity of wire rope, steel rails for tramways, &c., which showed undoubtedly that at that time he was convinced that he had in view a sufficient quantity of ore for working and treatment. The board were therefore justified in supposing that they were about to have some results.

NO PERMANENT PAYING LODE YET DISCOVERED.

Shortly after that, Capt. Trezise reported that he had not yet found any permanent paying lode on the property; at the same time stating that it was hardly to be expected that he would strike paying lodes at so shallow a depth. Immediately the discouraging reports began to arrive, the directors wired to the Australian board to ask their opinion, and it was resolved to send an independent expert (Capt. Warren) to confer with Capt. Trezise, and to report upon the property. That report would be received in the course of a week or two, and it would be at once communicated to the shareholders. Meantime Capt. Trezise had been instructed to exercise the strictest economy.

Mr. K. H. James (director) seconded the motion.

AN IMPORTANT QUESTION.

A Shareholder asked how long the funds now in hand would last.

The Chairman said that they had in hand here and in Australia about 15,000*l*., and the rate of expenditure in the wages at the mine had varied from 600*l*. to 750*l*. per month, but that would be reduced. He expected the future expenditure would not exceed 500*l*. a month. That estimate, however, did not include explosives, tools, &c.

REPORTS IN THE MINING PAPERS.

A Shareholder suggested that the reports from the mine should be published regularly in the mining papers.

The Chairman said they had not been published up to the present time, because the property was not sufficiently developed. When they had any production to show and progress to report it would be published from time to time in the mining journals.

Mr. C. A. Bleckley expressed his thorough confidence in the board, who, he felt sure, would not lead them on with vain hopes. He thought they had fairly put before them the worst, believing that it might be better. (Hear, hear.)

The motion was carried unanimously, and the retiring directors and auditors having been elected, the proceedings terminated with a vote of thanks to the chairman.

MOUNT ALBION SILVER MINING AND SMELTING CO.

STOCK EXCHANGE QUOTATION REFUSED—STOCKS AND SALES

The third ordinary general meeting of this company was held at Winchester House, Old Broad Street, E.C., on Thursday, the 21st inst.—Mr. G. Sichel in the chair.

The Secretary (Mr. T. E. Smith) read the notice convening the meeting.

FACTS AND OPINIONS.

The Chairman: It is such a very short time, gentlemen, since we had the pleasure of meeting you that there is really every little to say. We have circulated, since we last met you, the report of Mr. D. H. Bayldon upon the property to all the shareholders, and I trust that those who have studied it will feel satisfied with the stake he holds in the company. He simply speaks of what he has seen, and of what he is able to judge of, and it has impressed everybody as an honest and truthful report, and I hope you are satisfied at being partners in the concern. We have also since circulated our balance-sheet, which I should like to supplement by a few words. That balance-sheet extends over two months' working of the company, and during the further two months we have sent out 317 tons of bullion, being the proceeds of 1,747 tons raised, which 317 tons of bullion we may calculate, taking the average of what we have made upon other shipments, to be equal to about 2,400*l*. of profit; so that we shall have in hand something like 2,000 tons over and beyond the balance shown in the 10 months' balance-sheet. There is one point in the balance-sheet which, I think, requires a few words of explanation—viz., that there is on the credit side in matte and speiss an additional value, as fixed by the directors in London, of 1,800*l*. We only know by telegram that there are 1,500 tons, which is the reply of the managers on the other side in answer to our telegraphic inquiry, of matte earned during the year. We took in the stock at the works as 800 tons, which we then valued at 3,570*l*. Therefore in taking something like double the quantity at half the cost, even allowing of the whole being poor in silver we trust we have been well within the value, and that

we have not over-estimated it. I am pleased to tell you that we are now beginning to work in richer stuff than we have been doing. By the last communication made to you you will find the ore raised has averaged 52 ozs. per ton, while up to that time we have only raised on the average 40 to 42 ozs. Of course that is only one month's working. We cannot say what the future will be. I may tell you we have just landed by the Quetta 40 tons of bullion, giving 50*l*. per ton net, while the average of all our shipments during the past year have only given us 46*l*. 19s. 6d., so that this is a 7½ per cent. better return than any former return. We are also now beginning to ship enriched bullion, that is to say, bullion which, after passing through the furnace, is passed through enriching pots, and it gives them 410 to 420 ozs. a ton, in lieu of 180 to 220, which has been generally shipped. Taking, therefore, this to be 1 ton of the present bullion equal to 2 tons of the old bullion, we should have a saving upon this of 16*l*. a ton in carriage, while the cost will be only 4*l*. a ton extra in the cost of production. That is to say, that we are informed from the other side that the enriching process will cost 2*l*. per ton, so that if you take it at 4*l*. a ton you will get from 10*l*. to 12*l*. a ton more profit on the bullion than what we earned last year. Altogether we may venture to say that the outlook is favourable, the more so as Mr. George Young, who is now manager at the works, and who originally started the mine and the plant, wires us that things are improving there.

THE FUTURE.

We take this to mean not only that the bullion is improving, but also that the turn out of the mine is improviug. At any rate we have every reason to believe we are going to have another favourable 12 months, and we think when the new smelter is put up—which has already arrived upon the ground—at the end of this year that we shall be able to put a more favourable balance sheet before you, more favourable in the way of bigger returns and bigger profits; because as we increase our capacities for produciug cheaply, our profit ought to increase. We therefore look forward with hope and satisfaction to the next 12 months, and we trust that we shall then meet you with a satisfactory return. I have very little to add to this beyond to mention that in December we raised 1,082 tons of ore, giving us 197 tons of bullion. To the 24th January we raised 890 tons; and to the 21st February, 570 tons additional; that is 1,460 tons so far as we know in the present year, and I trust we may look upon this as giving 10*l*. a ton more profit. However, this is only vatacination and prophecy, which is never a very lucrative business. But we think the figures will come true. Having said all I have to say, I will now move that the report and the statement of accounts be received and adopted.

Mr. W. Blyth seconded the motion, which was carried unanimously.

Mr. Weldon then proposed that Messrs. Deloitte, Dever, Griffiths and Co. be re-appointed auditors at the remuneration of 25 guineas.

Mr. C. Hankey seconded the motion, which was agreed to.

NO QUOTATION.

The Chairman: Now, gentlemen, I have one remark to make which is not so pleasant as those I have been making. We told you at the last meeting that we should go the Stock Exchange Committee for a quotation. I regret to say that on the ground that the original subscription by the vendors was out of proportion to the rules and regulations of the Stock Exchange that therefore the Stock Exchange will for the present not give us an official quotation. It will be necessary that the shares in the company should go into more hands, and should be more evenly distributed, and that the proportion of the vendors' shares should be decreased. I am very pleased to say that the number of transfers which have come in during the last month beat in amount the number of transfers that have come in since the formation of the company. They are gradually coming into more hands. There have been large purchases of the shares made—from 500 to 1,000 and 2,000—by parties abroad in Paris and in Germany; and I trust that in five or six months the distribution of shares will be such that we can go to the Stock Exchange again. There is nothing in the inception of the company, or in the articles of association, or anything in connection with the company, that has caused the quotations to be declined. It is a hard and fast rule that the proportion of vendors' shares must never exceed by one-third the total amount of the capital. Unfortunately, the vendors, having great faith in the company, originally took half the stock for themselves, receiving a certain amount in cash, and it is this large amount which they took in the company, and which they hold to this day, which is the only obstacle to the official quotation. I have no doubt when the value of the shares advance as it will, but on their own merits, the vendors will be tempted to sell a portion of the shares, and they will then be equalised. Not having a quotation does not interfere with dealings in the shares of the company, because there have been very large and favourable dealings within the last month or six weeks.

COUNTING CHICKENS.

Dr. Mansell Jones: Might I ask, taking into consideration the extent of our property, and the recent very improved condition, Is it in contemplation to form sub-compauies in connection with this company. Provided we had more capital to work, what I consider the very extensive and very valuable property of the company, we could reduce our working expenses considerably. I think that is a very important point, which I hope the directors will thresh out in the near futnre. We have, undoubtedly, a splendid property. Mr. Bayldon's report tells you the ore is practically unlimited; and I consider if we formed one or two sub-companies in connection with this one, it would enable us to do justice to the extent of property that we possess.

The Chairman: I reply to the hon. proprietor:—I think it would be well to say that at present the board has no idea of the sort in contemplation, nor do they think the time has at all arrived for it. I think it is as well to walk before you run. We are now in the midst of putting up new machinery, which will give considerable impetus to our work and to our returns, and I trust that when we have increased returns, and show what we can do with iucreased machinery, it will become a question whether we should put more money into machinery, obtaining it on such terms as we should think suitable, or whether we should follow the advice of trying to sell a portion of our property. At the same time we think any suggestions of this sort should come from the other side. The gentlemen on the other side have a much larger interest than anyone here. They have as much interest as the whole of the London proprietary together, and such a suggestion will come in better form from them than from this side. When it is suggested we shall certainly follow it up, but until that time comes we should leave it to them to say what should be done. Our returns are favourable this year, and if we are assured there is enough ore to keep another smelter going, we should prefer to put it up, and give you larger returns. Of course that does not at all prevent us following the spirit of the suggestion made by Dr. Jones.

Dr. M. Jones: I should like to ask if you consider the present water supply is sufficient for the increased smelting power which was recently added to the mine?

The Chairman: We know nothing at present of the increase of the water supply. We only know we have strongly impressed upon Messrs. Moffatt during the month of December, when we were stopped for water, to increase their reservoirs, and their idea was to put reservoirs further up the hill so as to catch the water higher up, and we have no doubt, as they are fully alive to the imperative necessity of being prepared against drought, and of having water-power for the machinery, that they will have taken every necessary step to provide for it.

A LITTLE TOO SANGUINE.

Dr. Jones: I have much pleasure in proposing a vote of thanks to our worthy chairman and his co-directors. I think, with the addition of fresh blood on the board, we have a brilliant future in store. At any rate, things look very promising, and I trust that the forecast of the chairman will be fully carried out. I have much pleasure in proposing a vote of thanks to our chairman and the directors.

Mr. Clarke: I have much pleasure in seconding that.

The resolution was agreed to.

The Chairman: I beg to return you thanks on behalf of myself and my co-directors. We shall always try to do our duty, and we shall always try to speak the truth, and we shall always try to keep you well advised in what is going on, and we shall never try to keep anything from you, whether it is favourable or unfavourable, and I trust we shall always merit your confidence and support.

The proceedings then terminated.

DOLCOATH.

DIVIDEND OF £1 5s. PER SHARE.

A sixteen-weekly meeting of the adventurers in Dolcoath was held on the mine on Monday, under the presidency of the Rev. W. W. Butlin. The occasion was made more than usually interesting by the fact that Capt. Josiah Thomas has just attained his majority as manager of the mine. The accounts showed that the labour costs for the three months had been 12,170*l*. 15s. 1d.; tribute, 1,535*l*. 10s. 3d.; merchants' bills, 5,069*l*. 14s. 2d.; Camborne parish rates, 271*l*. 1s. 7d.; and other amounts, making the total debits, 19,212*l*. 8s. 4d. The total credits were 25,851*l*. 19s. 11d., leaviug a profit of 6,639*l*. 11s. 7d.

The Chairman, after reading the report of the committee, which recommended a dividend of 25s. per share, moved the adoption of the accounts and report. This, after paying income tax, 876*l*. 7s. 6d., would leave a balance to be carried forward of 5,266*l*. 19s. 10d. to the next account.

Mr. Frank Harvey seconded, and the resolution was carried.

MINE IMPROVING.

Capt. Josiah Thomas, commenting on the report, said: You will see that the returns of tin this time are about 16 tons more than last time, but that is not a matter to boast much about. The fact is that our average raisings are something like 7 tons a day, or over 40 tons a week, so that if we have good speed or poor speed for two or three days, it will make an amount of 10 or 12, or 15 tons difference. The production of the mine is about the same, and we cannot increase the returns much until we have better drawing facilities. We are doing all we can, as I told you last time, working the whims all the time from early Monday morning to late on Saturday night. If all goes on well we can return from 40 to 50 tons a week. Any little hindrances throw us back a few tons. The price per ton this time is 2*l*. 8s. less than last, when the average was 56*l*. 17s. 6d., as against 54*l*. 9s. 5d. now. That makes a difference of 1,215*l*. in our returns, which is equal to more than 5s. dividend. The report on the whole is, I think, a very good one. The lode in the shaft is somewhat improving. The south lode is looking rather better than it has done for some time past. At the 314 we have for several months been opening a lode worth from 30*l*. to 50*l*. per fm., and the present end is still worth 35*l*. We have a fine lode in the winze at the 295, and also in the rise over the 314; so we shall soon have a piece of ground there ready for stoping, 20 fms. high, far above the average value, and we shall be able to bring most of that stuff back to Harriett's when we put in that little water engine I told you about last time. The fact is, we have always had an eye to the future. We have never worked this mine—and I never will until I am obliged—as a mere market mine.

WE HAVE HAD AN EYE TO THE FUTURE,

and have laid open ground in order to take it away as cheaply as possible. We are not now breaking a single ounce of stuff but what can be taken away to the best advantage. I am thankful to the adventurers for the confidence reposed in me, and as long as I am with you I will try to do as well for you as I would if the mine were all my own. (Cheers.)

ATTAINING HIS MAJORITY.

Mr. Heard said Capt. Josiah Thomas had told them that he had that day attained his majority in connection with the management of Dolcoath—(applause)—and he thought they ought to congratulate him on the event. (Applause.) He had always stuck to the ship, and he hoped that he might be spared to retain his position for many years to come. (Cheers.) He moved "That this meeting of Dolcoath Mine adventurers desires to offer Capt. Josiah Thomas its sincere and hearty congratulations on attaining his majority as the manager of this important mine, trustiug that he may be spared for years to successfully direct it as he has done in the past." (Applause.)

Mr. Frank Harvey seconded. It was said that a good mine made a good manager, and in this case they might say that a good manager made a good mine. They looked up to him as the father of mining in Cornwall, and he hoped Capt. Josiah Thomas might not only be with them another 21 years, but another 21 years beyond that. (Cheers.)

Mr. John Branwell supported the resolution, which was unanimously carried.

In reply, Capt. Josiah Thomas thanked them for the confidence they had reposed in him. Without it it would have been impossible for him to have worked the mine so comfortably as he had done.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

INDIAN GOLD MINING.

To the Editor of the Mining World and Engineering Record.

Sir,—The editorial remark in last week's number, that "it is currently reported on the market that the Mysore return for next month will beat previous records," so entirely coincides with the views I have expressed in your paper, that I venture to put down my reasons for my belief.

Early in December last Capt. Plummer, who has always been better than his word rather than otherwise, writes:—"Large reserves of ore are now being opened out, and I think in from six weeks to two months more we shall return to a greatly increased output." The Mysore crushings for both January and February confirm these remarks by results; but according to Plummer's letter advices of 19th February, the two batteries of 60 stamps had not evidently been crushing during the whole of the month. They seem to have been at work during part of February; but March will offer a fair chance of showing what they can do.

On February 19th Capt. Plummer writes:—"The mine generally is looking very well, and we are still opening out *large reserves of ore.*" (The italics, I should say, are mine.)

Another point that leads me to think that the directors of the Mysore Mine will be anxious to show this month what Indian gold mining really amounts to is the following: Several of the Mysore directors are also directors of the "Goldfields of Mysore" Company, and both concerns are managed by Messrs. John Taylor and Sons. At the meeting of the Goldfields of Mysore on December 20th last Sir Chas. Tennant spoke as follows:—"I think we shall be able to sell a block within the next two or three months, which will not only give you a handsome dividend, but will also add considerably to the capital account."

The three months indicated would expire on March 20th, but of course it would not be fair to bind the Goldfields Company down to an exact date in such a matter. However, is it unfair to assume that the directors of the Goldfields of Mysore are waiting till Capt. Plummer shows, by the March returns from the Mysore Company, which will be published early in April, what a vast field of gold mining is being developed, under the most trustworthy, respectable management in the Colar district?

In Capt. Plummer's latest letter advices, dated 6th March, he says with reference to the Mysore Mine, "The rock-drills continue to give satisfaction perfectly." Taking this remark in conjunction with the others that I have given above, everything seems to favour the idea that the March returns will be particularly good as compared with those of previous months; though now that there are large reserves of ore within reach, the production of the mine will probably proceed with all the vigour for which Capt. Plummer has thought well to make us wait by his temporarily diminished output last year.—I am, &c.,

Scotus.

London, March 26th, 1889.

THE NEW GUSTON CO., LIMITED.

26th March.—In September last the directors, having been impressed by Mr. Schwarz of the great prospective value to your company of the two adjoining claims, the Little Annie and Smuggler, secured a twelve months' working option upon these properties on very reasonable terms, and since that time have been developing the Little Annie by a cross-cut from the Guston 3rd level to connect with the Annie shaft. The developments, so far, are considered most promising, and in the event of valuable ore bodies being discovered in either of these claims before September next, the Guston Company is in a position to secure them for the sum of about 17,000*l.*, and thus nearly treble the present area of the Guston property; at the same time the Anuie shaft (now over 200 ft. deep) will become available as a second working and ventilating shaft, and the general working facilities of your property will be much improved. Mr, Schwarz, in reply to enquiries regarding the ore body existing in the Little Annie, writes as follows:—"The ore occurrence is strong and well defined, with good body of quartz, showing a strong chimney in the adit level of Little Annie. It is low grade, as all these Red Mountain chimneys have been at surface, but shows considerable copper—a good indication." Guston Mine: Shareholders should carefully distinguish between the high grade argeutiferous copper ore upon which we are and have been working in the Guston Mine since August 12th, and the low grade ore bodies which are also being worked in other parts of the mine. Mr. Schwarz writes: Ore body in No. 1 level south, referred to in circular of 5th February last, promised well as another ore chimney of value in depth, and, he thinks, it is probably identical with the ore body, from which we are now shipping $45 to $60 ore in No. 4 level south, which is a distinct and separate body of ore from the high grade shoot we have been working upon since August last, and from which the high grade ore has been and is being shipped. No. 5 level—Drift to intersect ore body in No. 5 level: Mr. Schwarz reports as follows:—"Whilst we are undoubtedly close to our ore in No. 5, I cannot record it as opened as yet." From a cable lately received, Mr. Schwarz reports that he had 50 tons of 50-oz. ore aud 15 tons of first-class argentiferous copper ore, estimated at 300 ozs. of silver per ton, ready for shipment. The directors would draw the attention of the shareholders to the importance of the large body of 50-oz. ore lately discovered, which can be shipped and smelted to leave a profit of $30 per ton net. There being a considerable quantity of this ore, which is shipped without sorting, it will go a long way towards paying the working expeuses of the mine, thus leaving the high-grade ore available for dividends.—B. McNeill, Secretary.

CUMBERLAND ETHERIDGE GOLDFIELD.

IMPORTANT LETTER AND TELEGRAM.

Mr. W. J. de Müller, M.E., F.R.G.S., F.G.S., was the engineer appointed by the directors to examine and report upon Cumberland No. 1 North Gold Mining Company, and in a private letter written by him, dated January 27th, from the Etheridge Goldfield, he writes as follows:—The Cumberland is 18 miles from Georgetown, and we rode out to it as soon as possible. I have been very busy these last few days getting a thorough knowledge of the Cumberland No. 1 North Mine, and there is no doubt in my mind about its being a valuable property. The plan issued with the prospectus gives an accurate idea of the mine and its surrouudings, and I have been able to verify the details of it entirely to my satisfaction. As for the rich shoot there is no manner of doubt about its striking into our ground, and the Cumberland people have stoped it out to the very boundary, which has been reached on our side also by meaus of a level. In all the workings about the principal underlie shaft the rich ore is found, and I can see no reason why it should not continue. Whether it will strike exactly in the direction shown on the plan, and whether it will be of the same richness right through nobody can tell, but there is much probability of its doing so, and of course this must, in the first instance, enhance the value of the mine. But it is not at all necessary to rely entirely on that one shoot, as I see no reason why other equally rich or richer portions should not be struck in depth, where we have to deal with a powerful, healthy, and well-defined lode. In the Cumberland they have recently struck another rich shoot of stone at a lower level, tending apparently in the same direction as the higher one, and I do not see why such a state of affairs should not be often repeated. We are living in the manager's house next to the mill, of which I believe you have a photograph. The mill is not bad, and will be sufficient for some time to come. The supply of water is grand, and the dam as good a one as I have seen anywhere. My report on the property will be a favourable one, and I shall certainly advise the directors to take it up. The Cumberland is difficult to get at, and carriage food and other uecessaries are very expensive, and these circumstances make labour very expensive, and handicap mining considerably at present. But all that will be changed from one day to another, as soon as the railway is opened to Georgetown. I hope to crush some 20 tons of ore this week at the Durham Battery, and then I shall be ready for my return journey.

IMPORTANT TELEGRAM.

The telegram received from Mr. de Müller is dated the 13th February last, and is to the following effect:—"I have examined the mine and can recommend it. The representations of the vendors are substantially correct. Crushed 20 tons; obtained 87 ozs. of gold. Will give particulars in letter."

The letter preceding was written before the despatch of this telegram, and the 20 tons therein stated to have produced 87 ozs. were the 20 tons which in the letter he indicated he was on the point of getting crushed at the battery of the Durham and Lord Byron Gold Company. It is therefore the result of a recent crushing conducted under his own supervision. The directors of the Cumberland No. 1 north, consider Mr. de Müller's news to be extremely satisfactory as showing that the prospectus was an accurate description of the property, and also that the plan which accompanied it was substantially accurate. There can be no doubt from what Mr. de Müller says, that the Cumberland Company had worked through their original shoot of ore, and that the discoveries which have recently been made on their property are not continuations of the original rich shoot, but are new departures altogether, although it may be quite possible the new discovery is an important one.

Holloway's Ointment.—Sores, Wounds, Ulcerations, and other diseases affecting the skin, are capable of speedy amendment by this cooling and healing Ointment, which has called forth the loudest praise from persons who had suffered for years from bad legs, bad breasts, piles, abscesses, and chronic ulcers, after every hope of cure had long passed away. None but those who have experienced the soothing effect of this Ointment can form an idea of the comfort it bestows by restraining inflammation and allaying pain. Whenever Holloway's Ointment has been once used it has established its own worth, and has again been eagerly sought for as the easiest and safest remedy for all such complaints. In neuralgia, rheumatism and gout the same application, properly used, gives wonderful relief.

In answer to numerous enquiries, the Directors beg to announce that as far as practicable a thoroughly impartial allotment will be made. 29th March, 1889.

TO THE BRITISH WATER-GAS SYNDICATE, LIMITED.

Gentlemen,—I have carefully examined the process of Water-Gas as carried on at the works of the Leeds Forge Company, Limited, and herewith enclose my Report thereon. I have, from the experiments made in my behalf, come to the conclusion that Water-Gas has a great future for manufacturing, heating, and lighting purposes, and that it can be produced at a cost, at present prices, of about 4d. per 1,000 cubic feet. It must, under many conditions, prove a formidable rival to ordinary Coal-Gas.

Victoria Street, Westminster, March 28th, 1889. Yours faithfully, DOUGLAS FOX.

The LISTS will OPEN on MONDAY, April 1st, 1889, at 10 a.m., and CLOSE for Town and Country on or before 4 p.m. on the Same Day.

An Order to Inspect the Plant in Work at the Leeds Forge Company may be had on Application to the Secretary.

WATER-GAS PROVED A COMMERCIAL SUCCESS. (See Report enclosed with Prospectus.)

A SAVING OF £10,000 PER ANNUM IN ONE WORKS ALONE.

THE BRITISH WATER-GAS SYNDICATE, LIMITED.

INCORPORATED UNDER THE COMPANIES ACTS, 1862 TO 1887.

CAPITAL - £300,000, in 60,000 Shares of £5 each,

Payable 10s. on Application; £1 10s. on Allotment; £1 in one month after Allotment; and the balance two months after Allotment.

Directors.

SAMSON FOX, Esq., J.P., Mem. Inst. C.E., &c., Managing Director New Leeds Forge Company, Limited, Leeds, Chairman.
DAVID GREIG, Esq., J.P., C.E. (of John Fowler and Co.), Steam Plough Works, Leeds.
R. S. SCOTT, Esq., J.P. (of Messrs. Scott and Co., Greenock), Director of the New Leeds Forge Company, Limited.
G. WOODYATT HASTINGS, Esq., M.P., J.P., Director of the Salt Union, Limited, and the New Leeds Forge Company, Limited.

ABRIDGED PROSPECTUS.

The object of this Syndicate is to secure and work the well-known Water-Gas Patents for improvements in the manufacture of gas for illuminating, heating, welding, glass smelting, and all metallurgical purpose, lately owned by the Europäischen Wasser-Gas Actien Gesellschaft in Essen, for the United Kingdom of Great Britain and Ireland, and numbered 2,249, dated 9th June, 1887; 173, dated 14th January, 1878; 5,310, dated 29th December, 1879; 4,907, dated 9th November, 1881; 5,965, dated 14th December, 1882; 8,759, dated 9th June, 1884; 15,706, dated 21st December, 1885; 15,707, dated also December 21st, 1885; and Fahnejelm Magnesia Comb Patents, numbered 5,646, and dated 5th day of December, 1883; and No. 7,573, dated 22nd June, 1885, which Mr. Samson Fox has purchased. The Company have also secured the business and patent rights. Nos. 3,949, dated 12th October, 1876; 1,699, dated 8th April, 1882; 4,697, dated 3rd October, 1882; 5,980, 15th May, 1885; 3,583, 5th March, 1888; 6,514, 2nd May, 1888; together with all foreign rights relating to the construction of gas producers of Mr. A. Wilson, the well-known gas furnace engineer, of Stafford, together with his works, plant, machinery, patents, and everything as a going concern, and also further, the rights, patents, &c., of Mr. Bernard Dawson, C.E., 110, Cannon Street London, E.C., in connection with such inventions, which will place this Company in a position not only to command the market for water-gas plant, but will also enable them to supply the most improved types of generator gas plant and furnace gas plant.

Hitherto all attempts in this country to manufacture and apply water-gas on a commercial scale for heating, smelting, and illuminating purposes by simple and economical means, and without the use of skilled labour, have failed, but, after application and use upon a large scale, these inventions have proved beyond all doubt that pure water-gas, when used as an illuminating medium in combination with the Fahnejelm Magnesia Comb, the English patent rights of which are secured to this Company, gives a light in every way superior to coal-gas, and yet having all its convenience of application, and rivalling in brilliancy the electric light, can be manufactured at 4d. per 1,000 cubic feet, after allowing for cost of production, wages, wear and tear of plant, and all contingencies.

The greater heating power of this gas, as compared with any produced by present known means upon a commercial scale, gives a means of application to the industries of steel manufacture, &c., and is of the greatest possible value in its power to produce economical results over the present systems, and it is also for the purpose of developing and extending these various uses that this Syndicate is formed. The European patents have been secured in influential hands, and their application has been attended with the greatest success. The first plant in this country has been erected by Mr. Samson Fox, M.E., M. Inst. C.E., J.P., at the Leeds Forge, and has revolutionised the previous means of working mild steel, the production of steam, and the illumination of the works. Hitherto those works were supplied with ordinary coal-gas by the Leeds Corporation at the cost of 1s. 10d. per thousand cubic feet, which was almost the lowest price charged by any gas company in the United Kingdom, yet by the adoption of water-gas the power of rapid production of finished material is greatly increased, and, taking all advantages into consideration, a saving has been effected of over £10,000 in the first year of its use.

Water-gas has already been extensively adopted in many of the large manufacturing towns in Germany with eminently satisfactory results. Among others may be cited—

Essen.—At the works of Herrn Schulz Knaudt and Company, for welding and lighting private houses and street lamps, and gas engine driving, calcining magnesia, &c. Hoerde.—The Hoerde Mines and Ironworks Company, for open-hearth and crucible steel melting, re-heating furnaces, lighting and heating. Witkowitz, Austria.—Baron Rothschild's Iron and Steel Works, for open-hearth steel melting, lighting and heating, and for gas engine driving; the whole of the town is lighted with water-gas, including the church, streets, and hotels. Gandersdorf, near Vienna.—For lighting, heating, and brazing. Furstenwalde, at the works of Herr Julius Pintsch, for welding, buoys, &c., brazing, lighting, and heating. Gelnhausen.—For glass-blowing, for electric incandescent lamps, where it has been adopted principally on account of the great purity and cleanness of the flame, a necessity where great clearness of material is required. Konigszelt, for lighting and heating a large railway station and switch lamps—700 flames. Frankfurt.—The Frankfurt Metal Company, for smelting and refining precious metals. Warstein, for illuminating a large stalactite and stalagmite cavern belong to the town of Warstein, where water-gas has been preferred to coal gas and electric lighting. Hameln a/d Weser, at Dr. Lohman's Chemical Works. Winterthur, in Switzerland, at the works of Gebrudsr Sulzer, for welding, lighting, and heating purposes. And in other important manufacturing towns in France, Italy, and Russia.

In England it has been in use not only at the works of the Leeds Forge Company, but for many months at the works of Mr. Alfred Wilson at Stafford, where it is exclusively employed in his private house for lighting, heating, and cooking, and for any purpose to which solid fuel and coal gas has hitherto been applied.

Applications have already been received from a large number of the most important manufacturers in this country, who are anxious to adopt water-gas in their manufactories, not only for illuminating purposes, but also for motive power, smelting and metallurgical purposes, and arrangements are in progress to grant licenses. And an agreement for a license to be granted to the New Leeds Forge Company (Limited), for the purposes and on the terms mentioned or referred to in the agreement between S. Fox and A. C. Dockerill, has already been entered into.

It is the intention of the Directors, after supplying licences to some of the leading manufacturers and coal consumers, to confine themselves as far as possible to the formation of subsidiary Companies, and the Directors have already entered into negotiation with important manufacturers who are large consumers of fuel to purchase the monopoly from this Company for their own district, and it is believed that this will prove a most important source of revenue to this Company.

Mr. A. Wilson has for many years been recognised as one of the first experts of furnace gas in this country, having been engaged in the business for upwards of 16 years, and the value of his inventions and knowledge may be judged from the fact that his generators have already been adopted by most of the leading railways, iron and steel manufacturers, copper and brass smelters, glass manufacturers and boilers makers, foundry men, chemical manufacturers, sugar refiners, oil refiners, brewers, paper manufacturers, colliery owners, &c., &c., who have had erected upwards of 1,000 generators.

The services of Mr. A. Wilson, Memb. Inst. Mech. Eng., have been secured as general manager and chief engineer for a term of five years, on terms which are very advantageous to the Company, as his remuneration will depend mainly upon a commission on the profits payable after the shareholders have received a substantial dividend, so that the Company will have the benefit of the whole of his extensive experience and connections. Mr. Bernard Dawson, C.E., of 110, Cannon Street, London, who has also had great experience in the erection of gas plant, has consented to act as London Agent for the Company.

The purchase price of the water-gas patents and all improvements thereof for the United Kingdom, together with the patent rights, works, plant, machinery, and everything as a going concern, now owned by Mr. A. Wilson, and also the patent rights of Mr. Bernard Dawson (all of which patents are subject to the licences already granted, the benefit of which this Company take over, has been fixed at the sum of £217,250, payable as to £57,500 in fully paid shares and £159,750 in cash.

The following agreements have been entered into:—First, an agreement dated 27th day of March, 1889, and made between Alfred Wilson, of the one part, and Samson Fox, of the other part. Second, an agreement dated 27th day of March, 1889, and made between Bernard Dawson, of the one part, and Samson Fox, of the other part; also an agreement dated 27th day of March, 1889, and made between Samson Fox, of the one part, and Alfred Charles Dockerill, as trustees on behalf of the Company, of the other part.

Application will in due course be made to the London Stock Exchange for a quotation of the Company's shares.

If no allotment is made, the deposit paid on application will be returned in full.

Prospectuses and forms of application can be had at the bankers, brokers, solicitors, and at the offices of the Company.

Application for shares may be made upon the form accompanying the prospectus, or by letter addressed to the secretary, briefly stating the number of shares required, and accompanied by a remittance of 10s. per share.

Copies of the memorandum and articles of association may be inspected at the offices of the solicitors of the Syndicate.

THE MINING MARKET.

City, Friday Evening.

INCREASED CRUSHINGS FROM INDIA—BETTER MARKET FOR AUSTRALIAN SHARES—CHEAP FOREIGN SHARES IN FAIR DEMAND—INQUIRY FOR AMERICAN DESCRIPTIONS—COPPER SHARES UNSTEADY—HOME DESCRIPTIONS NEGLECTED.

The crushings from India announced this week are most favourable. The four chief companies, the Mysore, Ooregum, Nundydroog, and Balaghat, show an increase—in other words, exemplify what we have been preaching from the housetops for months past, that these descriptions are assuming the most solid position of any particular class of gold shares now quoted on the Mining market. Prices were not much moved by the telegrams, which, perhaps, came to be known too late, but Mysores this week have been done up to 6⅝. There need be no hurry to realize Indian Shares, for better times are coming for them. A new manager has been appointed to Mysore West.

Queensland shares have been to the fore this week. In our two last issues we have called special attention to Etheridge United, and the public have taken the hint. Buying at 2s. 9d., some of them have been so fortunate as to realise at 5s. The shares close firm to-night at 4s., and the market seems to have settled upon the price of 7s. as the next important rise. This, it anticipates, will take place within the next few days. Without pinning ourselves to market figures we think that the Etheridge barometer points upwards.

Cheap foreign shares were in fair demand, and there has been a good deal of buying of Colon, Tetuan, and other Colombian descriptions and Victorys. It should be remembered that the season is fast approaching when American mines, now suffering from stress of weather, can effectively be worked, in which case there are few concerns, either in America or elsewhere, that seem to promise better results than New Emma, which is well provided with capital and in every other respect. Callao Bis Shares also seem worth looking after; better news comes from Potosi, and as regards Yuruari, we consider Yuruari Shares amongst the cheapest in the market at present prices. The value of these mines has been well proved, and provided, as expected, the next return is good, these shares shonld double in price.

Copper shares have toppled during the week, but close fairly firm. The settlement in Paris passed off satisfactorily, and the dreadful things predicted did not come to pass. The worst is known abont copper now, and it is quite noteworthy how resigned to the situation everybody has become.

Home descriptions have again been neglected, and in truth there is little reason why at present any attention should be paid to them.

Africans.

In the absence of buyers, and with the too preponderating presence of sellers, prices generally are lower. Last week we cautioned the public against holding City and Subnrbans, Ferreiras, Simmer and Jacks, and Salisburys : the first-named have fallen 4*l.* per sharc ; the second and third 2*l.* per share ; and the last 1*l.* per share.

There are many good mines in South Africa unquestionably, but some of the present quotations are simply absurd, from an investment point of view.

The following have fallen :—Edwin Bray, ¼ ; Johannesberg, ⅛ ; Orientals, ⅛ ; Aurora, ¼ ; Bankets, ⅝ ; Bantjes, ⅜ ; Bixley, ⅛ ; Black Reef, ¼ ; Bothas, 3/16 ; Central Lanlaagte, ¼ ; Central Roodeport, ¼ ; City and Surburban, 4*l.* ; Crown Rcef, 1⅜ ; Crœsus, ⅜ ; Dornkop, 3/16 ; De Villiers, 2*l.* ; Durban Roodepoort, ⅞ ; Evelyns, ½ ; Ferreiras, 2*l.* ; Geldenhuis, 5/16 ; Golden Kopje, ⅝ ; Great Britain, 1/16 ; Heriot, ¾ ; Henry Nourse, 1½ ; Jnbilee, 1½ ; Jumpers, 2*l.* ; Kleinfontein, ½ ; Knights, ¼ ; Langlaagtes, 11/16 ; Ditto Block B, ⅛ ; Modderfontein, ¼ ; Morkel, ¼ ; Moss Rose, ¾ ; Nabob, ⅜ ; New Grahamstown, ¼ ; Randfontein, ¼ ; Royals, ½ ; Salisbury, 1*l.* ; Simmer and Jack, 2*l.* ; Spes Bona, ⅝ ; Stanhope, ¼ ; Star, ¼ ; Teutonia, ⅛ ; Van Ryn, ⅜ ; Vogelstruis, ⅝ ; Western Langlaate, ¼ ; Wemmers, 1½ ; and Wolhuters, 1¼.

The following have risen :—French Bobs, ⅛ ; Piggs Peak, ⅛ ; Revolver, ⅛ ; Goldfields of South Africa, ⅛ ; United Langlaagte, ⅜.

Copper.

A considerable volume of business has been transacted during the past week in the above shares, and prices have ruled higher than they close this evening. We repeat our remarks of last week that "prices have now touched the bottom, and an improvement may be looked for." The following have risen :—Cape Copper, Mason and Barry, Namaqua, ⅛ ; and Rio Tinto, 5/16 ; whilst a fall is shown in Quebrada, ¼, and Tocopilla, 6d.

Australians.

The Australian Market has been fairly active this week, and it would seem that the public are at last beginning to grasp the fact that shares can now be purchased at a discount in companies that pay regular dividends, such as Day Dawus and Gympic Great Eastern. Etheridge have had a decided improvement on the week, and after reaching 5s., and thousands of shares changing hands, close firm this evening at 4s., 4s. 6d., and appear a decidedly good purchase at such a low figure. Bonnie Dundee again should be purchased for a rise. A rise has taken place in British Broken Hill of ¼ ; Etheridge United, 1s., and Gympie Golden Crown, ⅛. The following have fallen :—Bonnie Dundee, 1s.; Day Dawn, 6d. ; Mount Britten, 6d., and No. 2 Queen, 1s.

Diamonds.

There has been but little business doing in Diamond shares, although the bulls attempted successfully to force De Beers, until at one time the figure stood at 16⅝, 16¾, but if it be true what we hear from South Africa, the price should be very much lower. We certainly could not advise a purchase of De Beers at anything like the closing price, 16⅛, 16¼.

The following show a fall :—Bultfontein, ⅛ ; De Beers, ¼ ; Griqualand West, ¼ ; New Consolidated, 2s. ; New Jagersfontein, ¾ ; South African (Pullinger), 1s. ; London and Orange Free State Exploration, ¼ ; Loudon and South African, ⅜ ; Read's Drift, ⅜ ; and Burma Ruby, 7/16. The only rise has been in Anglo-African, ⅛.

The following are the closing quotations :—

Anglo-African	5½ —	5¾
Bultfontein, New Shares—	3⅝ —	3⅞
Central Dorsfontein	8 —	10
De Beers Consolidated	16⅛ —	16¼
Gordon Diamond	19/ —	21/
Griqualaud West	6 —	6¼
New Consolidated	21/6 —	22/6
New Jagersfontein	14 —	14½
South African (Pullinger)	15/ —	16/
Spes Bona (Bultfontein)	4/ —	5/
United	2¼ —	2½
United Jagersfontein	16/ —	18/
London and Orange Free State Explor.	4½ —	5
London and Sonth African Exploration	17¼ —	17¾xd & rights
Read's Drift Land Co.	2 —	2¼
Burma Ruby Mines	1⅞ —	2 pm

Indians.

There has been a fairly good business done in Indian shares during the week, and prices have in several cases been higher than they close this evening. The Ooregum and Mysore returns are both of a most satisfactory character, but there seems to be a feeling on the market (which, in our opinion, is most unreasonablo) that larger crushings should have come to hand.

It is a certain fact that Mysores are a far better purchase at the quotations ruling now than when they were changing hands freely at 8*l.* and 9*l.* per share.

A rise is shown in Balaghat (partly and fully-paid) of 6d., and Ooregum Preference 1/16, whilst a fall has taken place in Mysore Reefs of 6d., Nundydroog ¼, and 1s. South-East Mysore.

Foreign.

A rather large business has been done this week in Callao Bis, Don Pedro, Carlisle, Montana, New California, Palmarejo, and Victory, and in several instances an improvement will be noticed by the prices given below. Palmarejo, as we stated in our last issue, were being rigged, and at one time changed hands at 20s., but speedily fell to the present quotation, 16s. 6d. to 17s. 6d. Victorys have had a rise of 1s., and appear to be going higher. New Emma and New California, also at present low prices, should be good purchases.

The following show a rise :—Callao Bis, 9d.; Don Pedro, 1/16 ; El Callao, ¼ ; Garfield, 6d. ; La Trinidad, 2s. ; and Victory, 1s. ; also New Emma and New California have risen. A fall is registered in Flagstaff of 1s. ; New Spitzkop, 1s. ; Ruby, 6d. ; and St. John del Rey, 3d.

The following list shows the principal changes which have taken place :—

	Last Week.		This Week.

LATEST FROM THE MINES.

Indian Mines.

Balaghat-Mysore.—Cable from Mr. A. S. B. Oakley, the company's resident agent :—"March crushing, 148 tons, 342 ozs. gold." The directors have sold the gold produced at the mine during February for 984*l.* 5s. 11d.

Indian Consolidated.—A telegram from the Colar section of the property announces that during the month of March 415 tons of quartz were crushed, which yielded 94 ozs. of gold.

Mysore.—The following telegram, dated 5th April, gives last month's return of gold as follows :—"2,459 tons of quartz produced 3,054 ozs. of gold ; also 195 ozs. obtained from tailings ; together 3,249 ozs." The company have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of February, which realised 11,957*l.* 10s. 7d.

Nundydroog.—The following telegram, dated 5th April, gives last month's return of gold as follows :—" 300 tons of quartz produced 514 ozs. of gold." The company have sold, through Messrs,

Johnson, Matthey and Co., the gold obtained in the month of February, which realised 1,461*l.* 4s. 1d.

Ooregum.—A telegram, dated April 3rd, gives last month's return of gold as follows :—"508 tons of quartz produced 1,132 ozs. of gold." The company has sold the gold obtained in the month of February, which realised 3,483*l.* 12s. 6d.

Colonial Mines.

Anglo-Saxon.—The directors have received advice by wire to the effect that 305 tons of stone have been crushed, yielding 1,200 ozs. of gold. The directors have declared an interim dividend of 2s. per share.

Bucknall's Gold.—The official liquidator of Bucknall's Gold Estate, Limited, Mr. Henry Dever, 4, Lothbury, E.C., under the direction of Mr. Justice Kay, has declared a return of such money paid upon the 1*l.* shares as may be in excess of 10s. per share.

Day Dawn Block and Wyndham.—The directors announce that the result of the crushing for the fortnight ending 30th ult. is as follows :—1,244 tons crushed ; yield of gold, 980 ozs. ; approximate value, 3,400*l.* ; fortnight's expenses, 2,130*l.*

Day Dawn P.C.—The following cablegram, just received from the manager at Charters Towers, gives the result of this company's crushing for the fortnight ending 30th March, viz. :—"1,220 tons, 1,300 ozs., including retnrn from public mill." (Estimated value, 4,420*l.*)

Durham and Lord Byron Amalgamated.—The following cable gives the result of the company's crushing for the 19 days ending 31st March :—" 237 tons, yielding 545 ozs. Crushing for the public for 12 days realising 320*l.*" This is an average yield of 2 ozs. 6 dwts. to the ton of quartz.

Etheridge United. — The directors of the company have received the following telegram from their mining manager in reply to their telegraphic inquiry of him as to whether crushings of quartz were taking place, viz. :—"Mills started to run 14th day of January. 9th day of February, 441 ozs., 1,057*l.*"

Gympie Golden Crown.—A cable is to the following effect :—"Ought to reach the reef in drive westward in about two weeks. Cross-cut has advanced the distance of 150 ft. ; quartz veins showing. There is every indication to show we are close to the vein." This refers to cutting the March reef in the lower level.

Midas.—Cable from the mine :—" Yield for week, 28 ozs." (114*l.*)

Mount Morgan.—The London agents of the Mount Morgan Gold Mining Co., Limited, Queensland—Messrs. Laughland, Mackay and Baker—have received the following telegram from the company :—" We pay 100,000*l.* to-day, being 2s. per share for March."

Foreign Mines.

Bentong Straits.—The company notify their change of address to 147, Leadenhall Street, London, E.C.

Consolidated Esmeralda.—The superintendent advises by cablegram :—"The quantity of milling ore is increasing, and the quality improving—the edge being 2½ ft. thick, and the average assay value 4 ozs. standard gold per ton.

Cordova Union.—The directors have received a cablegram stating the new 10-stamp mill is at work.

East Arevalo.—Cable from the mine manager, Capt. H. Prideaux, at El Chico, Pachuca, Mexico, states :—" Third level, lode improved ; richest pieces ore assayed 23 marks, montone ; commenced opening lode fifth level." This is equivalent to 137 ozs. per ton, the mark being 8 ozs., and the montone 3,000 lbs.

Mesquital Del Oro.—The following cablegram has been received from the mines :—" Ten stamps new mill started 2nd April." These 10 head are part of the 30-stamp mill now in course of erection. The usual report appears amongst our foreign intelligence.

New California.—Accounts by mail show that the profit for January was 718*l.*, and for February, 950*l.*, instead of 550*l.* and 850*l.* respectively, as estimated in telegrams. Manager's statement of returns for February :—1,030.37 tons, $10,099.93. The clean up comprises shipments from the 8th February to the 15th March, inclnsive, and, for the most part, resulting from ore extracted from the 1,800 level workings.

New Hoover Hill.—A cablegram states that 258 ozs. of bullion were shipped on the 2nd inst., being the result of the crushing for the month of March.

Ouro Preto.—The directors have sold, through Messrs. Johnson, Matthey and Co., the gold obtained in the month of January, which realised 3,814*l.* 9s. 4d.

Palmarejo.—Cable from the chairman at the mines :—" Everything has been satisfactorily arranged." The directors desire to state that the chairman is now on his way to England.

Rocky Bar Wide West.—A cablegram from the superintendent at Rocky Bar states :—"For month of March, mined and milled 425 tons quartz, producing 292 ozs. bullion ; estimated value, $4,400 ; nearing pay ground in east level No. 1." The above return shows an average yield of 13 dwts. 8 grs. per ton of quartz.

Sicilian.—The superintendent reports that the adit level on the Fantina Mine has been driven since last report 100 metres. The lode continues to widen and improve. He also states that he believes the ore from the Fondichella Mine will give at least 50 ozs. of silver to the ton.

United Mexican.—Telegram :—" San Cayetano property: Gross returns for week ending March 30th, $6,850 ; expenses for week ending March 23rd, $7,500 ; profit for week ending March 23rd, $1,000. El Cubo property : Gross receipts, week ending March 30th, $1,230 ; expenditure (including capital expenditure) for week ending March 23rd, $5,500."

Home Mines.

Mellanear.—The audited accounts for the year ending 31st December last show, as the result of the operations carried on during that period, a balance of expenditure of 1,244*l.* 17s. 1d. For the preceding 12 months the loss was 4,163*l.* 0s. 7d. ; of this amount, however, 3,000*l.*, being cost incurred in sinking Gundry's shaft, was carried to capital acconnt. The sales of copper realised 8,429*l.*, and of tin 846*l.* 19s. 7d.

FOR LATEST PRICES

AND ALL PARTICULARS OF FOREIGN AND HOME MINES
SEE PAGES 580 AND 581.

Metals.

Copper has shown a decided improvement, the demand for consumption having been large. The market for G.M.B. has been active, and price improved from 39*l.* 10s. to 42*l.* 10s., but eased at the close yesterday to 41*l.* 10s. cash. The price to day is lower, and sales of 300 tons from 41*l.* to 40*l.* 5s. cash for three months was done at 41*l.* 10s. ; and all the year sellers option, 40*l.* To-day 39*l.* 10s. taken for 16th May, and sellers for three months thereat. The statistical position is unsatisfactory. The supplies in March were 11,135 tons, and the deliveries 4,399 tons. Visible supply on 1st April ; 124,876 tons against 118,140 tons on 1st March. Wallaroo and Burra quite nominal. We quote English tough, 45*l.* to 47*l* ; best selected, 47*l.* to 50*l.* ; strong sheets, 53*l.* ; India sheets, 50*l.* ; yellow metal sheets, 5¼d. ; ore, regulus, &c., 8s. to 9s. per unit.

Tin has been steady. Straits has improved from 94*l.* to 95*l.* cash, closing weaker at 94*l.* 10s. cash, and 95*l.* three months. Three months has ruled 15s. to 20s. over spot, and Australian has realised 22s. 6d. to 25s. premium. The stocks in England, Holland, and quantity afloat are 11,873 tons, against 12,175 tons on 1st March. Stock in London, 5,044 tons. Delivery, 1,960 tons, of which 515 tons were to America. The Dutch market has improved, and we quote Banca and Billiton at 57¾fl. to 58fl. English ingots, 97*l.* to 97*l.* 10s.

Tin Plates in good demand and dearer. We qnote ordinary cake 13s. 6d. Liverpool

Spelter has been dull and easier at 16*l.* 12s. 6d. to 16*l.* 15s. for ordinary brands, ex ship here.

Sheet Zinc. Of 120 tons offered in P.S. yesterday, 40 tons sold at 18*l.* 15s. nett at works.

Lead has been quiet. We quote soft Spanish, 12*l.* 8s. 9d. to 12*l.* 10s. ; soft English, 12*l.* 15s. to 13*l.* L.B. China pigs, 13*l.* 5s.

Quicksilver.—Rothschilds sold a good deal at 7*l.* 12s. 6d. and now ask 7*l.* 15s. ; seconds 7*l.* 12s. 6d.

Antimony, firm, 49*l.* to 50*l.*

London Metal Exchange.

4.45.—Closing official report.—Copper : G.M, Brands, cash, 40, 40½ ; three months, 39½, 40 ; best selected, 47, 48 ; strong sheets, 52 ; English tough, 45, 45½. Tin : Fine foreign, cash, 94¼, 94¾ ; three months, 95, 95½ ; Australian, 95⅜, 95⅞ ; English ingots, 96, 97 ; Spelter, 16⅝, 16¾.

Glasgow Pig Iron Market.

3.11.—Business at 44s. 11½d., 45s., 44s. 11d. cash ; 45s. 2d., 45s. 3d. 45s. 1½d. one month ; closing buyers, 44s. 10½d. cash ; 45s. 1½d. one month ; sellers ½d more. Market steady, moderate business. Middlesbro' done 39s. 3½d., one month ; closing buyers, 39s. cash; 39s. 2½d. one month ; sellers ½d. more. Hematite done 49s. ½d. cash ; 49s. 3d½.' 49s. 4d. one month ; closing buyers 49s. cash ; 49s. 3d. one month ; sellers, 1d. more.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (3rd April).—The lode in the 40-fm. level east of junction continues to produce 7 tons of mixed ores per fm. In the same level west of Haley's winze the lode produces 3 tons of mundic and good work. The stopes at and below the 30-fm. level at the junction are producing a large quantity of mixed ores generally. Stopes in back of 40-fm. level east of new engine shaft are producing their usual quantity of ores. Cook's late stopes below the 30 east of cross-course will produce 6 tons per fm. We are stripping down a piece of lode at the 40-fm. level near the new engine shaft, which is fairly productive.—T. Gregory.

BULLER AND BASSET (2nd April).—Copper Hill section: The men during the week have made a very fair start with opening on the lode at the 84-fm. level. The average width is about 4 ft., and produces low quality ore. Machinery: We are cleansing and overhauling No. 2 boiler at the pumping engine this week, as per Government requirements, &c.—J. H. James.

CARPUAN (1st April).—I have visited this mine to-day, and am pleased to report good progress in sinking the shaft, which I am pleased to inform you continues to be sunk in a beautiful lode 4 or 5 ft. wide, and worth 20*l.* per fm. I have to-day broken in the bottom of the shaft some of the richest work we have yet hauled to surface.—R. Knott.

D'ERESBY.—Good progress is being made in cutting ground for sinking the Gors shaft below the No. 9. The hanging and heading lodes seem to be parting behind the shaft, and the lead for the most part is going off with the heading lode, leaving a "horse" of ground between the two lodes. The stopes in the No. 1 sump will produce 2 tons of lead to the fathom, and the No. 2 sump from 1 ton to 1½ tons.

DEVON GREAT CONSOLS (4th April).—Wheal Maria, eastern shaft, Capel Tor lode: The cutting of ground for barrow road and other necessary work preparatory to sinking the shaft below the 86 is progressing satisfactorily. In the 74 east and in the 50 west the drivages are being carried by the side of the lode for greater speed. The same remark will apply to the sinking of Sargent's winze in the bottom of the 62 west. Wheal Emma railway shaft, new south lode: In the cross-cut north, at the 260 west on the middle part of the lode, the ground is without important alteration. Watson's engine shaft: In the cross-cut north, at the 160, the ground having thin layers of quartz associated with it, progress at present is rather difficult. In Lark's rise, in the back of the 148 west, the lode is 3 ft. wide, and worth 3 tons of copper and mundic ores per fm., and is very promising. In the 136 east the lode is 3 ft. wide, very promising, and is yielding 4 tons of copper and mundic ores per fm. In the 136 west the lode is 4 ft. wide, also very promising, and worth 4 tons of copper and mundic ores per fm.—Isaac Richards.

DEVON UNITED (4th April).—Wellesford's shaft: In the 132 east the lode is 3 ft. wide; very promising; composed of strong capel and quartz with peach, mundic, and copper ores; worth of the latter 2 tons per fm. In the 132 west the lode is 4 ft. wide; still looking well, and is now yielding 4 tons of copper ore per fm. In winze sinking below the 110 west the lode is 3 ft. wide, also very promising. During the past week it has improved in value, and is now yielding 2 tons of copper ore per fm.—Isaac Richards.

DRAKEWALLS (April 4th).—There is no change to notice in the 147 driving east since my report of last week. The lode continues to produce 4 tons of mundic per fm. and a small portion of tin. We sold on Friday last to Messrs. R. R. Mitchell and Company 2 tons 10 cwt. 1 qr. 23lb. tin at 55*l.* per ton. We are pushing on with the fixing of the iron work of the new calciner and all other surface operations as fast as possible.—H. Rodda.

EAST BLUE HILLS.—The information received from the mine this week is satisfactory and cheering. The agents report that all points on the Baldhu lode are looking better, and that there is an improvement on the Pink lode. The latter is of great importance to East Blue Hills, as its development will be watched with considerable interest. A bunch of tin on the Pink lode would very soon give immense profits, considering what this lode has yielded in other parts of the St. Agnes district. The workings of the mine are now carried out under unexceptionable management, and therefore shareholders cannot complain of any relaxation in the efforts of the executive to bring the concern to a successful issue.

EAST GRASSINGTON.—The following report, dated 3rd April, has been received from the manager:—East shaft: The 47 fm. level west is now within 3 fms. of reaching the perpendicular of No. 3 sump, and is gradually draining No. 3 run of ground. The lode in the end is to-day 2½ ft. wide, carrying nice patches of ore, worth fully 8 cwt. per fm., and daily improving. A stope behind the end, worth 8 cwt. of lead ore per fm. In the intermediate level, west of No. 2 sump, below "Amy's workings," the lode has been slightly disordered by a cross joint, but is opening out again most satisfactorily, and is to-day 2 ft. wide, composed chiefly of spar, gossan, and solid stones of lead ore worth 20 cwt. per fm. In the same level east, the lode is somewhat narrower and worth 12 cwt. of lead ore per fm. The lode in the drivage west of No. 3 sump is 2½ ft. wide, composed of soft sugary spar, gossan and lead ore, worth 20 cwt. per fm. The lode in the same level east is 2 ft. wide, and worth 11 cwt. of lead ore per fm. A stope in back of the 37-fm. level worth 9 cwt. of lead ore per fm. Good progress is being made in extending the water level east of Harris shaft. Harris main shaft: This shaft is down 18 fms. 3 ft. below the water level. On surface we have fixed the T bob, pulley, stands, and flat-rods to east shaft. Dressing and smelting operations carried on daily.

LEADHILLS (2nd April).—Setting report—Brown's vein: Eight men are set to drive the 145 level 84 fms. 3 ft., south of Jeffrey's shaft, at 110s. per fm.; vein above 4 ft. wide, charged with quartz, but no ore. Eight to drive the 145 level 34 fms. 1 ft. 6 ins. north of Wilson's shaft at 100s. per fm., unkindly vein above 4 ft. wide, and without ore. I hope to have these two points communicated by the end of next week. Four to drive the 145 level 6 fms. 4 ft. south of Wilson's shaft, at 95s. per fm.; vein about 4 ft. wide, but it is too dried for ore. Seven to drive the 130 level 41 fms. 1 ft. north of Jeffrey's shaft at 105s. per fm.; vein above 4 ft. wide, charged with very nice-looking quartz, and ore worth 15 cwt. per fm., and improving like. Four to stope above the 130 north of Jeffrey's shaft at 45s. per fm., worth 25 cwt. of ore per fm. Four to drive above the 130 south of Jeffrey's shaft at 67s. 6d. per fm.; worth 15 cwt. of ore per fm. Four to stope above the 130 south of Jeffrey's shaft, at 42s. 6d. per fm.; worth 40 cwt. of ore per fm. Four to stope above the 130 north of Wilson's shaft, at 37s. 6d. per fm.; worth 40 cwt. of ore per fm. Six to sink the winze below the 115 south of Wilson's shaft, at 90s. per fm.; vein above 4 ft. wide; worth 50 cwt. of ore per fm. Two to drive above the 115 south of Wilson's shaft, at 70s. per fm.; worth 30 cwt. of ore per fm. Four to wood the stope above the 100 south of Wilson's shaft, and clear out the broken ore therefrom at per shift rate. 14 to drive below the 85 south of winze, and north of Jeffrey's shaft, at 120s. per fm.; vein, 12 ft. wide; worth 40 cwt. of ore per fm. Four to stope above the 35 south of flat rod shaft, at 30s. per fm.; worth 30 cwt. of ore per fm. Four to stope above the 20 south of flat rod shaft, at 30s. per fm.; worth 45 cwt. of ore per fm. George's Roust vein; Three to drive Gripp's adit, 330 fms. 3 ft. 3 ins. north of Muir's cross-cut, at 112s. 6d. per fm., and 20s. per ton of ore; vein 5 ft. wide, well mixed with promising quartz, but without ore.—T. Newbigging.

MID-DEVON.—Report for week ending 30th March:—Surface: The machinery has worked without cessation this week, and at five revolutions. A shaft: The percolation of water from upper workings is abating considerably, and expect it will soon cause a falling off in general influx to shaft. The water is now 15½ ft. below the 80. C shaft: The 60 east has been driven by nine men 1 fm.; total distance from shaft, 35 fms.; the strata is hard, composed chiefly of compact garnet and capel, with a little axinite quartz and chlorite intermixed, in places spotted with yellow ore and arsenical mundic. The preparatory work for trip-plat and tramway is still being wrought on by six men; the plat is now being excavated, and when attle is being hauled from drivage the men from this point are engaged blasting south side of level necessary to get tramway round to plat. The 50 east stopes 2, 3, and extreme point of drivage worked on by six, six, and two men, are worth respectively 2¼ tons, 3½ tons, and 2 tons of copper ore per cubic fm. The strata at No. 3 stope is intermixed with large quantities of chlorite and axinite, and strongly stained with copper ore.—J. Neill.

PRINCE OF WALES.—Operations are progressing satisfactorily in all departments. The lode in the engine shaft is of the most encouraging nature, being worth 16*l.* per fm., and improving, and the expectations of practical miners are great that in development of depth a very rich tin mine will be laid open, and in all probability the pioneer dividend tin mine of East Cornwall.

PRINCE ROYAL.—The adit level is cleared, and the shaft is now being secured, which will be completed in a few days, when the workings will be drained, and sinking at once resumed in a good lode.

ROMAN GRAVELS (4th April).—We have nothing new from any of the workings, above water, to report to you. The new pit-work is now in place from the 125 up to the 40, and the men are cutting ground at the latter level for No. 3 plunger bottom. We hope to have all the columns complete from the bottom of the mine to the adit, or day level, early next week, when the men will turn their attention to the re-fixing of ladder-way, and the putting in of new stays for main-rods, &c., &c., from the 65-fm. level upwards. We have taken out the old 60-in. cylinder, and are waiting for the new one, which we hope will reach the mine very shortly. We have to-day sold 50 tons of blende for 21*l.* 5s., and are sending out samples of 100 tons of lead ore for sale next week.—A. Waters and Son.

RUSSELL UNITED (4th April).—In driving the 80-fm. level west there has been a very decided improvement in the lode within the past week, the leading part, being full 3 ft. wide, is composed of peach, arsenical, and sulphur mundic, with tin, at present worth 10*l.* per fm., and is a most promising looking lode; it carries a regular wall, and has been better defined throughout the drivage at this level than I have before seen in the mine. During the past month, while the water prevented working at the 80, the shaftsmen were employed in opening west on the south lode at the 67-fm. level, which is looking more promising in the present end than when commenced, and has produced some good stones of copper ore, and seeing that there has not been anything further discovered in the cross-cut south at the 80, I have arranged for the men there to open a little west on the lode recently driven through, where it looks more promising to commence on than that above referred to. The machinery continues to work satisfactorily.—Capt. W. George.

SOUTH DARREN (4th April).—In the 142 end west there is good lead in the bottom and to halfway up the forebreast. We think that the end will again become richer as it gets away from the joint mentioned last week. The stripping going east in this level is worth 17 cwt. of silver-lead ore per fm. The lode in the 142 end east is stronger. A stope in this level is worth 15 cwt. of silver-lead ore per fm. Very little work has been done in the 130 west cross-cut this week, the men having been clearing out the stuff they broke last month. The lode in the 110 end east is strong; worth 8 cwt. of silver-lead ore per fm. The lode in the 100 end west is strong, and looks kindly; worth 15 cwt. of silver-lead ore per fm. A stope in this level is worth 12 cwt. of silver-lead ore per fm., with a good mixture of copper.—J. Mitchell.

TIN ERA (2nd April).—Since the date of my last week's report we have driven through another good-looking branch 6 ins. wide, which I regard as a favourable indication to near approach to the lode. We are pushing on the cross-cut with all possible force, and find the ground immediately to the north of the branch referred to of much the same character as for some time past.—R. Knott.

VAN (4th April).—The 135 south level: I am pleased to say that the driving west continues to look as well as it did, and maintains its value of 40*l.* per fm. We have driven 9 ft. upon it up to the present. The cross-cut south at the 120 east is driven 10 ft. in a remarkably strong lode. There must be a deposit of mineral in close proximity to a lode presenting such highly mineralised indications as are here presented. There is no change to notice in the stopes this week. On the floors we are busy preparing another parcel of lead and blende.—Capt. W. H. Williams.

WEARDALE (30th March).—Ore raised for the week, 64 tons; ore dressed for the week, 94 tons; ore, &c., smelted for the week, 131 tons, producing 67 tons of pig lead.

WEST WHEAL GRENVILLE (2nd April).—Since forking water, which rose while Plunger lift was being completed to the 28-fm. level, way has been made for forking lift, and the same dropped to a little over 6 fms. below the 80. We are finding a quantity of stuff accumulated in shaft, which the shaftsmen are drawing to the 80 by windlass. By this means we are making way for dropping lift as fast as the nature of the work will permit. When any men can be

spared from engine-shaft the same are employed on skip road in Harvey's shaft.—T. Hodge, J. Skeat.

WHEAL METAL AND FLOW.—In the 35-fm. level east on the Metal lode, the improvement referred to last week continues, and the agents are much chcered by the appearance of the lode, which looks to them like the beginning of a rich run of tin, which in all probability will be a continuation of the riches of the celebrated Wheal Metal in western and new ground. It should not be forgottcn that this lode yielded over 800*l.* per fm. in the old Wheal Metal. The returns from the Flow, it may be mentioned, pay the costs of the mine, therefore the shareholders are uudoubtedly in possession of a very valuable property.

WHEAL UNY.—The lode in Hind's shaft is of the most promising description, and the sinking is now proceeding satisfactorily. The confident expectations of working miners in the district are that the development of this lode in depth will very shortly open up a mine that will vie with any of its neighbours.

FOREIGN MINING INTELLIGENCE.

ALMADA AND TIRITO (12th March).—Last week's work : The Balvanera shaft was sunk 3.9 ft. by seven drillers ; total depth, 38.7 ft. below the 50 ; the rock is compact, and will not require much timbering. The 50 north was driven 22.5 ft. by four men with the Ingersoll drills, carrying its breast 66.5 ft. north of the east cross-cut ; the breast contains considerable black ore scattered over the whole width. The lode is very deceiving, but has at present a very promising appearance. The 24 north (San Jose) was driven 6.01 ft., at $10, by five drillers ; it is producing about 1 ton of mineral per lincal fm., about ½ or ¼ of which is of a very fiue appearance, the same as from No. 7 winze. The 24 south from breast of main cross-cut was driven 3.5 ft., at $9, by four drillers ; total from cross-cut, 45.6 ft. ; the breast is still in quartz with stains of mineral. This week we resumed the sinking of No. 7 winze ; price $12 per ft. I intersected it, and the bottom is unproductive.—Sanchez.

ANDALUSIAN (25th March).—Barytes lode : For a day or two the specks of argentiferous galena disappeared, but I am glad to say the barytes again carries them. We have met with a vein of white clay near the north-west wall accompanying the barytes, which may bring some change. Panaderos lode : The adit continues with quartz, iron oxides, shale, and a little iron pyrites. We carry a wall on our east side, but have no wall on the west, and do not know how wide the lode really is. Once we get further into the hill we must cross-cut west, and the east also, to make sure we really have the foot wall, as at the Belgian mine the best ore in their upper workings was found near that wall. We may be at present driving on a poor part of the lode, ore existing perhaps on our cast or west side, but we shall clear this point up by a cross-cut a little later. Saturno lode : At shafts Nos. 1 and 2 we are driving the ends east and west respectively in order to communicate with each other. In both ends the ore varies from 1½ to 5 ins. of galena. At No. 3 shaft we are ten metres deep, and have a nicc lode all along the bottom, averaging 2 ins. of purc galena. As our three first shafts have turned out well, I have fixed the place for a fourth trial shaft, about 56 metres east of No. 3. to bc sunk on the nnderlie of lode, and feel almost confident we shall meet with mineral as quickly as in the others. The weather has been very much against us, and has stopped our working in the euds until within the last few days ; but we, nevertheless, intend weighing in 200 quintals of ore for this month, if the ore holds on as good as at present. We have to depend for this entirely upon the ends, as we have at present no stopes.—Haselden.

ASIA MINOR.—Underground operations are proceeding vigorously. Number of men employed in the mines, 423 ; value of stopes, 12 tons, 15 cwt. Since last report Savalan end west in air shaft has very much improved. It is fully 3 ft. wide, and worth 10 cwt. per fm. We consider this to be a very promising feature. The dressing is proceeding as energetically as the weather permits. Production to March 22nd, 1,198 tons crushed, prodnced 123¾ tons rich silver-lead ore. Corresponding period last year, 459 tons crushed, prodnced 37½ tons.

BONNIE DUNDEE.—Mine manager's report for fortnight ending 2nd February :—We have had 14 men stoping from the back of No. 1 south-west level on an average of 3 ft. of reef, which should crush from 10 to 15 dwts. per ton. Have had six men in the underground stope from this level on about 18 ins. of reef. The stone from these stopes is now being crushed at the company's mill, and is looking a little better than the last crushing. Have raised 200 tons of quartz for the fortnight. The contractors have sunk the No. 3 straight shaft a further distance of 25 ft., making a total depth of 725 ft. from the surface. At a depth of 712 ft. we went through into another formation, with about the samc bearings aud dip as the St. Patrick's reef. The shaft is still in formation, with a little promising-looking quartz intermixed. We may get a defined reef on the footwall. All machinery in connection with the mine in good order.

BRATSBERG (25th March).—Hoffnung Minc : There is no change of importance at No. 2 adit either in the level itself, the rise, or winze since last report. No. 3 adit level continues to look exceedingly well, worth fully 1½ ton per fm. The rise in the back of No. 3 adit level is worth 1 ton per fm. The mid-level at Ball's is yielding only saving stuff. At No. 4 level we have just holed the rise ; lode worth about ¾ ton per fm. No. 5 level west is looking very promising, but poor in yield ; the same level east is carrying a nice leader of ore, but not enough to value. Wc are still meeting with good success at thc mid-level at Murchison's ; present value, 1½ ton per fm. The rise at the shallow workings continucs to produce about ½ ton per fm. Johanues Mine : The cross-cut has been driven about 3½ metres during the past week ; we have recently cut some small veins of orc embedded in what appears to be lode matrix, but up to date sufficient has not been done to show its character. The wiuze has been sunk 2 metres since last report, but I regret to say that on Saturday last we cut a good deal of water, which, without a special pump, renders sinking exceedingly expensive and slow. We are in hopes that in the course of a few days the influx will decrease, although it looks rather doubtful. Næsmark Mine : Barker's shaft has been sunk 2 metres during the week. Thc improvement reported here last week holds good, but does not extend from the southern end of thc shaft ; consequently, we cannot as yet judge its value. The water is strong here. Surface work and remarks : We are pushing on the machinery as fast as possible ; the weather, which, for the most of March, has been against us, has now changed in our favour.—J. D. Holman.

CALLAO BIS (5th March.)—Mine—Unda shaft : We have driven 4 ft. in the livel in No. 1 stope east, making its distance 28 ft. from breast of stope. In this drivage some blue rock comes in, and the lode is mixed considerably with it. However, by assay, I find it is about the same in value (about 6 dwts.), otherwise no chauge to notice. At the 350-ft. level the cross-cut south-east has been driven 6 ft. 6 ins., making its total length from shaft 37 ft. 6 ins. ; the ground is still exceedingly hard, and we have the greatest difficulty to get men to work there. There is no change, except we are occasionally passing small seams of quartz, but none of them contain gold. I hope soon to be out of this hard rock, and be able to proceed faster. The cross-cut north-east has been driven 9 ft. ; total length, 27 ft. from shaft ; besides this drivage a considerable portion of the west side of the cross-cut has been taken down, and it is now wide enough for tramroad and shoot when required. This ground, although not so hard as cross-cut south-cast, is difficult to break now we are fairly started. I hope to do better this month. We were also troubled with bad air, and I was obliged to partition the shaft from top to the 350-ft. level, which took considerable time to do, besides the loss of time with the miners. There is now good ventilation, and thc men are working without complaints. I should mention that the cross-cut in hanging of the seams in No. 4 or 350-ft. level, as mentioned in my last, is stopped for the present, as I find nothing to guarantee further prospect. I have now come to the conclusion that the so-called new lode at this level is nothing more than a quantity of seams of quartz in the country formation, and has no regularity of bearing, nor continues. Strange enough, every sample I have tried from this show traces of gold, and its kindly condition in the shaft induced me to recommend its being driven on. Sosa-y-Mendez : I am very pleased to report the favourable state of affairs here. From the boundary above the small shaft, and in a south-westerly direction, I have sunk 12 costean pits, in each of which I have met regularly defined croppings of solid quartz, all giving gold. By assay I find this quartz gives from 7 dwts. to 16 dwts. per ton. These pits are about 30 metres apart, and I have no hesitation in reporting to you of having a lodc in the Sosa-y-Mendez, which appears worth while to be well prospected. I am yet rather undecided as to its dip, but to ascertain this thoroughly I am sinking two small shafts about 20 ft. from the back of thc lode on either side. I have asked some practical men here to examine it, and they are all of opinion we have something worth being worked. This is a list of samples assayed from the several places along the back of the lode :—No. 1 sample, 13 dwts. 1 gr., boundary line ; No. 2 sample, 9 dwts. 19 grs., 2nd pit ; No. 3 sample, 9 dwts. 19 grs., 3rd pit ; No. 4 sample, 6 dwts. 12 grs., 4th pit ; No. 5 sample, 11 dwts. 17 grs., 5th pit ; No. 6 sample, 10 dwts. 14 grs., 6th pit ; No. 7 sample, 5 dwts. 7 grs., 7th pit ; No. 8 sample, 19 dwts. 14 grs., 8th pit ; No. 9 sample, 13 dwts. 4 grs., 9th pit ; No. 10 sample, 16 dwts. 13 grs. 10th pit ; or an average of about 11 dwts. per ton. I consider this encouraging, seeing that the whole of the samples came from the surface. I wish to push this work faster if I can, as I attach a great deal of importance to thc place, more especially since I am satisfied of the existence of a lode there. I am told it has thc same strike, and its apparent dip is the same precisely as the lodc now being worked on by the Union Company. Should this prove correct, I hope you will be satisfied of its being a certainty, and well worth our working it. I estimate there is about 200 tons of ore mined from various trial pits, aud the driviug of the tunnel, but it would not pay to bring to the mill here, other than to sample it, as I have already done. I am confident we have a mine here if well worked.—G. W. Eustice.

— (7th March).—I have just returned from the works at the Sosa-y-Mendez, and am more than ever satisfied with the prospect there. The last of the costean pits sunk is 1,250 ft. from thc boundary, and still there is a lode showing about 4 ft. in thickness, and good quality quartz. I wish to add that I am more than ever impressed with the importance of the property ; the whole concession is new ; little or no wood has been cut off it, and its location near the Mocupia River offers the advantage of water for all purposes. I especially recommend this to the notice of the directors, feeling confident that the establishment of a mine there would soon repay its outlay.—G. W. Eustice.

CANTABRIAN.—The mine manager reports that the fine weather has now set in, aud that all the jigging machines will be fully set to work within the next fortnight, and that the number of miners has been increased since his last report. No. 3 gallery has been cleared, and re-timbered, and ore of superior quality is now being taken out. The gallery is 123 metres long. No. 6 gallery is also cleared, and shall commence to extract ore within the next few days. He also says that the deeper the mines are sunk the richer thc ores become, and that there is a large quautity of ore uow at the mines waiting shipment.

CHONTALES.— The directors have received advices from their manager, via Corinto, dated March 4th, who reports : During the past month the Consuelito main level was driven nine varas, and rise put up six varas. The ground in the end was again hard, but is now a little better for progress ; the lode is squeezed at present, but continues its regular course, and letting out more water than usual. Our only disappointment is the extraordinary length of hard ground, as the formation of surface like the thousand ft. through which we are now driving never made any gold in the mines on the western part of the lode, whereas the declivity and surface formation, like we are driving to reach, made gold in every instance, so it seems the best that can be done is to try with every speed aud economy to gain the good ground of hope aud promise. The cost at the mines for February was 120*l.*

COLAR CENTRAL (12th March).—Low's engine shaft : 200-ft. east cross-cut has been advanced 14 ft. since last report ; total distance from shaft, 181½ ft. The stream of water mentioned as having been tapped here increased considerably for several days, but has now diminished again to a small stream, such as was first met with ; ground continues much thc same ; driven by one rock-drill. 200-ft. south drive from east cross-cut : As stated in my last report, thc north drive was discontinued, and we have driven 15 ft. south from thc cross-cut ; the quartz has increased in quantity, but although we arc not yet through it in the bottom, I seo nothing at present to lead mc to think it is more than a big bunch ; driven by one rock-drill. 200-ft. west cross-cut has been driven 14 ft. ; total distance from main shaft, 181½ ft. ;

the ground continues hard, and, since passing through Darlington's shaft, very dry; the ventilation has improved a great deal; driven by one rock-drill. Underlay shaft: The 171-ft.level has been advanced 7 ft. by hand labour, making a total of 72½ ft.; there is no change here worthy of notice. The laying of 2½ in. air pipes to this shaft is now being put in hand, as we have received the first instalment of the pipes, and expect the balance within the next week or ten days. East boundary shaft has been sunk 1 ft. only; total depth, 73½ ft. Owing to the increase of water I considered it advisable to commence cross-cutting here, and a cross-cut west has been put in 6 ft.—A. S. B. Oakley.

COROMANDEL (22nd Feb.)—I beg to hand you the following report for the month ending 16th inst.:—Main shaft, 280 ft. level: The cross-cut was extended 23ft. 8 ins.; total, 35 ft. 8 ins. We have cut through the Green Harp reef, and have driven north on its course 11 ft., by six men. The reef has been 2 ft. 6 ins. wide, but at present seems split up and disordered. Up to this time we have not met any gold. We have about 70 ft. to extend north here to intersect the Black reef. The 80-ft. level: Rising on Venus reef is up 28 feet, by two men. The reef is small, at present about 8 ins. As we rise here we hope to open up payable quartz. MacDonald's reef, by two men, has been driven north 12 ft., and south 9 ft. Nothing has been met with here, but the reef, 1 ft. wide, is encouraging. The 80 cross-cut south, by two men, towards Golden Pah shaft has been extended 12 ft., and just passed through a good-looking vein which we shall open on as soon as the cross-cut is sufficiently apart to do so. The winding-gear has been erected, and the accumulated stuff at the 80-ft. level all drawn to the surface. All pumping and winding works from both shafts are now going regular, and I hope in course of a short time to meet valuable discoveries.—Capt. Hodge.

CORTEZ.—The directors have received the following report from Mr. Welsh, the superintendent at the mines, under date of 16th March:—Ore hauled to mill, 172 tons. Ore treated at mill, 165 tons, assays of which show it to contain 68 ozs. silver per ton. Bullion shipped 12 bars, containing 14.144 ozs. fine silver and 9.23-100 ozs. gold.

DENVER (22nd March).—Mine: The east drift at the 1,050 level continues to advance in soft, well mineralised ground, of very low grade materials, assays from which gave the results:—Sample of pyrites, $\frac{32}{100}$ ozs. gold, 1.40 ozs. silver; average sample across end, $\frac{10}{100}$ ozs. gold, 1.18 ozs. silver. Cross-cut S.E.(1,050 level: This cross-cut has been advanced 8 ft. in very hard rock; and, when in a distance of 5 ft., cut a thread of mineral, evidently one of several "feeders" between this and the main vein. This little vein assayed well (gold $2\frac{99}{100}$ ozs., and silver 3.02 ozs.), and inasmuch is of some significance, but is too small to claim further attention. Another test lot has been to the mill, but shows no improvement worthy of remark.—Alfred Rickard.

DEVALA-MOYAR (11th March).—The lode in the winze sinking below the deep tunnel is now 7 ft. wide, and will produce 3 tons pyrites to the fathom for the length of winze 12 ft. The lode in the tunnel east of cross-cut has improved in appearance, and will produce 2½ tons pyrites to the fathom. No. 2 winze sinking in the bottom of the 48 is looking exceedingly well, and will yield 5 tons pyrites to the fathom. The deep tunnel east will be cleared of *débris* in a few days, and driving resumed. Assay for the past fortnight: Pyrites winze: 1 dwt. 17 grs. and 3 dwts. 11 grs.; east of cross-cut, 1 dwt. 17 grs. and traces; No. 2 winze bottom of 48, 15 dwts. 15 grs. and 1 oz. 19 dwts. 4 grs.—J. Williams.

FRYERSCREEK.—The directors of this company have received the following advices, dated Fryerstown, 21st February:—During the past fortnight we have extended the 520-ft. level south a further distance of 21 ft., making a total of 67 ft. from the cross-cut. The slide has come in the drive; it is still 4 ft. from the footwall of the lode. There is a little stone in the flookan, but nothing regular as yet. Stone-making in bunches and cutting out again. The country at this level is more favourable for quartz than what it was at the 623-ft. level, and I hope we shall discover payable stone at this before long. The 420 eastern line of reef: We have extended the drive west from main level a further distance of 12 ft., making a total of 17 ft. The floor is still going west and rising about 3 ft. in 6 ft., with a little water coming from the floor. There was 2 ins. of stone on the floor on Monday, but it is cut out again. There is every appearance of stone being abont this run of country, but it requires a great deal of prospecting, and I think by driving on this floor we shall meet with quartz in the hanging wall, as all the stone that we have worked in your mine has been in the hanging wall, not on the lode. The 260-ft. level: We have extended this drive north a further distance of 8 ft. for the past fortnight. The ground is very tight with small seams of quartz in the footwall, but not gold-bearing. The first block of stone we got in this drive is all cut out; total, 61 ft. from the winze. The 420-ft. level on the western line of reef: We have extended this drive north of cross-cut a further distance of 29 ft. for the past fortnight, making 54 ft. from cross-cut; there is no stone in this drive as et.

GYMPIE GREAT EASTERN (7th Feb.)—Fortnightly report: During the past fortnight the drive going north at the 634-ft. level has been extended 9 ft.; total, 37 ft.; there is a large body of crushing stuff, but there is not much gold to be seen. The drive south has been extended 12 ft.; total, 60 ft.; the reef is about 12 ins., showing very little gold. There is a large body of crushing stuff in the stopes above these levels north and south, showing a little gold. I expect the gold to get better as we rise up. The stopes above the 500-ft. level north and south are all showing fair gold, and those above the 364-ft. level, on the old eastern reef, are all showing a little gold. The winze at the 580-ft. level in the eastern cross-cut to cut the 1 South Great Eastern reef has been sunk 12 ft.; total, 81 ft.; and timbered 20 ft.; total, 66 ft. The country is good slate, and we may expect the reef at any time, as we have now reached the depth estimated by the surveyor. For the four weeks ending 30th January there were 580 tons of quartz raised and crushed, for a return of 962 ozs. 13 dwts. 18 grs. of smelted gold. Everything about the mine and winding engine and battery is in good working order. There are 80 men employed, 70 at the mine, and 10 at the battery.—J. James.

INDIAN CONSOLIDATED (11th March.)—Phœnix section: We have extended the tramway tunuel 3 ft., making the total distance from the cross-cut 14 ft.; the lode is now 5 ft. wide, but split into two branches, the one on the hanging-wall is 1 ft. 6 ins. wide, containing quartz and blue gneiss, mixed with a little pyrites, the branch on the footwall is 1 ft. wide, composed chiefly of decomposed matter. The appearance of this tunnel has improved since last week. We have four stopes working in back of tramway tunnel, 40 men are engaged on this work; the lode is divided into two parts, with blue rock in the middle, 6 ft. wide. The western portion is 4 ft., but the quartz is of low quality. The east or footwall side is 5 ft., and I think will give a fair average yield of gold. The mid-day stopes are producing their usual quantities, and the lode is keeping to the width of 5 ft. Working by 15 men. Stopes working in back of No. 1 by 10 men, and stopes in bottom of No. 1 by 12 men; there is no difference in their appearance during the past fortnight. Mr. R. B. Johnston, the mill manager, reports that during the month of January 483 tons of quartz were crushed, which yielded 97 ozs. of gold, or at the rate of 4 dwts. 5 grs. of gold per ton.—J. Williams.

— (11th March.)—Colar section: No. 5 shaft: This shaft sinking below the 360 ft. has been cut 9 ft., or 30 ft. 5 ins. below the levels. There is no lode to value at present in the shaft. The 360-ft. level driving south of shaft has been cut 3 ft. 6 ins., or 51 ft. from shaft, no lode to value in this drive at present; the lode is disordered by crossings, assaying 2 dwts. 14 grs. The 360 level driving north of shaft has been cut 3 ft. 2 ins., or 59 ft. 2 ins. from shaft; the lode in this drive is opening out large, being now 2 ft. wide, and assaying 1 oz. per ton stone. The stope in the bottom of the 300 south drive continues without change; lode ranging from 1 ft. to 2 ft. wide; assaying 2 ozs. 8 dwts. 8 grs. per ton stone. The rise and stope in the back of the 300-ft. level south is being pushed on by machine; lode at present of mixed character. As we advance with the stope we shall get into a more defined lode. We should be in this about Thursday this week; stone assaying 6 dwts. 12 grs. per ton. The stope in the bottom of the 300 north continues in a lode 2 ft. wide; low-grade stone; assaying 5 dwts. 23 grs. per ton stone. The stope in the back of the 300 north off the late winze is producing a little better stone; lode 3 ft. wide; assaying 5 dwts. 5 grs. per ton stone. The winze siuking below the 156 north drive has been cut 3 ft. 4 ins.; lode large, 3 ft. wide, low grade; assaying 3 dwts. 3 grs. per ton. Davey shaft: The 170-ft. level driving south of shaft has been cut 19 ft., or 49 ft. from shaft; lode between walls, 2 ft. wide. This drive carries a vein of quartz in the hanging 4 ins. wide, and in centre of drive about 8 ins., but of no value. I am hoping, as we advance, that these branches will come together and form a productive lode. New south shaft: This shaft has been cut 4 ft. 2 ins., or 141 ft. 8 ins. from surface. The ground is very hard, and we cannot make such good progress as I anticipated. Trial shaft: This shaft has been sunk 34 ft. 6 ins. or 86 ft. from surface. We are still in broken ground, and from its appearance we have still some distance to sink before we bottom on solid ground. We have the incline timbered the whole distance. Surface: Battery in good condition, and running 20 heads by day. All machinery in good working order, and general surface work in a forward state. Health of camp good.—T. R. Davey.

JAY HAWK.—Under date March 7th, the manager at the mine says:—For more than half the week I have been engaged in timbering the soft ground through which we have been driving for the last 100 ft., and which still continues. It consists of boulders and shattered strata, mixed with clay and talc. It is all heavily stained with mineral, and is exactly similar to the ground that the tunnel in the neighbouring mine, the Jay Gould, passed through immediately before striking their lode. The total length of the tunnel is now 1,715 ft.

JOSEPHINE.—Extract from superintendent's report for week ending 9th March:—The 300-ft. level has been driven east 14 ft. We have to-day over 3 ft. of quartz in the breast, 2 ft. in the footwall and 12 ins. in the hanging-wall; this latter is larger by 9 or 10 ins. than we have yet had it, and is the rich streak from which the $1,651.59 assay came from, but is increasing in size. I think, as a matter of course, it decreases in value. I enclose you Prof. Price's assays of quartz samples from this stringer taken March 7th. Although these samples were taken from a small stringer, yet I think them very encouraging, as they show that the richest rock yet found in this mine is on the east side, where we have the most ground. The stopes above the 300 level west do not look as a whole quite so well; there is considerable waste mixed in with the quartz. Twenty stamps have been steadily working during the week, and the batteries look well. Note.—Four samples from the 12-in. stringer referred to gave an average yield by assay of $221.66 per ton.

KAPANGA (22nd Feb.)—I beg to hand you the following report for the month of four weeks ending 16th inst.:—Larnack's shaft: 10 men have sunk below the 500 13 ft. 6 ins., making the shaft now 22 ft. 6 ins. under the 500; the country rock is fairly congenial for gold, and our progress is good in sinking. Rising on Scotty's south by eight men. These men here have risen 51 ft. The reef is about 1 ft. wide in the back, and producing paying quartz for the stamps. The last taking down of the reef has yielded 162 lbs. of good picked stone. This will now come in our next month's returns. The point of rise is now in the shoot of gold we left below the winze in intermediate, and abandoned on account of too much water. The yield per ton of quartz I value at 3 ozs. at present. Stope 420 south on Kapanga: The reef here averages about 1 ft. wide, working by two men, and worth ½ oz. per ton. Rising above intermediate south, by two men, on Scotty's, has been risen 11 ft.; the reef here is pinched up, small, and unproductive. The 300 south on Scotty's has been driven by two men 15 ft.; the reef in forebreast is about 1 ft. wide, and promises an early improvement. Sinking new winze below 300 south on Scotty's: Six men have sunk 23 ft. 6 ins.; the vein here averages about 1 ft. wide, the yield of quartz nothing to value; this winze has been very disappointing, as I reckoned its yield here would give 3 or 4 ozs. per ton. I still, however, hope to find rich quartz on either side of winze when the ground is available. Stoping new bunch above 300 on Scottys: Three men have been stoping here; reef 1 ft. wide, yield about ¼ oz. to the ton; this stope is near exhausted, unless it takes a sudden rise south and lengthen in that direction. We stamped for the month 136 tons of quartz, and treated 18 lbs. picked quartz, which yielded net 51 ozs. 19 dwts. Everything throughout the mine have worked regularly and uninterrupted, but the low quality quartz and the limited quantity of picked stone have made our returns very low during the past month. While I write we are doing much better, the 420 rise has come to the rescue.—Capt. Hodge.

MESQUITAL DEL ORO (1st March).—Work done in the mine during the week was as follows: Acerada level, east of Sans: Six men, driven 6 ft.; total, 130 ft. 6 ins. Reef 4 ft. thick, of low grade ore. The 85 level east: Six men, driven 6 ft.; total,

581 ft. Reef 3 ft. 6 ins. thick of fair milling ore. The 137 level east: Six men, driven 5 ft.; total, 566 ft. Reef 5 ft. thick of good milling ore. The 137 level east, rise B: Six men, risen 4 ft.; total, 15 ft. 6 ins. Reef 6 ft. thick, on a fair average ore. The 137 east, winze C: Driving west of wiuze to meet 190 level east. Six men, driven 3 ft. 6 ins.; total, 6 ft. 6 ins. Reef 2 ft. 6 ins. thick, of low grade ore. The 190 level east: Six men, driven 3 ft. 6 ins.; total, 388 ft. 6 ins. Reef 3 ft. thick, with good average ore. The 190 east, winze B: Six men, sunk 5 ft.; total 26 ft. No alteration. The 190 level west, south part: Two men, driven 3 ft.; total, 296 ft. Reef 5 ft. thick, showing a little free gold; looks good for the western ground. The 256 level east: Six men, driven 4 ft. 6 ins.; total, 250 ft. Reef 5 ft. thick, with good milling ore. The 256 level west: Six men, driven 8 ft.; total, 188 ft. 6 ins. We are carrying the reef 5 ft. wide, and still more standing to the south of us; rather low grade ore during the week. Sans shaft: Six men completing station at 190 level. San Miguel tunnel: 14 men, driven 11 ft. 6 ins.; total, 1,736 ft. 6 ins.; forcing with all possible speed. Stope 137 east: 20 men; reef 6 ft. thick; a little falling off in quality, but still a fair average milling ore.—R. H. Jones.

MONTE DEL ORO (1st April).—The following are the results of assays made in London of 10 samples taken from different parts of the mine, viz.:—No. 1 sample of quartz in hanging wall, north of shaft No. 6, assayed 5 dwts. 5 grs. gold per ton; No. 2 sample from the south end assayed traces gold per ton; No. 3 sample from north of cross-cut west assayed traces gold per ton; No. 4 sample from intermediate level assayed 2 dwts. 15 grs. gold per ton; No. 5 sample from north of shaft No. 5 assayed 11 ozs. 6 dwts. 7 grs. gold per ton; No. 6 sample from bottom of old workings, near shaft No. 6, assayed 13 dwts. 2 grs. gold per ton; No. 7 sample north of 6 shaft assayed 1 oz. 4 dwts. 19 grs. gold per ton; No. 8 sample from south end assayed none; No. 9 sample from north of cross-cut west assayed none; No. 10 sample from north of shaft No. 5 assayed 6 ozs. 17 dwts. 3 dwts. gold per ton.

MONTROSE.—The manager at Montrose (Mr. Hy. C. Hawkins) writes to the company on the 5th March:—Herewith I beg to hand you Mr. Hayden's report on the work done on Montrose during the month of February. Mr. Hayden has entered very fully into everything, and there is little for me to add, except that I am very well satisfied at the manner in which the works have been carried on. Scott's reef is now well developed, and the water race finished in a most workmanlike and creditable manner.

— Mine manager's report above referred to.—Scott's reef tunnel: The tunnel has been driven 36 ft. during the month to a distance of 403 ft. forward. The reef now shows a width of 3 ft., and the ore has improved in value during the month. On the 21st ult. connection of tunnel with shaft No. 2 was effected at a vertical depth of 153 ft., and a depth on dip of lode 165 ft. High level tunnel: The High level tunnel has been driven 39 ft. during the month to a distance of 51 ft. from collar. At collar the lode shows a width of 1 ft. 6 ins., and widens to 2 ft. at 15 ft. ins., just beyond which point it suddenly pinches out, a small leader marking the line of reef. The distance from breast of tunnel to shaft No. 1 (where the lode is 4 ft. in width) is only 18 ft. in a straight line, or about 22 ft. on line of reef. The pinching out of the reef in tunnel is, therefore, of small consequence, as it must make again before the shaft is struck, and is visible on the surface. The quantity of ore extracted in driving is small in comparison with that obtained in stoping, and the loss of the few tons which would have been extracted between the collar and shaft had the reef not pinched out is more than balanced by the ease of driving occasioned by absence of reef. Shaft No. 2 has been sunk 23 ft. during the month to tunnel level, viz., 153 ft. vertically and 165 ft. on lode; this shaft is now finished. Scott's reef: The completion of shaft No. 2 marks the full development of Scott's reef. By its means the reef has been proved to a vertical depth of 153 ft., while the tunnel proves its horizoutal continuity. All work now done on this reef will be directly applied to the extraction of milling ore, which can within two months be obtained in quantity far exceeding the capacity of the 10-stamp battery about to be erected. A large quantity of timber has been cut and stacked at the mine, and timber, preparatory to stoping, is about to be commenced. About 400 tons of ore from tunnel and shafts are already at grass. West end reefs, tunnel No. 1: Tunnel No. 1 has been driven to a distance of 170 ft. The reef pinched out at 102 ft. from collar. A cross-cut to north at this point has just been commeuced, and a reef 2 ft. in width has been already struck. Though the wall of reef appeared to continue in the line on which we have been driving, I feel confident that the lode in cross-cut is the main body of reef, and that on which we have been driving is only a leader from the reef, or, possibly, the bar running parallel to it. In the forebreast we have had only a very small body of rock, and that not pure quartz, while in the cross-cut the lode is quartz, and prospects very much better than the other. Tunnel No. 3: Stoping is being carried on at tunnel No. 3, but only a small quantity of milling ore has been extracted during the month, it being necessary to take out a very large proportion of mullock in order to extract the ore. Some very rich rock has been taken out, and during this month (March) I hope to get out a good many tons of the same quality. Prospecting: Since my last report was written nothing new has been found. Reef No. 1 has been thoroughly prospected, but nothing payable has been struck, excepting at the point where the reef was first discovered. Water race: The water race is now finished, earthworks, dams, and fluming. Battery site: All earthworks in battery site are finished, and nearly half the masonry; and everything will be ready before the battery is on the ground.

— On the 2nd inst. the directors received the following cablegram from the manager: "Struck a rich body of ore in No. 2 shaft, north cross-cut. Expedite the shipment of balance turbine piping."

MOUNT MORGAN EXTENDED.—The directors have just received report No. 33 of the local committee (per Mr. R. Ballard M.I.C.E.), dated Rockhampton, Queensland, 15th February, 1889, in which it is stated, that—We are busy erecting the brickwork around the boiler and erecting the chimney. Our steam pump and boiler has been erected at the well, and the pipes have been laid from the well to the mill. The pump works beautifully, and throws the water up with great ease. The manager is busy deepening his well, and he tells me that the water is increasing as he sinks. This business, as I have told you, before is my greatest anxiety, the water supply being our weakest point. It is a great expense, the well-deepening and enlarging, but it must be done. All the earthworks are finished except the excavation for the tank, which is now proceeding. The contractors will commence to erect it in about nine days. I have just received from the Otis Company, Melbourne, complete drawings for our Cornish rolls and gearing, the Victorian stone breaker, with a very nice arrangement for separating and re-grinding the ore, and a simple but extremely convenient ore elevator. The design of the plant as arranged by them appears excellent, and I expect daily to receive word from Melbourne that it has been shipped. In the experiments I am condnctiug I find that I can succeed in economically and profitably relieving our ores of a considerable amount of their baser metals and metaloids before subjecting them to amalgamation, and that I shall have corresponding success in saving the minute particles of gold disseminated through the ores. I have done my best to keep the expenses of the mill down to the very lowest compatable with your best interests, and that I have gone further than my first estimate is principally upon the encouragement afforded me by later experiments. I have to a considerable extent completed many valuable and necessary additions for economic and profitable working unforeseen at an earlier date. All works connected with the development of your property are proceeding satisfactorily.

MYSORE REEFS (12th March).—Fortnightly report.—Harvey's shaft: The 320-ft. level north has been advanced 21 ft., now 66 ft. 3 ins. from shaft. We have just cut into some small branches and patches of quartz, which no doubt belong to the bunch of quartz and pyrites we are sinking the winze in below the 250-ft. level, but at present are not sufficiently into it to speak for certainty. Cross-cut west of plat 250-ft. level has been advanced 18 ft. 9 ins., now 152 ft. 9 ins. from plat. We are still cutting through a very hard band of trap, we must continue this for a time with the hope of getting through this hard run of ground and find quartz make on it. Cross-cut east of the 250-ft. level north has been extended by hand labour 8 ft. 9 ins., now 143 ft. 9 ins. from level. The rock is somewhat harder, but letting out more water. Winze sinking below the 250-ft. level north in the bunch of quartz and pyrites has been sunk 3 ft. 3 ins., now 5 ft. 3 ins. below the level. The band of quartz appears to be heaving out as we sink by the pyrites and trap-rock. Two assays have been made. Rough quartz selected, 1 oz. per ton; smalls, 10 dwts. per ton. Taylor's engine shaft: A full force of men and rock-drills are employed, 4 ft. have been sunk in one week, which makes a depth of 139 ft. 3 ins. from surface. One week has been employed in timbering. I did not think it would require it, the rock being so hard, but it had to be secured. I trust now we shall go on without any further interruption until we prove the lode. The rock is exceedingly hard and difficult to sink in; patches of quartz are intermixed with it, which gave a trace of gold according to assay.—M. Scantlebury.

NEW EBERHARDT.—The mine manager reports, under date 16th March, as follows:—South drift: There has been assorted and put on the ore dump 9 tons for the week; assay value of same, $47 per ton. As we have had considerable spar mixed in with the quartz for the last week, it has increased our usual quantity, and diminished the value to $47 per ton. North shaft, No. 1: The sinking of this shaft has been advanced 7 ft. for the week; total depth, 76 ft.. The character of the lime is about the same as reported in my last, but somewhat softer. North shaft, No. 2: Drift westerly from the bottom of this shaft has been extended 6 ft.; total length, 66 ft. No change from last week. North shaft, No. 3: Drift north from bottom of this shaft has been advanced 4 ft.; total length, 4 ft. East drift from bottom Gore incline has been advanced 6 ft.; total length, 180 ft. The face of this drift is still in quartzite, but which is more broken and not quite so hard.

NEW EMMA (16th March).—I have to report work carried on at the mine for the week ending to-day as below:—Level No. 1 easterly, advanced 9 ft.; total, 219 ft, with no material improvement to report. Raise from No. 1, extended 9 ft.; total 26 ft. Shows considerable improvement; ore seams increasing in width, so much so that we are now able to save a little ore for concentrating. Drift from No. 1 towards hanging-wall, advanced 8 ft.; total, 52 ft. Nothing new to report here; ground continues heavily charged with oxidised iron. Level No. 1 north-westerly, advanced 15 ft.; total, 235 ft. Continues in old workings, with no important change. Level No. 3 south-easterly, advanced 10 ft.; total, 365 ft.; not any change to report. We still have the narrow seam of iron and clay, and the rock, though hard, is strongly saturated with oxidised iron. Level north-westerly from uprise from Attwood winze, advanced 9 ft.; total, 136 ft. Not any improvement to report; 14-in. seam of vein matter and ore intermixed continues, and is looking fully as well as per report of 9th inst.—H. C. Wallace.

NEW LA PLATA.—The manager writes under date of March 18th: Mine: The discoveries in lease 1 continue. The deep fissure in the McGee shaft has again opened out, and is producing excellent ore. A small seam of rich ore has been discovered on lease 6, and lastly, the sulphide fissure on the 5th level shows indications for improvement. In a word, the mine all round is looking better than it has for months past. Concentration: The experimental concentration at the small mill was quite satisfactory, and the snow being all melted from the hill slopes, work commenced on the excavation for the mill on the 12th inst., timbers for the building arrived on the 13th, and the work has since been pushed with great vigour. I estimate the royalty from this mill at $600 to $700 per month, commencing with May next.

NEW LIVINGSTONE (9th Feb.)—Fortnightly report:—I have to report that the underlie shaft has been sunk a further depth of 9 ft. during the past fortnight, making the total 141 ft. from the No. 2 level. The reef is 2 ft. 6 ins. wide in the bottom of the shaft, and the stone in the last bench taken up has improved a good deal in appearance, as it is heavily charged with mineral. I am sending this stone to the mill, for I have got a very good opinion of it, as there is a good footwall to the reef, and it is now dipping at the proper grade. The water has lessened, and the contractors are making good progress.—N. Mayne.

NEW ORGANOS.—On the operations during January last the superintendent reports:—Te Encontré top workings: 24 ft. 5 ins. driven on a veiu of gossan 6 ins. thick. Marino lode: Winze sunk 7 ft.; vein of rich gossau and quartz 12 ins. wide. Green's discovery: Stoped 18 ft. 2 ins.; vein 14 ins. wide. James' discovery: 18 ft. extracted; lode of gossan and quartz 2 ft. wide. New discovery: End advanced 20 ft. 5 ins.; vein small and poor for gold. 47 ft. extracted in back of stope. Lode 15 ins. wide, of rich quartz and gossan. Winze sunk 14 ft. on same class mineral as the stope. Timbermen employed in Nos. 2 and 3 levels. Chorro: 150 tons of good minerals have been taken out and sent to the mill. Returns: 210 tons of

mineral were crushed during the month, mostly quartz; yield, 225 ozs. gold=1.07 ozs. per ton.

NINE REEFS (12th Mareh).—Mining operations—Malleson lode, main shaft: The 310-ft. level north has been advanced 3 ft., a total distance of 96 ft. 6 ins. As this drift has now reached the point where the vein is intersected by the dyke seen in the levels above, it is intended to temporarily suspend the drivage and employ the men in driving the same level south of the main shaft, so as to hasten the communieation with Baynard shaft. The continuation of the vein north of the intersection by the dyke is being proved by the siuking af Morrison's shaft. The veiu in the 310-ft. level north at the intersection is 5 ft. wide. Morrison's shaft: Sinking under the 185-ft. level has advanced 4 ft. 3 ius.; total depth below the 185-ft. level, 39 ft. 6 ins. The part of the vein carried in this shaft is 6 ft. wide, the assay being 2 dwts. 14 grs. gold per tou. No. 5 stope, in the bottom of the 185-ft. level north of main shaft: Vein, 6 ft. wide; assay, 1 oz. 3 dwts. 6 grs. gold per ton. No. 6 stope, in the back of the 310-ft. level north of maiu shaft: Vein, 6 ft. wide. Champion lode, Vyvyan shaft: The cross-cut east at the 145-ft. level south of Vyvyan shaft has advanced 4 ft. 8 ins., the total length of the cross-cut now being 21 ft. The indieations are very favourable that the main part of the vein is rich in gold. Stopes.—Stope in the north end of the stope in the back of the 143-ft. level south of Vyvyan shaft: Vein, 2 ft. wide; assay, 5 dwts. 21 grs. gold per ton. Stope in the south end of the stope in the back of the 145-ft. level south of Vyvyan shaft: Vein, 1 ft. 8 ins. wide; assay, 5 dwts. 5 grs. gold per ton. North stope in the back of the 145-ft. level, north of Vyvyan shaft: Veiu, 1 ft. 6 ins. wide; assay, 7 dwts. 2 grs. gold per ton. No. 2 Vein, 95-ft. level north and south of cross-cut east, south of Vyvyan shaft: Vein, 3 ft. wide. The vein in the north drift has improved in appearance. New Shaft: Sinkiug on No. 2 vein has advanced 10 ft., the total depth now being 40 ft. below the surface. Milling.—The quautity of rock crnshed during February was: From main shaft, 669 tons 5 cwt.; from Vyvyan shaft, 79 tons 4 cwt.; a total qnantity of 748 tons 9 cwt. My cable message of the 9th inst. will have informed you that the gold obtained was 91 ozs. This, however, represents only the quantity of gold melted, as we have on hand in the blanket sands a further quantity, estimated as being 30 ozs. of gold. You have expressed a desire to have the works at Vyvyan Shaft pressed with all diligence. This shall be donc, and I fully agree with you that this part of the mine is one of great promise. I do not, however. think you wish me to neglect the Malleson lode eutirely, as this is a very large lode; and, although the assays vary very much, still the width of the vein compensates iu a degree for the low grade of the quartz, as will be readily seen when you reflect that the vein is, on an average, at least 5 ft. wide, contains about 13 tons of quartz to the fm., and, if the average assay of several samples be, say, about 10 dwts. of gold to the ton (the average of our battery samples), then there are 130 dwts., or 6 ozs. 10 dwts. of gold to the fm. Of course, we do not utilise the whole of the assay value of the gold, but say that, practieally, we realise 80 per cent. of the assay—this gives 8 dwts. to be taken out—in the first operation you get about 40 to 45 per cent. of the gold, or 4 dwts. to 4½ dwts. to the ton; in subsequent operations, say, 33 per ceut., or 3 dwts. to 3½ dwts. per ton; the balance is lost. I find that we now extract nearly 45 per cent. of the assay value of the battery samples. I have reason to believe that from the concentrates and tailing we should recover 33 per eent., and I look forward with some confidence to having 200 ozs. gold per month. I shall not be satisfied unless I get this amount, and in a very short time. I ought to give it you from 800 tons of our average rock as soon as I cau utilise the full contents of the rock. I am convineed, so far as my power of judging goes, that you have a most valuable property in the Nine Reefs Gold Mine. The grade of the quartz may be low as eompared with that of some of the mines in the neighbourhood; scarcely so, however, compared with the general average of the gold mines of the world; but the redeeming feature is that the veius are wide and very persistent.—Capt. Bennetts.

NORTH MEXICAN (16th March).—The San Nicolas shaft is timbered and finished to the 100-ft. level; from here down it has to be enlarged to timber it and make the ladder-way. I gave a contract to enlarge it at $9.00 per ft.; it will be about 35 ft. down to the bottom. I expect to have that work done inside of three weeks, aud when that is fiuished, then we will begin sinking on new ground.—R. S. Carlisle.

NUNDYDROOG (12th March).—Mining operations: Webb's shaft is down 403 ft. 6 ins.; Taylor shaft 360 ft. 8 ius.; there is no lode iu the bottom of either of these shafts, and the rock eontinues to be very hard. We have commenced to sink to the north end of the supposed old workiugs near the north bouudary, but before a trial is made it is impossible to say whether they are old workings or only a natural depression in the soil. The 370 level north of Webb's shaft: The cross-cut has been driven 18 ft.; the roek is somewhat changed to a lighter colour. We think it is more like the appearance of the rock accompanying the gold-bearing quartz than it was a week ago. The stopes in the bottom of the 370 south of Webb's shaft, the lode is at points nipped, and there cannot be a great quantity of ore broken from it. The quartz, however, gives a rich assay. Last week it was 2 ozs. 7 dwts. 6 grs. In the bottom of the 300 there is a lode 3 ft. wide, assaying 2 ozs. 3 dwts. 6 grs. In the intermediate level the lode is 2 ft. wide. assaying 1 oz. 5 dwts., and in the bottom of the 230 it is 20 ius. wide, assaying 14 dwts. 6 grs. In the middle level it is 20 ins. wide, assaying 14 dwts. 13 grs. In the bottom of the 166 the lode is 1 ft. 6 ins. wide, assaying 1 oz. 18 dwts., and in the rise in the back of the 230 north of Webb's shaft it is 18 ins. wide, assaying 1 oz. 13 dwts. 12 grs. Weekly samples from the mill: Rough quartz, 3 ozs. 10 dwts. 18 grs.; smalls, 2 ozs. 6 dwts. 12 grs.—B. D. Plummer.

ORITA (20th Feb.)—Mine: Very little to add to my letter of the 16th. Water supply not increased an inch, but considering the supply we are moving plenty of gravel. Branch sluice: We have now the mine pipe in a good position to put in a distributor and branch pipe to start washing here. At present I have men clearing for the pipe line. This connection will, I hope, be made and the water washing here, while we are making next clean np. Also we may run a mouitor here in wet weather, and must be prepared to take advantage of any flush we may have in Despensa. It will take about 25 days' washing here to get in shape, and then the face will go on improving in height till it meets the present workings, when we will have a very fair body of gravel eommanded by both main and branch sluice. Channel: The more we enter the better defined this is beeoming, and there is no doubt but we are in the only natural outlet of the deposit.—H. J. Prender.

OSCAR (28th March).—Oscar lode: No alteration to note either in the 400-ft. level west, or intermediate level below. We are driving them about 5 ft. in width, and in this portion of the lode we have a good deal of quartz and calcspar. The No. 3 lode is producing a large quantity of quartz. Hitherto the walls of the lode have been very undefined, but now there is apparently a good footwall making its appearance. This will enable us to make better progress. The stuff both from here and from the levels in Oscar is being heated separately in the mill. Daw's lode: We are breaking some very good quartz from the bottom 420-ft. levels, and the men are making very fair progress. In the level above south the quartz is thin, and the same remark applies to the stopes following this level. The same level north is not looking so well, and in the rise and stope in back the quartz varies from 5 to 7 ins. From the stopes generally we are finding some fair stones with visible gold. The stope in 170-ft. level north is producing a good deal of quartz, but it does not appear to be very rich. Next mail we shall forward the monthly report and result of this month's crushing.—J. Daw, jun.

PALMAREJO.—Report for month ending 23rd February:—Amount of ore milled, 434 tons; assay value of same, $58.26; percentage obtained, $71.30; net value of product, $18,000; profit on working same, $5,000. Dios Padre has been driven 61 ft., making total length of 702 ft. A letter has been this day received from the chairman, dated Palmarejo, March 6th, in which he says: "Please tell my colleagues that I am very pleased with the property. All that has been said about its value is far within the mark, and the place teems with prospects, which are practically eertainties, of perfeetly incalculable value in the future. I shall not leave here until I have a complete plan and system carefully laid down and considered; this, I hope, will be doue in about another week."

PERSEVERANCE (2nd March).—B tuunel, 1st level south, 1st rise: Stoping yields good rock; end at present in same thickness of mixed slate and quartz as was passed through in 2nd level, but here it is more mineralised, and lode stuff apparently much wider. 2nd level, 2nd rise: You proposed to sink in sole of this rise at point, where upper level from No. 1 rise holes. This sink shows at present a thickness of 6 ft. of mixed quartz, taleose slato and partings of clay slate all very well mineralised with oxide of iron and pyrites, one large crystal showing free gold in the pyrite. It increases the thickness of lode here to 13 ft., bnt we are not on the footwall yet. If the same experiment now started lower down yields the same result, as from what we see in rise No. 3 we have good reason to expect, it gives us a very extensive pieee of good stoping ground. Looking all round, I think our prospects are improving, and that another three weeks will give confirmation of this opinion. I have omitted to mention that the end in No. 2 level is in good reef of the same nature as No. 1 prospecting shaft end. Progress here is unfortunately very slow, and will be with hand labour. One trouble is that neither contractors nor miners plan their holes so as to get the most work out of the dynamite. Battery sample, week to March 6th, 17 dwts. 10 grs.; buddle heads, 4 ozs. 17 dwts. 10 grs.; buddle tails, 8 dwts. 17 grs.; No. 1 prospecting shaft, workings end, 10 dwts. 18 grs.; sink in sole of 2nd rise B, 10 dwts. 18 grs.; top rock, outcrop uear bnngalow, 12 dwts.: north drive in B, 9 dwts. 19 grs. Tailings sample, taken 10th March, 1 oz. 1 dwt. 19 grs.; tailings 1 cwt. from heaps, 1 oz. 1 dwt. 19 grs.; tailings sample, taken 8th March, 17 dwts. 10 grs.; tailings sample, old heap weathered, 13 ozs. 16 dwts. 4 grs.

— Note.—A eonsigament of gold from the mine, weighing 56 ozs. has been received in Londou, and disposed of by Messrs. Pixley and Abell, realising 200*l*.

PESTARENA.—The gold returns from the Pestarena United Mines for the month of March were as follows:—From Pestarena district, 378 ozs. 8 dwts. 12 grs. from 353 tons of ore, equal to 1 oz. 1 dwt. 9¾ grs. per ton. Val Toppa: 159 ozs. 14 dwts. 6 grs. from 407 tons, equal to 7 dwts. 20 grs. per ton; total, 538 ozs. 2 dwts. 18 grs. obtained from 760 tons of ore amalgamated, showing an average yield of 14 dwts. 3½ grs. to the ton.

SILVER WOLVERINE (20th March).—Since date of last report underground developmeuts have been earried on by day work on company account with highly satisfactory results, inasmuch as a series of pockets carrying rich leaf and argentite or black silver with highly argentiferous black blendes have been encountered near the 70th foot mark, at which point black or silver-bearing slate begins to show decided appearances of permancney on the hanging-wall, while the footwall, as before, is yet in the trap. In coneluding this brief report, I may add that the outlook at the Silver Wolverine is for a new opening, extremely good, to say the least, and with the advent of our mineral railroad soon to be operated in the immediate vicinity of the property, the success of the Silver Wolverine as a producer is in my opinion assured.—W. Roland.

SOUTH-EAST MYSORE (12th March).—Mining operations:—Lavelle's shaft, end north: During the last eight days we have driven 31 ft., makiug a total distance from shaft of 222 ft. 6 ins., leaving 23 ft. more to hole to Rogers' shaft. We have had a lode for over 200 ft. in length; in places over 6 ft. wide; a more masterly lode cannot be seen. At present it has dipped under the bottom of the level. I fully expected this. For the remaining distanee we shall be without any lode. I hope to effect a eommunication by Monday, or even before. When this has been completed I shall put a drill in the back of the level to break quartz, and at once put men to stope in a lode that will in places yield good quality stone. The winze will likewise be restarted. I am very sorry to say coolies are still very scarce. I cannot get sufficient to do the work. Rogers' shaft: Sunk during the last week or eight days, 5 ft. 4 ins. We are doing better duty here, aud shall continue to. The lode has considerably improved of late; solid quartz 18 ins. wide; but the full size of the lode is from 2 ft. to 3 ft. We shall when (according to the telegram as publishe1 last week this communieation has been effeeted) "these two shafts are communieated, have a magnificent piece of stoping ground laid open, from which any quantity of good quartz can be broken and sent to the mill. The present depth of the shaft is 288 ft. 1 in.; we shall, therefore, have our shaft 30 ft. or over below the level when holed. Now that the lode in the shaft has given evidences of further improvement, we have an unbroken length of over 245 ft. of lode, and still lengthening. A stope can at onee be taken up iu the bottom of the level and baek; no more bother from water or hoisting. Machinery working very well, and health of the camp at present good.—J. M. Rogers.

ZARUMA.—The manager, under date 1st March, writes :—I must say that at present our prospects are most cheering ; and, with the quartz already opened, there should be no difficulty in keeping the 20 stamps supplied for the next twelvemonth. Abuudancia, No. 2, south vein : The lode is now 26 ft. wide.

SOUTH AFRICAN NEWS.

LATEST TELEGRAMS, &c.

MANICA.—It is announced that Count Cecil Kearney, J.P., has joined the board of the Manica Ophir Mining Company, Limited.

SALISBURY.—For last month (not February as previously reported) the return was 1,469 ozs. A dividend of 15 per cent. has been declared for last month.

GREAT BRITAIN.—The London agency for the transfer of shares opened for business on Wednesday last, the 3rd April, at 46, Holborn Viaduct.

JUBILEE.—A cablegram from the secretary in Pietermaritzburg states :—"Result of last month's crushing is 437 ozs. of gold. Will not pay a dividend."

GORDON DIAMOND.—Return of work done at mine for week ending 30th March :—Loads of blue hauled, 8,200 ; loads of blue washed, 6,200 ; value of diamonds produced, 2,000*l.*

WEMMER.—The following cable message has been received from the head office of the company at Kimberley :—"Struck main reef present level north drive ; the reef is 4 ft. thick, looks splendid."

BIRD'S SWAZILAND CONCESSION.—Certificates of shares are now ready for delivery in exchange for the baukers' receipts covering deposit allotment and first instalment at the offices of the company, 63 and 64, Old Broad Street, E.C.

SOUTH AFRICAN.—The following particulars of work relate to the week ending March 2nd :—Blue ground hauled, 2,340 loads ; blue ground washed, 5,392 loads; diamonds obtaiued, 1,415 carats ; estimated value, 1,415*l.* ; reef hauled, 1,800 loads.

GOLDFIELDS OF SOUTH AFRICA.—The capital having been increased by the issue of 120,000 shares of 1*l.* each, holders of certificates can have them stamped with the necessary alteration on application at the offices of the company, 2, Gresham Buildings, Basinghall Street, on Mondays, Wednesdays, and Fridays, between the hours of 11 and 3.

WITWATERSRANDT.—Robert Whyte and Co., 19, Bury Street, St. Mary Axe, have just received the necessary authority to open a London office for the Witwatersrandt Gold Mining Co. (Knight's), and are now prepared to transfer shares and issue new certificates. All transfers must be made on the usual transfer form bearing *ad valorem* stamp. They have also received, per Norham Castle, 823 ozs. of gold from this company.

SHEBA.—The miue manager writes on the 1st March last as follows :—The striking of the rich gold shoot in No. 5 West (already reported by cable) is undoubtedly a splendid feature in the mine, being at the lowest possible adit level. thereby proving the permanency of the shoot of gold. There is ore equal to anything previously discovered. The mill is working magnificently, having been greatly improved since it was stopped in August last.

THE SOUTH AFRICAN GOLD TRUST AGENCY.—Notice is given that the share transfer books will be closed from the 8th to the 12th inst.. both days inclusive, for the purpose of paying an interim dividend for the three months ending 31st March, 1889, of 2s. 6d. per share on the ordinary shares, and 6s. 3d. per share on the founders' shares, to be declared at the statutory general meeting, to be held on the 11th inst. The offices of the Trust and Agency Company, the West Battery Reef Gold Mining Company, the Mynpacht Luipaards' Vlei Gold Mining Company, and the Nooitgedacht Estate and Gold Mining Company, have this day removed to 8, Old Jewry, E.C.

FORBES REEF.—The manager (Mr. F. B. Doering) reports that he has commenced sinking a new working shaft on Forbes' reef 300 ft. deep, and has ordered the necessary winding and pumping gear for this purpose. He is also putting in low level drives on all the principal new reefs, and has fixed upon a suitable site for the new central mill, which will be built so as to accommodate a large number of stamps. Aerial tramways will convey the ore to this mill from the various reefs in the vicinity. He reports that the Ivanhoe and some others of the new reefs are so soft a nature that stamps are superfluous, and the ore will be treated in Huntingdon or other mills. A new lode containing antimony and gold has been discovered on the eastern side of the concession, which promises well. Additional houses are being erected for the accommodation of the 25 men who have recently been sent out from England. Thirty new stamps have been ordered, and will shortly be shipped together with a considerable quantity of other plant. The company have received a telegram from the mines, stating that the yield of gold for the month of March is 625 ozs.

DURBAN-ROODEPOORT.—At the meeting on Monday, Mr. Archibald Parker presiding, the chairman referred to the very satisfactory progress which the company is making. He said that if it be desirable to make the property into two companies it could be done in a manner, which would be fair to all the shareholders, by simply forming a company and handing one share for each of those now held. Resolutions were passed increasing the capital from 90,000*l.* to 100,000*l.*, by the creation and issue of 10,000 shares of 1*l.* each, to be allotted *pro rata* amongst the shareholders of the company, the said shares to be issued at a premium of 4*l.*, which will give 50,000*l.* of additional working capital. Share warrants payable to bearer are now ready for issue, and those shareholders who may desire to exchange all or portion of their registered scrip for the above are requested to apply to the secretary for forms of application and particulars. A cablegram from the mine reads as follows : "Since our last cable (16th March) we have crushed 420 tons of quartz, producing 653 ozs. of retorted gold, working 14 days. One day lost by reason of various causes, which will be explained by letter."

ROBINSON.—The chairman, in the course of his remarks at the meeting on February 16th, considered that the Witwatersrandt goldfield is one of the greatest discoveries of the present age, and that the Robinson Company is one of the most remarkable features of these fields. The capital is 50,000*l.*, and during the past year a profit of over 60,000*l.* has beeu made. They have now 40 stamps at work, and they hope to have 200 going later on, milling 2 or 3 ozs. per day. He added that "it is no flight of imagination to state that there is no calculating the actual value of the company's mines, for we find that the deeper the reefs are worked the richer they show in gold." He also said that they have ore in sight sufficient to keep their mills going for years to come. At the same meeting resolutions were proposed to raise the capital to 2,750,000*l.*, allotting ten shares of 5*l.* each (50*l.*) for each present share of 1*l.*, the balance of 16,250 shares to be kept in reserve for another issue at the discretion of the directors. The proposal was carried *nem. con.*, and power was given to the board to convert the shares either into share warrants or shares to bearer. All the mines of the district, however, are not Robinsons; and special care must be taken in regard to many of those which were newly floated during the intemperate rush of last autumn.

TRANSVAAL GOLD EXPLORATION.—The following particulars are from manager's advices of March 4th :—Mines—Theta vein : The weight extracted duriug week was 70 tons, assaying 6 ozs. 18 dwts. per ton ; vein continues without material change. Columbian Hill : Bore-hole No. 5 was sunk 7 ft. through slate and quartz ; total depth, 22 ft. Owing to the frequent falling iu of the sides the work had to be stoped. No. 6 is a trench immediately below bore-hole No. 5 on a very precipitous hillside. Huge blocks of quartz have been found therein, but they do not carry any gold. This place will be further prospected. Beta vein : Stripping operations had been going on at this place, but the vein had not yet been reached. Browu's Hill mill —Battery : The battery had been at work on Theta ore for 123 hours, and crushed 118 tons, assaying 4 ozs. 8 dwts. per ton. The clean-up yielded 775 ozs. of amalgam. Complete figures for February had not been ascertained, but will be given uext week. Pans : The pans were at work for 109 hours, and treated 39 tons of tailings from Theta ore, assaying 4 ozs. 8 dwts. per ton. Clean-up yielded 241½ ozs. amalgam. Figures for month will follow. Cablegram : "Crushed 575 tons in 22 days, yielding 825 ozs. Treatment of tailings in pans yielded 45 ozs. Pan residues, 81 ozs. additional." Total for March, 951 ozs.

VOGELSTRUIS (7th March).—South recf, No. 2 shaft : We are still erecting pit head frame, &c. At an early date, however, we hope to commence working below ground when drifting on the south reef will be pushed. No. 3 shaft is down a little over 80 ft. The water is quite quick, and difficult to keep with windlass. We shall persevere. however, with the sinking till it reaches plane of drainage level 90 ft. vertical below surface. Cross-cuts for south and main reefs will be started off, though I expect we shall have to suspend work till provision is made to work it by animal power. The assay of the 15 in. reef we passed through at the 50 ft. point in sinking gave 3 ozs. 4 dwts. per ton. Maddock's winze : The drifts were driven on the reef last month 112 ft., the ends being thus now 136 ft. apart. We shall continue these drivings during March, after which stopes will be opened out. The reef throughout is of a stopable value, average width about 9 ins. At the present the reef in the east drift is 18 ins. wide ; assay value, 17 dwts. The reef iu west drift is only 3 ins. to 4 ins. wide, but its assay value is over 7 ozs. to the ton. Rosewarne's winze : The east and west drifts on south reef at this point were not of practical value at the month end. The drifts seem somewhat off the reef. To-day, however, there is again some indication of the reefs being intercepted in the drifts, which latter have been turned off with the object of cross-cutting. Main reef : The drainage level has penetrated the mud dyke, and since last report has beeu connected with No. 6 wiuze. It is being pressed on night and day shifts towards No. 7 winze. Main reef stopes : The assays of these stopes have not shown as high as last month. No. 1 winze east and west stopes, 3 dwts. 22 grs. ; No. 2 winze east and west stopes, 12 dwts. 10 grs. ; No. 5 winze east aud west stopes, 5 dwts. 5 grs. The mill returns, however, will be the crucial test for this ore. In an intermediate winze, put down for veutilation between Nos. 6 and 7 wiuzes on the reef, the latter gave an assay value of 4 dwts. 14 grs. Battery : Previous advices will have informed you we started our battery on the 28th ult. The first few days crushing proved the plates to have been incorrectly set, the engineer having given them only ½ in. pitch instead of a pitch of 1 in. to the foot, which I have since learned is the prevailing pitch on the Randt ; one or two other alterations we purpose also making before we commence again. These alterations will delay us some little time before all is in full work again, but we hope to have 10 heads going next week. Assays : No. 22, taken from stopes east and west of No. 1 winze (main recf), 3 dwts. 22 grs. gold per ton ; No. 23, taken from stopes east and west of No. 2 winze (main reef), 12 dwts. 10 grs. gold per ton ; No. 24, taken from stopes east and west of No. 5 winze (main reef), 5 dwts. 5 grs. gold per ton ; No. 25 taken from intermediate winze, iucline 6A (main reef). 4 dwts. 14 grs. gold per ton ; No. 26, taken from driving east of Maddock's winze, south reef, 17 dwts. gold per ton ; No. 27, taken from driving west of Maddock's winze, south reef, 7 ozs. 1 dwt. 18 grs. gold per ton ; No. 28, taken from No. 3 shaft, south reef, 3 ozs. 4 dwts. 1 gr. gold per ton. —C. ROWE, Superintendent.

POTOSI, LIMITED.

ENCOURAGING ACCOUNTS FROM THE MANAGER.

Mr. de Lemos' report has been published. He says :—"On reaching the mines on the 16th February the first few days were spent with Mr. Pryor in visiting the different prospecting works made by him during the last few months. Before proceeding, I wish to state at once that these works appear to have been conducted by Mr. Pryor efficiently aud economically, and that credit is due to him for what he has achieved in comparatively so short a period. Of the four lodes, the one which by its appearance looks to me most promising is the Old Potosi, notwithstanding that its milling test was not the highest. Altogether I have come to the conclusion that Potosi has now a prospect of eventual success. Of course able and economical management will be a *sine qua non*. Just before closing I received the following telegram from Mr. Pryor, dated Callao, 11th : —'Old Potosi, bottom level west continues rich,' which can be considered as a most favourable piece of news, indicating, as it does, that we have met with the pay shoot of the Old Potosi lode."

The report of Capt. Pryor, which follows, is equally encouraging, and seems to show that Potosi is entering upon better days after all its past trials.

JUST PUBLISHED. Crown 8vo. Price, 2s. 6d.

"MINING MACHINERY"

By C. CORNES, Ass. M. Inst. C.E., and M.I.M.E..

Containing illustrations, descriptions and current prices of the various kinds of Machinery used for mining purposes, including Stamp Batteries, Prospecting Stamps, Crushing Mills, Rock-drills, Air Compressors, Ore Breakers, Screens, Jiggers, Amalgamating Pans and Settlers, Percussion Tables, Vanners, Ore Feeders, Chlorination Plant, Aerial Ropeways, Winding Engines, Steam Engines and Boilers, Turbines, Water Wheels, Pumping Engines, Diamond Boring Machines for deep bore-holes, Boring Tools, Mine Stores, &c., &c., the whole being codified for telegraph purposes and forming the best guide to intending purchasers of Mining Machinery.

PUBLISHED BY E. and F. N. SPON, 125, STRAND, W.C.

THE

Mining World & Engineering Record.

ESTABLISHED 1871.

Shareholders desiring FULL REPORTS of the MEETINGS of the Companies in which they are interested should Subscribe to and Read the Mining World—6d. weekly. One Guinea per annum, post free.

Half-year, 10/6; Quarter, 5/6. All subscriptions payable in advance. Subscriptions for the Continent, £1 3s. 6d.

Orders to be sent to

W. Dunbar Quinlan,

CONTINENTAL AGENCY,

at which the Mining World may be purchased every Saturday

PARIS - - - 224, Rue de Rivoli.
NICE - - - 15, Quai Massena.

Subscriptions will also be received at the same addresses.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

J. M.—We attach no importance to it.
Anxious.—No call will be made this year.
Etheridge United.—Thanks for your letter. Gratitude is rare, and hence all the more refreshing when shown.
G. M.—Sell Nos. 3 and 5, but hold Nos. 1, 2, 4, 6 and 7.
New Emma.—About May or June we look for a good advance.
B. D.—The crushing is good by ounces, but the number of tons should have been given.
W. H.—Mr. L. J. Woodman is the secretary. Write to Dashwood House, Old Broad Street.
South Africa.—The writer of the articles is a gentleman well qualified to express the views he does.
Jane G.—Your case is a hard one. Consult a solicitor. We will give you a name if you so desire.
Inquirer.—Professional jealousy, we suppose.
Walter T.—Declined with thanks.
West Argentine.—Yes, join the re-construction.
La Plata.—The last report is certainly better. Hold on for the present.
Gold Hill Shareholder.—Follow the advice of the board.
Clara S.—Hold No. 1 and 8. No. 2 is wound up. No. 3 paid its last dividend in November. No. 4 is re-constructing. No. 5: The offices are at Winchester House. No. 6: Dickens Custer re-construction should be joined. No. 7: Callao Bis is a perfect re-construction success we hear.
C. T. H.—New Emmas are good to hold.
Flagstaff.—Re-construction will probably be the outcome.
James W.—Fancy an altitude of 11,000 ft. That is the reason that winter working is so dangerous. You remember possibly the snow slide of a few years ago.
Patriot.—We cannot enter into political matters. We have enough to do to deal fully with mining matters alone.
Centurion.—You are not a subscriber.
J. Priestman.—Buy them at once.
Market.—Sell No. 1, but hold No. 3. We know nothing of No. 2.
A. Tyler.—You will certainly get an allotment.
Anxious (P.A.)—Rather a dangerous speculation.
D. J.—The dividend was declared last week, and payable on the 8th inst.
Dame (Fifeshire).—A fair speculation.
Capitalists.—We are informed that your application money will be returned.
B. A. C.—The telegram will be found in our columns this week. The shares should be held.
Manchester Reader.—The capital of the company is 250,000*l.*, in 1*l.* shares fully paid. A good investment.
G. H.—Too high.
T. Glaston.—There is no market.
Miscellaneous (Cambs.)—Hold for the present.
Saxon.—Take the best offer you can. The shares are not worth holding.
Clothier.—See the letter we publish in this issue on South African affairs.
A. Nicholas (Camborne).—We advise you to have nothing to do with the parties mentioned.
Mousetrap.—Try Messrs. Trubner's, Ludgate Hill, London, E.C.

The Mining World.

LONDON: SATURDAY, 6th April, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

MARCH CRUSHINGS FROM INDIA.

The satisfactory progress of Indian gold mines is well exemplified by the returns of crushings for March received in London yesterday. There is an increase in each of the four principal companies that are crushing. The following table may be left to speak for itself:—

	March Returns.		February Returns.	
	Tons.	Ozs.	Tons.	Ozs.
Mysore ...	2,459	3,249	2,023	3,038
Ooregum ...	508	1,132	432	927
Nundydroog ...	300	514	280	394
Balaghat ...	148	342	146	258

On the market the news was received with a languor born of want of appreciation of the facts, but better prices may be expected, as the importance of the March returns comes to be realised. We are inclined to believe that of all the goldfields at present commanding the attention of mining investors, there are none that deserve to hold in their estimation so solid a position as those of the Mysore territory of India.

THE SYNDICATE MANIA.

In our issue of October 20th last we dealt at some length with the projects which were then being talked about for syndicating the iron and coal industries of the United Kingdom. Since that time the proposal with regard to iron, the impossibility of carrying which into effect we clearly demonstrated, has gone entirely into the background; but every now and again the coal trust is trotted out in one shape or another, only to be laughed at by thinking people, who regard any combination of the kind, which should enable a comparatively few wealthy men to manipulate the greatest industry in the country in any way they pleased, as utterly chimerical. But even if the scheme were at all practicable we have little doubt that the Government would interfere and prevent its being carried into effect. And, in our opinion, the interference would be perfectly justified, for it would be intolerable that the commercial prosperity which has made the United Kingdom what it is should be jeopardised for the sake of benefiting temporarily—for no such movement could be permanently successful—a ring of monopolists.

One of the later propositions for the formation of a syndicate was, however, regarded in some quarters as likely to be accomplished:—we refer to the project started a few weeks ago for amalgamating the whole of the tinplate works of Monmouthshire and South Wales. The tinplate industry is of a much more limited kind than either the iron or coal industry, and as the movement was initiated by the Messrs. Fowler, to whom the establishment of the Salt Union is largely due, it was by some people thought likely to succeed. The meeting convened by the Messrs. Fowler was therefore anticipated with a good deal of interest. The gathering was held at Swansea on Tuesday last, and was very largely attended. Mr. Fowler, who presided, went into the details of his proposal at length, explaining that the scheme was drawn up on similar lines to those of the Salt Union. All the works were to be bought up, such owners as chose being bought paid outright, while those who preferred to take their purchase-money partly in cash and partly in debentures were to be allowed to do so. A resolution to the effect that a provisional committee should be appointed to consider details and report to a future meeting, having been proposed, an amendment was moved "that, in view of the immense increase in the consumption of tin-plates, consequent upon the system of supplying exporters at the lowest possible prices, the meeting declines to entertain any scheme which would interfere with the absolute freedom under which the trade had hitherto been successfully conducted, and asks Messrs. Fowler to discourage further efforts in promoting the proposed syndicate." The amendment was carried by 28 to 21 votes, most of those present not voting. Messrs. Fowler, however, do not seem inclined to "discourage further efforts in promoting the proposed syndicate," and we understand that

they still believe, or affect to believe, that they will be able to satisfy the makers that a consolidation such as they suggested would be to their advantage. They point to the closeness of the voting as an indication that the scheme was largely approved of; but it is to be noted that the resolution did not express any view in the matter: it simply proposed that a committee should be appointed to consider the details. We think, therefore, that the Messrs. Fowler would show more discretion if they left the tinplate industry alone.

There are two striking objections to such a combination. The first is that any attempt to force up prices unduly would be immediately resisted by our largest customer, the United States. Not only would the tariff be largely increased, but we do not doubt that the Americans would themselves start tinplate works of their own, and would take less and less quantities from this side. Our Transatlantic cousins would hardly come to Cornwall for their tin, so that while striking a heavy blow at the industry which the Messrs. Fowler are so anxious to benefit, the starting of tinplate works in the States would have a disastrous effect on Cornish tin mining. That we are not exaggerating the importance of American consumption as a factor in the business is proved by the following table showing the exports of tinplates and sheets in the last two years, with the value as given in the Board of Trade returns:—

	Quantities.		Value.	
	1887.	1888.	1887.	1888.
	Tons.	Tons.	£	£
Germany	4,357	5,862	62,696	82,911
Holland	3,296	3,546	50,467	54,504
France	4,837	4,550	66,279	67,005
United States	268,355	292,623	3,562,972	4,087,147
Australasia	6,916	7,708	98,975	116,555
British North America ...	17,584	20,042	258,720	286,208
Other countries	48,161	56,960	692,745	843,980
Total	353,506	391,291	4,792,854	5,538,310

From this we see that the United States take nearly two-thirds of our total exports of tinplates and sheets, and we see, moreover, that the American demand has largely increased. This increase has since gone on, for we find that in the first two months of the present year 56,350 tons were taken by the States, as against 43,084 tons in the corresponding period of last year, while in nearly every other direction there had been a falling-off. It is clear, therefore, that the United States' demand must be the dominating factor in any arrangement connected with the tinplate trade. But beyond this such a combination as that suggested would have to deal with a firmly-established union of tinplate workers. The men would certainly resist to the utmost any attempt which would almost certainly have the effect of sending the trade away, and, therefore, of throwing them out of employment. Considerable skill is required in the manufacture of tin plates, so that it would be impossible to replace the disaffected workmen until the stoppage of operations had wrought irreparable damage to the industry. We might cite other objections to the scheme, but the two that we have referred to are quite sufficient to show that the combination proposed is absolutely impracticable. The sooner the Messrs. Fowler recognise that fact the better it will be for them and for the tin-plate industry also.

ETHERIDGE UNITED.

Commencing at 2s. 9d. the shares of this company rose during the week to 5s., relapsing on Thursday, but becoming firmer as the market closed last night. On Thursday was published the first substantial crushing which this company has had. Hitherto the struggle has been severe to get the machinery to the mines, and afterwards to put it in place. Successive managers have presumably done their best, but have retired, and now the control is in the hands of an energetic Scotchman rejoicing in the name of Ferguson. This gentleman seems determined to win his spurs on the Etheridge goldfield, and has commenced well by sending home the news of a crushing of 440 ozs. for about 26 days, but omitting the all important point—the number of tons from which he obtained it. The telegram was favourably received, and the public are now becoming persuaded that the Etheridge United directors mean business. They have, however, in the past been more sinned against than sinning. The forces of nature are somewhat difficult to fight against, and when to these are added the difficulty of conveying heavy machinery over trackless wastes, and when you are at the mercy of your teamsters, the directors on this side may send telegrams, and the secretary may write letters, but practically they are powerless. However, matters are now all smooth for working, and shareholders will not hold the management guiltless if they do not improve the shining hour. It is so long since the Etheridge group started on a career which has known more downs than ups, that the shareholders may be forgiven if they require to be informed that there are now 10 stamps working at the Nelson Mine, and 10 other stamps working at the Goldsmith Mine. At the Goldsmith Mine there are 10 additional stamps ready to be put up, and steam-power is on the ground available for other 40 stamps. There is an ample supply of water in the two dams owned by the company, but in order to be quite independent, of the rainfall, 3¼-in. piping is on the way, which will enable the manager to get a constant supply from the bottom of the shafts. The mines now being worked are the Lady Franklin and the Ropewalk, and there is said to be abundant ore. In the opinion of the directors the resources of the company are sufficient to carry it on for a considerable time, even should no returns be forthcoming. The mine has made a good beginning in the way of crushings, and may be expected to contribute to its own cost, and, ultimately let us hope, to reward the shareholders for the unusual amount of patience they have been called upon to exercise, and of annoyance they have been obliged to undergo. We need say nothing about the low price of the shares. The foregoing facts point to the moral, even if they do not adorn the tale.

THE NORTHERN TRANSVAAL DIRECTORS KEEP IT DARK.

A meeting of the Northern Transvaal Gold Mining Company, Limited, was held yesterday, in an attic in St. Stephen's Chambers, Telegraph Street. The attic in question, if occupied by a dozen persons for any length of time, would be extremely unpleasant as regards atmosphere and unwholesome as regards sanitation. Despite the risk of the one and the peril of the other, our representative attended at the appointed time, and was told that members of the Press would not be allowed to enter; in fact, that the company had had rather more than enough of the Press. The latter statement we can readily believe. Concerns like the Northern Transvaal Company do not care to have their proceedings too closely criticised. The independent shareholders present—and we assume, for the sake of argument, that all of them were independent—might have supported the Press in their claim to be present, if only in the interest of their absent brethren; but no aid was received from them. It is useless trying to protect people who will not raise a finger or utter a word to protect themselves. If the lambs are dumb, they must not be surprised if the shearer be active.

THE TRANSVAAL GOLDFIELDS.—5.

By a Cape Colonist.

At first the Paul Kruger party refused to consent to this, and the whole matter came to a deadlock. Subsequently, about two months ago, a special session of the Free State, Volksraad, was called on the railway question, and at the instance of Paul Kruger a resolution was passed authorising the construction of an extension from Colesluy in this colony to Bloemfontein, the capital of the Free State, to be afterwards continued into the Transvaal, it being understood that this concession was made on the express understanding that the Cape Colonial Government abandoned the idea of extending their line from Kimberley into Bechuanaland, along the western border of the Transvaal. But even then the Paul Kruger party in the Transvaal are believed to have sufficient influence over the Free State Government to prevent the proposed extension being carried further than Bloemfontein until they had constructed their line from the Komati River through Barberton to Pretoria. Now, seeing that it is exceedingly problematical whether that line will ever be constructed, and if it is, knowing that Pretoria could not be reached from that direction for the next 10 years, it is presuming a little too much on the patience of our business men, who are looking at the energy of Natal with feelings of mortification. It is to be recorded to the credit of the progressive party in this colony that such nonsense would not be listened to for one moment, and a resolution was passed during the last session of the Cape Parliament authorising the Government to construct an extension of the railway from Kimberley to the Vaal river, the confines of the colony, a distance of 24 miles; but so great has been the influence of the Paul Kruger party over the "Bond" faction in this colony—notwithstanding the friction I have alluded to—that the Government has practically abandoned the idea, and the consequence will be another row when the Cape Parliament meets in May. Now there is another element to be taken into consideration. At a point near Barkey West, to which place the Kimberley line would have been extended, the Transvaal territory, the colony, and Bechuanaland meet. Bechuanaland is a British Crown colony, and beyond Bechuanaland will be found the native territories of Matabeleland and Mashonaland, all of which are now under the Protectorate of the British Crown. Recent prospecting has proved that all these countries are as rich in gold deposits as the Transvaal, and attention is now being directed to the necessity of extending the line from Kimberley across the Vaal river in a northerly direction, wholly irrespective of Transvaal attractions, and hence it is currently reported that our Government has approached the Imperial Government with the view of obtaining the assistance of that power to construct the proposed line.

It will thus be seen that the question of railway extension in South Africa is one in which English capitalists are largely interested. It has certainly reached the stage from which there is no retreating. Gold of itself is not a factor to be taken into consideration when the feeding of a railway is concerned. On the other hand it is of necessity an indirect feature which must be largely considered. The opening up of the industry over so large an area of country necessitates an enormous importation of machinery and manufactured goods, the one

for the prosecution of the work, and the other for the supply of the people. Besides this it must not be forgotten that the introduction of so large a population means the development of other industries, and above all the cultivation of the soil, which has hitherto been so largely neglected. As I have before stated the Transvaal alone is capable of supplying a much larger white population than is to be found in the whole of South Africa at the present moment. This means the transfer of thousands of families from over populated Europe as years go on, and it may therefore be safely predicted that in the immediate future the Transvaal will be overrun with a gigantic network of railways. The climate is one of the loveliest in the world, and the area of cultivated land is much larger in proportion than in any other State in South Africa. That there are many political difficulties in the way of the establishment of a settled government cannot be denied; at the same time these difficulties are not insuperable. There are evidences of a more enlightened policy coming to the front. The question is really in the hands of the intelligent portion of the Dutch Africanders. These men—and there are scores of them—are sufficiently progressive in their ideas to take the government into their own hands if they will only develop sufficient pluck to do so, and they can do it without the semblance of a physical struggle. They are thoroughly acquainted with the English language, and they willingly admit that in time the English language will be the dominant language in South Africa. If they would only come forward and assert their authority it is quite certain that they would receive the support and countenance of all the English and English Africanders. If all we hear is correct, it appears that owing to the present unsatisfactory condition of affairs, capitalists at home exhibit a timidity which is very natural. It is true that within the last six months upwards of four millions sterling have been invested in these goldfields by English capitalists, but common sense tells us that that amount would speedily be increased ten fold if the solidity of the Government was established.

It will be scarcely diverting from the railway question for me to remark upon the way in which the goldfields industry has been carried on up to the present moment. There cannot be less than 400 gold companies at Barberton and Johannesberg. On this point I will give some details in my next. These companies have principally been started with South African capital, and many of them have suffered the usual fate of companies which are promoted by men who knew nothing of the business, and who started them for purely speculative purposes. Wherever goldfields were proclaimed a rush was made, and half-a-dozen men clubbed their claims together, which had only cost them a few hundred pounds, and then started a company with a nominal capital of say 100,000*l.*, in 1*l.* shares, the promoters putting the lion's share of the purchase money into their own pockets. Assays based on picked specimens and asserted to represent some fabulous number of ounces to the ton were published, and the shares ran up to an absurd price, the natural result being over speculation and gambling in stocks to a fearful extent. As a very natural consequence many of them at Barberton, at all events, have come to grief, and instead of expected dividends the concerns have had to be wound up. Truth compels me to state that as a matter of fact the number of companies at Barberton and Johannesburg which are really paying dividends may be counted on the fingers of one hand. Possibly this is another cause why foreign capitalists are timorous of entering the Transvaal. On the other hand, we have overwhelming evidence to prove not only that the gold is there, but that it is there in paying quantities, and of sufficient extent to keep thousands of stamps at work for the next generation. Besides the paying by companies of exorbitant prices for their claims, another cause of the failure has been the want of a practical knowledge of the business. It is not too much to say that there have been during the last two years, and probably may even now be found, men who have undertaken the management of these companies, men who have proclaimed themselves mining engineers, and men who have declared themselves to be gold experts, not one of whom ever saw gold quartz mining before in his life. Gradually all this is being changed. Men who have not lost their all, and who are desirous of taking shares in new companies, satisfy themselves that the capital is sufficient for the purpose; that the vendors are not paid extravagantly; that they are compelled to accept at least half the amount in shares, which they are bound down not to negotiate until a dividend is paid; and that the manager shall be a man of experience; and that the engineer shall give some proof of his proficiency in his profession. As an instance of the inexperience exhibited in the management of some companies, I may mention that a few months ago some Cornishmen were imported as "miners," who, when they arrived, proved so incapable that we were driven to the conclusion that they were tinkers, tailors and candlestick makers, who had never had a pick in their hands in their lives.

I have thus briefly deviated from the actual subject of this letter for the purpose of showing what a change has come over the Transvaal within the last two years, in reality, since the foundation of Johannesberg. As soon as the news came down that gold had been discovered on the Witwatersand men of all classes and descriptions rushed up without a thought of the difficulties they really had before them. True it is that they went up well knowing that the discovery was not that of alluvial gold; but there seemed to be a sort of misty glamour hanging over the new fields, which was of itself an attraction. It was well known that at Barberton, the first discovered goldfields, the gold was embedded in hard quartz; but word came down from the Witwatersrand that the precious metal was to be found in what was called "banket"—a colonial term for the well-known sweet, "rock almond." It is really a sort of conglomerate, a petrified mass of mud, stones and sand, which actually requires as much crushing as the hardest quartz. There seemed to be a sort of lingering hope in the minds of many who went up that this change of formation would lead to the discovery of alluvial gold; and, indeed, alluvial gold has been found in many of the creeks, but in such small quantities as to disgust the few Australian miners who had found their way to these wonderful goldfields. Another feature must be mentioned, which also bears on the railway question. Nine out of ten of those who went up in the first instance, and, indeed, not a few of the hundreds going up every day, are under the impression that they will be able to make their pile in a couple, or three years at the most, and having done that, they intend to clear out of the country. They are now beginning to recognise the fact that gold quartz mining is like all other legitimate industries, it has to be worked at, and to work at it with a profit people must settle down to it as an industry, and as we have plenty of scientific data before us to prove that it will last out the present generation, people are now becoming gradually convinced that they must abandon reckless speculation, and apply themselves to the serious business of practical development. To accomplish this according to the commercial lines of the present day, it is beginning to dawn upon us that we must have rapid and regular communication between the several gold-bearing centres and the seaports, and that this can only be done by means of railways.

How and in what manner this is to be accomplished it is difficult to say. That it must be accomplished is a moral certainty, for if not the gold might as well remain in its matrix for another generation. That there are grave political difficulties in the way will be easily understood if my readers have followed me thus far. In this part of the world we are making history so rapidly, and there is every probability that before this letter is in print considerable changes will have taken place on the railway question. In reality it is a case of commercial interest *versus* Transvaal obstinacy and obstruction, and it is difficult to predict which will eventually prove the victor. The situation is accepted to be a delicate one, and the several Governments of South Africa, looking at the many complications, are contemplating a conference, the particulars of which I hope to send before the end of the present month.

(*To be continued.*)

EGYPTIAN DEBT.

In regard to the determination of the Egyptian Government, in the face of the opinion expressed here by eminent counsel, to pay off holders of the Five per Cent. Railway Preference Debt, the question has been raised whether the committee of the Stock Exchange would interfere on behalf of the bondholders. It is impossible to say upon what the committee may decide in the matter, but it is probable they would not take any action until the bondholders had prepared a case and decided a point. A precedent is to be found in the case of the Spanish defalcation, in cutting down in 1851 one-half of the amount of coupons in arrear from 1841, when the committee appointed by the bondholders issued a certificate for the remaining half, and laid their case before the committee of the Stock Exchange, who refused recognition of Spanish securities, and at length gained the acknowledgment by the Government of the whole amount. There is, however, a very material difference in the present instance; the former was a confiscation of principal, and this only a reduction of interest, which many think the Government have a right to carry out, including, the Government say, the English Crown officers. The question really is whether the Government have the power or not, and this can only be settled by legal action.

RETURNING THE MONEY.

The directors of the Canadian Asbestos Company have wisely saved themselves all further trouble on the part of the shareholders by agreeing to return the capital subscribed. The directors have repudiated the purchase of the property, and have themselves resolved to defray the outgoings and expenses of the company. It is necessary first that the company shall be wound up, and if the shareholders are wise they will see to it that their own independent liquidator is appointed. Whilst giving the directors every credit for honourable conduct, we cannot compliment them on the judgment they displayed in endorsing such a prospectus as that upon which the company was floated. Its chairman is Sir Henry Isaacs (Alderman), who occupies a similar position in connection with the Cerro de Pasco (Transvaal) Goldfields, Limited, whose statements as to this concern, made at an informal meeting a short time ago, were of a most enthusiastic character. It is earnestly to be hoped that in this instance also his judgment has not been at fault. It is true the property is situate in the De Kaap District, which is rather under a cloud just now, like Cerro de Pasco itself, of whose

shares in regard to the market, it may be said in the language of the old song :—

"Oh no, we never mention them,
Their name is never heard."

The absence of information from this concern is beginning to disquiet the shareholders. The best thing we know about the company is the excellent stamps the directors have had made for it at the works of Messrs. Appleby and Co., of East Greenwich. Should the concern ultimately fail it will be from no fault of the machinery; but at the same time the protracted silence of the directors, after the gushing outburst of Sir Henry Isaacs at the meeting to which we have referred, necessarily causes uneasiness in the minds of the shareholders, who were some 15 months ago invited, out of the capital of 375,000*l.*, to provide the substantial instalment of 150,000*l.*

ANTIOQUIA AFFAIRS IMPROVE.

Mr. Donogan, in the exhaustive speech he delivered at the meeting of this company on Thursday, showed the great improvement that has taken place in the mine, and the need there is that the debenture-holders should take a reasonable view of the situation, and allow the concern to pursue untramelled that path of prosperity upon which it has now entered. The whole of the debt to the bankers has been extinguished, and the only creditors other than the debenture-holders are the directors (who will not trouble the shareholders), and the Frontino and Bolivia Company, the quality of whose mercy will not be strained. The great point under the consideration of the meeting was the attitude of the debenture-holders. To these gentlemen is due the sum of 14,000*l.* Their debentures are at present unsaleable, and even if the interest were paid they would remain so still. Now, by the conversion of these debentures, as proposed by the directors, into preference shares, the principal would be preserved and the interest capitalised. They would have a 1*l.* preference share for every 1*l.* of debenture now held, carrying 10 per cent. out of profits. The result would be that whenever the 10 per cent. is paid upon the preference shares, the ordinary shares which follow them will become of market value. By agreeing to such a policy the company would be lightened of the financial cargo which has kept it water-logged so long, and the ship might be steered into a harbour of dividends which none of the shareholders, until quite recently, even hoped to reach.

THE CONCESSIONS TRUST, LIMITED—MATERIAL FACTS RENDER CAUTION DESIRABLE.

We referred on March 23rd to a concern entitled, "The Concessions Trust, Limited," and pointed out its undesirable character as an investment, at all events, until more specific information was given to the public, and until a better claim to their subscriptions had been established. We have now received from Messrs. G. E. Stokes and Co., of 19, Change Alley, London, the following memorandum :—

"Referring to our circular of yesterday, we would advise intending investors to delay operating until they hear from us again. Material facts have just come to our knowledge which, we think, render caution desirable.

19, Change Alley, London, E.C. G. E. Stokes and Co."

Messrs. Stokes and Co. are to be congratulated on the action they have taken, though their candour might have led them to mention the material facts to which they refer. Still, the course they have taken may be recommended for imitation to other firms, who, after indentifying themselves with new projects, subsequently find that further investigations are required before they allow their clients and friends to part with money they may never see again.

BALKIS MANAGEMENT.

The directors of the Balkis Company may not like to know what is thought about them in the Transvaal, but the opinion there does not differ much from what it is here. In the Transvaal the colonists think the company has a magnificent property, but that it is badly managed. In England also the opinion seems to be that it is a magnificent property managed by imbeciles. Of course, we know that grand returns have been promised at the various meetings some day; but "some day" is a bad tune to waltz to, "now or never" being the ditty the shareholders prefer. It must be confessed that the Lydenburg goldfields have not come to the front as they were expected to do, and that those who have prophesied in their name rank now amongst the false rather than the true prophets. We are a long way, however, from saying as the *Transvaal Advertiser* does, that these fields have been kept back by the machinations of a clique in London—we are rather disposed to think they are kept back by well-meaning incompetents, whose policy, when the company has money, is an activity the reverse of masterly, and who only seem to wake up when it is necessary to make a further plunge into the pockets of the shareholders. Whilst upon the subject, perhaps the directors will tell us what they are doing with the Eesterling Farm, to work which the shareholders subscribed last July a sum of 20,000*l.* This farm is said to possess reefs richer than any in the country. What steps have the directors taken to bring to the pockets of the shareholders the dividends of which those pockets have so far been destitute? What with heavy London expenses on the one hand, and law expenses in the Transvaal on the other, the company has literally been done to death between the upper and the nether millstone. Will the directors tell us whether it is true that the Government have resolved to throw the farm open? Two shareholders from South Africa threaten to present themselves at the next meeting and "speak a bit," as the Yankee says. They have a mandate to tell the directors what their constituents in the Transvaal think of them, and if they are true to their mission what they will have to say will neither be flattering nor consolatory.

RED REEF GOLD MINING CO.—A GOOD DEAL OF WORK DONE IN A SHORT TIME.

Lord Hay, of Kinfauns, the chairman of the Red Reef Company, was able to make a very gratifying statement to the shareholders who assembled at Mr. Felix Wilson's offices in Finsbury Circus on Tuesday last. The capital appears to have been fully subscribed, and the confidence felt in the company in the Transvaal is such that the 20,000 shares reserved for local applicants have been taken. The capital subscribed, the directors at once took energetic steps to complete the purchase, and the grants of title are now in possession of Mr. T. H. T. Rogers, the active solicitor of the company. The property appears to be quite as valuable as the prospectus described. It embraces 91 acres, and is traversed by twelve gold-bearing reefs, some of which in neighbouring properties have helped to make the Witwatersrandt district famous. These reefs seem likely to make the fame of this company also, for assays from them give up to 13 ozs. to the ton. The Klip River crosses the centre of the estate diagonally, and the configuration of the ground is such that the property can be worked with economy and despatch. It is too expensive for one company to work alone, and so the directors are having a survey made, so as to be in a position to sell portions to subsidiary companies, and it was more than hinted at the meeting that certain persons are desirous of obtaining slices of a property which is so highly thought of both here and in South Africa. Mr. Lidstone, C.E., a director, gave an extremely lucid description of the company's property, and showed that the success of neighbouring claims justified the opinion largely entertained, that "the shares would equal those of the Robinson or the Salisbury." The shareholders have every reason to be satisfied with the property they possess, and with the intelligent management into whose hands it has fallen.

UMBELOOSI EXPLORATION LAND AND MINING CO., LIMITED.

The list of applications for shares in this company closed yesterday, but the prospectus ought not to be passed over in silence. The concession, which is granted for 50 years with the right of renewal, extends over 400 square miles—in other words, about one-twentieth of the entire area of Swazieland. It confers the monopoly of mining rights of all gold, precious stones, and minerals which may be discovered, with every other subsidiary advantage that is necessary to the successful development of mines or cultivation of lands. A property so vast must of course be subdivided, and the directors will take good care that in this happy event their shareholders will not be taken at a disadvantage. The company has good neighbours, one of them being the Forbes Reefs, whose shares are at a premium, and from which since the machinery has been erected 60,000*l.* worth of gold has been produced. The testimony of Capt. Ewing and Mr. John Thorburn, both of whom occupy official positions in Swazieland, are emphatic as to the vast possibilities that lie before the company in its researches for minerals of almost every description. It is well stated that whilst the capital of other companies, with an acreage infinitely less, ranges between 300,000*l.* and 400,000*l.*, this company, with an acreage of 400 square miles, has a capital of but 225,000*l.* The company has been favourably received by the public, and the allotment of shares will be made on Monday. The shares to-night are quoted at $\frac{5}{8}$ prem.

THE HANSARD PUBLISHING UNION, LIMITED

The recent acquisition of the copyright of "Hansard's Parliamentary Debates" and the contract with the Government for their publication by MacRae, Curtice and Co., Limited, together with the largely increasing general trade secured by this company, have rendered necessary some important additions to its works. In order to attain this end, and with a view at the same time to terminating the competition of certain other businesses of a kindred nature, it has been decided to effect an amalgamation with other important firms. These firms are MacRae, Curtice and Co., Limited, Messrs. Wyman and Sons, the well-known printers; Clement-Smith and Co., Limited, who enjoy a special reputation for high-class colour printing; Messrs. Vanoni, the celebrated engravers, who take a foremost position as regards illustrated work; and the important newspaper and magazine publishing business of Mr. Henry Vickers. There can be no doubt that the consolidation of the above businesses will constitute a powerful trade organisation, the extraordinary character of whose resources will necessarily attract a large amount of additional and profitable work. It is obvious that in an amalgamation scheme of this magnitude, the savings to be effected by consolidation, increased purchasing power, and completeness of plant and general trading resources, must necessarily be an important source of dividend. At present there are no fewer than 14 separate establishments

engaged in the work which the Hansard Publishing Union will consolidate ; and when it is remembered that, in addition to rent, rates, and taxes, motive power, etc., each of these requires its own special managers, overseers, foremen, timekeepers, clerks, book-keepers, etc., it will be apparent that an immense economy will be effected. The capital of the company is 375,000*l*., consisting of 20,000 8 per cent. cumulative preference shares of 10*l*. each and 17,500 ordinary shares of 10*l*. each. Messrs. Monkhouse, Goddard and Co., having examined the books, state that the profits of MacRrae, Curtice and Co., Limited, Clement-Smith and Co., Limited, Vanoni and Co. and Wyman and Sons alone are more than sufficient to pay 8 per cent. per annum on the entire issue of 200,000*l*. of preference shares of this company. This is independent of the profits on the important *Hansard* Government contract and on the extensive business of Mr. H. Vickers, and is also apart from the savings in rentals, &c., to be effected by the amalgamation, and which savings are calculated by Mr. Thomas Taylor, the well-known printers' valuer, to exceed 11,000*l*. per annum. The preference shares are entitled to a preferential cumulative 8 per cent. dividend. The ordinary shares take the whole of the surplus profits ; and, having regard to the above fact, the directors entertain no doubt of paying a highly satisfactory dividend upon the ordinary shares, after making ample provision for a reserve fund and other purposes. The purchase price for the plant, machinery, type, the valuable leasehold premises in Catherine Street, and Great Queen Street, and the goodwill of the combined firms has been fixed by the vendor at 325,000*l*., of which it is stipulated that at least one-half shall be payable in preference and ordinary shares of the company in equal proportions, and the remainder either in cash or shares at the option of the directors. The board is an exceptionally strong one, and the company bids fair to be a great success. It is stated that the ordinary shares in the Hansard Publishing Union, Limited, were freely dealt in this afternoon at ¾ to 1 premium.

THE NORTHWICH SALT CO.

The best known expert in the salt trade is probably Mr. Thos. Ward, J.P., who has come to the conclusion that the Northwich beds occupy at least 3 square miles, and contain, in the aggregate, 900,000,000 tons —the upper 380,000,000 and the lower 520,000,000. Starting on this basis, the supply of salt appears to be almost as inexhaustible as the demand. The property of the company, which is freehold, embraces 27 acres, and is situated at Lostock Graham, near Northwich, the headquarters of the salt production. It is proposed to erect works equal to an output of 1,000 tons per week upon this land, which has the double advantage of being accessible both by railway and canal, so that it can command all the markets. The supply of salt is regarded as inexhaustible, and the profit is estimated at a minimum of 6s. per ton. The property has been reported upon by Dr. Rance, secretary to the Royal Geological Society. It will surprise many of our readers to learn that, with the exception of the coal and iron industry, the salt trade is the most important in the kingdom, and four-fifths of the trade is possessed by the Cheshire Salt Union. The figures are almost staggering by reason of their magnitude. For example, the quantity shipped in the Mersey during the years 1878 to 1887 amounted to upwards of 10,000,000 tons, of which the East Indies absorbed more than 3,000,000 tons, the United States 1,500,000, and other countries in accordance with their population and trade requirements. Meanwhile the effect of the Salt Union has been to enhance the price of the commodity, and a further rise may be expected when forward contracts have run out. On a reasonable calculation, and after remorselessly cutting down original estimates, the profit, it is believed, will be 15,300*l*., or 15 per cent. upon the share capital of the company. This, we may here state, is 100,000*l*., in 5*l*. shares, of which 65,915*l*. has already been subscribed, and the remaining 6,817 shares of 5*l*. each are offered for public subscription at par to complete the working capital. The company has made gratifying progress with its works ever since the issue of the prospectus last February. The directors are business men, and the broker is Mr. J. Y. Watson, of Copthall Buildings, who is very well known and widely esteemed in mining circles. The list of applications for shares will close this day (Saturday) for both town and country.

PARKER'S BURSLEM BREWERY, LIMITED.

The success which has attended the conversion of private breweries into joint-stock companies is manifest by the premiums at which the shares stand in the market ; and we have little doubt that Parker's Burslem Brewery, Limited, the prospectus of which lies before us, will be no exception to the rule. Unlike some of the brewery concerns that have been attempted to be foisted upon the public, Parker's Brewery has been established for many years, and its conversion into a company is not by any means in consequence of declining business. The returns for the year 1887-8 were the largest on record, and it is stated that the sales for the current year show a still further increase. It is with a view to extending and developing the business that this company has been formed ; and in addition to the freehold brewery, with a supply of excellent water, well adapted for brewing purposes, the company acquires a large number of hotels and public-houses, two malt kilns, capable of producing upwards of 16,000 qrs. of malt per annum, as well as the rolling stock, horses, plant, stock, book and other debts, materials and goodwill. The steady growth of the business may be seen in the report of Messrs. Price, Waterhouse and Co., who have examined the books, and who state that the quantity of ales, beer, &c., sold during each of the following years ending 2nd June was as follows :—1885-6, 49,175 barrels of 36 gallons ; 1886-7, 55,528 barrels of 36 gallons ; 1887-8, 65,582 barrels of 36 gallons. And that the net profits from trading for the year 1887-8, as shown by the brewery books, including rentals and interest on loans, but exclusive of any charge for interest on capital, &c., amounted to 42,652*l*. 7s. 6d.

A statement like this coming from a firm of accountants of such high standing, together with the fact that since the accounts were made up the sales for nine months show an increase over the corresponding period of last year at the rate of over 8,000 barrels per annum, warrant the directors in confidently assuming that the profits will be sufficient to show at least 12 per cent. on the ordinary share capital. The capital is 360,000*l*., divided into 18,000 6 per cent. cumulative preference shares of 10*l*. each, and 18,000 ordinary shares of 10*l*. each. The debenture capital is 185,000*l*. The purchase price has been fixed at 554,250*l*. As the company take over the whole of the business as a going concern as from 2nd June last, with the benefit of the large stock of hops, malt, beer, materials, &c., also all trading plant, horses, carts, drays, barrels, as well as the book debts owing to the firm, and as the brewery is purchased free from liabilities at that date, no further working capital is required. The lists close on Monday.

THE ROSARIO NITRATE CO., LIMITED.

The names of the gentlemen on the first page of this prospectus will give confidence to investors. The directors are gentlemen of high social and commercial position, and may at once be credited with having carefully examined the statements of this remarkable prospectus. The profitable character of the nitrate industry is universally acknowledged. Provided that the nitrate beds are well selected, and worked with intelligence and economy, profits seem to follow with a certainty that is unerring, whilst recent experience shows that for the speculator a turn with nitrates is usually fraught with much profit. Shares of well-introduced nitrate companies almost always go to a premium, and in proof of this the share lists have only to be consulted. The capital is large, but the property is valuable. In the first place we find 650,000*l*. in 6 per cent. debentures of 100*l*. each, repayable at 110*l*., and 600,000*l*. in 120,000 shares of 5*l*. each, equal to 1,250,000*l*. 80,000 shares are now offered to the public at par, but more than half of these have been applied for by local residents. The nitrate grounds and works which this company has been formed to acquire, are known as Rosaro, in the province of Tarapaca, Chili. The reports relied upon are chiefly those of Mr. Gallagher and Mr. Clarke. The experience of the former gentleman in this business is generally acknowledged, and he states that the Rosario oficinas contain about 1,000 acres of virgin ground in the best part of the Nitrate district, 66 miles from the port of Iquique, and connected with the main line of the Nitrate Railways Company by a branch running into the establishment. Water is plentiful, and the property alike easy of access and development. "Its grounds are the richest I have known," says Mr. Gallagher, and he adds, "The caliche runs through the entire estacamiento in an uninterrupted layer or stratum, the quality or ley giving an average of over 50 per cent. Equally important is the thickness of the caliche, which gives an average of 30 to 36 in. (in many places considerably more) at a moderate depth from the surface ; thus the extraction is easy and cheap." The estimated yield of Rosario is 30 quintals of nitrate. After this, we are prepared for the statement of Mr. Gallagher as to the immense value of the ground, "even if it were not notorious that they lie in the centre of a very rich district." The manufacturing plant is complete, and commenced work for the season on 14th March. It is capable of an output of from 200,000 to 220,000 quintals per month—in fact, the establishment as it exists, and as the company takes it over, is on an enormous scale. The appurtenances are of modern construction, and have been designed to produce nitrate and iodine on a large as well as economical scale. It is Mr. Clarke who reports upon the oficinas of San Juan and Argentina, and he estimates that they contain 287 estacas about half-worked. It should be borne in mind that the purchase price includes not merely the works we have been describing, but also the stocks of nitrate and iodine at the three oficinas, with all contracts ; and the prospectus states "this should leave a profit of over 50,000*l*. to the company." Should the shares of this company advance to anything like the substantial premiums of those of its competitors the estimated dividend of 20 per cent. per annum upon the capital is reasonably low. The properties are purchased for 1,200,000*l*., but the vendors stipulate that they shall have one-third of their interest in the company's shares, and they pay all the expenses incidental to its formation. 50,000*l*. will then remain as working capital, which would be a fair reserve, seeing that the property is taken over as a going concern.

NOVELTY IN CANAL TRANSPORT AND CONSTRUCTION.

The ingenious system of canal navigation, of which Mr. Arthur Pickard, of the firm of Messrs. Pickard Brothers, of Leeds, is the inventor, may be inspected at the offices of Messrs. J. O. Chadwick and Sons, of 95, Finsbury Pavement. The inspection will well repay any trouble it may cause. To the 13 specific advantages which Mr. Pickard claims for his idea, one other may certainly be added—that of originality. He claims for his novelty in canal transport and construction the following favourable points :—(1.) One power to carry any load any level distance. (2.) Dispensing with haulage and attendance. (3.) The use of truck boats, which may be bodily lifted from the waterway, to load or unload, and may also be instantaneously transferred from one current or level to another. (4.) Can be adapted to present canals by dividing the waterway and providing guide rails in the mid feather. (5.) Where present canals have use of an existing stream, it can be utilised in forming a current, and where they have no natural supply of water, they at present have a pumping engine, which engine may be used for forming the current. (6.) May be made a great saving for conveying product from collieries or works to a railway or canal, or as a feeder for any class of traffic to or from a railway or canal. (7.) May be adapted for relieving goods traffic on railways by forming current in each side of permanent way. (8.) In forming new canals, they may be constructed of continuous iron tanks, which may be supported over valleys, roadways, or other waterways, and levelled by excavation through high ground, thus reducing the number of locks or new levels to a minimum. (9.) One statiouary engine of moderate power will form current in two or more distinct levels or courses. (10.) The current being onstant prevents any delays or stoppages.

of ice, and if the canal be of new formation, its bed will always be kept clear. (11.) The speed of present canal traffic may with ease be doubled or trebled, and the cost of carriage immeasurably reduced. (12.) The necessity for locks, with all their costly construction, expensive working and delays, avoided. (13.) It may in many cases be used for conveyance of passengers, or as a means of amusement and recreation. These claims have been endorsed by a large portion of the general and scientific Press. It is stated that, whereas the cost of ordinary canal navigation is in construction 5,000*l.* a mile, Mr. A. Pickard's system is reduced to 3,000*l.* a mile. The system is certainly ingenious, and, so far as we can see, practical.

EAST AREVALO.

THE recent news from the East Arevalo Mine will have prepared the public for the following gratifying telegram which was received in the course of the week from the manager, Capt. H. Prideaux, at El Chico, Pachna, Mexico, who telegraphs :—"Third level lode improved; richest pieces ore assayed 23 marks, monotone. Commenced opening lode fifth level. This is equivalent to 127 ozs. per ton, the mark being 8 ozs., and the monotone 3,000 lbs." Since the reorganisation of the board, which is now composed of thoroughly business gentlemen like Mr. Jenkins and Mr. Henry Wilson, the company has prospered considerably, and great credit is also due to the manager in Mexico. There was a time, not so long ago, when East Arevalo seemed about to founder in the deep sea of impecuniosity, but at the present time the position has so much improved in every way that the shares seem to form a desirable speculation.

THE MONEY MARKET.

CITY, FRIDAY EVENING.

THE influx of gold at the Bank, and the fall in the discount rates, led to the full expectation at one time that the Bank rate would be reduced this week to 2½ per cent., but a little reflection showed that this was premature, although it is probable that the directors may take the step next week, when the circumstances will have altered. The Bank return, indeed, shows that the directors could not very well have followed the course expected, for although nearly half-a-million of gold arrived from abroad, the whole, and 58,000*l.* more has been absorbed in circulation, while the note circulation has also augmented 828,000*l.*, so that the reserve has fallen off 880,000*l.* to 14,336,000*l.* against 13,447,000*l.* last year, while the proportion to liabilities has fallen 2¼ per cent., to 39 per cent. The liabilities under deposits have declined, although the private securities have increased 508,000*l.*, and the latter are now a million in excess of the private deposits, a proof of the absorption and greater demand for money than has been experienced for many years, which, with all other available statistics, tends to confirm the improvement in trade. While, however, bills have fallen to 1¾, ⅞ per cent., money has been in demand at fully 2¾, 3 per cent, and the inquiry at the Bank has been considerable. The allotment of Treasury Bills at a fraction under 2 per cent, for three months, and 2¾ per cent. for 12 months, assisted the case in the market, which has unfavourably affected the exchanges.

Being the eve of the discharge of the April dividends, short money has been much wanted, and the India Council and the Treasury—the latter on payments on account of Local Loan Stocks—have between them drained the open market. Heavy borrowings were likewise made at the Bank, and the general rate has been 3 per cent. Discount quotations, on the other hand, have resumed their downward career, and three months' bills have been accepted as low as 1⅝, ¾.

The Bank has again received gold, 22,000*l.* coming to hand, chiefly from America. Bar silver was steady, but unaltered; while rupee paper was firmer.

Last week terminated with a complete chapter of accidents. What with the loss of a Channel steamer, of six men-of-war at Samoa, and the Penistone railway accident. This week no such calamities, fortunately, have as yet been reported, and we have at length been gratified by news from Stanley, who has met Emin Pasha, after overcoming difficulties that would have disheartened any less intrepid explorer. In Parliament this week the Naval Defence Bill has been under discussion, and will presumably be passed with practically little alteration in the measure, as its necessity is admitted on all sides. Although only an unimportant failure has been announced in connection with the liquidation in Paris, many, owing to the serious depression in the shares of the credit establishments, have had to sell their other securities in order to meet their engagements, and in face of strenuous efforts to maintain last week's levels, prices have given way, and the effect here has been more strongly marked in the Foreign Government department. The fall on the week, however, has been slight, and by no means represents the variations that have occurred. The Funds have been good, and with Indian Government and Colonial Inscribed Stocks have commanded higher levels. The flight of Genl. Boulanger had but little effect upon Foreign stocks, but has caused considerable excitement in France. The "boom" in Home Railways has been general, but the greatest favourites have been the Southern issues, Metropolitan, and Great Eastern Stocks, which, although closing below the best, still show a rise of 1½ to 2 per cent., other descriptions participating to an exient of 1 to 1½ per cent. The traffic returns were very good, as they compare with those of Good Friday week last year. American Railway Issues were dull and listless, but finally a better tendency prevailed, and prices rallied $¼ to $1. Grand Trunk of Canada Railway Stocks gave way about 1¼ to 1¾ in the Preference issues, while Mexican have been remarkably active, finally leaving off 2 higher. Miscellaneous Securities have been fairly steady, and there has been a demand for Brewery shares for investment purposes.

The Markets to-day opened dull, but when it was announced that the Paris liquidation had been satisfactorily concluded prices at once took a turn for the better, and in many instances closed at top prices. The Funds and India Stocks were without important alteration. Foreign Government Bonds were very good, and Egyptian, Spanish, and the Tribute and Defence Loans were particularly in favour and ½ to 1 higher, and Egyptian Unified have risen to nearly 91. Peruvian Bonds were exceptionally lower on the day

A further sharp rally has occurred in the Home Railway Market, and a clique of operators have pushed Brighton "A" to over 151½, or a rise of 2 on the day. Metropolitan, Caledonian, and Great Western advanced 1, and the rest ¼ to ¾ per cent. Metropolitan District Stock, however, was hardly so strong. The reason given for pushing the Southern Lines is the expected increased receipts from the Paris Exhibition traffic, but this is somewhat overdone, and must have already been discounted, if not wholly, at least to a very large extent. More activity and better prices have been seen in the American Railway market than for some days past, and the buying of a few special descriptions caused a sympathetic response in the remainder of the list, and the most active left off ½ to 1, and the rest ¼ to ½ higher on the day. Grand Trunk and Mexican Stocks were good, and ¼ to ½ per cent. better. A through traffic agreement has been entered into, and freight rates fixed between the Temiscouata, Grand Trunk and Inter-Colonial Railways. Cable Stocks were good, but most Miscellaneous descriptions gave way, and a further relapse was recorded in the Nitrate group.

Annexed are the final quotations to-day :—Consols Account, 98$\frac{3}{16}$, 98$\frac{11}{16}$; Egyptian Preference, 194¼, 194¾; Egyptian Unified, 90$\frac{5}{8}$, 90¾; French Four-and-a-Half per Cents., 103¼, 103¾; Hungarian, 86$\frac{1}{16}$, 86$\frac{3}{16}$; Italian, 95$\frac{5}{16}$, 95$\frac{7}{16}$; Mexican, 93½, 94; Peru Five per Cents., 13$\frac{5}{16}$, 13$\frac{7}{16}$; Peru Six per Cents., 14$\frac{13}{16}$, 14$\frac{15}{16}$; Russian, 1873, 102$\frac{5}{16}$, 102$\frac{7}{16}$; Portuguese, 65$\frac{5}{16}$, 65$\frac{7}{16}$; Spanish, 74$\frac{7}{16}$, 74$\frac{9}{16}$; Turkish, 1871, 91½, 92; Turkish Defence, 103, 103½; Caledonian, 117½, 117¾; Great Eastern, 76⅜, 76⅝; Great Western, 156¾, 157; Brighton "A," 151½, 151¾; North-Western, 180¾, 181; Metropolitan, 88, 88½; Metropolitan District, 38, 38½; Midland, 141⅞, 142⅛; North British 57¾, 58; North-Eastern, 170, 170¼; South-Eastern "A," 114⅝, 114⅞; East London, 13¼, 13¾; Grand Trunk 11⅜, 11½; Ditto First Preference 72¾, 73; Ditto Second, 53⅜, 53⅝; Ditto Third, 28½, 28¾; Canadian Pacific, 51⅝, 51⅞; Mexican Railway Ordinary, 47¼, 47½; Denver, 16¾, 17; Erie, 28$\frac{3}{16}$, 28$\frac{11}{16}$; Milwaukee, 61¾, 65; Lake Shore, 104⅛, 104⅜; Louisville, 63¾, 64; Atlantic First, 32¾, 33; Ontario, 17, 17⅛; Ohio, 21¼, 21¾; Norfolk and Western, 51½, 51¾; Reading, 22$\frac{7}{16}$, 22$\frac{11}{16}$; Reading Five per Cent. Bonds, 84¼, 84¾; Union Pacific, 62½, 62¾; Wabash Preference, 26¼, 26½; Ditto Bonds, 44½, 44¾; Ottoman Bank, 12$\frac{5}{16}$, 12$\frac{7}{16}$; Anglo-Telegraph, 50¼, 50¾; United Telephone, 15⅞, 16⅛; Hudson's Bay, 20⅞, 21⅛; Suez Canal, 88¼, 88¾; Guinness, 31, 31¼; Allsopp's, 8¼, 8½; Bryant and May, 13, 13¼; Nitrate Railway, 24⅛, 25⅛; Salt Union, 12¾, 13.

CORRESPONDENCE.

[*We do not hold ourselves responsible for the Opinions or Statements of our Correspondents.*]

CHEAP SHARES.

To the Editor of the MINING WORLD AND ENGINEERING RECORD.

SIR,—Among the low-priced shares which have hitherto escaped notice are New Organos shares at 4s. Why they should remain at that *low* figure only shows how easy it is for a really cheap investment in a mine which has paid a *profit* since December last to be overlooked. The last mail brings advice of a profit of 300*l.* for February. Those who have held their shares all through re-construction will soon be able to reap their reward, as several thousands have been spent on new machinery, and the 24 new stamps are at work; and I should advise them to increase their holding and not to wait till they have doubled in price.—I am, &c.,

SHAREHOLDER.

London, March 30th, 1889.

NORTH AUSTRALIAN MINING CO.

SIR,—In a paragraph in your issue of March 30th, in which you very fairly describe the condition of "The North Australian Mining Company," which might well now change its name to the Pandora Company, you speak of a gentleman as "capable of seizing the reins and conducting the team with ability and commercial aptitude." That gentleman is Mr. Hodgkinson. No doubt not to know Mr. Hodgkinson is to argue oneself unknown, but I do not; and it would add additional value to your criticism and suggestion, to me as a shareholder, if you would kindly furnish me with some information.—I am, &c.,

C. A. BLECKLEY.

61, King William Street,
March 4th, 1889.

[Mr. Hodgkinson, of Peterborough, is the gentleman to whom we referred. He has rendered important service to several companies that fell upon evil times owing to indifferent management.—ED. *M.W.*]

CARLISLE GOLD MINING CO., LIMITED.

SIR,—The directors at their board meeting to-day elected Mr. John Stewart Wallace and Mr. Emanuel Allen to fill the vacancies caused by the retirement of Mr. Joseph Crick and Sir Nicholas W. Elphinstone, Bart., being the two gentlemen for whom the largest number of votes were given.

This result was arrived at without either the directors or vendors exercising their rights to vote.—I am, &c.,

H. CAMERON RICHARDSON,
Secretary.

15, George Street, Mansion House,
London, E.C., April 4th, 1889.

THE CROMWELL QUARTZ MINE.

THE MACHINERY DESCRIBED.

High up on the shoulder of one of the most remarkable mountain ranges of Central Otago, about 13 miles off Cromwell, at a place called Bendigo, is situated the well-knowu Cromwell Mine ; and here, from out of the bowels of the earth, in almost as barren and inhospitable a region as it is possible to conceive, there has been taken in days gone by a hundred thousand pounds worth of gold. Seizing the opportunity afforded by the Ministerial trip to Central Otago I resolved, in the interests of my paper, to pay a visit to the mine, and accordingly, the Ministerial traps were left behind, and in company with Messrs. Allen, T. Mackenzie, Barron, and Ussher, who were also auxious to see for themselves, I began to toil up the steep ascent in the direction of the mine. One of the men made his appearance, and Mr. C. S. Reeves, the managing director, aud Mr. Hilton, the mine manager, soon afterwards emerged from one of the huts on the hillside. As we had not very much time at our disposal, we at once commenced our inspection of the machinery and workings, which, I may at once say, are the most compact aud substantial of any that I have seen on the Otago goldfields.

When the old company ceased operations, owing to the flooding of the mine, they were on good gold, aud the new company, which includes both New Zealaud aud London capitalists, are at present sinking a shaft to tap the reef at 500 ft. For the purpose of sinking this shaft some first-class machinery has been erected, and there is also on the ground the necessary machinery for treating the quartz directly the reef is struck. We first looked at the shaft which has now reached a depth of some 300 ft. In dimension it is 12 ft. by 5 ft. 6 ins. in the clear, and comprises one pumping and two winding compartments. The sides and ends are timbered upon the "blocking" system, whereby economy of material and preservation of timber are secured, and right down the shaft there are incline ladderways and stages at convenient distances for ingress and egress ; while near the bottom of the shaft provision is made for fixing a safety "pentice" for the convenience of the shaft sinkers during blasting operations. Pent doors and counterbalances are also fitted at the top of the shaft for the protection of the sinkers from falling material ; while over the shaft stands the lofty "poppet" heads, well braced and secured. As already stated, this shaft is to be sunk to a depth of 500 ft., and when this is reached a cross-cut will be extended to intersect the reef. This will give sufficient backs to the upper or 430-ft. level, thereby considerably reducing the working expenses of this portion of the mine, the handling of the quartz being much less than by the system adopted in most of the other mines in Otago. Among other conveniences in connection with the shaft I noticed a huge capstan for raising or lowering the pumping or other heavy gear. This has already proved a good labour-saving machine.

Having said so much about the shaft I will now proceed to give a description of the machinery, which we next visited. A good deal of labour has been expended in forming the present machine site, a good deal of the sloping rocky hillside having to be blasted away, in addition to which a long retaining wall had to be built in order to secure a sufficient area. Entering the machine house the first thing to attract attention is the pumping gear. After the shaft had been sunk a certain depth it was found that the water from the adjoining workings, and also from the new ground, had to be contended with, and accordingly an efficient plant was purchased in Victoria. The surface gear consists of a 9 ins. faggoted main shaft, on which is keyed a large cast-iron pump crank, so made as to allow of varying strokes. Then fixed upon this shaft is the main wheel, 8 ft. in diameter, and weighing 3 tons. It must have been a work of no small difficulty to get this heavy piece of iron-work up the steep hill to the mine. It is actuated by a pinion upon the intermediate shaft extending the whole length of the principal frames, and upon this shaft is keyed an extra spur wheel gearing into a clutch pinion, keyed upon the first motion or pelton wheel shaft. In connection with the pump crank is the large sweep or connecting rod heavily strapped and attached to the balance-bob, which consists of massive cast-iron and heavy woodwork, the whole resting upon main bearers bolted and fixed in the bob pit excavation in sold rock. To the "nose" of the balance-bob is attached by large straps and plates the main or dry rod running in suitable guides to a depth of 250 ft. To this main rod is attached the No. 1 plunger workings fixed in a recess in the end of the shaft. The plungers are fitted with automatic gear, thereby ensuring the continual fullness of the tanks and the "solid" working of the pumps. Safety catches also are fixed to ensure against the leakage of the plunger and draw-lift gear, which might be caused by accident to the surface or other connections. The whole of the pumping machinery is driven by a pelton wheel, which, when pumping is not required, can be used as an auxiliary power, which will be required when the shaft is sunk to the proper depth.

The air compressor is Ford's U type, which is built on the wet system, water being used as cooling medium to prevent the heating of certain portions of the machinery.

The winding machinery next attracts our attention. It consists of huge cast-iron drums worked by toothed gearing, the whole being fixed with strong and efficient brakes, reversing clutch and gear for winding from intermediate levels or winding from any portion of the shaft. The ropes for winding purposes are composed of the best plough steel kind, and tested to a high breaking strain. The above machinery is mounted on a substantial framing, well braced and bolted to a solid rock foundation. The whole of the winding and air-compressing machinery is driven by a reaction turbine.

The company also has a battery of 20 heads, with the necessary berdans and other appliances for gold saving. This is only a short distance from the new main shaft, with which it will be connected by tramway. The quartz will be landed direct into the trucks and then conveyed direct to the battery, which is driven by a reaction turbine. Provision is also made for the use of steam power in case of the water in the race running short.

The lighting arraugements have been improved by the introduction of the electric light, and the dynamo, which is driven by a small pelton wheel, is fitted with the most recent improvement. The lights used are of the incandescent type.

The whole of the machinery mentioned is contained in housing of ample dimensions, and there are conveniences in the shape of blacksmith's and carpenter's shop, &c., for effecting repairs, contiguous to the main shaft.

Two days previous to our visit a very successful start was made with the pumps and attendant machinery, the first revolution throwing water from the lowest depth without the slightest hitch. Everything had worked smoothly and well up to the time of our visit. The requisite power for driving the whole machinery is derived from the company's extensive water races, the water being conducted from headworks in pipes—a distance of 900 ft. The company is fortunate in having everything on the ground for a complete and extensive manipulation of quartz of high or low-grade. The visitors present on the trip I am writing of possessed considerable practical mining knowledge, and spoke in very high terms of the design and efficiency of the plant. It is very probable that if the same class of machinery had been introduced years ago the Cromwell Mine might have been kept working to this day ; but it has generally been the habit in Otago, instead of using proper appliances, to resort to numerous makeshifts, which have proved costly in the working of the mine aud ruinous to the shareholders. There is no doubt that had the mine management been more able and the machinery of a better stamp, there would in times past have been fewer calls and more dividends to be paid. It is sincerely to be hoped, now that our mines are once more coming to the front, that in future they will be worked in a more systematic manner than hitherto.

The whole of the aforementioned work was designed and carried out under the immediate superintendence of Mr. G. P. Hilton—a thorough practical miner and engineer, who has been engaged on some of the principal mining works in the colonies. Upon his severing his connection with the Cromwell Company, he was immediately engaged to report upon several large mining schemes with a view to operations being undertaken for their development. One of his first reports was in connection with the recent discoveries at Mount Highlay, a line of operations being sketched to open out that valuable property. It is stated that there are thousands of tons of payable quartz on this property to be obtained without a great deal of labour, and every exertion is now being made to get the necessary machinery for crushing on the ground as soon as possible. If all the recently discovered reefs are systematically and scientifically worked we may soon expect to see Otago to the front as one of the best developed quartz mining districts in New Zealand, as there is no denying that we possess numerous auriferous reefs equal to any in the colony.—*Otago Daily Times*, Feb. 16.

VISO TIN, LIMITED.

MANAGER'S REPORT FOR MARCH.

30th March.—Since sending you my report of the 9th February, the progress of our work has been much interrupted, first, by the heavy rains which generally prevail in this country at the change of the seasons, and second, by the changes we have had to make in our working arrangements consequent on the unsatisfactory nature of the results attained. As stated in the report referred to, at that time our prospects generally were encouraging. The plant throughout the mine was in good condition, and with a further extension of our dressing floor there was good reason to expect regular returns of tin, as I had most carefully sampled the ground, and from an assay made in England of the concentrated mineral, I had no doubt that the yield and quality of the tin would be satisfactory. But soon after the date mentioned we came upon a run of ground in our workings which yielded very little tin, and that of an inferior nature, which for the time has upset our calculations and prevented us from realising our anticipations. Being, however, convinced from my personal knowledge of the district, and the quality of the tin it has invariably produced in former years, that the present falling off is quite exceptional, we are extending our operations to another part of the property, and expect during the ensuing month to reach a piece of ground which is of a better quality than any part we have hitherto worked. I am glad to say the weather is now very favourable, and our machinery working well.—R. R. Nancarrow, Manager.

THE MORGAN GOLD MINING CO., LIMITED.

It will be seen that the result of the crushing cleaned up on Saturday, the 23rd inst. was as follows :—365 tons yielded 186 ozs. 16 dwts. of gold, being an average of 10 dwts. 6 grs. per ton of ore.

The last manager's report is as follows :—(March 26th)—Big lode : We have cut through this lode near the fault, where we found it to be 18 ft. wide. We are now driving west on the foot-wall. The machinery at the mill and mine is working smoothly, and at this writing the 19 heads are at work. Although we are not expending any money on surface improvements, still the expenses have been rather higher during the past month, owing to the great number of men at work prospecting, but I consider it cheaper to open up a mine vigorously than by creeping along.

(March 28th).—Since coming to town I have received the following telegram from our mill manager :—"Found gold in eastern end of south lode better than No. 2 winze."—(Signed) Ribble. This was struck after I left Dolgelly. It is within 20 ft. of where we crushed the 100 tons from, and where I said in the report that the indications were favourable for a new shoot. This is about 120 ft. west of the old shoot, and on the foot-wall (south-west) lode, which we are now opening up.

THE HARRIETVILLE GOLD MINING CO., LIMITED.

I beg to inform you that a telegram has been received, dated 3rd April, from Messrs. Blake and Riggall, the company's solicitors at Melbourne, as follows :—" Leaves (? Leases) and rights transferred. Riggall. Possession taken April 1st. Cash paid." A telegram has also been received by Messrs. John Taylor and Sons, the managers, from the vendors' agent at Melbourne, of which the following is an extract :—" Monsmeg stone full average value opened to keep 12 heads going for five years without further sinking. Telegraph necessary authority to expend two thousand pounds to increase battery in order to obtain immediate large monthly return. Tiddledee equally good. Grand property." Mr. T. G. Davey, who has been appointed the company's resident manager, is expected to arrive at the mines about the 8th instant. J. Garland, Secretary.

REPORT OF MEETING.

PHŒNIX UNITED MINES.

A DIVIDEND OF 2s. PER SHARE.

SHAREHOLDERS of Phœnix and West Phœnix United Mines held a meeting at Webb's Hotel, Liskeard, this week—Mr. A. C. L. Glubb presiding.

The accounts showed: Debits, labour costs for 16 weeks to March 16th, 7,136*l.*; merchants' bills, 16 weeks to March 2nd, 2,277*l.*; coal and freights, 871*l.*; railway carriage, 385*l.*; lords' dues, 347*l.*; bankers' charges, 96*l.*; rates, taxes, &c., 344*l.*; balance of purchase of West Phœnix (Witheybrook) Mine, machinery, &c., 230*l.*; balance, 1,266*l.*; total, 12,955*l.* Credits: Tin sold, 10,588*l.*; credited on account of black tin and stone tin sold, 2ud April, 1,900*l.*; copper ore sold, 211*l.*; less credited on account last audit, 180*l.*; copper on account ready for sale, 100*l.*; old scrap cast iron, 26*l.*; and balance brought forward from last audit, 309*l.*

In reply to Mr. R. J. BAZLEY (Plymouth),

The PURSER (Mr. W. Polkinghorne) stated that the total amount of tin stuff for the 16 weeks was 240 tons. Probably when the tin was weighed on the morrow it would be found to be a tou or two more.

On the motion of the CHAIRMAN, seconded by Mr. G. WILTON, the accounts were unanimously passed, and a dividend of 2s. per 1-12,000th share was declared, a balance of 65*l.* being carried forward.

Mr. CLINTON asked, having regard to the increased quantity of tin sold during the past four months, whether the reserves had been diminished in consequence.

Capt. WILLIAMS replied that the mine had been worked in a fair and proper manner, aud they had in no way diminished the reserves either in the quantity of stuff or in the run of ground laid open.

Mr. HEATHMAM wished to know how it was that, while Phœnix United was paying a dividend of 12 per cent., the shares were only quoted at 3⅜ to 3¼.

Mr. MAYNE (Redruth): Oh, that rests with the brokers.

On the motion of Mr. BAZLEY, seconded by Mr. MAYNE, the agents and the committee's report were adopted; and, ou the motion of the Rev. J. O. WEST, seconded by Mr. C. ISAAC, the Rev. J. O. West, Messrs. O. Abbott, H. U. Broad, Borlase Childs, O. Colmer, A. C. L. Glubb, W. Matthews, W. West, and the pursers (Messrs. W. and W. C. Polkinghorne) were re-elected the committee.

THE VICTORY GOLD MINING CO., LIMITED.

MR. LARCHIN'S REPORT.

29th March.—I have much pleasure in handing you my report upon my return from your mine, confirming my former report, sent to the shareholders after my first visit, that the property was of undoubted richness, and possessed unusual facilities for economical working. On my way to the mine, when I arrived at Callao, I heard from several quarters reports of rich discoveries at Victory Mine. The present position of the mine is that it is now opened up sufficiently to start stamping, with ample reserves of ore which will yield good profits, and with every appearance of considerable improvement at very early date. Immediately upon my arrival I proceeded to inspect the workings at the shaft sunk to prove the value of the lode in depth, and which was at the date of my leaving sunk to the depth of 165 ft. At the surface, where the lode can be seen in the tunnel, it is from 5 to 6 ft. wide, with well-defined walls, but considerably disordered, composed of diorite, quartzite, and quartz. At 50 ft. from surface, where the shaft intersects the lode, it presents much the same appearance, but from this point it gradually and steadily improves, becomiug more settled, carryiug greater proportion of quartz. In the bottom this improvement is still more decided, the quartz richer in coarse free gold. Trials made at different depths of the lode-stuff, in which no gold was visible, produced 1 oz. 1 dwt. to the ton, the gold being of very fine grain, and a trial crushing made of 3 tons taken at different points from top to bottom of the shaft, gave a return of 2 ozs. per ton. The pump in use at this shaft being worked to the utmost limits of its capacity, Mr. Russell, the manager, decided that it would not be prudent to carry the shaft any deeper until the new pump arrived, and therefore concluded to start a drift from the bottom ou the course of the lode, which, at the time I left, was driven 12 ft., showiug still further improvement—some of the ore carrying 5 or 6 ozs. per tou; and it is the opinion of Mr. Russell and Mr. Nicholls, the underground captain, that we are on the top of a rich ore-bearing part of the lode, and they anticipate large results at this point. Ou the arrival of the pump Mr. Russell will continue the sinking, and will also put out a cross-cut to the parallel lode, and in the meantime is opening up stoping ground iu the tunnel and shaft, so as to be able to run the stamps continuously. Having put the matter of the redemption by purchase of the Government dues in train, to secure to the company a freehold property, and the consequent aunual saving in dues, I decided to return, realisiug that with so valuable a mine before us, no time should be lost in at once providing the further machinery required, the selection of which, under my personal superintendeuce, would be a great saving to the company, knowiug from my visit what was best required. Praise is due to Mr. Russell for the economy exercised by him in carrying on the works of the company, in which he is ably assisted by Mr. Nicholls and the rest of his officers and staff, and I may add that I left everyone in the best of spirits at the future prospects of the mine. With 20 stamps running (which are now on the property), and a yield of 2 ozs. per ton, he should be able to send 2,000 ozs. of gold per month without difficulty. We may congratulate ourselves that we have a good paying mine, and with 40 stamps in operation, at the present average, the company should be easily able to pay a dividend of 50 per cent. upon its capital. I place myself at the disposal of the board, should they desire my services, to return and superintend the erection of the machinery and the future working of the mine.—R. LARCHIN.

REPORT FROM THE SUPERINTENDENT.

Writing under date 5th March, 1889, Mr. Russell, the superintendent at the mines, says:—No. 2, west winze, has been sunk a depth of 22 ft. The lode in this winze is about 5 ft. wide; pans very good. No. 3, east winze, has been sunk a depth of 14 ft. The lode in this winze being about 7 ft. wide; pans very good. The prospecting tunnel in the Quebrada has been driven 13 ft. The stone gives off good gold. We have sunk a small shaft 17 ft. on a cantara at the mouth of the La Cruz tunnel, from which we are getting very rich ore. I am in hopes that this cantara will meet the lode we are working in the tunnel, and then we will have good air in all the workings. Under same date, Mr. Nicholls, the underground captain, writes:—East winze sunk 8 ft.; total depth, 14 ft. Reef, 7 ft. wide, improving in richness. West winze sunk 15 ft.; total depth 22 ft. Reef 4 ft. 6 ins.; quartz much richer. Cantara shaft sunk 14 ft.; total depth, 17 ft. Small reef, very rich."

SOUTH DARREN SILVER-LEAD CO., LIMITED.

IMPORTANT DISCOVERY.

Mr. J. H. A. Smith (secretary) has just sent the shareholders a full report on the mine from Capt. Mitchell, the agent, giving particulars of the various operations, and more especially of the receut important discovery in the 142-fm. level west. The manager says in the course of this report: "In the 142, in continuing the drivage straight on through the cross-course we found we had no lode, aud as we considered the lode was likely to be disordered near the cross-course, the drivage was coutinued for 7 fms. in the country. A cross-cut was then put out south which cut the lode withiu a few feet of the drivage. At this point it was cut into about 6 ft., and showed lead all through it with small streaks and flashes still going into the south side. The drivage was continued from this point on the north part of the lode for about 9 fms. in a strong lode valued at from 10 to 15 cwt. of silver-lead ore per fm., and in places producing good copper ore. This brings it to 16 fms. west of the cross-course, when the lode got richer, and another branch was found in the south side which increased the value to 2 tons of rich silver-lead orc per fm., which value has been maintained for the last 3 fms. The discovery in the west end has materially improved our position, and if it holds in length, and be also found in the upper levels, it will soon put the mine in a good positiou."

COMMERCIAL NOTES.

(*Continued from page 579.*)

RAILWAYS.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year:—Increases:—Caledonian, 4,121*l.*; Eastern and Midlands, 18*l.*; Great Northeru, 3,486*l.*; Great Western, 6,030*l.*; London and North-Western, 13,942*l.*; Manchester and Sheffield, 4,933*l.*; Metropolitan, 863*l.*; Midland, 16,973*l.*; North British, 3,678*l.*; North-Eastern, 6,386*l.*; and North Staffordshire, 335*l.* Decreases:—London and South-Western, 4,796*l.*; and London, Chatham and Dover, 2,468*l.*

The Brighton Railway traffic return for the week ended March 30th exhibits a decrease of 7,302*l.*, and the South-Eastern a decrease of 6,294*l.*

The traffic receipts of the Nitrate Railways Co. from March 16th to 31st were 34,485*l.*, or 5,236*l.* more than in 1888.

TRAMWAYS.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results:—Increases:—London, 617*l.*; South London, 91*l.*; Southwark and Deptford, 63*l.*; West Metropolitan, 75*l.*; North London, 33*l.*; North Staffordshire, 9*l.*; Stockton and Darlington, 3*l.*; Woolwich and South-East London, 69*l.*; Hull, 7*l.*; Imperial, 52*l.*; Swansea, 24*l.*; Sunderland, 80*l.*; Edinburgh, 84*l.*; Bristol, 270*l.*; Gothenburg, 27*l.*; Continental Metropolitan, 436*l.*; Calcutta, 95*l.*; Bordeaux, 286*l.*; London Street, 225*l.*; London Southern, 33*l.*; Provincial, 643*l.*; Belfast, 258*l.*; Southampton, 18*l.*; Calais, 6*l.*; France, 83*l.*; and Germany, 319*l.* For February the Buenos Ayres and Belgrano Tram way receipts were $43,280, against $38,581 in 1888. The London Road-Car receipts for the week ending 23rd March were 2,440*l.*, compared with 1,696*l.* last year.

MISCELLANEOUS.

With reference to the payment of the dividend due April 15th on the Egyptian Preference Bonds, the necessary coupon lists can now be procured on application at the Dividend Pay Office, Bank of England.

Messrs. I. Thomson, T. Bonar and Co., notify that the coupons of the Russian Five-aud-a-Half per Cent. Land Mortgage Bonds of the Central Bank of Land Mortgage Bonds of Russia (Third Series) for 1,000,000*l.* due April 13th, together with the bonds drawn in St. Petersburg, will be paid on and after that date at their offices, Old Broad Street.

Messrs. Baring Brothers and Co. annouuce the uumbers of 108 bonds, amounting to 18,100*l.*, of the Unified Five per Cent. Loan for 11,127,000*l.* of the Oriental Republic of Uruguay, which have been drawn for payment at par on and after July 1st next.

The certificates for shares in the Julia Nitrate Company, Limited, are now ready, and will be exchanged for banker's receipts.

The San Jorge Nitrate Company, Limited, has to-day declared an interim dividend on account, of 5s. a share, payable 23rd of April.

Notice is given that the share transfer-books of the Tarapaca Waterworks Co. will be closed from the 9th to the 13th of April inclusive for the payment of dividend.

PAHANG KABANG.—Notice is given that on and after the 8th iust. the address of this company will be East India Chambers, 23, Leadenhall Street, E.C.

THE BRITISH BROKEN HILL PROPRIETARY CO., LIMITED.

The directors' report and balance-sheet and statement of accounts to 31st December, 1888, has been issued in anticipation of the meeting to be held some 10 days hence. The whole of the expenditure during that period has been of a preparatory nature, and for the additional requirements of the mine, in buildings, machinery, and other indispensable necessaries, there will still be a further considerable outlay chargeable to capital account, previous to any regular revenue being earned. The chief anxiety of the board, as well as of their colleagues in Melbourne, has been to see that the money permanently invested has been judiciously spent, and in their report they claim in this respect to have been successful. They regret that the preparatory work upon the mine, both underground and on the surface, has occupied so much more time than had been originally estimated, and point out the causes to which this is due. They, however, are glad to be able to state that all the works, both at the mines and Port Pirie, are now approaching completion. The underground development is being pushed on vigorously; the water reservoirs are finished; great progress has been made with the smelting works and with other buildings; a connection by rail has been made between the mine and the railway at Silverton, the works including a bridge or viaduct of some magnitude; and by last advices from Melbourne, the board is assured that smelting and all other operations of the establishment should be in full work in the later part of May. Within the last month the directors have made a contract to dispose of 5,000 tons of ore, which they are unable, as yet, to smelt at the works, to a local smelting company, on terms which will leave a satisfactory profit. "They cannot, however, refrain from congratulating the proprietors upon the possession of an extremely valuable property, according to the testimony of all those on the spot who are best qualified to pronounce an opinion upon it."

CONSOLIDATED ESMERALDA, LIMITED.

April 5th.—I am instructed by the directors to inform you that the mill was re-started on March 11th, and has since been running steadily on ore extracted from the stopes opened up from the 375 ft. (lowest) level (Durand Mine). The pay streak in the ledge has been narrow, but the ore has been good, and estimated to yield about 2 ozs. gold per ton; within the last few days, however, a marked improvement has taken place. The superintendent advises by cablegram that the ore body is now 2½ ft. thick, and the average assay value about 4 ozs. gold per ton. From the discovery of the narrow seam of ore in drifting on the 375-ft. level, reported March 20th, which assayed about 180 ozs. gold per ton, it was expected that further developments would show an increase in the quantity of milling ore, and it is satisfactory to find that this has been the case. The bullion returns will be announced as soon as received. It is proposed to hold the general meeting of shareholders some time during May, when a full report on all the properties owned by the company will be presented, an eminent mining engineer having been engaged to spend two or three weeks upon the property, so that his report may be as full and complete as possible.—F. Fuller, Secretary.

MONTANA CO.

MONTHLY RETURN.

The secretary of the Montana Company, Limited, begs to state that the following information has been received by cablegram from the resident director at the mine:—"Total weight of ore crushed during March, 6,843 tons; yield from the three mills, $118,000; working expenses for the month, $55,000." N.B.—The estimated number of ounces contained in returns by assay being, gold 3,203 ozs.; silver, 40,155 ozs.

REPORTS OF MEETINGS.

RED REEF GOLD MINING CO., LIMITED.

A COMPANY WHOSE REEFS ARE PROVED—ASSAYS UP TO 13 OZS.—CAPITAL FULLY SUBSCRIBED.

THE first ordinary general meeting of the company was held at the Registered Offices of the company, 30, Finsbury Circus, on Tuesday, to transact the ordinary business of the company. Notice was also given that "So soon afterwards as the business of the ordinary general meeting shall be concluded, an extraordinary general meeting of the company will be held, when the subjoined resolution will be proposed."

RESOLUTION.

"That the articles of association of the company be altered by the insertion therein immediately after the word 'two' in the third line of article 77, the words 'and a half.'"

The Right Hon. Lord Hay, D.L., of Kinfauns (chairman of the company), presided.

Mr. FELIX F. WILSON (secretary) read the notice calling the meeting.

CAPITAL.

The CHAIRMAN: Gentlemen, as you are all aware, this is the statutory meeting, required by the Companies Acts, to be held within four months from date of registration, and it is obvious that in a short time, and with a property in Witwatersrand, no great progress can have been made in developing the mine. In December last the company's prospectus was issued, 25,000 shares were offered for subscription, and of these 19,008 have been subscribed for, and 6,000 shares reserved for issue in South Africa, in pursuance of a cable received from our agents in Johannesberg, so that practically the capital of the company has been fully subscribed. Immediately after allotment instructions were sent to our agents in Johannesberg to take the necessary steps to complete the purchase. This has been done, and we are now in possession of our property. The titles have arrived, but prior to that we had cables from our manager in South Africa, which stated that the titles were complete. This morning, however, the grants of titles arrived. That is really all we have to inform the shareholders upon, but perhaps it would be as well if I were to give a short description of the property. The company's property covers an area of 91 acres 2 roods 15 perches, and is traversed throughout its extreme length by 12 auriferous or gold-bearing reefs, some of which have been proved to be amongst the richest in the Witwatersrand district. The reefs running through the company's property are known as the Red Reef, the Yellow Reef, the Sunday Reef, the Free State Reef, and the Kimberley Reef. As proving the valuable character of our property I would mention that the Yellow Kimberley, Sunday and Red Reefs are well-known to be extremely rich. Considerable quantities of ore have been taken from the yellow reef on the property of the Ziervogel Gold Mining Company, and have been assayed by Messrs. Johnson, Matthey, and Co. and Mr. D. C. Griffith, showing upwards of 13 ozs. to the ton. (Cheers.) The following table of result of assays taken from the above property made by Messrs. Johnson, Matthey and Co. and Mr. D. C. Griffiths is taken from the certificates of these gentlemen :—

GRATIFYING ASSAYS.

Assays made by	Yellow Reef.	Kimberley Reef.	Sunday Reef.	Red Reef.
	ozs. dwts. grs.	ozs. dwts. grs.	ozs. dwts. grs.	ozs. dwts. grs.

D. C. Griffiths, Assayer to the Bank of England... ...	13 2 23	1 19 4	4 19 15	12 18 1

FACILITIES FOR WORKING.

This property is well watered by a tributary of the Klip river which crosses the centre of the estate diagonally. The ground rises on the western side about 120 ft., and on the eastern side about 150 ft. above the bed of the stream. This undulation of the ground causes the reefs to be exposed in well defined outcrops, and will easily enable us to remove a vast body of ore by quarrying instead of by the more expensive process of siuking shafts. (Hear, hear.) Before ordering machinery and commencing expensive operations at the mine, the directors have thought it desirable to have a careful survey of the property made Mr. Knox, or some other competent engineer, with a view of ascertaining whether it will be better to work the surface ore, which, although of comparatively low grade, is easily moved, being what is known as banket quartz, or to sink shafts for the richer ore, which may be found lower down. With this object we have sent instructions to our manager to have this done, and to advise as to the best mode of commencing work. (Cheers.) With so small a capital as only 25,000*l*. it will. of course, be impossible to thoroughly develop so large a tract of property as this company possesses, and it is therefore proposed at an early date to consult shareholders as to the desirability of selling a portion of their property to a subsidiary company. There will be, I think, no diffieulty in obtaining about 1,000*l*. per claim for any part of the property we may be disposed to sell, but before bringing any definite proposal before the shareholders we have thought it better to wait until our eugineer's report has been received, and the survey completed. When this is done we hope to submit to you a definite offer to purehase a small portion of the company's property, and for this purpose will call you together again at an early date. (Cheers.) We are payiug less per claim than any other Witwatersrand company that has come out lately. We cannot do auything until we receive a report from our engineer.

FAVOURABLE POSITION OF THE PROPERTY.

Mr. LIDSTONE, C.E. (director) explained the general position by means of a map, and described the run of the company's reefs. Their value had been tested on one side eastward by the Ziervogel Company, and by the Black Reef Company. On the latter a valuable discovery had recently been made, which they said would carry their shares very high indeed. On the same line of reefs westward of the Red Reef property was a small company which had assayed ore taken from a depth not so great as the Ziervogel, but below this (the Red Reef) company's depth, giving 1 oz. to the ton. That was a good yield of quartz, both to the west and to the east, and as the Witwatersrand reefs are remarkably homogeneous in character—(cheers)—the Red Reef Company might be sure that the reefs running through its property would be proportionately good. The South African people would not sell any of their shares until the property had been worked, and the shares are up to 6*l*. or 7*l*., but it is firmly believed that this property will turn out equal to the City and Suburban or the Robinson. It should be borne in mind that the vendors would not take any portion of the purchase-mouey in cash, and are still of the opinion that when the mine is worked the shares will be equal to those of the Robinson or the Salisbury. (Cheers.)

The CHAIRMAN: I think the property we have acquired very valuable, and that it has been bought very cheaply in comparison with other gold mining companies in South Africa.

Mr. LAMB: Are you taking any steps to sell a portion of the property?

The CHAIRMAN: We hope to get a definite proposal.

Mr. MARTINEAU (director): We wish to have the survey of the property made before selling any part of it, as, naturally, we do not wish to get rid of the best. (Hear, hear.)

Mr. LAMB: How long will the survey take?

Mr. MARTINEAU: Orders have been given for it, and money sent out.

The CHAIRMAN: The property ruus east and west, and it is not very desirable to sell any claim north or south. Before we agree to anything we ought to be very well informed as to the value of the diffcrent claims.

The meeting was then made special to make a slight alteration iu the articles of assoeiation, whieh was fully explained by Mr. T. H. T Rogers, of Great Winchester Street, the solicitor. This having been done, the proceedings closed with a vote of thanks to the chairman.

STANDARD BANK OF SOUTH AFRICA, LIMITED.

INCREASE OF BUSINESS—DIAMONDS—PROGRESS FOLLOWS IN THE WAKE OF MINING.

THE half-yearly meeting of the proprietors was held on Wednesday at the Cannon Street Hotel.

Mr. JAMES DRAKE presided, and in moving the adoption of the report and accounts (taken as read), said the receipts of the

half-year showed a considerable increase over those of the previous half-year. The note circulation was 737,187*l.*, being an advance of 58,631*l.*, indicating the growing prosperity of the bank and the increased confidence of their customers. The amount due to customers on deposit, current, and other accounts was 7,259,777*l.*, showing the very large increase of 449,862*l.* In drafts issued there was an increase of 18,000*l.*, and in acceptauces oue of 62,760*l.* Bills receivable amounted to 1,323,268*l.*, showing an increase of 148,477*l.* On the first three credit items in the balance-sheet, cash with bankers, at branches, and remittances, deposits with bankers, and loans on securities and investments in Consols and Colonial Government and Municipal securities, there was a total of 3,910,152*l.*, showing an increase of 975,824*l.* They were advancing steadily and surely in the employment of mouey. Bills discounted showed a slight decrease, the up-country people not now requiring advances as much as they did formerly. The profit aud loss account showed that the profits amounted to about 1,000*l.* less than those of the previous half-year; and it was proposed to pay a dividend and bonus at the rate of 12 per cent. per annum, and to carry 25,000*l.* to the reserve fund, which would thus be raised to 475,000*l.*

DIAMONDS.

He would now allude to the leading industries of South Africa. In diamonds there was a steady trade. In 1887 the output was 4,251,834*l.*; in 1888 it was 4,022.382*l.* There was a reduction in the average valne per carat. Wool ranked next to diamonds. In 1887 the production of wool was 2,276,102*l.*; in 1888 it was 2,927,259*l.*; while there was also an improvement in quality.

GOLD.

In 1887 the value of the gold exported was 237,487*l.*; in 1888 it rose to 904,461*l.*, being more than double the amount in the four preceding years. Copper showed an increase of 50 per cent. in bulk. Mohair was increasing in the amount exported, but diminishing in price; feathers had diminished in production, and so also had wine and sugar.

PROGRESS DUE TO MINING.

The bank's business with the Transvaal Government was of a friendly and mutually satisfactory character. Towns were springing up and growing enormously. Coal and silver had been discovered, and were in process of development. The progress made by Natal was also very striking, the close conuection of Natal with the Transvaal and the extension of the railway system having enabled it to increase its trade very largely. It was hoped that an improvemeut would now be effected in the harbour of Durban which would enable ocean steamers to cross the bar at all hours without lightering.

RAPID DEVELOPMENT.

South Africa had now become one of the best customers of this country, and, instead of being a debtor would be a creditor. The rapid progress made by all classes of the people was most remarkable; and with their 66 branches scattered all over the country they had good reason for anticipating a prosperous future.

The motion having been seconded by Mr. Daniel Mackenzie (a director) was adoped after a short discussion.

A dividend of 25s. per share, and a bonus of 5s., being at the rate of 12 per cent. per annum, was declared.

The retiring directors were afterwards re-elected.

Thanks were voted to the managers and staffs in London and South Africa, and also to the chairman and directors.

THE CALLAO BIS CO., LIMITED.

RE-CONSTRUCTION A SUCCESS—ADVICE TO OLD SHAREHOLDERS—TWO STRINGS TO THE BOW.

An extraordinary general meeting of the Callao Bis Company, Limited, was held at Winchester House, Old Broad Street, on Wednesday, for the purpose of confirming, as special resolutions, resolutions which were duly passed at an extraordiuary general meeting of the company, held on the 18th day of March, 1889, and for the appointment of a liquidator of the company to carry out the winding up and re-construction of the company—Francis J. Bladon, Esq., presided.

The notice calling the meeting was read by the Secretary (Mr. J. H. Thornton.)

SOSA-Y-MENDEZ LOOKING WELL.

The Chairman: Gentlemen, my duties to-day are very simple. We have called you together simply to confirm the resolutions passed at the previons meeting, and which cannot be varied at this one. They must be either accepted or rejected. I think before I put the formal resolution it will be satisfactory for you to know what some of you may have already heard, that all the news from the Sosa-y-Mendez—not got up for the purposes of liquidation and construction, but simply coming from our manager in his ordinary reports as the indications justify him in writing—all the news justifies him in writing as he does, and saying that in that mine there is a decided improvement, and that we are warranted in our anticipations of good results if we find the additional capital which is necessary to achieve them. The reports all go to show that in Sosa-y-Mendez we have an exceedingly valuable property. That is in addition to the Callao Bis property, and whatever may be thought out of doors, and of course none of us can tell what the resnlt will be, the indications there also justify re-coustruction and rapid development; and although I do not like to prophesy, simply because I do not know, still I shall be pleased to take up my proportion in the full hope and belief that there will come from it a good result, and that I shall find my shares in due course show a decided advance upon the current market value. (Cheers.) I thiuk it will be a very great mistake, indeed, if any gentlemen throw away their shares now, after having stood by the ship so long. I think they should, as a matter alike of boldness and discretion, stand by their shares, believing as I do that they will rise in value, and that the ship will come safely into port at last after a good voyage. The first resolution I move is the confirmation of those passed at the previons meeting.

Mr. Mackay (director) seconded the motion, which was carried.

A Shareholder: Are the books of the old company closed?

The Secretary: They have been closed about a fortnight.

The Shareholder: I have bought some shares on the Exchauge, and cannot get the transfers through. Am I entitled to claim my new shares?

The Chairman: If you are not on the register, and cannot claim to be on the register, you will have a right to make a claim against the parties from whom you bought for delivery of the new shares. That is one of the difficulties of re-construction. It creates many annoyances of that kind, and the directors are powerless in the matter. We cease to be directors in a quarter of an hour from the present time.

The Shareholder: Are not the books to be opened again?

The Chairman: All the transfers that come in within the next day or two will be registered in the usual way.

A Shareholder: What is to become of the 50,000 additional shares created under the re-construction? What is the objection of creating them?

The Chairman: That is a very proper question to ask. Under re-construction, one of the very great mistakes made is not to provide a sufficient amount of reserve capital for any possible future requirements, and in the present case it was thought right to do so. If the Sosa-y-Mendez property develops in the way it promises to do, it may be desirable to issue, in some form or other, an additional amount of capital for further machinery and further development. But the first thing to be done is to get the old shareholders to take up their shares under the re-construction.

The Shareholder: How are the 50,000 shares to be dealt with?

The Chairman: First of all, I cannot tell what the future directors may do, but it is positively certain (I think I may put it in this way) that none of those shares can be dealt with until the old Callao Bis shares have advanced beyond par, credited with 15s. paid up. If they advance beyond par, it will be in consequence of extremely favourable circumstances which have arisen in the meantime in refereuce to those circumstances which justify the directors of that company in calling you together or bringing any fresh proposal before you. In the meantime no one can be bound as to what will be done, but there will be a reserve of capital ready to meet contingencies.

THE NEW SHARES.

The Shareholder: Will those shares be dealt with by the future board without consulting the shareholders?

The Chairman: Do you expect me to bind the future board? I think you must consider that every director will have to face the position at the time, and be answerable to the shareholders.

The Shareholder: Will they be issued at a discount?

The Chairman: I have just explained. The present price of Callao Bis shares is about 5s., with a liability of 5s., that must bring them to 10s., aud there must be an advance on 10s. before the reserve shares can be issued.

The Shareholder: I should like it to be au instruction to the liquidators not to issue them.

The Chairman: The liquidator cannot issue them.

The Shareholder: Or the future board without consulting the shareholders.

The Chairman: There will be a statutory meeting of the new company necessarily within four months. That will be the proper time when you really have the directors before you to try and bind those directors to some definite promise. In the meantime nothing can be done whatever, and certainly the present directors cannot bind the future board. You will have that future board before you at the statutory general meeting, and then you can bind them down in any way you think proper.

The resolution was carried unanimously.

MR. THORNTON.

The Chairman: Next, as regards the appointment of liquidator:—There is only one gentleman I am bound to say who can properly and efficiently carry out this liquidation, and that is Mr. Thornton, our secretary, who has been associated with the company from the commencement. He has to deal with something like 4,000 shareholders, and liquidation under his direction will be

MORE ECONOMICAL AND MORE SATISFATORY IN EVERY SENSE,

because he knows the shareholders and knows the work. I beg to propose "That Mr. James Henry Thornton, of Winchester House, Old Broad Street, accountant, be, and is hereby appointed liquidator for the purpose of winding up the company."

Mr. Cundell secouded the motion, which was carried unanimously.

The Chairman: I have now to propose:—"That the followiug resolution passed at the extraordinary general meeting, held on the 18th March, 1889, that, pursuant to section 161 of the Companies Act of 1862, the liquidator be, and is hereby authorised to sell and transfer, subject to the provision being made for dissentient shareholders (if any), the property and assets of the company, and transfer them to a new compauy upon the terms of re-coustruction now submitted, and identified by the chairman, be, and is hereby confirmed."

The motion was seconded by a Director and carried unanimously.

RE-CONSTRUCTION A SUCCESS.

The Chairman: I am pleased to say that the shareholders in a body are coming in, and when I tell you that very large and important shareholders have assented in the form of sending proxies, you will see that this re-construction is going to be carried out in a satisfactory manner. I do beg of you, gentlemen, to take advautage of the fact that you are shareholders, and not to send in a notice of arbitration, by which you will only get a small price for your shares, but to stand fairly by them in the hope and belief (which we share with you) that you will find a far better return by an advance in market value, which will compensate you in every sense for simply standing by your shares, rather than throwing them into the lap of the liquidator under notice of arbitration.

A Shareholder: Is it not necessary that we should have a certain number of shareholders to carry the resolutions?

The Chairman: A quorum is present, and besides we have the proxies.

The resolution was carried unanimously.

The Chairman: I have only to congratulate you on having so far proceeded with re-construction, and without reiterating my statement I do hope that you will stand by your shares, especially remembering

that in addition to the Callao Bis property (which you have seen advance our shares considerably before) you have the Sosa-y-Mendez development, which we eagerly look forward to at this period.

A Shareholder: Do you intend to work the Callao Bis?

FUTURE POLICY.

The Chairman: As soon as the re-construction is sufficiently carried out to provide us with funds we shall carry out strictly the recommendations of the report of Mr. Edgar Taylor, but in addition to that we have this second string to our bow, which we hope will prove to be quite as valuable—if not more so—than the original one.

The proceedings were then brought to a close with a vote of thanks to the chairman.

SIERRA BUTTES GOLD MINING CO., LIMITED.

SIERRA BUTTES PAYS ITS WAY AND HAS PROSPECTS OF FURTHER DISCOVERIES—PLUMAS EUREKA MAKES A PROFIT OF £50,600, OF WHICH THE SHAREHOLDERS GET £38,600—RICHNESS OF THE TREZONA SHOOT—UNCLE SAM MINE.

The thirty-eighth ordinary general meeting was held at Cannon Street Hotel on Thursday—Fredk. Tendron, Esq., chairman of the company, presided.

Mr. John Saul (secretary) read the notice calling the meeting, and the report of the directors was taken as read.

COSTS REDUCED.

The Chairman: Gentlemen, our report goes a little later than the 31st of December. Since that date some further letters have been received, and I will give you as much information as I can as to the state of things up to the present time. The quantity of ore milled at the Yuba mill for the six months is about the same as usual—24,279 tons. This belongs to the Sierra Buttes, with which I am now entirely dealing. This mill has been in operation about five years, and the average working cost during the three years preceding this half-year was 18s. 6d., whereas the working cost of the past half-year has been reduced to 15s. (Hear, hear.) But the earnings of the mill, including the sulphurets throughout the same period, per ton, only averaged 17s. Now, deducting this falling off in the yield of ore, or, rather, deducting the diminished working expenses from the diminished yield (although so small a sum), it makes a difference of no less than 8,000*l*. You will readily understand that the result of

THE WORKING OF THE HALF-YEAR IS COMPARATIVELY UNFAVOURABLE.

This disappointment arises almost entirely from the quality of the ore between the ninth and the eighth levels. For a number of years we were engaged in driving a tunnel that we thought would lay open ore sufficient to supply the mill for many years between the eighth and the sixth levels—that is to say, a distance of about 800 ft., and during the period of working those levels, we have taken out a quantity equal to 284,000 tons. Now, as the distance between the ninth and the eighth was 700 ft. we had every reason to expect to be supplied with a quantity of ore that would last us for years to come. The vein is solid in places, of good width, but the gold is so evenly disseminated through it, and in such very small quantities, that even by a certain amount of selection up to the present time we have only taken out 36,651 tons, and as that ore bears a large proportion to the quantity now being milled the yield has fallen off considerably, and we see no hope for the moment of an improvement. The one hope that we can entertain is that by constant watchfulness, and possibly by not having quite as expensive exploratory works as we had when driving the ninth level, and when making the rises from the ninth to the eighth levels, we may get the working cost still lower and be able to continue milling these very poor ores, in the hope that we may come upon, at all events, bunches of better quality. That is one of the most responsible duties that the mining captain has to discharge. When he goes round the works to see that the ore taken out is ore that will pay for the cost of extraction, that, I say, is one of his most responsible duties. The milling cost is so small that it is represented by about 1s. 2d. per ton, but the extraction and the boarding of the men engaged in the extraction is something like 8s. a ton, and it is exceedingly difficult to judge whether the ore will pay for this cost of extraction and treatment. Mr. Johns has implicit confidence in Capt. James, and therefore he is obliged to keep him at the Buttes mine at the present time more than he would otherwise desire to do. We can only follow the course that we have hitherto pursued.

PROF. CLAYTON CALLED IN.

We asked Prof. Clayton to go over the mine and make any suggestions he could. You all have had his report, and if you have taken the trouble to read it you must have been struck by the able geological account he gives of the country, and the mastery he has of theoretical as well as practical mining. (Hear, hear.) Nothing could be more instructive to those interested in this subject than the account he gives of the formation of veins. We shall certainly act upon the recommendations he gives us, and feel that we are justified in pursuing the work in the manner he recommends. You will see that he holds out the hope that there may be some large bodies of pay-ore between the ninth and eighth levels. That is easy to judge, for if we have only taken out some 10,000 tons from a quantity that we might reasonably estimate at over 200,000 tons, and as no miner can see beyond the rock that he has just blasted down, and that is facing him, there is every chance that there may be ore of better quality, but he places his main expectation on the laying open of a parallel vein to the Ariel, called the North Cliff vein, which was worked upon in former years. The North Cliff is joined to the Ariel vein by the South Cliff vein, and in other places, from the difference of curvature and dip, it comes into contact with the Ariel vein. Our experience of it up to the present time caused us to place it in a very secondary position as regards the Ariel.

THE ARIEL SEEMED THE MASTER VEIN OF THE PROPERTY,

but there were portions of the North Cliff that paid very well, and from the recommendations of Prof. Clayton it has been decided to conduct a number of exploratory works to enable us to reach the North Cliff vein. I must, in justice to Capt. James, mention that before Prof. Clayton visited the property, Capt. James had commenced exploration by digging a trench in places where the outcrop of the vein could be commanded westward of the operations that had been conducted in former years, and he was able to trace the vein for a length of 550 ft., and in two places where he dug a trench he was able to find gold, although not in sufficient quantities to pay, but towards the end of the exploratory work he found pay ore that averaged about $8 per ton—32s. If we can make both ends meet with 17s., we should be in clover with 32s., and the vein there was about 4 ft. wide. He sank some feet in this, and found it maintained its quality, and both he and Mr. Johns look upon this as the apex of a permanent shoot of ore. You cannot work it from the surface without much expense, and, therefore, they decided on continuing the old level, which would be most likely to meet it soonest, namely the No. 2. That is where he sank a shaft some 70 ft., and at the end of the course of the lode that he had been able to trace on the surface he sank 25 ft. That was the position on the 31st of December. Whether the ore was making in one direction or the other, neither he nor anybody else can tell, but at all events this work has been pushed on as fast as possible, and we hope that there may be pay ore before he comes under the pay ore found above. That work, probably, will not be completed till July. It will lay open a certain amount of ore of good quality, and by mixing it with the poor ore of the Ariel, we shall not only be able to pay our way, but make a moderate profit. (Hear, hear.)

FURTHER EXPLORATIONS.

Another exploratory work is cross-cutting from the Ariel vein to reach the same body. When once they are in the North Cliff they will follow its course, and if the ore body there is of equal quality, and of greater length, then we shall have as it were a new lease of life, and the moment we know anything definite and positive that will justify us in communicating it to you, we shall do so without any delay. We may have that news in the course of a few weeks, or it may be poor when they meet it from the eighth level, and they may have to go some distance further. There are various other places recommended by Prof. Clayton for exploring the North Cliff vein, and we shall not hesitate to avail ourselves of every opportunity of doing so, and of spending the money necessary for work of that kind.

PROFIT OF 5,500*l*.

There was a profit made during the year of 5,500*l*., and, at all events, our financial position was improved to that extent, and you have had out of the former profit some 3,000*l*. of dividend paid to you, but of this 5,500*l*. we have not given you any portion, and I am sure you will thoroughly endorse our action in this respect; for if we had the chance of purchasing a new property you would not like to be shut out from it, or to have a smaller proportion than one half. From the balance that stands on the profit and loss account in favour of the account, we must deduct the amount that stands still to the debit of the mill on the credit side of the balance-sheet. After deducting that some 8,000*l*. remains, of which we have carried 7,000*l*. to reserve, and that with the 11,000*l*. we had to the reserve fund before, we have had money sufficient to pay the moiety of the new mine, and so the shareholders of the

SIERRA BUTTES ARE THE OWNERS OF ONE-HALF OF THE UNCLE SAM PROPERTY.

With regard to that property I will speak later on. I think I have given you all the essential information that we possess in connection with the Sierra Buttes, and I will pass on at once to the Eureka Mine, merely stating that the 1,000*l*. we leave on the profit and loss is not available for purposes of dividend. It is merely sufficient to cover the Sierra Buttes liability towards the cost of the Empire Mine. The Empire Mine happens to be one of a number of properties that have been offered to us during the six years we have been seeking a new property. Very happily we did not entertain it for one moment when they asked 60,000*l*. for it, nor did we purchase it when later on it was offered at a lower sum. We took a bond of it, and the terms were that we should do certain work at our own cost, and lend the owners who were in difficulties a couple of thousand pounds. We accepted those terms or otherwise we would have had nothing to do with the mine. We have had considerable difficulty in getting our money back, and it is quite a question whether we shall ever get it back. Those are some of the risks incidental to mining, but we must be prepared to take a risk of 2,000*l*. or 3,000*l*. if a property is promising. It is one thing to risk 2,000*l*. or 3,000*l*., and quite another to buy outright a property of 20,000*l*. or 30,000*l*. and then raise another 15,000*l*. or 20,000*l*. to develop it and find nothing after all. We shall never depart from our policy of insisting of trying a property before we purchase it. That liability with regard to the Empire Mine must be shared equally by both classes of shareholders.

I NOW TURN TO THE PLUMAS EUREKA MINE.

Work on this property during the past half-year gave something like 28,000 tons, which was about the quantity of ore milled at the Mohawk mill. That mill has done such excellent work that I do not think it lost more than a day during the whole of the half-year. The working cost was 16s. 6d., as against an average of 17s. 6d. for the three preceding years! The yield of the ore was 29s. a ton, as against 26s. for the three preceding years, an improvement on the whole of 4s., or about 5,600*l*., and that improvement shows to some extent the additional dividend that you have had during the past half-year, or that we shall now declare, if you assent to it, as compared with the average dividend during the three preceding years.

TREZONA SHOOT,

Out of this quantity of 28,000 tons, only a proper proportion of ore was taken from the Trezona shoot. This Trezona shoot was first worked about May, 1887. At that time everything looked most unfavourable for the Eureka Mine, as you know. Out of 83,800 tons,

43,600 eame from the Trezona shoot. We insisted upon their only stamping a certain quantity from there. We eould have made big profits if we had ehosen, and sent your shares up to a most satisfactory price, but the day of reekoning would have eome. Now, by making it less we have been able to do work in other parts of the mine, and iu taking out the poor ore we always had the ehauee of eoming to better. At the present time we hear of two parts of the property that promise well, but our outside mines and the flat veins in the Eureka seemed so bunehy that you eould never rely upon them for auy length of time. One of these bodies is ealled the Mohawk flat vein, whieh has now been worked for some years, aud has given a fair proportion of ore, and now it seems to be showing a considerable quantity of ore of rather better quality than in the old 76, whieh seems to be putting on a new spurt, and there we have ore of good quality. By eoutinuing that same poliey we may hope to keep the company in existence for some time to eome. At the same time mines must work out. We eannot elose our eyes to the fact that

THESE MINES ARE THE OLDEST IN CALIFORNIA,

that they have been worked for many years, and that an enormous amount of ore has been taken from them, but still the mountain is of immense size, and we do not know what may be diseovered if you will only have eourage during the bad times. The profit made from these 43,600 tons (beeause there has been preeious little profit from any other plaee) has been about 50,600*l.*, and of that you will have had, ineluding the dividend we shall declare to-day (if you assent to it), 38,600*l.*, so that during the 18 months we shall have improved your finanees by 12,000*l.*, which I thiuk is very satisfaetory. (Cheers.) And uow, gentlemen, will you bear with as much equaniinity as you can, a warning from me that you must not eount on this 2s. dividend. The Trezona shoot deteriorates both in size and quality as it goes down, and a portion of the reserves that we eounted on has been lost, that is to say, that in the Trezona ore two large bloeks of waste grouud have intervened. Altogether the mining eaptain looks upon that as equal to the loss of six months' supply of Trezona ore, and, therefore, it looks very mueh as if we had reason to be thankful for a very fine shoot. But this shoot will, before very long, give out, and as our present profits do not average anythiug like what they have doue during the past 12 or 18 months, you must be prepared for a reduetion of dividend. If anything unexpeeted supervenes, so mueh the better for you. I reuember onee before when giving you a warning like this—instead of the returns falling off they inereased greatly. (Laughter.) The flat vein is giving next to nothing, and what it is giving is not paying.

NOT A GAMBLING COUNTER.

We have doue one thing for this company, and that is that we have kept it out of the gambling element. (Cheers.) We have done so by iuforming you beforehand what was likely to happen. We were not run short of money. We have bought one property, and if it turns out well we may be eneouraged to buy another, but whatever happens we will have the eommand of a good sum of money, and we will also be in a position if your mine works out, to have something to give you baek.

GOOD DIVIDENDS, BUT ALSO A GOOD RESERVE.

Therefore, you need not expeet that the whole of your earnings will come to you as dividends. At the same time the reserve fund has reaehed a good and respeetable amount, and we shall not erowd on to it. We will give you a fair proportion of what it earned. Of eourse there has been no difficulty in paying the Eureka moiety of the Unele Sam purehase with a reserve fund whieh stands ou the balanee-sheet as 52,790*l.*, and seeurities worth betweeu 2,000*l.* and 3,000*l.* more—all first class. The only weak one has been written down to its present market priee. That is the East and West India Doek Stoek, whieh last half-year was written down to 70*l.*, but yesterday's transactions were at 71½, and all the other stoeks show a rise. We did not make investments when we wanted the money, and so we had a large amount available on deposit, and when it beeame neeessary to pay for the Unele Sam we merely asked the bank to authorise the agent to honour Mr. Johns' draft for the amount required, and the transaetion was earried through. (Hear, hear.)

A SPLENDID RECORD.

I pass from the Buttes and Eureka Mines with the simple observation that the dividends paid you from both have amounted to 742,000*l.* If this new property is going to do anything like that we shall have something like a return from it—(eheers)—beeause, iustead of a capital between two eompanies of half a million, the present outlay upon the Unele Sam is very little over 30,000*l.*

A PROPERTY BOUGHT AS IT SHOULD BE.

Nobody has had a shilling out of it. Some man abroad who has rendered us service Mr. Johns thought we ought to make a present to, and we thought so also, so that we have authorised him to give him 200*l.* I do not know when any property has been bought for English shareholders in the manner the Uuele Sam has been bought. (Cheers.) Do not suppose it is an absolute eertainty, or that it is going to replaee both the Buttes and the Eureka, or even one of them. At present very little work has been doue. The surfaee works are worth next to nothing. We shall have to build a new mill, make roads, water eourses, and boarding houses for the meu. They have only driven a eouple of levels in one vein and one level in another, and the mine has only been explored to a very moderate depth, but what has been doue has beeu so satisfaetory, that we did not hesitate to buy it.

NO FOREBODING ABOUT UNCLE SAM.

We have had uo foreboding about the property, and can only eongratulate ourselves on having seeured this result. In the No. 2, or prineipal level, we know at preseut of two shoots. In one of them they had driveu about 126 ft., aud from surfaee indieations they feel satisfied it will last another 150 ft. at the least. Then eomes a dyke and break, and some distanee from that shoot, whieh is ealled the western, is another called the eastern, and by the 10th March they had driven in a vein of good quality, 160 ft. In places the vein was 8 ft., and even 9 ft. wide—and presented what they called "a splendid appearauce." At present, as far as we know, it has narrowed eonsiderably, aud is ouly 4 ft. wide. We have heard nothing of a change in quality, but we do kuow that 300 tons of that ore milled in February produced 90s. a ton. Now, if you see the profit made by the Eureka out of 29s. a ton, and the small profit on the Buttes out of 17s., you may feel satisfied that 90s. a ton, if it only eontinues, is going to do great things for us, because the working eost of Uncle Sam will not be much greater than the working eost at the other mines. We are not satisfied with driving these levels, we want to see the eonneetion between the north and south veins. They are making that and are eontinuing work also on the north vein.

POSSIBLE JUNCTION OF VEINS.

Prof. Claytou on the plan seems to have drawn it as if the north aud south veins will eome together, and I should not be surprised if they do. They may be separate veins, like the Ariel and North Cliff, and hold down distinetly, but it will take time to test this. They have eommenced an important work, a tunnel, whieh will be about 1,300 ft. long, and whieh we hope may be finished by the 30th of June, 1890. That tunnel is to eut the veiu 400 ft. below where we are working now, and if the vein holds good that distance, we shall have a large supply of ore. I may tell you that we leave Mr. Johns not absolutely with *carte blanche*, but with very great liberty of action.

CONFIDENCE IN MR. JOHNS AND HIS STAFF.

We have so mueh confidence in his judgment, and know the people ou the spot ean judge so mueh better than those far away, that although we express our opinion, we leave it to his diseretion to meet our views or to earry out his own. I do hope he will not put up a large mill at Unele Sam until we have laid open a large quantity of ore ground. I like the mine to be ahead of the mill, and not the mill to be ahead of the mine. I was at the mine when the long tunnel was eommeneed at the Sierra Buttes, and none of us thought that

AFTER DRIVING 2 MILES, AND SPENDING 40,000*l.*,

sueh a pitiful end would eome to a shoot so fine as this was in the sixth and seventh levels. Therefore, I want the work to be ahead of the milling power and not the mill to be ahead of the mine. You will have the working result of the past month sent to you in the eourse of a few days. This morning the estimate eame as follows:—$15,500 for the Buttes, with ouly 40 stamps running, whieh just pays our way, and that is all we hope to do for the next few months. At the Eureka the estimate was $30,000. The Eureka turns out rather better thau the estimate. You will see that the balance of profit is not a balanee that will stand a 2s. dividend; neither is the profit for January or February equal to a 2s. dividend. At the Uncle Sam the result for Mareh was $5,000, but it has been working very little. First of all there are only 10 stamps, aud one of them is so out of repair that it has to be hung up, and the other nine staups have not been able to work for several days in eonsequenee of a fearful storm that burst over the whole plaee. One of the unpleasant things I expeeted to have announced was that we should have a very short water supply; that the Eureka would have to use steam, whieh would eost 2s. or 3s. a ton extra, that we might have had to puump water from the river, and that all the *employés* would have to be put upon a short supply of water.

NO FEAR OF DROUGHT.

At the Buttes I do not know what we should have done, because we are entirely dependent on water. A storm has, however, come, and the injury it has done us is as nothing eompared with the benefit we have derived. At the Unele Sam also we were shown some of our weak points. Mr. Johns has seen some of them, and now when they put up a new mill they will be able to seleet a position not likely to sustain serious damage. This damage seemed very serious indeed, beeause it was supposed to have eut off the supply from the mill, and to have damaged the mill itself, but in the eourse of a few days we had a satisfaetory telegram to say that the mill was working again. Before putting the formal resolutiou for the adoption of the report and aeeounts I will offer to answer any questions, or to give any further information that you may wish. (Cheers.)

Mr. Wright (director): I seeond the resolution.

QUESTIONS.

Mr. Frewer: I should like to uuderstand whether the 15,000*l.* standing to the Sierra Buttes eredit is the eontribution of that mine to the Uncle Sam, leaving only 15,000*l.* to be dedueted from the 52,000*l.* from the Plumas Eureka. As to the working expenses—if you absorb the whole of the reserve fund from the Sierra Buttes I ean see that in the future the total earnings of that mine must be devoted towards the expenses of working the new mine, putting up the mill, and not in more dividends from the Sierra Buttes than we have reeeived during this last half-year.

The Chairman: The reserve fund of the Sierra Buttes would be 11,000*l.* What we have this half-year earried to it makes it amount to 18,000*l.*, and the investments are worth about 1,500*l.* more—take it at 20,000*l.* 15,000*l.* was its moiety, and we have still a eertain amount of money left, whilst, of eourse, we hope that the Uncle Sam will do something towards paying its way. We hope the miue will be worked at a profit, and that the profit will be used towards developing it. On an emergeney we have 4,000*l.* plaeed to aeeident fuud, and although we should be sorry to apply it to the ueeds of Unele Sam, if neeessary we will do so, and more than that, we have in Plumas Eureka most aeeommodating bankers. They would have the security of the properties, and would uot object to lend over 5,000*l.* more than their own proportion towards any expense that might be necessary for surfaee work. I ean assure the Plumas Eureka shareholders that any little kindness they may show to the Sierra Buttes Company is arranged on a proper business basis, and no risk whatever is run in what we find it desirable to do. We would rather borrow from the Eureka Company, if neeessary, than issue debeutures or anything of that kind.

Mr. Weir: You said we should probably lose the money that has been expended on the development of the Empire Mine. In that event do the eompanies lose jointly?

The Chairman: Yes, jointly, if the amount (which is between 2,000*l.* aud 3,000*l.*) be lost.

A Shareholder: I thought you said you had some charming letters to read to us. (Laughter.)

The Chairman: I had a complimentary one for the board, which I will spare you the trouble of hearing. (Laughter.)

The report was then unanimously adopted.

The Chairman proposed "That a dividend of 2s. per share, free of

income tax, be and is hereby declared on the Plumas Eureka shares, payable on the 5th inst."

Mr. Heyer seconded the motion, which was carried.

SERVICES OF MR. TENDRON.

Mr. Wright (director), in proposing the re-election of Mr. Frederick Tendron as a director, said: Mr. Tendron has been with us for about 10 years. We have had a great many opportunities of witnessing his ability here in the conduct of the general meetings, and hearing the large amount of information he has given. The previous expositions we have had are equalled, if not excelled, by the one to-day. (Cheers.) After you have received his descriptions you know quite as much about these mines as the directors do themselves. He tells you the whole truth. He does not hide the faults or over estimate the advantages. (Hear, hear.) There is one point I would like to bring to your notice with reference to our chairman—it is very important, though not always to be obtained, that a director should have a knowledge of the mines and of the *employés*. To do that the property must be visited, and our chairman has done that. When you come into contact with the management you both know each other, and are much better able to form a mutual esteem for each other's qualities. The chairman of the Sierra Buttes obtained an exact knowledge of everything connected with the mines, and such was the impression he made on the other side that Mr. Johns is always only too happy to apply to Mr. Tendron for information and advice. Although our chairman is not a practical engineer, his knowledge of mining is so accurate and his experience so great that he approaches to that profession very nearly. In short, Mr. Tendron, as the chairman of this company, is the right man in the right place. (Cheers).

Mr. Maitland seconded the motion, which was carried by acclamation.

The Chairman: I am much obliged to you for again re-electing me. I have been twice for you to California, and though I cannot go this year I hope to do so next year. When I go next year you will have to do without a secretary, for I shall take Mr. Saul with me. (Cheers).

THANKS AT HOME AND ABROAD.

I am extremely obliged to you, and will take the opportunity of moving a cordial vote of thanks to Mr. Johns and the other officers of the mine, and specially with reference to their gratuitous and valuable services in connection with the purchase of Uncle Sam Mine.

Mr. Weir seconded the motion, which was carried.

Mr. Fell proposed a vote of thanks to the chairman and directors.

Mr. Weir, in seconding the motion, said: We are extremely fortunate in having a chairman who does not think it too much trouble to go to California, and a board of directors who do not manipulate the accounts, so that the shares are up in a balloon one day, and at zero the next. I should like to see our shares higher. (Laughter.) I bought them at a much higher price than they are to-day, but still we must hope on. I wish especially to thank the chairman for his clear and lucid explanation as to the state of the mine.

The motion was then carried unanimously.

The Chairman, in returning thanks, said: We know in good times and in bad times you will hold by us and support us, and whilst we feel that we have your confidence we have the courage to do our duty in your interests.

The proceedings then closed.

DURBAN-ROODEPOORT GOLD MINING CO., LIMITED.

MORE CAPITAL TO DEVELOP THE PROPERTY—SHARES TO BE ISSUED AT A PREMIUM OF £4 EACH—60 HEAD OF STAMPS CAN BE WORKED FROM 13 CLAIM BLOCK ALONE.

An extraordinary general meeting of the Durban-Roodepoort Gold Mining Company was held at the Caunon Street Hotel, on Monday last, to consider business for the alteration of the company's articles of association, and for the further development and working of the company's property, and to pass the following resolutions proposed by the directors:—

(1.) "That the capital of the company be increased from 90,000*l.* to 100,000*l.* by the creation and issue of 10,000 shares of 1*l.* each." (2.) That the said 10,000 shares shall be allotted pro ratâ amongst the shareholders of the company who shall be upon the register on the 1st day of May next, provided they apply for the same in writing to the secretary not later than the 30th June next, after which date the directors shall be at liberty to dispose of such shares as may not be applied for as they may see fit to the best advantage of the company." (3.) "That the 10,000 shares shall be issued at a premium, to be named by the directors, and to be fixed by the meeting, and that the total amount received for such shares (including premium) shall be used as further working capital of the company." (4.) "That the articles of association of the company shall be amended by repealing article 39, and substituting in lieu thereof the following article:—'An annual meeting shall be held at least once a year in London, and until otherwise prescribed such general meeting shall be held not later than the month of May in each year.'" (5.) "That article 77 of the articles of association be altered by striking out all the words occurring therein after the words 'such delegation.'" (6.) "That a new article shall be added to the articles of association as follows:—'98A. When in the opinion of the board the position of the company permits, interim dividends may be paid to the shareholders on account of the dividends for the then current year.'"

The notice calling the meeting added, "At the said meeting the directors will intimate to the shareholders the policy they propose to carry out for the full development and working of the company's property, and the reasons why they have considered it to be for the interests of the shareholders to decline proposals for the purchase of 10 of the 23 claims owned by the company, and they will also explain to the shareholders the course they intend to propose at the general meeting to be held on the 1st May, in respect to the immediate payment of a dividend."

Mr. Archibald Parker presided.

Mr. Lee Wright (the secretary) read the notice calling the meeting.

The Chairman: Gentlemen, the time for the general meeting is, according to the articles of association, fixed for May. The directors were desirous of making it earlier for several reasons, but found this could not be done, and having learned that some shareholders are anxious to obtain information, particularly in reference to the report that the company was likely to dispose of 10 of the original 23 claims, and also in regard to the declaring of a dividend, it was thought better not to wait for the general meeting, but to call the present extraordinary general meeting. We do not intend to present any accounts to-day, as the proper time is at the general meeting, to be held on the 1st of May. The company was started with a working capital of 20,000*l.* Your property consists of a Mynpacht, or mining lease, of 343 acres, and of nearly 27 claims. The company was formed on the 2nd of January of last year. For several months it was under temporary management, and whilst so 810 ozs. of gold were extracted from 1,106 tons of ore, being at the rate of nearly 14 dwts. to the ton. This, we understand, was taken from the main reef, or surface stuff.

A MANAGER APPOINTED.

At as early a date as possible a manager was sent from here (Mr. Ollerenshaw), and after laying out the mine, and erecting 10 additional stamps, and putting the first 10 stamps in proper working order, he commenced crushing in October last, and up to 18th March, a period of five months, obtained 7,257 ozs. of gold. This has been taken from 3,488 tons of ore, and the average is, therefore,

FULLY 2 OZS. TO THE TON.

This ore is chiefly from the south leader or reef, but there is a part of it, about one-fourth, we understand, from the main reef. All this has been obtained working with 20 stamps, and it has not been practicable until lately to work these continuously, owing to the dryness of the season, and although our position in regard to water is much better than most of the mines on the Randt, it was found that to get a regular supply dams must be constructed. One dam has already been finished capable of holding 3,000,000 gals., and there has also been a small one near the mill. Nearly all the work has been on the 13 claim block. On this six shafts have been sunk, the deepest of these being 79 ft. To enable this block to be worked to greater advantage and at less cost, the manager secured four claims outside the block that an adit might be driven through them to open up both the main and south reef of the 13 claims at a depth of from 100 to 130 ft. I am not quite sure of this depth. This adit has been driven to the extent of 473 ft., and it was expected would ere this have been completed; but by late advices we find it will probably not be finished until towards the end of the year. This adit will open up a large body of ore, and will also drain the mine. On the 10 claim block there are three shafts sunk, and until lately we trusted to the main reef on this alone, but two months ago the manager advised that two most promising leaders had been discovered. One of these is now being worked to a small extent; the other cannot be, until certain shafts or drives are completed, there not being at present sufficient ventilation. A report having got abroad that it was proposed to sell the 10 claim block, and that a syndicate had been formed for the purpose of taking it over, it is necessary to say something about this. The directors have been asked whether you would sell, and were also invited to meet Mr. Morrison, who has recently returned from South Africa, when he would, as representing

A SYNDICATE, FORMED AT JOHANNESBURG,

make certain proposals. He, however, on hearing that the views of the directors were very decided, and that no scheme would be entertained that meant the payment of promotion money or commissions in any form or shape—(applause)—did not put forward the proposal. The directors were determined that if anything was done in the way of separating the two blocks, it must be so that every shareholder would have an opportunity of subscribing pro rata according to the shares he now held. (Cheers.) The directors have heard much about the scheme, and are aware it was based on the idea of making a large profit, and was such as no shareholder would agree to unless benefitted by the affair in some other way. If desirable to make the property into two companies, this could be done in such a manner as to be fair to all the shareholders by simply forming a company and handing one share for each of those now held. The dividing of the water might be somewhat difficult, but for economical workings the directors are of opinion that it is better to keep all our property in the company's hands, and to work it as one concern. (Cheers.) We come now to the question of increase of capital. As already stated, the company started with a working capital of 20,000*l.*, and under ordinary circumstances that might have been sufficient, but the property is proving a very valuable one, and is likely to more than fulfil the promises of the prospectus. We do not ask an increase of the capital because of its poverty, but because of its richness. The shareholders naturally want dividends and object to their profits being consumed in development, and in this the directors agree, and now recommend the issue of 10,000 shares at a premium of 4*l.* each, thus making the capital 100,000*l.*, and giving 50,000*l.* of working capital to be devoted to the thorough developing of the company's property, and also enable your directors to distribute the profits after writing off what may be advisable for depreciation. And now as to the payment of a dividend. At the general meeting it is intended to propose the declaration of a dividend, whether the capital is increased or not. This would probably have been done even earlier, but according to the articles of association we found it could not be done until the general meeting in May, and that we could not alter the date. You will observe it is proposed to amend the articles of association so as to do away with these difficulties in future. If the capital is increased we can, of course, utilise the whole of our profits, if not we must be content with smaller dividends. With such a promising property it is desirable that the development should not be kept back by our working capital being too small.

DEVELOPMENT.

In the development of the property it is proposed to send out, in time for next transport season, when low rates prevail, say about October, another 25 stamps, and engine-power sufficient to drive them, and also pumps. The number of stamps at present is 20, and five additional were shipped recently. By the time the second 25 stamps are erected a large quantity of ore from the adit and also from the 10 claim block should be available. It may be advisable to still further increase the machinery. The next 25 stamps will be put upon the present site, but if more are erected the question of whether to put them near the 10 claim block will be considered. A tramway will probably be laid

from the 10 claim block to the mill, a distance of about 1 mile. In order to make the most of the water, and prevent it running to waste, it is proposed to ereet additional dams, and also to convey it in pipes to the mill instead of by open sluits, as at present. We propose that the Mynpacht should be thoroughly prospected, and if reefs of value are found, to open them up. There are several veins of banket known to exist, and we are informed that the ground just outside our Mynpacht has been pegged out, and that

ORE WITH VISIBLE GOLD HAS BEEN FOUND.

This is expected to run into our ground. Various buildings have been erected, but much is yet required, and in view of the approach of winter, better quarters are being erected for the amalgamators and engineers, and those of the miners and kaffir labourers are being improved. Mr. Ollerenshaw, the manager sent from here, proved most efficient, and did much good work in laying out the mine, which, like most of the Transvaal properties in the early days, was mismanaged from want of knowledge. Unfortunately his health was indifferent, and he, after the first crushing, viz., in October, asked to be relieved. This was agreed to, and he is now in this country. Mr. Goodwin was appointed acting manager. He has given us much satisfaction, and we have received most favourable reports of his character and abilities, and are informed from independent sources that the mine is well managed. We have, therefore, offered him the permanent appointment. (Cheers.) I now propose the first three resolutions. I see no reason why we should not club them together; they are all upon the same subject. (Applause.)

Sir Donald Currie, in seconding the resolutions, said that he had heard that it had been reported in South Africa that he had had in some way or other some connection with the proposal for the purchase of these claims by the syndicate. There was no foundation whatever for such a rumour; on the contrary, it was his opinion that the management of the company and its working should be entirely in the hands of the board; it could not, in his opinion, be better looked after. As regarded the increase of the capital by 10,000*l*., which would bring it up to 100,000*l*., he approved of the proposal; it would give them, by the suggested issue at 4*l*. premium, 50,000*l*., and this premium would render it possible for the directors to further the wishes of the shareholders, and pay dividends, less depreciation.

SYNDICATE OFFERS.

This had been the policy which had met with his approval from the first moment that he heard anything about the purchase. Offers had been made, he knew, by two syndicates, but he assured them he was not interested, either as a large shareholder in the African Investment Corporation or individually, in any such proposals. He objected to, and repudiated, any such statements. He simply now wished to support the motion of the chairman, that the capital should be increased from 90,000*l*. to 100,000*l*. by the proposed issue of 10,000 shares. He maintained that the working of the company should be retained in the hands of the directors. Two schemes had been proposed to him, and he had been asked to join them, but he had refused in both cases. The recommendation of the board was, he considered, the best in the interests of the shareholders, and he advocated its adoption. He felt that the colonial board should be directly under the control and absolute authority of the board here. (Cheers.)

THE QUESTION OF STAMPS.

Mr. Darvell asked whether the development of the mine would be such as to keep the extra 20 stamps going?

The Chairman, in reply, read an extract from a letter from Mr. Goodwin, dated January 3rd, in which it was stated that he felt confident that from the 13 claim block alone he would be able to supply 40 stamps, and when the adit level was completed, and they commenced sinking in the lower levels, he estimated that they would obtain from the south and main reef quartz enough for 60 head of stamps, and this from the 13 claim block alone.

In reply to further questions, the Chairman also read an extract from a letter from Mr. Campbell, one of the local directors, corroborative of the remarks of Mr. Goodwin.

TAILINGS.

Mr. Hopkinson asked what was being done as regarded the tailings, and the recovery of any gold that might be left in them.

The Chairman said that Mr. Ollerenshaw had been of the opinion that he had got out all of the gold that was to be obtained from the ore, and that the tailings were not worth much; the directors, however, were giving the matter their careful consideration, and had asked for samples to be sent home for experimental treatment. It was a very

FREE ORE.

Mr. Darvell asked whether the present water dams and reserves of water would be sufficient to keep the extra stamps going.

The Chairman said that an extra dam might perhaps be required, and that would be finished simultaneously with the erection of the stamps.

The motion was then put and carried.

The Chairman then moved the fourth resolution, stating that the directors wished to have the power to hold the meeting earlier than May.

Mr. Hopkinson seconded the motion, which was carried.

The Chairman then moved the fifth resolution, rescinding a portion of article 77.

Mr. Darvell seconded the motion, which was carried.

The Chairman then moved the sixth resolution, authorising the payment of interim dividends, and expressed the hope that they would be able to do so. (Hear, hear.)

Mr. Robertson seconded the motion, which was carried.

THANKS.

On the motion of Mr. W. G. Soper, seconded by a Shareholder, a cordial vote of thanks was accorded to the chairman for presiding, and the proceedings terminated.

ANTIOQUIA (FRONTINO) MINING CO., LIMITED.

MONEY REQUIRED TO DEVELOP THE PROPERTY—DEBENTURE-HOLDERS AGREE TO THE PROPOSITION OF THE DIRECTORS.

A meeting of the debenture-holders in this company was held on Thursday, 4th April, at the Offices, Gresham House, Old Broad Street—Mr. Richard Donagan presided.

Mr. J. J. Truran (secretary) read the notice convening the meeting.

POSITION FULLY EXPLAINED.

The Chairman said: This meeting of the debenture-holders of the company has been called for the purpose of taking into consideration the preseut financial positiou of the company, and the present condition of the mining operations and the requirements of the same for the future, and the prospects of the mine in the event of such requirements being complied with; and also for the purpose of endeavouring to concert such measures as will place the financial position on a sound and unassailable basis, and as will lead to the works which are absolutely necessary for the life of the mine being vigorously carried out without further delay. I may as well state frankly that to enable the latter most important and desirable object to be effected one of two steps must be taken, viz., either the parties interested in the property must provide further capital, or else the debenture-holders must postpone their urgeut aud long-deferred claims to the exigencies of the situation, by allowing the temporary profits which are now being made to be applied to those works which will, there is every reason to believe, convert such temporary profits into profits of a permanent character, and of such an amount as to give satisfaction to everyone coneerned. Ever since the temporary profits referred to became continuous, and appeared to be likely to last for some little time, your directors have giveu their most carnest and careful attention to the whole scope of the question, with the view to strikiug out some course which might alike effect the object desired and be acceptable to the various persons interested. In order to comply with the second of these conditions they felt that it would be necessary, in carrying out the first coudition, to steer clear of anything so euinently distasteful as the subscription of further capital, and they have matured a plan which they feel assured will meet both conditions—only to carry it out the forbearauee and consideration of the debenture-holders will be required, but which they feel sure the businesslike common sense (if I may be allowed to use such an expression) of the debeuture-holders will induce them to afford. Now, first to deal with the financial position of the company. Of course, it is kuown to all present that the company has for years groaned under the incubus of a heavy debt to Messrs. Restrepo, the company's bankers in Colombia.

THE LOCAL DEBT.

In the year 1883, in which year the present board assumed office, the debt to Messrs. Restrepo was 4,117*l*. In 1884 it had becoue reduced to 3,801*l*.; in 1885 to 3,031*l*.; in 1886 to 2,626*l*.; in 1887 to 1,812*l*.; and in Juue, 1888, I am pleased to say, this long-standing debt was extinguished altogether. In the accounts to December, 1887, there appeared a liability of 100*l*. to the Imperial Bank in London, aud this, and also various sums amounting to 1,202*l*. due to several persons, have, during the year 1888, been discharged. The only creditors now, other than the debeuture-holders, are, collectively speaking, two in number, viz., the Frontino and Bolivia Company and the directors. As to the Frontino and Bolivia Company, it is both a cash creditor and a debenture-holder. Speaking for the moment of the cash branch of the debt only, the Frontino and Bolivia Company claims a sum of 5,133*l*. It is an old affair, incurred in the early stages of this company's career, in connectiou partly with the acquisition of the property, and partly with the expense of working the mine, before Messrs. Restrepo began making any advances. It appeared at 5,133*l*. in the books of the Frontino and Bolivia Company so long ago as 1881, and it has stood there ever since at that amount—not as a tangible asset, but as one of the items of the ledger balances, which might some day be realisable or might not. As to the directors' fees, they were noted up in the books as they accrued, according to the artieles of association, but in 1885 the board reduced the amount by one-half, viz, from 500*l*. a year to 250*l*., and that both prospectively and retrospectively, and, aeeordingly, in that year a sum of 521*l*. was written back to profit and loss as the amount so given up to that date. Not only have the fees siuce been credited as they accrued at the reduced amount, but in the year 1888 the board were enabled to write baek a further sum of 377*l*., and which amount will appear so written back in the next accouuts. The results of this operation, and of a cash payment to the directors when it was made, are that the amount now standing as due to the directors for uupaid fees amounts, to the 31st December last, to 1,032*l*.

POSITION OF DEBENTURES.

We now come to the grand item of indebteduess, viz., the amount due to the debeuture-holders. The prineipal amounts to the total of 14,181*l*., of which 2,500*l*. became due ou the 1st August, 1885, 11,232*l*. on the 31st March, 1888, ineluding renewed bouds. 198*l*. not renewed is payable at any tiue, and 210*l*. does not become due till 1st September, 1891, the last mentioned sum having been provided by a section of the debenture-holders at, I may say, my persoual request, for the purpose of rescuing some overdue debentures, which had beeu dealt with by the original holder as securities for money, from the hands of the holders who, having no interest whatever in the company other than the documents they held as security, were threateniug to proceed to extremities, and that just as the coupany's horizon was beginning to brighteu, perhaps I may say becoming tinged with gold, in the forun of profits from the returns. On the debentures of the company there is an arrear of interest which, on the 31st March last, the day on which another half-year's interest became due on the larger portion, amounts to 6,577*l*. Against this large amount of indebtedness what have we got? Well, to begin with, we have got a miue which, worked as it has been, literally, from hand to mouth, and that often with very little in hand, and the mouth uncommonly hungry through long con-

tinued semi-starvation, has, nevertheless, with the aid of the premium on exchange, cleared off 4,117*l.* of debt in Colombia, and 1,302*l.* of debt in England, and has, moreover, during the past year provided a sum which, if we can get your sanction to so using it, will very nearly provide the meaus of effecting what the mine wants, and the nature of which I will explain presently. It would be rather premature for me on this occasion to go very fully into the actual results for the year 1888. The accounts to December arrived in due course, but the valuations did not reach us till a few days ago, and these were necessary to arrive at the exact results; but I shall be quite safe from entering into any speculative anticipations or from making any communication to a meeting of debenture-holders in advance of that to be afforded in a few days after this meeting to the shareholders generally if I merely remind you that the monthly circulars issued to the shareholders for the 12 months, Jauuary to December, 1888, inclusive, show the following estimates:—Value of the gold produced, 8,580*l.*; cost Colombia and England, 4,558*l.*; estimated profit for the year, 4,022*l.*

FUNDS PRESENT AND FUTURE.

And, as everything is estimated very fairly, doubtless the profit will come out at a trifle more, even after depreciation of plant has been charged. The statement of the financial condition now requires me to mention that on the 31st January last Messrs. Restrepo had in hand on current account $3,812; that Mr. J. H. White had at the same time in his hands $3,107; and that to-day we have a sum of 1,434*l.* at the bauk, subject to the payment for certain stores now in order, and about to be despatched to the uines, amounting to 150*l.*, or thereabouts, and to office expenses. We also have to receive a surplus from the realisation of the January gold when it shall have arrived, subject to the payment for next month's stores and mine requirements. It now devolves on me to explaiu what we want and why we want it. What we want is a sum of money to expend on the mine, which has been estimated at 2,000*l.*, and which, to be on the safe side, we must look upon as possibly 2,500*l.*, and it is essential that before beginning to expend this amount we should clearly see our way to the whole of it, so as to have no hitch during the progress of the work—for a hitch means delay in execution—and that would be fatal to the efficiency of the work. What we want the money for is very easily explained, only I must claim your close attention for a few minutes in order that you may apprehend it fully. The Frontino Mine is situated in a spur of a mountain—so that it was originally worked on both sides of the spur from the two hill sides—I am now alluding to 1829, and thenceforth. When this company took to the mine in 1874 there were several levels, one of which when worked was called the Fragua level. The lowest level was called the adit, and from this adit a shaft had been sunk, but had been left to go to ruin, and was, in fact, nearly full of *débris* and water. At that time it was considered that instead of attempting to reopen that shaft, which was badly placed for working at, and was not in the best place for getting at the ore in depth, it would be much better to sink a new shaft from the adit, at a place more to the east, which could be more easily worked at, and which would be more suitable in dealing with the ore in depth; in other words, the ore, running as it does from west to east, would, in depth, be inclined to recede from the site of the old shaft, but would approach towards the site selected for the new shaft. Accordiugly, in 1877 a shaft was begun, and a pump and turbines to work it and other machinery were in 1880 chosen by Mr. Franklin White, then in England, aud by the aid of such part of this machinery as was used the new shaft so begun in 1877 was sunk. Simultaneously with the sinking of the shaft a new adit was driven to drain such shaft to a depth of 20 fms., and the idea was to continue such adit beyond the shaft, and so get under the old shaft workings—to drain the old workings by means of the adit—and from such old workings, and from the continuation of the adit westwards, to obtain such returns as to enable the shaft to be sunk deeper, and a permanent mine to be thus established. And having regard to this adit, the pump sent out was sold, as not being then required. The shaft and the adit having been communicated, by which drainage was established, the turbine put up was taken down, and the sinking of the shaft below the adit was commenced with more simple appliances, sinking for a short distanee below the adit being a simple affair, and requiring at first only a small hand pump. Unfortunately the expected returns from the old workings and from the adit westwards were not obtained; the lode had been more extensively worked upon in former years by means of the old shaft than was supposed, and in the adit the lode pinched out.

A COMPETENT MANAGER GRASPS THE SITUATION.

Thus, just as some substantial work had to be done to get the shaft down deeper than a hand pump would do it, it was found that the expected returns were not forthcoming, and the sinking of the shaft had to be suspended. In this dilemma Mr. G. H. White, our manager, whose arrangements under great difficulties are deserving of praise, finding he could not sink the shaft without appliances which he had not the means to put up, or to work them if they had been up, determined to attack the lode below the adit by means of a small diagonal sinking further to the west, which he could get down by meaus of hand pumps. This sinking, though called the 1885 shaft, is really hardly deserving of the name of shaft, but it has answered its purpose—it laid open the lode for a limited area, and the working has resulted in profits. Had Mr. White been untrammelled, he he might with such profits have resumed the sinking of the 1877 shaft, and have made his mine. But the debt to Messrs. Restrepo had to be provided, and the profits went there instead. This debt, as I have mentioned, is now discharged, and profits are still being made from Mr. White's workings, and there is still an opportunity of proceeding with the siuking of the 1877 shaft, and making the mine. Only now the claims of those in England on such profits have to be considered. And now I come to the most important statement of all, and to which I entreat the close attention of all who hear, or who may read this exposition of facts. It is this—the workings from which the profits have been made, and out of which the debts referred to have been discharged, and by means of which the little funds in hand which I have spoken of were built up, were in January down 16½ fms. from the adit, and according to recent advices, in order to keep up the returns and profits, sinking was to be resumed in February down to 20 fms., and 20 fms. is the very lowest depth to which these slender workings can be sunk with the present appliances.

DEVELOPMENTS.

Knowing this, Mr. White has made another diagonal sinking at the extreme end of the adit and still further to the west, and in the advices, dated 5th January, Mr. White reports that at 8 fms. below adit he has come upon the lode, and it is 4 ft. wide there. Of course this last sink is comparatively free of water, while his 1885 shaft is being kept drained by the hand pumps, and when he is constrained to cease working at the last-mentioned spot he can transfer his hand pumps to this latest sinking, and, if he has no greater influx of water, will be able to get that down to 20 fms. also; but, of course, that sink, like the 1885 one, cannot be got below 20 fms. with hand pumps. If, therefore, the little funds in hand, and the profits to be made during the next few months are to be applied, as far as they will go, in paying claims in England, and which, if so applied, would scarcely amount to an appreciable sum to each claimant, the mine must—it no use mincing the matter, and it is incumbent on me to speak plainly at such a critical juncture—the mine must inevitably come to a standstill when the returns from the remaining 3½ fms. of practicable ground in the 1885 shaft is exhausted, and when the recently-constructed sinking to which I referred just now shall also be got down to 20 fms., and the mineral to be obtained from there shall also be got out. If, however, the funds now in hand, and to be obtained during the next few months, instead of being frittered away in numerous small payments, should be devoted to now erecting the necessary machinery and sinking the 1877 shaft, aud driviug levels therefrom towards the lode—aud by which means the present workings could be brought into communication with the 1877 shaft, aud drained that way—there is every probability that the mine would be permanently resuscitated. The present workings have shown clearly in two distinct places that the pinch in the lode which occurred iu the adit does not go down, but that the lode opens out again, and in one of such places it has proved to be rich and in the other has already been found to be over average value; so that the sinking of the 1877 shaft may reasonably be expected to yield a large body of paying ore from the Carmen lode. The present idea is again to bring in water from the Carmen stream by means of the Fragua level before referred to, and with the fall of water thus obtained to work pumping and hauling machinery, and thus siuk and work from the 1877 shaft, and if ever further power should be wanted to go deeper than the Carmen water power would take us, it would be practicable to bring in water from the Animas stream in aid of the Carmen water. Mr. White has submitted other plans—one of which is to begin a new adit lower down the valley, and to drive it to the spot where the 1877 shaft is, and to get such shaft down to it by means which would take some little time to explain, but which are practicable; aud the other of which plans is to sink a new shaft outside which could be drained by an ordinary water-wheel, and to get under the 1877 shaft that way; but both of these plans are open to the objections, that if hard ground should be met with the expense would be increased and delay created, and that neither would afford any relief to the mine until it should be completed: while the erection of machinery to be worked by water through the Fragua would relieve the shaft of water directly it should go to work, and so smooth the way to the sinking and the driving of the deeper levels, from almost the commencement of these operations. Explorations are still practicable on the Escobar, Brecha, Grupero, and other lodes, and some of such are now going on to a limited extent, but if the returns from the Carmen lode stop, these explorations must of necessity stop also; while, if the returns from the Carmen are rendered permanent by the sinking of the shaft, these explorations can be continued, and may, and probably will, lead to profitable results. Already the indications are such that Mr. White is contemplating the erection of a small mill on the west side of the hill to crush the ore he expects shortly to have available. It would be deplorable to have to stop all these works for want of means, when, if pursued for a time they may be profitable.

JANUARY PROFIT.

The letters just to hand advise that the returns for January were 348 tons, yielding 410 ozs. Estimated value of the gold, 1,110*l.*; estimated cost, 619*l.*; estimated profit, 491*l.* Mr. White would almost appear to have had a previsiou of this meeting, for in his letter he says:—"With the exception of the works in the Hoyo valley, which will not demand any great sacrifice, I have not presumed to undertake others without authority from the board; the mine must be treated as a new one, aud our work up to the present should be considered as an endeavour to keep the mine open and prove it—but the future depends upon the works uudertaken to develop the mine." In another page he says:—"Some 40 fms. between the 1885 shaft and the 1877 shaft, which I considered as of no value, will no doubt prove of value from uow forward," and in his mining report he says:—"The main lode will not give out in depth; instead of the Frontino Mine being considered an old mine dyiug hard, it should be treated as a new mine requiring development." Having now explaiued what we want, and why we want it, I propose next to consider how to do it, and stated shortly, the plan is that one aud all having claims on the company should consent to take prefereuce shares for the amount of their claims, bearing interest at 10 per cent. per annum as from the 31st March inst. That is to say, the amount due to each debenture-holder for principal and interest to the 31st of March should be calculated, and he should receive as many 1*l.* preference shares as the amount came to—odd shillings being, of course, thrown overboard. As to the Frontino and Bolivia Company, a holder of 1,500*l.* of the debentures that company would have to be asked to take prefereuce shares for the principal and interest. With regard to the cash debt of 5,133*l.* due to that company, there are circumstances connected with some of the items constituting the debt, that render the amount, though legally correct, yet preposterously high, and it seems to me that if the Frontino and Bolivia Company receive 3,000 1*l.* preference shares for this amount, that company may consider itself as uncommonly fortunate and well served. The directors would be willing to take like preference shares for their reduced claim. The effect of all this would be, that it would be necessary to issue and allot about 24,790 1*l.* preference shares in the whole, the interest on which would be some 2,479*l.* per annum as from the 31st March last. The further effect would be that the funds uow in hand would thereupon become available for the development of the mine, and as duriug the next six months it would only be uecessary to provide for three months' preference interest, viz., 618*l.*, the interest being satisfied up to March by the conversion, and as the profits may be reasonably expected for such six months considerably to exceed that sum, it is abundantly clear that by the time we have matured all the

arrangements, the funds now in hand will have beeome augmented to the sum necessary to carry out the work without any apprehension of having to suspend it for a day through want of means, and I think I may say it is also pretty clear that the preferencc interest may be punctually provided, pending the execution of the work.

FINANCIAL PROPOSALS.

As a matter of detail, I may mention that the directors propose for consideration the suggestion that the 10 per cent. preference interest should not be cumulative, but that the results of each year should stand on its own bottom, and that out of the profits of each year the 10 per cent. preference should be paid, and that out of profits in exeess of that the ordinary shareholders should —after setting aside some reasonable portion to a reserve fund, whieh is most important—have a dividend, and that in the event of the profits being sufficient to pay 10 per cent. on the ordinary shares, and to leave auy residue, such residue should be apportioned so as to give an equal augmentation of dividend to both elasses of shares. It may seem rather Quixotic of me to be speaking of 10 per ccnt. dividends to the ordinary shares, but it is not beyond the range of possibility, aud whether probable, or not, you will, doubtless, not fail to see that now, when we are proposing to substitute preference shares for debentures, is the time to settle the terms on whieh the new form of preference should be based. In eonclusion, I would desire to make an appeal to each debenture-holder individually. The present board have for six years worked assiduously and perseveringly with the company, not tottering to its fall, but tottering as if it would fall, but which disaster has, as yet, been averted. Mr. White has for even longer been working assiduously and perseveringly with the mine under a cloud, and he has done it alone, in a remote situation, in a sparsely populated country, and with everything against him—men leaving him, because they thought the mine would soon collapse, and other hindrances too numerous to eveu refer to; and he has yet brought the mine into a profitable condition to at all events the extent and for the period that his expedients will suffice, aud he has cleared it of debt in Colombia. Let me, therefore, ask cach debenture-holder to signify his appreciation of such efforts by chcerfully and readily acquiescing in the plan now proposed.

THE WELCOME WORD, "DIVIDENDS."

Iu asking you to evince your gratitude in this way I may remind you that gratitude has been defined as a lively sense of favours to come, and the aptitude of this definition is, I think, clearly demonstrated in the present case, for I feel couvinced that if thc plan be carried out the "favours to come" will not be wanting; but, on the contrary, will assume the shape of half-yearly dividends for many years. We can venture to pay the dividends half-yearly on the above basis of each year standing by itself, because having monthly accounts of receipts and payments wc can see how things are going. If the debenture-holders will agree to the above proposals we will announce the fact in our forthcoming report to our shareholders, and will take the necessary steps to legalise the issue of the preference shares; and we can take steps to seek the consent of the Frontino and Bolivia Compauy to the proposed settlement. I may add that we have already had assents to the plan from 25 debenture-holders, holding debentures amonnting to 4,878*l*. prineipal; and if the plan is approved at this meeting we will solicit the assent of the other holders, and I do not doubt that if the holders will only look into and consider the circumstances they will unanimously agree to a proposal so manifestly to the advantage of every one eoneerned. We shall now be glad to hear the views of those present, and I shall be pleased to afford the fullest information in my power on any point which I may have passed over, or may not have explained with sufficient clearness, aud I hope that before we separate we may be able to formulate and pass some resolntion whieh may convey to those holders who are not present to-day the opinion of those who are—and that in no ambiguous terms, but expressed in such an uumistakable way as to amount to a kind of intimation to the absent ones as to the course they should take. It is most desirable that the deeision of the debenture-holders should be unanimous. There are courses open to the board by which a certain majority would bind the minority, but those eourses involve law, and law involves both expense and delay, and eaeh of these would be prejudieial—it would be mueh more to the purpose to spend the money on the mine instead of in law costs, and to dedicate the time to the work, instead of wasting it in the neighbourhood of Lincoln's Inn. To you present, with my voice, and to the absent ones by means of thc printed report, I say a unanimous acquiescenee, if you please. (Cheers.)

A Shareholder: In the statement yon have made there was no reference to the expected conjunction of the three lodes. Is that a prospect before us?

The Chairman: That was a prospect that Mr. White always said was before us, but Mr. Gifford went over there and made a eursory inspection, and gave it as his opinion that the conjunction of the lodes would be so deep dowu that it never would be reached.

THE RESOLUTION.

The Chairman: If no other gentleman has any remarks to make, I will read a resolution we have framed, and if it meets with your approval, I will ask two gentlemen to move and seeond it, as we wish it to come from the debenture-holders, and not from the company. The resolution is as follows:—

"This meeting of debenture-holders having heard the statement of the chairman, and having fully discussed the matter of the eonversion of the debentures, with the arrear of interest thereon up to the 31st Mareh last, into preference shares, carrying a preference dividend of 10 per eent., as from the date up to which the debenture interest shall be so eonverted—such preferenee dividend to be dependant on the profits of each year, and such preference shares to be entitled to a further dividend rateably with the ordinary shares whenever the profits in any one year shall, after the setting aside of any sum not exceeding 500*l*. to a reserve fund, and the payment of 10 per cent. on the ordinary shares, be sufficient to allow of a further dividend—is unanimously of opinion that the proposed plan is for the benefit of the debenture-holders, and of the company. And it is resolved that the proposal be, and is hereby, aecepted by the debenture-holders present, and that the directors be, and are hereby, requested to solicit the consent of all other debentnre-holders and of the shareholders to the proposal, and, if neeessary, to take sueh steps as they may consider, or may be advised as being necessary to carry the proposed plan into effect."

Dr. H. A. Holden: I have much pleasure in proposing that resolution.

Sir Geo. D. Harris: I think I am one of the largest debenture-holders, and I may be allowed to second the resolution.

Lord Strathallan: Supposing you could only pay a preference of 5 per cent. one year, what would become of the other 5 per ceut.?

The Chairman: It would be lost.

Lord Strathallan: Would that be the case if you had enough to pay 15 per cent. the next year?

The Chairman: Yes; but on the other hand, if we had 25 per cent., the preferenee shares would get 12½ per cent. of it.

The Chairman said he had got several assents to this scheme from large debenture-holders, among whom was the largest holder in the Frontino and Bolivia Company, and he thoroughly approved of it. He did not, therefore, expect auy oppositiou from that company.

The motion was then carried unanimously.

Lord Strathallan proposed a vote of thanks to the chairman, and the proceedings closed.

THE GRASKOP MILL AND MINING CO., LIMITED.

A SUCCESSFUL RE-ORGANISATION — A GENEROUS PROPOSAL—STAMPS TO BE WORKED NEAR THE MILL BY A DYNAMO RUN BY WATER POWER.

The statutory meeting of this eompany was held at the Cannon Street Hotel on Tuesday last, under the presidency of Mr. Lawrence W. Cloete (the chairman of the eompany).

The Secretary having read the notice couvening the meeting,

The Chairman said that the meeting was ouly the statutory one held in complianee with the requirements of the Joint-Stock Companies Aets, and he had no resolution to propose. He would remind the shareholders, however, that this was really not a new company, but a re-organisation of the Graskop Gold and Stores Company. At statutory meetings there was as a rule very little to be said to shareholders, but it was his opiuion that if chairmen entered into little more details at the first meetings of new eoncerns, and take the shareholders a little more into their confidence, it would have saved many a company from ruin. (Hear, hear.) As he had just said, their company was

NOT A NEW COMPANY,

but the re-organisation of oue that had been running for a few years, and not too successfully, it having had many difficulties, iucluding difficulties of a political nature, to contend against. The new company, however, started at a time when, in the eyes of the public, the Transvaal had assumed a very different position and place as a gold-bearing eountry to what it did a few years back at the time of the formation of the old eompany—the Graskop Gold and Stores Company.

SATISFACTORY RE-ORGANISATION.

The work of the re-organisation had, he was glad to say, been very satisfactory—(eheers)—and out of 400,000 shares, which had to be taken up by the old members, there was at the present moment only about 18,000—or a little below 4½ per cent.—which had not been taken. (Cheers.) Of these 18,000 shares 12,000 belonged to the diggers at Graskop, and had to come iuto the re-organisation, but as these men were far away in the Transvaal, it was searcely to be expected that they could at once communicate with the directors, and inform them whether they were or were not disposed to enter into the scheme proposed. The directors were, however, determined that that balance of 18,000 shares should be taken up,

A GENEROUS OFFER.

for they intended offeriug to pay the liability on them, and to give the miners half their shares back again for nothing. (Applause.) If the men refused to enter into a re-organisation upon such a fair basis as that they must not blame the directors if they took the shares themselves. (Hear, hear.) Those shares were, undoubtedly, of valne now, aud it was only a question of time for their value to largely increase. The chairman then pointed out the position of the mines of the eompany on the map of the Transvaal, and after having given some explanation of thc condition of the property, proceeded to state that they up to the present time had to bring their ore first down a very steep hill, then up a high gradient, and down by the ridge of a mountain—altogether a distance of somewhere about 4 miles, involving an expenditure of 6s. to 8s. per ton. They were now, however, he was glad to say, taking measures to obviate this. (Cheers.) They were erecting a dynamo, to be worked by water power, to drive the stamp at the mine.

THE FIRST COMPANY IN SOUTH AFRICA POSSESSING A DYNAMO WORKED BY WATER POWER.

He believed they would be the first company in South Africa that had ever erected snch a dynamo, and it must be perfectly clear to the mind of any reasoning man that very great advantages must accrue from using the eopper wire—which was already there, and cost them nothing—for driving their stamps at the mines, instead of having to take the ore 4 or 5 miles across the country by bullock waggon to be crushed.

RETURNS EXPECTED SHORTLY.

He hoped that in the course of a few months they would get some good returns from the new mills worked in the manner above indicated. At the present time they were not working all their claims, becanse—and it was rather unfortunate—their manager was not a good assayer. He was very good at panning, but he had not always told them the gold panned. They were now, however, sending out a competent assayer, and they would test all the lodes to see what they eoutained. (Hear, hear.) He had no resolution to propose, bnt would be glad to answer any questions.

Mr. Whytt wished to know whether the stamps near the mine would be worked by electricity or water power?

The Chairman stated that the driving power would be water power. It was no use having any other power in that part of the world for wood and coal were very expensive. The water would drive the dynamo that created the power, and the power—the eleetricity—

would be conveyed by the copper wire right up to the motor, and the motor would drive the stamps and the Huntingdon mill.

THANKS.

After a few further remarks, Mr. OGLE moved, and a SHAREHOLDER seconded, a cordial vote of thanks to the chairman and directors, which was unanimously carried, and the CHAIRMAN having briefly responded, the meeting separated.

THE KLERKSDORP GOLD ESTATES, LIMITED.

EXTENT AND VALUE OF THE PROPERTY—TRANSFER MADE TO THE COMPANY—A LOCAL DIRECTOR OF EXPERIENCE TO ASSIST LONDON BOARD.

THE first ordinary general meeting was held at the Cannon Street Hotel, on Thursday—Sir William Arbuthnot, chairman of the company, presided.

Mr. A. J. MAY (secretary) read the notice calling the meeting.

OBJECTS OF THE TWO MEETINGS.

The CHAIRMAN said: We are met together to-day, gentlemen, to hold the statutory general meeting, which, in accordance with the Limited Liability Companies Act, must be held within four months of the formation of a limited liability company, and after the termination of that meeting to hold an extraordinary general meeting for the purpose of considering a resolution to make a slight alteration in the articles of association of the company, which has been found necessary by your board of directors. The secretary will now read the notice that has been issued convening these meetings. (Notice read). As you are aware, at this statutory general meeting of shareholders no regular business can be transacted, but before its conclusion you may perhaps like to hear what steps have been taken to further the object for which the company has been formed.

FACTS SUCCINCTLY STATED.

As stated in the prospectus, the Klerksdorp Gold Estates Company was brought out for the purpose of acquiring the mining and surface rights of two mynpachts or mining leases on the commonage of Klerksdorp, in the Transvaal Republic, South Africa, the auriferous reefs running through which, in the opinion of mining experts, are a continuation of the celebrated Witwatersrand deposits. The property includes two mynpachts of 1,562½ and 412½ English acres in extent respectively, and also two valuable water rights of 150 and 100 yds. respectively, on the Schoen Spruit River, along the course of that stream. The property is situated on the main road, which is also the mail coach road from Kimberley to Johannesburg, with a station at Klerksdorp, which is 80 miles from Kimberley, from which place to Cape Town, a distance of 800 miles, there is direct communication by railroad. On completion of the purchase of this property by the company, the services were at once engaged of a well qualified mining engineer,

VIEWS OF THE MANAGER.

Mr. Ogden, who left this country to take charge of our property on January 25th last, and arrived on the 28th of the following month at Klerksdorp, from which place a letter has been received from him, dated the 2nd ult., which, as it may be of interest to shareholders, I will now read:—

"Klerksdorp, Transvaal, March 2nd, 1889.

"Gentlemen,—I have the honour to inform you that I arrived here on the morning of the 28th ult., having been delayed a week in reaching my destination on account of the impossibility of obtaining a seat on the coach from Kimberley, owing to the rush for Johannesburg by adventurers, seats having been booked, in many cases, a fortnight in advance. . . . .

"Upon my arrival I called upon Mr. Leask, who has since shown me a portion of the property, and he has also informed me that he trusts to be in a position in a few days' time to transfer the property over to me as manager of the company. . . . .

"When once the transfer is made, I shall commence operations with all possible despatch. . . . From what I have already seen on the property, I am inclined to form a most favourable opinion, both as regards the auriferous banket and the surrounding geological formation; but having only been able to make a mere cursory inspection, I would refrain from expressing or forming an opinion until I have thoroughly examined the property. This I shall do as soon as it is possible, and forward you my report, which, I anticipate, will be favourable. I am, gentlemen, your obedient servant,

CHAS. W. OGDEN."

A TELEGRAM.

I am glad to be able to inform you that the following telegram has also since been received from Mr. Ogden, dated March 16th:—"Property has been transferred to company. Prospects are encouraging—OGDEN," which I think you will admit is very favourable. Immediately on receiving this the necessary arrangements were made to obtain a Stock Exchange settlement, which will probably be granted in the course of a few days, and will be followed in a few days by a Stock Exchange quotation. I have nothing more to communicate with reference to this meeting, gentlemen, but I shall be very glad to reply to any questions that shareholders may wish to ask, to obtain further information relative to their property. (Hear, hear, and cheers.)

A SHAREHOLDER: Can you tell us what arrangements have been made with regard to the machinery?

The CHAIRMAN: We are expecting a report from the mining engineer, showing what description of machinery will be most suitable to send out there. I now, gentlemen, with your permission, declare the statutory general meeting closed,

THE SPECIAL MEETING.

The CHAIRMAN: In pursuance of the notice which has just been read by the secretary, we resolve ourselves into an extraordinary general meeting, which has been convened for the purpose of making the alteration in the 59th clause of the articles of association; but before proceeding to put to the meeting the resolution contained in the notice, a few words in explanation of the reason for making the alteration I have referred to may be considered necessary. The object in altering the word "six" in the 59th clause of the articles of association to "seven," is to enable your directors to appoint a managing colleague on the spot at Klerksdorp, and this has been deemed expedient for the following reasons: On the formation of the company 20,000 shares were subscribed by and allotted to shareholders in South Africa, principally in the Klerksdorp district. These shares were applied for on the strength of a prospectus marked "Private and confidential," which had been forwarded to a resident at Klerksdorp (Mr. Leask), and in that prospectus Mr. Leask's name appeared as local managing director.

A LOCAL DIRECTOR.

In drawing up the prospectus that was eventually issued and advertised in this country, it was decided to omit Mr. Leask's name as managing director, as it was thought that the services of a local managing director could be dispensed with. Mr. Leask has, however, written very strongly complaining of this omission, as the 20,000 shares were taken up in South Africa, for the most part, on his recommendation, as he has a very great influence in the mining world out there, and, being a gentleman of very considerable property and means in Klerksdorp, and at the same time deservedly held in high esteem and respect by the community on account of his knowledge of mining matters and business generally, we have acceded to his views. The directors were under the impression that Mr. Leask would have been satisfied with the position of financial agent, but unless he is at the same time appointed managing director he has emphatically declined saying that the question of salary is not of the slightest importance to him if only the promise which was conveyed in the prospectus he first received is carried out.

MR. LEASK'S APPOINTMENT ADVISABLE AND NECESSARY.

The directors having taken the matter into consideration have come to the conclusion that it would be advisable, if not absolutely necessary, in the interests of the company that Mr. Leask's views should be concurred in, but in the meantime the full number of directors authorised by the articles of association—six—has been filled up, and for this reason an extraordinary general meeting has been necessary to alter the articles that an additional director may now be appointed; and it is proposed to give to Mr. Leask the post of local managing director. The board have much pleasure in most confidently recommending this course, the more so that it will not be a source of any additional expense to the company; on the contrary, the remuneration of the managing director, inclusive of his fee as a member of the board, will be very considerably less than would have had to be paid to the financial agent out at Klerksdorp—an official appointment which would have been found imperative to make in the event of there being no local manager or board on the scene of operations.

A SHAREHOLDER: Will the solicitor read the article that has reference to the remuneration of the directors?

Mr. FRANCIS (of the firm of Francis and Johnson, solicitors to the company) read the article in question, which provided that the payment to the chairman should be 250*l.* per annum, and 200*l.* to each of his colleagues, including any director who might be a managing director, by way of remuneration for ordinary services, and in addition thereto, whenever a dividend of 10 per cent. or upwards was declared the directors would be paid a sum equal to 5 per cent. upon the net profits of the company, such additional remuneration to be divided as they might agree among themselves.

Mr. D. MACDONALD (director), in seconding the motion, said the effect of the resolution will be that we will be able to obtain the services of Mr. Leask, a gentleman with whom I am personally acquainted, and whom I had the opportunity of seeing not long ago on the spot, and observing what he was doing. He is at present running a gold company adjoining ours very successfully, and he has greater experience in the Transvaal than any man I know. He commenced as a prospector 15 or 20 years ago (before the gold discoveries in the Transvaal were made) under Sir John Swinburne, and since then he has acquired an immense property in the neighbourhood of Klerksdorp. I think that his advice and assistance, as given to our mining engineer, will be invaluable. (Hear, hear.)

A SHAREHOLDER: Will Mr. Ogden be subordinate to Mr. Leask?

The CHAIRMAN: He will be subordinate to him financially, but not as a mining engineer.

The usual compliment to the chairman closed the business.

THE GAWTON CO., LIMITED.

A GREAT IMPROVEMENT—DEBTS LIQUIDATED AND A CREDIT BALANCE SHOWN OUT OF PROCEEDS OF THE MINE—ON THE ROAD TO DIVIDENDS.

THE ordinary general meeting of shareholders was held at the Offices, Windsor Chambers, Great St. Helen's, on Wednesday, for the purpose of receiving the directors' report and statement of accounts, and transacting the general business of the company.

Charles Clark, Esq. (chairman of the company), presided.

Mr. EDWIN F. COLMER (secretary) read the notice calling the meeting, and also the minutes of the last meeting.

AGENTS' REPORT.

2nd April.—In submitting to you my report on the various points, and the work done during the six months ending 28th February last, I beg to say that during that time we have driven, stoped, risen, and sunk 135 fms. 1 ft. 9 ins. of ground, yielding 4,376 tons of arsenical mundic, or equal to 32½ tons per fm. Of those 4,376 tons, 1,410 tons have been burnt in the flat furnaces, and 2,966 tons in the revolving calciner. The 95 east, near the engine shaft, continues to yield a large quantity of arsenical mundic, and is each month laying open more than we are taking away; this end is also producing some good stones of copper ore. The winze, mentioned in last report as sinking in bottom of the 105-fm. level, has been communicated with the 117-fm. level, thereby giving good ventilation, and laying open for stoping a considerable section of paying lode. We are now rising in back of the 105-fm. level to communicate with the 95-fm. level east. The part of the lode carried (5 ft. wide) will yield 11 tons of arsenical mundic per fm., but what the lode will yield for its full width it is impossible for us to say just yet. It will, however, open up a large quantity of good arsenical mundic. We have

now at work the three double flat furnaces and the revolving calciner, and hope to be able to keep them fully employed. Although we have had a very wet and severe winter to contend with, we have burnt 99 tons of arsenical mundic more than in the previous six months. There is no falling off in the prospects of the mine, and the production of arsenical mundic can be maintained and every effort will be made to increase it. Owing to the precautions taken we have been free from serious accidents either to the men employed or to the machinery. The machinery, however, having been long in use, has to be carefully watched and repaired, and this has been done at a very considerable cost during the last few months. If a fair price for arsenic can be had, I trust and believe that we shall be able to increase our profits.—M. Bawden.

TANGIBLE PROOF OF THE COMPANY'S PROSPERITY.

The Chairman: I beg to propose "That the report and accounts as circulated, and the manager's report now read, be received and adopted." I need scarcely say that it is with sincere pleasure my colleagues and I ask you to pass this resolution, and to accept the tangible proof, which we now place before you, of the correctness of the forecast we ventured to commit ourselves to when we met you in November last. We began the half-year, as you see, with an adverse balance of 1,044*l*. 3s. 8d.; we ended with a credit balance of 921*l*. 0s. 11d. We have reserved for debenture interest during the present month 50*l*., and these three items together make up our total of 2,015*l*. 4s. 7d. for the half-year. "Good wine needs no bush," and a good account needs very little comment from the management; and after citing these figures they may be safely left to the shareholders to make any remarks upon them that they think proper.

SALES NEARLY EQUAL TO 5,000*l*.

Our sales for the half-year amount to close upon 5,000*l*., including the soot in stock, but not delivered, on the 31st August last. The question of refining remains still in abeyance, but it will not remain so very much longer, for we may deem it right to take some decided step in the course of the next few months. The details of the work done during the half-year have been given very fully in the report Mr. Bawden has read. The 95-fm. level east, which you will remember we spoke of at our last meeting as having become a very important point in the mine, continues extremely profitable, and the communication of the winze from the 105 to the 117 has laid open a large quantity of ore ground. You have heard from Mr. Bawden that we are opening out in the mine each month more ore ground than we take away, and there is no falling off, either in our present production or in our prospects—so far as we have the opportunity of judging of them. The price of arsenic is not lower than it was—I believe it is a little higher—from 5 to 7½ per cent. better than in 1888. In the face of this fact you will suppose we have been expecting a better price, but actually, on behalf of a "ring," a lower price has been offered than we succeeded in obtaining from our purchasers in 1888. Of course we have refused that bid, and have very little doubt that we shall be able to obtain a result which will be very much more satisfactory to you as shareholders and to us as directors. I do not think there is any other matter that I need trouble you with, but Mr. Bawden, or I, will be delighted to answer any questions, and the auditor having come into the room, will be able to explain anything that may need explanation in the accounts.

Mr. Goslett (a shareholder) seconded the motion, saying that the report was very satisfactory.

REVOLUTION EFFECTED BY MR. BAWDEN.

Mr. Moses Bawden: I thought possibly some of the shareholders might have asked some questions about the mine, and I think it only fair to myself, now that we have turned the corner, to say that when I took the management it was openly said there was not enough arsenical mundic in the mine to keep the furnaces going four weeks longer. That was not my opinion at the time, but seeing we had then no arsenical mundic in sight, it took some little time to ascertain whether my opinions would be verified or not—that the principal part of the arsenical lode was standing to the south of the main lode, although the big bunch we had been working on was spliced out to the main lode with a vein not larger than one's finger—I say I had faith in the mine, and felt that from some cause, a cause we could not see, because there was no cross-course or anything of the sort to indicate to us that the lode had been thrown either one way or the other—I say, I felt certain that a lode from 30 to 50 ft. wide could not dwindle out to the size of one's finger without some trace of it going away in some other direction. We cross-cutted south in various quarters, and discovered that the main part of the lode was standing to the south. We first proved it in the eastern part of the mine 150 fms. from the engine shaft.

TWO RICH LODES.

The great question was—"Is this lode standing near the engine shaft as well as 150 fms. to the east of it? If it is, we ought to do something;" but we could not prove this at once for several reasons, because it would take time to do so, and also money, but we proved the points as rapidly as we could, and at this moment I can say, fortunately, that we have a very rich lode near the engine shaft, and we have also a very rich lode 176 fms. east of the engine shaft. I have every reason to believe that it is standing for the whole of its length to the south of the old workings. We are now taking away the arsenical mundic from the 95 just east of shaft, and 150 fms. east from shaft, and we have put in a cross-cut at the 82, and I am very pleased to be able to tell the shareholders to-day that that is almost the best point we have in the mine. (Cheers.) We have cut through it now 6 ft. wide, and it is about as rich as we have had it anywhere in the mine. We cannot tell the width, but when you see by the reports that we have actually put through the furnaces 32½ tons for every 6 ft. in length that we have taken away of the lode during the past six months it speaks for itself. I think this is

UNPRECEDENTED EITHER IN DEVON OR CORNWALL.

(Cheers.) We are beginning to creep up, and when we stand upon our legs the question is whether we shall not have to put up another revolving calciner. I do not think we need apprehend that our discoveries will dwindle away in a day; they are too substantial, and the time has now come when we must begin to prove the mine deeper. When I tell you that

THE MINE HAS NOT BEEN SUNK A FOOT FOR NEARLY 20 YEARS,

I think you will agree with me the time is coming when we ought to go deeper, and one reason why we should do so is found in what took place just after I assumed the management and had discovered the great lode to the south. 150 fms. east of shaft we put down a winze, or sink, to see if that great course of mundic had gone down to the bottom of the mine or not, and we sunk it 13 fms., and for several fathoms in depth (10 at least) the lode would turn out 40 tons of mundic per fm. This was one of the richest courses of mundic I ever saw in my life, and yet not 1 ton of it has been touched below the 117. We shall not be sinking the shaft for nothing 150 fms. to the west. The shareholders may say it will take a long time, but in Gawton we have a flucan which stands to the north side of the lode, and we can drive on it very rapidly. I think we can do it at the rate of from 8 to 10 fms. a month, so that we should not be a long time, and when we are driving on that fluean we could cross-cut at any time to prove the lode as we are going on.

LOOKING VERY MUCH BETTER.

I think you will agree with me that we are not looking worse than we were six months ago, but very much better. (Cheers.)

The report was then unanimously adopted.

The Chairman: That concludes our business, because this being the half-yearly meeting we have no officers to re-elect.

Mr. Goslett: I think we ought not to part without proposing a vote of thanks to the chairman, and to include in it the directors. The report they have given us to-day is very satisfactory—much more so than the majority of mines with which we are acquainted.

The motion was seconded and carried unanimously.

The Chairman: I am very much obliged to you for this proof of your confidence. We shall endeavour to continue to deserve it, and to do our best for the property and for you.

The proceedings then closed.

THREE SPANISH LEAD MINES.

A BRILLIANT REPUTATION WELL SUSTAINED.

The Linares, Alamillos and Fortuna directors have issued their annual report and statement of accounts to December 31st. The record of past prosperity is well maintained.

LINARES.

The accounts show a less favourable result in regard to profit than those of recent half years in consequence of the low prices of lead which have lately prevailed; but, on the other hand, the position of the company's affairs has considerably improved since the issue of the last half-yearly report, inasmuch as the communication between Warne's Mine and Old Pozo Ancho Mine has been effected. The Pozo Ancho Mine has thus been unwatered, and good quantities of ore are now being obtained from it. The ore thus raised is extracted by tributers and is delivered by them at prices which yield good profits to the company. The reserves of discovered ore suffered no diminution during the past half-year; they are again estimated at 5,150 tons. The smelting of the ore has been carried out with results which do not differ materially from those shown in recent reports. The balance at the credit of the profit and loss account on the 31st December last was 3,326*l*. 2s. 6d.; out of this sum the directors have declared a dividend of 4s. 3d. per share, which is payable on the 30th inst., 3,187*l*. 1s. 6d.; leaving a balance to carry forward of 139*l*. 1s.

ALAMILLOS.

The accounts show a profit of 3,057*l*. 19s. 10d., a result which, without doubt, will be considered favourable, having regard to the low prices which have been obtainable for lead during the half-year. The extraction of ore was well maintained, and the costs were very moderate in amount. The reserves of discovered ore are again estimated at 3,250 tons. A considerable amount of exploratory work was carried out during the half-year, and some good bunches of ore were met with. The tributers continue to deliver good quantities of ore at prices which leave a satisfactory profit to the company. The cost of smelting has shown a slight reduction on that of the preceding six months, and at the same time there has been some improvement in the produce obtained from the first-fire smelting. The balance at the credit of the profit and loss account on the 31st December last amounted to 3,115*l*. 2s. 2d.: out of this a dividend of 1s. 9d. per share has been declared, which is payable on the 30th inst., 3,062*l*. 10s.; leaving a balance to carry forward of 52*l*. 12s. 2d.

FORTUNA.

The profit during the six months ending 31st December last amounted to 5,605*l*. 0s. 4d. This shows a reduction of 1,127*l*. 11s. 1d. on the preceding half-year, which has arisen from the lower prices at which the produce has been sold. There was an increased extraction of ore, but as the cost of working was likewise heavier, the gain from this source was not great. Portions of the company's mines are being worked by tributers on terms which yield a fair rate of profit to the company. The reserves of discovered ore in the various mines are estimated in the aggregate at 8,100 tons, being the same as in September last. The balance at the credit of the profit and loss account on the 31st December last amounted to 5,666*l*. 5s. 8d.; out of this the directors have declared a dividend of 4s. 3d. per share, which is payable on the 30th inst., 5,312*l*. 10s.; placed to reserve fund 5 per cent. on the dividend, 265*l*. 12s. 6d.—5,578*l*. 2s. 6d.; leaving a balance to carry forward of 88*l*. 3s. 2d.

These mines rank among the many successes achieved by the firm of Messrs. John Taylor and Sons, of Queen Street Place.

Holloway's Pills and Ointment.—Some occupations tend to the development of certain diseases, and those who toil as miners are peculiarly liable to rheumatism, lumbago, and other allied complaints. In the goldfields and copper mines Holloway's remedies have been largely patronised by the workers to their very great advantage, and they can be confidently recommended as invaluable remedies for inward congestions, spasms and cramps in the bowels, and all those conditions of the lungs and liver to which those who work underground, or in impure atmospheres, are so peculiarly liable. For cuts, bruises, sprains and stiffened joints, the action of Holloway's Ointment is eminently healing and soothing, and a supply should always be at hand in case of need.

PARKER'S BREWERY, BURSLEM, STAFFORDSHIRE.

ABRIDGED PROSPECTUS.

This Company is formed to take over and carry on the well-known and extensive Brewery at Burslem, Staffordshire, known as Parker's Burslem Brewery, together with a large number of hotels, public houses, &c., situate in Burslem and neighbourhood, as well as the Tunstall Brewery, about 1½ miles from Burslem, and belonging to the same proprietors.

The business is old-established, is the largest in the Pottery District, and has been successfully carried on for many years, the trade being a largely increasing one—the returns for the year 1887-8 being the largest on record, while the sales for the current year show a still further important increase. The late Mr. Parker, the head of the firm, made a large fortune, and the surviving partner, Mr. Dobson, is now desirous of retiring, but his son, Mr. W. W. Dobson, under whom the Brewery has been conducted for several years, will continue to manage the business with the same brewer and the same staff.

The Company will acquire the valuable and extensive freehold Brewery, with a supply of excellent water well adapted for brewing purposes, the quality of which is suitable for the production of high-class ales. The plant, which is modern, is capable of producing about 1,650 barrels per week. The Tunstall Brewery (freehold) is at present not being worked, but with a few modifications and additions to the plant will be capable of brewing 800 barrels per week should the demand exceed the limit of output of the Burslem Brewery. Included in the purchase are two extensive malt kilns at Barnsley, one freehold, the other on annual tenancy capable of producing upwards of 16,000 quarters of malt per annum, as well as the rolling stock, horses, plant, stock, book and other debts, materials and goodwill. There are 177 licensed hotels, public-houses and beer-houses belonging to or held by the Brewery, of which no less than 123 are freehold or copyhold (equal to freehold), and the remainder are held on short leases or yearly tenancies. There are also a large number of freehold houses, cottages, and other property included in the purchase, and in addition there are about 30 houses whose trade is secured by advances. The above houses are situate in Burslem and the surrounding districts.

The Brewery is admirably suited for carrying on the trade with efficiency and economy, and attached to it are offices, cooperages, working sheds, well, boiler-houses, stabling, store-rooms, &c.

Besides the trade which is done with the houses belonging to or tied to the Brewery, and which include many of the most popular and best houses in the district, the Brewery does an extensive and valuable general business.

The books of the Brewery have been examined by Messrs. Price, Waterhouse and Co., of London, whose report can be seen at the offices of the solicitors of the Company.

Messrs. Price, Waterhouse and Co., certify that the quantity of ales, beer, &c., sold during each of the following years ending 2nd June was as follows:—

1885-6	49,175	barrels of 36 gallons.
1886-7	55,528	" "
1887-8	65,582	" "

and that the net profits from trading for the year 1887-8, as shown by the Brewery books, including rentals and interest on loans, but exclusive of any charge for interest on capital, &c., amounted to £42,652 7s. 10d.

The large yearly increase in the sales was caused by the acquisition of a large number of additional tied houses bought in each year, therefore the profits of the years 1885-6, 1886-7, although much smaller than those of the year 1887-8, would form no criterion of the present rate of earnings upon the much larger capital now in the business.

The increase in the sales still continues; the sales for the nine months from 4th June, 1888, to 23rd February, 1889, both inclusive, amounted to 53,588 barrels, as against 47,473 barrels for the same period of the year 1887-8, or an increase at the rate of over 8,000 barrels per annum.

Since the 2nd June 1888, 17 of the above freehold licensed houses have been purchased almost entirely out of the current profits of the Brewery, which will further increase the profits of the business as well as the rentals.

It is intended to realise a large portion of the unlicensed property, consisting of an earthenware works, dwelling-houses, brick and tile works, &c., at present let and producing a gross rental of £919 per annum, and to invest the proceeds in additional licensed houses, which will further increase the business.

The directors are satisfied that there is ample scope for a further large and profitable development of the business, but, without taking into account the advantages to be gained by such extensions, the directors confidently anticipate that the dividends receivable by the holders of ordinary shares will from the outset be highly satisfactory, while the sound nature of the preference shares must be apparent to investors.

The success which has attended the conversion of private breweries into joint stock companies is well known, and there is probably no class of investment which has become more popular. The daily quotations of the stocks and shares of brewery companies are sufficient evidence of this.

Mr. W. W. Dobson, who has been closely associated with the management of the business for many years, will join the board as joint managing director after completion of the purchase.

The Company will thus take over the whole undertaking as a profitable going concern, there being no interruption of business by its conversion into a joint stock Company.

The directors propose to retain the services of the staff of the Brewery, who have for a long period enjoyed the confidence of their employers, thus ensuring a continuance of the system of management by which the Brewery has attained its present position.

The business will be taken over as from 2nd June, 1888, the Company receiving the profits from that day, and paying interest on the purchase-money at the rate of 5 per cent. per annum to the date of the completion of the purchase.

As the Company take over the whole of the business as a going concern as from 2nd June last, with the benefit of the large stock of hops, malt, beer, materials, &c., also of trading plant, horses, carts, drays, barrels, as well as the book debts owing to the firm, and as the Brewery is purchased free from liabilities at that date, no further working capital is required.

To pay—1st, Five per cent. interest on the £185,000 First Mortgage Debenture Stock will require per annum	£9,250	0	0
To pay—2nd, Six per cent. dividend on the £180,000 Preference Shares will require per annum	10,800	0	0
	£20,050	0	0

Thus, if the net profits only amount to the same as last year, viz., £42,652 7s. 10d. (which Messrs. Price, Waterhouse and Co. certify to have been the amount) there would be more than sufficient to show 12 per cent. on the ordinary share capital, without the increase in rentals and increased profits anticipated from the extention of the business as already shown by the current year's sales.

Application will be made for a quotation on the London, Manchester and Dublin Stock Exchanges.

QUINLAND—LONDON.

THE MINING MARKET.

City, Friday Evening.

POOR OUTLOOK FOR SOUTH AFRICANS—INDIAN SHARES DULL—COPPER—FOREIGN SHARES ACTIVE—BUSINESS IN HOME SHARES.

What with the settlement, and the poor returns from South Africa, the market has not been so lively as in some recent weeks. The monthly crushings from Witwatersrandt have been disappointing, and the sponsors for this description of enterprise are not comforted when told that the dearth of water has affected the mines, because they know that rain fell heavily during both February and March. Winter commences in the Transvaal in June, and it is then the days are short, so that the expectation of lower returns will probably be realised. South Africans seem unsafe to touch at present. Our lists will show that the fall in these descriptions has been, in several cases, measured by pounds. Diamonds have also been flat, and it is apparent that this market is without back bone.

Indian shares have been dull, and mark a decline on the week. It is a conundrum which we give up—why just before the publication of the monthly crushings the shares should rise, and immediately the crushings are announced they should fall? We have observed this again and again.

Copper shares have been flat. It is singular how little attention is now paid to this market. The collapse in the metal is as though it had never been. The Comptoir d'Escompte is a thing of the past, and M. Secrétan is forgotten. The mighty have fallen, and the memory of them scarcely remains.

There has been rather more business in Foreign shares, and a diligent inquiry has sprung up in regard to Hydraulics. Colons are thought to be far too low, and have advanced 6d., and Tetuans are likely to follow the upward lead that now seems to have set in. American shares have been dealt in pretty largely, and prices of Foreign descriptions generally have hardened.

Of Queenslands there is nothing new to say. Etheridges have been round about 4s. 3d. all the week, so that the market view that they would go to 7s. has not been realised. A circular issued by the directors this week adds but little to the facts we placed before our readers in our last issue.

The market for Home shares has been fairly brisk, and prices have hardened somewhat. The Cornish market is firmer. In this connection we deplore the action of the West Godolphin and Tregembo shareholders in so suddenly determining to close these mines. Why, after adhering to them manfully for so long a period, they should be sent without shrift to their account with all their sins and imperfections on their heads is a mining mystery which seems fathomless. Left in the lurch as he was, Mr. Lane had no recourse but to advise the shareholders to close these concerns.

Africans.

The news from South Africa as to the March crushings has not come up to expectation, and in several instances the dividends have been passed ; hence there has been a considerable drop in prices on the week, and more especially since Tuesday, the making-up day. For the guidance of our readers we give the making-up prices of the shares mostly dealt in :—Bantjes, 2 ; City and Suburban, 12½ ; Crown Reef, 6¾ ; Crœsus, 2½ ; De Villiers (Robinson), 58 ; Ferreiras, 17 ; Gold Fields of South Africa, 2⅞ ; Heriot, 5½ ; Jubilee, 5¾ ; Jumpers, 12¾ ; Langlaagte, 4⅜ ; Langlaagte Central. 1⅝ ; Modderfontein, 1¼ ; Salisbury, 20 ; Thomas Reef, 1⅛ ; Van Ryn, 1⅛ ; Wemmer, 10½ ; Wolhuter, 3⅛.

The market closes very weak with the exception of Crown Reefs, Langlaagtes and Jubilees. The following have fallen :—Edwin Bray, ⅛ ; Thomas, ¼ ; Johannesbnrg Waterworks, ⅝ ; Moodies, ¼ ; Anrora, ½ ; Bankets, ⅛ ; Bantjes, ⅜ ; Blackreef, ⅛ ; Blaubank, 2s. ; Bothas, ⅛ ; Central Langlaagtes, ⅛ ; ditto Roodepoort, ⅛ ; City and Suburban, 2¼ ; Cornucopia, ⅜ ; Crown Reef, ⅜ ; Crœsus, ¾ ; Dornkop, 1/16 ; Durban Rudepoort, 1⅛ ; De Villiers, 5*l.* ; Ferreiras, 2*l.* ; Geldenhuis, 7/16 ; Goldfields of South Africa, ¼ ; ditto new, ⅛ ; Golden Kopje, ¼ ; Heriot, ¾ ; Henry Nourse, ¾ ; Johannesburg Pioneer, 20s. ; Jumpers, 2*l.* ; Kleinfontein, ¼ ; Knights, ¼ ; Langlaagtes, ⅞ ; ditto Block B, ⅜ ; Mainreef, ⅝ ; Modderfontein, ⅛ ; Moss Rose, ¼ ; New Grahamstown, ⅜ ; Oosthuizen, ¼ ; Salisbury, 4*l.* ; Simmer and Jack, 1½ ; Spes Bona, 20s. ; Stanhope, ¾ ; Star, ⅛ ; United Langlaagte, ½ ; Van Ryn, ⅛ ; and Wemmers, 1/16. The only rise being in Jubilee and Vogelstruis of ½.

Copper.

There has been a considerable amount of business doing in copper shares generally, but prices have not been maintained. Capes made up at 2 1/16; Masons, 6⅝; Panuleillo, 1/16; Quebrada, ⅞; Rio Tinto, 11⅝; and Tharsis, 4⅛. The market closes this evening very dull, the general feeling being to let shares alone until after Easter. A fall is registered in Copiapo of ¼; Libiola, ¼; Mason and Barry, ¼; Namaqua, ⅛; Panuleillo, ⅛; Rio Tinto, ⅜. No other change to mention.

Australians.

There has been very little business doing in Australian shares with the exception of Etheridge United, respecting which the general opinion appears to be that they will go considerably higher. A fall is shown in the following: Bonnie Dundee, 6d.; Cumberland, ⅛; Day Dawn, 6d.; Gympie Gt. Eastern, 6d.; Kapanga, 3d.; Mount Shamrock, 6d. The only rise has been one of 6d. in Mosman.

Diamonds.

There has not been much doing in diamond shares until to-day when some little life was given to the market by a few buying orders, and hence prices are a shade firmer all round. A fall is shown in Anglo-African of 1/16, Bultfontein ¾, Reed's Drift ⅜.

The following have improved:—Griqualand (West), ⅛; New Consolidated 1s. 6d.; South African (Pullinger), 1s.; United, ¼; London and South African, ⅛.

Foreign.

Business has been brisk in several of the low-priced shares, the principal dealings being in Alturas, Colon, Esmeralda, East Arevalo, Flagstaff, La Trinidad, New Organos, Palmarejo, Tetuan, United States Placers, Victory, and Yuruari. A fall has taken place in the following:—Balkis, 6d.; Colorado, 1s.; Coromandel, 6d.; Frontino, 1s.; Garfield, 1s. 6d.; La Trinidad, 2s.; Montana, 1/16; Monte del Oro, 6d.; New Lisbon Berlyn, 3d.; Orita, 1s.; Richmond, ¼; St. John del Rey, 3d.; United States Gold Placer, ⅛; United Mexican, ⅛; Violo, 6d.; and Viso Tin, 6d. The solitary rise of note has been one of 1s. 6d. in Victory.

Indians.

There has been an absence of business in Indian shares during the week, and in consequence, prices are a shade lower, but bear every appearance of being a good investment at present rates:—A fall has taken place in Balaghat (17s. 6d. paid) of 1s.; Goldfields of Mysore, 1s.; Mysore Gold, ¼; Mysore West, 6d.; Nine Reefs, 1s.; Nundydroog, ⅛; and South-East Mysore, 1s.

The following list shows the principal changes which have taken place:—

	Last Week.		This Week.

LATEST FROM THE MINES.

Colonial Mines.

Cumberland.—A telegram received from the mine conveys the result of March month has been mutilated in transmission. A repetition has to-day been received announcing that in 24 days' work with 10-head of stamps 400 tons have been crushed, yielding 195 ozs. of bullion. The message further adds that they are now crushing full extent of power, having been delayed owing to alterations.

Ironclad.—Cablegram: "Heavy rains; mill started to run."

Midas.—The following cable from the mine states:—"Yield for week 58 ozs. (238l.)"

Mount Leyshon.—A cable gives result of fortnightly crushing as follows:—"190 tons, 147 ozs.; 10 heads, 1,170 ozs." The water is evidently still short, as only 10 heads out of 20 have been going for five days out of 12.

Mount Perry Copper and Reid's Creek Gold.—Advices by cable notify a shipment per Dacca of 11 tons of matte and 25 tons of copper.

Foreign Mines.

Birdseye Creek.—Telegram from Mr. Goodwin received April 11th as under, viz. :—"We have cleaned up $3,000 from Hankin's Canyon."

Cortez.—A cablegram from Mr. Welsh, the snperintendent at the mines, shows the results for the month of March :—"Disbursements during the month of March, $23,000 ; stores, $3,600 ; mines and mill, $19,400 ; produced 47,000 ozs. silver-ore, worked 720 tons ; February results, 3,700 ozs. silver more than cabled."

Garfield.—A cablegram from Mr. Hooper, the superintendent at the mines, shows the results for the month of March :—"Production, $6,600 ; revenue expenses, $8,500 ; capital and development expenditure, $1,300 ; tons crushed, 303. Five stamps working 26 days. Working low-grade ore. Anticipate increase in production this month."

Josephine.—A cablegram from the superintendent states :—"Yield of free gold for month, $8,500 ; value of sulphurets saved $3,000 nett ; total expenses $5,500. 1,100 tons crushed."

La Trinidad.—Telegraphic advice announce the shipment of the silver bullion produced during the month of March valued at $28,000."

Orita.—We are requested to announce that Mr. Alfred Cobbett, a director of the Colombian Hydraulic Company, has joined the board of the Orita Gold Mines, Limited.

Pahang Corporation.—The directors have to-day declared a bonus dividend of 15 per cent., payable on 25th inst., to the members registered on the books of the Corporation on the 18th inst., and the transfer books will be closed from the 15th to the 18th inst., both inclusive.

Pinos Altos.—The directors have declared an interim dividend at the rate of 10 per cent. per annum for the three months ending 31st ult. Warrants will be sent out on 25th inst. The transfer books will be closed to that date. A telegraphic advice states that the out-turn for March was $42,700.

Stafford.—A telegram from Mr. H. B. Tilden, the manager at the mine, dated 8th April, announces particulars of the clean-up for the last two weeks in March :—"Crushed 80 tons, which produced 34 ozs. of gold."

Home Mines.

Morgan.—The secretary informs us that at a board meeting held yesterday the directors declared an interim dividend at the rate of 5 per cent. per annum for the three months ending 31st March, payable to all shareholders registered in the company's books, on the 24th inst., and it was also resolved that in view of the great development which had taken place at the mine since the company commenced operations further crushing machinery be erected capable of treating up to 100 tons of ore per day. Notice is also given that the transfer books will be closed from the 24th inst. to the 30th inst. inclusive.

London Metal Exchange.

4.30.—Closing official report.—Copper : G.M, Brands, cash, 38½, 38⅝ ; three months, 38, 38⅜ ; best selected, 46½, 47½ ; strong sheets, 52 ; English tough, 45, 45½. Tin : Fine foreign,. cash, 92, 92½ ; three months, 93, 93½ ; Australian, 93¼, 93¾ ; English ingots, 95½, 96 ; Spelter, 17, 17⅜.

Glasgow Pig Iron Market.

3.15.—Business at 44s. 5d., 44s. 5½d., cash ; 44s. 8d., 44s. 7d., 44s. 7½d., one month ; closing buyers, 44s. 4½d., cash ; 44s. 7d. one month ; sellers ½d more. Market steady, moderate business. Middlesbro' done 38s. 7d. cash ; 38s. 10½d., one month ; closing buyers, 38s. 7d., cash ; 39s. 10d., one month ; sellers ½d. more. COMMERCIAL NOTES.

Railways.

The traffic receipts of the undermentioned railways for the past week show the following changes when compared with those of the corresponding period of last year : — Increases : — Caledonian, 1,710*l.* ; Eastern and Midlands, 20*l.* ; Great Northern, 4,160*l.* ; Great Western, 1,150*l.* ; Hull and Barnsley, 1,040*l.* ; London and North-Western, 13,498*l.* ; Manchester and Sheffield, 3,267*l.* ; Metropolitan, 535*l.* ; Midland, 13,747*l.* ; North British, 549*l.* ; North-Eastern, 7,291*l.* ; and North Staffordshire, 970*l.* Decreases :— London and Sonth-Western, 4,286*l.* ; and London, Chatham and Dover, 2,314*l.*

The Brighton Railway traffic return for the week ended 6th April exhibits a decrease of 3,457*l.*, and the South-Eastern a decrease of 1,121*l.*

The approximate gross earnings of the Denver and Rio Grande Railway Co. for the first week of April were $131,000, showing an increase of $4,000 over 1888.

The Mexican Central Railway gross earnings for the fourth week in March were $195,955, against $180,678 in 1888. For the three weeks ending March 4th, the total receipts of the Lima Railways amounted to 4,388*l.*, or 260*l.* more than last year. The Cincinnati, Washington, and Baltimore Railway earnings for the fourth week in March were $49,500, against $52.800 in 1888. The Smyrna and Cassaba Railway receipts for the week ending March 18th were 2,147*l.*, against 1,972*l.* last year.

Tramways.

The traffic receipts of the following tramway companies for the past week show the subjoined comparative results :—Decreases :—London, 26*l.* ; London Street, 207*l.* ; Belfast, 169*l.* ; Southampton, 45*l.* ; London Southern, 20*l.* ; Woolwich and Sonth-East London, 6*l.* ; South London, 82*l.* ; Bristol, 118*l.* ; Hnll, 26*l.* ; West Metropolitan, 120*l.* ; Burnley, 15*l.* ; Stockton and Darlington, 15*l.* ; North London, 120*l.* ; Edinburgh, 13*l.* ; Bordeanx, 209*l.* ; Continental Metropolitan, 583*l.* ; Germany, 51*l.* ; Calais, 28*l.* ; Gothenburg, 1*l.* ; Imperial, 126*l.* ; Swansea, 86*l.* ; and France, 198*l.* Increases : North Metropolitan, 56*l.* ; Provincial, 159*l.* ; North Staffordshire, 37*l.* ; Southwark and Deptford, 42*l.* ; Calcutta, 117*l.* ; and Sunderland, 13*l.* The London Road-Car Company's receipts for the week ending April 6th were 2,636*l.*, against 2,047*l.* in 1888.

Miscellaneous.

With the sanction of Mr. Justice Stirling, Mr. F. G. Painter has declared a first dividend of 2s. 6d. in the £ to the creditors of the London and Leeds Bank, Limited, payable on and after to-morrow, April 11th, at the offices of Messrs. Tribe, Clarke, Painter and Co., Moorgate Street Buildings, E.C.

Messrs. Morton, Rose and Co., state that on and after the 15th inst. fully-paid scrip certificates of the Principe do Grao Para division of the Rio de Janeiro and Northern Railway Company, Limited, second issue of 600,000*l.* Five per Cent. First Mortgage Sterling Debentures, will be issued in exchange for allotment letters on presentation of the latter at their office, Bartholomew House, E.C.

The San Jorge Nitrate Company, Limited, notify the closing of their transfer books from 15th to 20th inst. inclusive, for the purpose of preparing warrants for the dividend payable 23rd instant.

Mr. Samuel Laing, who, for 16 years, has been chairman of the Railway Debenture and the Railway Share Trust Companies, has, owing to advanced age, found it necessary to retire, and the directors have appointed Mr. Francis Pavy, who for some years has been vice-chairman and managing director, chairman in his place.

Dividends Declared and Announced for Week Ending April 13th.

Carried forward

Anglo-Continental Guano Works Co.	—	10 per cent.
Anglo-Austrian Bank	—	8 fl. per share.
Bahia and San Francisco Railway	—	6½ per cent.
Compagnie Generale des Asphaltes	—	15s. per share.
China Shippers Mutual Steam Navigation	3,495*l.*	8 per cent.
Ceylon Tea Plantation Co.... ...	281*l.*	5 per cent.
City of Melbourne Bank	10,000*l.*	14 per cent.
Darjeeling Co.	—	6 per cent.
Imperial Fire Office...	—	8*l.* per share.
Indo-European Telegraph Co. ...	—	17s. 6d. per share.
Kenward and Court	—	7 per cent.
London and Lancashire Life Assurance	—	20 per cent.
London and Brazilian Bank ...	—	8s. per cent.
National Penny Bank	553*l.*	5 per cent.
Primativa Nitrate Co.	—	20 per cent.
Royal Mail Steam Packet	—	2*l.* 15s. per share.
Recife and Sao Francisco Pernambuco Railway	1,016*l.*	5 per cent.
Reuter's Telegram Co.	—	5 per cent.
San Paulo Gas Co.	1,199*l.*	10 per cent.
West India and Panama Telegraph	1,154*l.*	12s. per share.

The Gatling Gun Limited.—The English company, which last year acquired all the patent rights in the gatling gun for the Eastern Hemisphere, has just received an important order from the British Government for rifle cartridges. The company has a large factory at Birmingham for the manufacture of all kinds of ammunition as well as for the construction of the famous machine gun.

BRITISH MINING INTELLIGENCE.

BERTHA CONSOLS (10th April).—The lode in the 40-fm. level east of junction continues to produce 7 tons per fm. In the 40-fm. level west of Haley's winze the lode produces 3 tons per fm., and good work for tin. Cook's late stopes below the 30-fm. level east of cross-course produces 8 tons per fm., with an increase of copper ore. The stopes in back of the 40-fm. level east produce their usual quantity of minerals. In the large stopes west of junction, and west of old engine shaft, we are breaking a large quantity of mixed ores. A rise in back of the 40, near the new engine shaft, is opening profitable ground. The machinery and surface work are going on without interruption.—T. Gregory.

BLUE HILLS.—The Baldhu lode in the 66-fm. level west is improving, being now 3 ft. wide and tinny throughout.

BULLER AND BASSET (9th April).—Copper Hill section: Good progress has been made in opening the stope at the 24-fm. level during the past week, but no change of importance has taken place in the character of the lode. The machinery is working regularly and well, and the whole is in thorough good order.—J. H. James.

CARPUAN (8th April).—We continue to make good progress in sinking the shaft on the south lode, which, I am also pleased to state continues to present a splendid appearance, and worth 20*l*. per fm.—R. Knott.

D'ERESBY.—There is no new feature to remark. The stopes in the No. 1 sump have improved. The lode north and west of the Gors shaft is without any change. There is a good deal of work in cutting ground before sinking, as the tramroad has now to be carried around the shaft under the penthouse; but the sinking will be commenced as soon as possible. The agent thinks that he can sink 10 fms. in about 10 weeks after commencing.

DRAKE WALLS.—The mine continues to open out in the most satisfactory manner, and the ends improving for tin. The arrangements at surface for dealing with increased quantities of ore are nearing completion.

EAST BLUE HILLS.—The lode in the 30-fm. level west on the Baldhu lode and in the stopes continues good. No further change in the pink lode is reported this week.

GREAT FORTUNE.—The different points are now valued in the aggregate at 27*l*. per fm. A slight breakage which occurred to a crank of the stamping machine has delayed operations for a few days, but has now been repaired, and they will proceed with all possible speed to fork the mine 10 fms. deeper, when considerably increased monthly returns are expected.

MID-DEVON (6th April).—Surface: The machinery throughout the mine has done good duty. Pumping-wheel has been kept at five revolutions per minute. A shaft: There is a slight abatement on the influx of water into shaft. At 2 p.m. to-day the water was 22 ft. below the 80. C shaft: The 60 cast has been driven by nine men 5 ft. 6 ins.; total distance from shaft, 35 fms. 5 ft. 6 ins. The strata is unchanged in its character, but contains more yellow ore. The last two advances has yielded several cwts. of ore, and the end, although hard, is very promising. The preparatory work for trip-plat and tramway is being wrought on by six men, and they will, I expect, complete their contract by end of next week; there will then remain another week's work to prepare for tramway rails and a few days to lay the rails. The 50 east: Stopes Nos. 2 and 3 and extreme point of drivage, worked on by six, six, and two men, are worth respectively 2¼ tons, 4 tons, and 2 tons of copper ore per cubic fm. The strata at No. 3 is conducive to greater yield; its prospects exceed anything I have before seen at any point in the mine.—J. Neill.

PRINCE OF WALES.—The lode in the engine shaft is of the same value and promising appearance as reported last week. The lode in the 155 or bottom level is reported to be worth fully 12*l*. per fm., and the values of the other points are maintained, so that there must now be a considerable quantity of tin ground laid open. The caleiner house is completed, with the exception of some trifling details which will soon be finished, together with the building of the stack, and the dressing arrangements for making the tin marketable will then be completed.

PRINCE ROYAL.—The securing of adit levels and shafts it is expected will be completed this week, and in the meantime the engineers are making some necessary improvements in the machinery with a view to increase its efficiency for carrying the shaft down. In the course of a short time, therefore, we may have something good to report.

ROMAN GRAVELS (11th April).—We have now about 20 fms. of pumps to put in to complete the third or last plunger lift to the adit or Day level. This will be done this week. The severe and very wet weather which we have been having since Monday last has hindered us considerably. No work could be done at surface until to-day, and the men at work in the shaft had very great difficulty in keeping their candles alight owing to the great quantity of surface water falling upon them. The new cylinder bottom is on the way to us, and we expect the cylinder will follow forthwith. When these are in place we shall be able to start pumping the water out of the mine, as everything in connection with the new pitwork will be by that time complete. We have to-day sold 100 tons of lead ore for 855*l*.—A. Watson and Son.

SOUTH DARREN (11th April).—In the 142 end west there is a little lead in the bottom of the level, but the rest of the end is poor. The stripping in this level continues worth 17 cwts. of silver lead ore per fm. In the 112 end cast the lode shows spots of lead and copper. The drivage in the 130 west is not yet through the lode; it is leady but not yet to value. The 100 end east is producing good stones of lead. The 100 end west is worth 15 cwts. of silver lead; this end looks promising. The 25 tons of silver lead ore sold on the 5th inst. realised 308*l*. 15s.—J. Mitchell.

TIN ERA (9th April).—The cross-cut north continues much the same as reported last week, consequently there is no change to report to-day.—R. Knott.

VAN.—The mine has much improved. The new lode in the 135 south continues to be worth 40*l*. per ton, and is widening. The 120 east is also looking better, and altogether the appearances of the various ends are now encouraging. The sampling next week will be 100 tons lead and 100 tons blende.

WEARDALE (6th April).—Ore raised for week, 89 tons; ore dressed for week, 84 tons. Smelt mill stopped for repairs and for sweeping chimney.

WEST CARZISE.—The manager reports, under date of the 9th instant, as follows:—I am glad to say we are looking better in the 30-fm. level west on the Carzise lode. The branch from the south has improved the lode, and good vans of tin were brought up from it yesterday.

WEST WHEAL GRENVILLE (9th April).—The shaftsmen during the past week have been timbering shaft and clearing stuff to make way for lift by drawing the same to the 80-fms. level. The forking lift has been dropped, and water forked to 7½ fms. below the 80. Skip road in Harvey's shaft has been put in to about the adit level.—J. Skeat.

WHEAL CREBOR.—There is no particular change in the undertaking workings. The lode in the 200-fm. level west is 5 ft. wide, yielding small quantities of copper ore and arsenical mundic. The sale of copper on the 18th instant will be 333 tons. Large quantities of arsenical mundic have been sold, and it is believed the monthly returns of this product can still be increased, which it is hoped may make up for the depreciation in the price of copper ore.

WHEAL METAL AND FLOW.—In the 35-fm. level east of the Metal lode some capel has for the moment disordered the lode, but this is expected to be only temporary, as from recent samples the lode is still worth 5*l*. per fm. The development of this lode is watched with considerable interest by miners in the district, from the fact that the same lode in the eastern workings was worth fully 15 tons of tin to the fm., a value, it is believed, unsurpassed by any other lode in the county. Both the Metal and Sehneider's lodes were rich near the surface, and the former lode, more particularly, continued good till it reached the junction of the two lodes, where a mine of wealth was opened up, and the shares which were at one time down to 1s., rose to 40*l*.

WHEAL UNY.—The only information received this week is to the effect that the 193-fm. levels east and west are both more hopeful. The shaft is also looking better, the blue or tin-bearing part being larger. The extension of the 193-fm. levels east and west is of much importance, seeing that they are now approaching the rich run of tin ground passed through in the level above.

FOREIGN MINING INTELLIGENCE.

ANDALUSIAN.—Extracts from Mr. Haselden's report, dated 4th April:—Barytes adit again showed a vein of galena for one day, and then went back to specks in the barytes. Panaderos adit continues with a little iron pyrites. Salturno lode: We have holed No. 1 and No. 2 shafts with our level, and I have set the No. 1 men to stope in the back at 12s. per metre. No. 4 shaft has struck ore, just a little at first, like the others did, so it seems we have a run of 150 metres likely to be in ore. We have now 220 quintals of ore ready for sale.

ASIA MINOR (23rd March).—Number of men employed in the mine, 431; value of stopes, 12 tons 15 cwt. Production to 29th March, 1,581 tons crushed; produced, 169 tons rich silver-lead ore. Corresponding period last year, 981 tons crushed; produced, 102¼ tons.

BALAGHAT-MYSORE (19th March).—Fortnightly report:—North engine shaft: I am pleased to say we have completed cutting the ground for the plat at the 410-ft. level. As soon as the sollar, &c., is finished, I shall again resume the sinking of the shaft below this level. The 410-ft. level north has been driven 12 ft., or 33 ft. 9 ins. from the shaft; the ground is hard for driving, and the lode at present poor. This end will now be pushed forward with all speed that we may strike the same run of ground as is now being worked in the levels above, and with, I hope, equally good results. The 330-ft. level north has been advanced 24 ft. 3 ins., or 389 ft. 3 ins. from the shaft; the quartz is about 15 ins. wide, and assays 2 ozs. 2 dwts. 11 grs. of gold per ton. The No. 1 winze in the bottom of this level has been sunk 5 ft., or 16 ft. 6 ins. below the level; the quartz is about 1 ft. wide, and assays 16 dwts. 12 grs. of gold per ton. The stopes in the back of this level are yielding quartz of from 9 ins. to 1 ft. wide, which assays 3 ozs. 2 dwts. 1 gr. of gold per ton. The No. 3 winze in the bottom of the 270-ft. level north has been sunk 6 ft. 6 ins., or 53 ft. below the level; the quartz is about 8 ins. wide, and assays 6 dwts. 12 grs. of gold per ton. The No. 2 cross-cut west has been driven 3 ft. 5 ins., or 30 ft. 11 ins. from the level. The No. 2 cross-cut east has been advanced 2 ft. 3 ins., or 73 ft. 6 ins. from the level. The stopes in the back of the 270-ft. level north are producing quartz of from 1 ft. to 14 ins. wide, assaying 2 ozs. 9 dwts. of gold per ton. The 165-ft. level north has been extended 5 ft. 3 ins., or 470 ft. 9 ins. from the shaft; the quartz is about 3 ft. wide, but as yet only assays 6 dwts. 12 grs. of gold per ton. I am looking forward to an early improvement here. The stopes in the bottom of this level are yielding quartz of about 1 ft. wide; assaying 3 ozs. 5 dwts. 8 grs. of gold per ton. Surface: The general work at surface is progressing satisfactorily. The mill is being kept going as usual, and with quartz of our usual quality.—Capt. Pryor.

BRATSBERG (1st April).—Hoffnung Mine: No. 2 adit level is looking very promising, but for the present yielding only saving stuff. The rise in the back of this level is worth 1½ tons per fm.; whilst the winze in the bottom is yielding about 1 ton per fm. We are daily expecting to hole with the rise coming up from No. 3 adit level. No. 3 adit level is producing 1½ tons per fm., and the rise in the back about 1 ton per fm. We have suspended the mid level at Ball's shaft, and all operations will be discontinued at this point until the stopes coming in from No. 4 level are sufficiently advanced, so that the transport of the stuff may be facilitated. No. 4 level is yielding about ¾ ton per fm. No. 5 level east is yielding about ½ ton per fm., but the same level west remains poor. The mid level at Murchison's is worth 1 ton per fm.; at this point we are now getting very near some old workings, the Silver Sink. At the shallow rise we have now a very nice looking lode, worth ¾ ton per fm., and for convenience in stoping we shall commence to drive at the top of the rise east. In all 84 miners have been employed in this mine during March month. Johannes lode: The cross-cut has been driven during the past month 18.35 metres, making a total length of 76.34. We have struck Johannes lode, and have driven for about 2 metres through what may be termed a well defined lode, but have not yet reached the hanging-wall, although we think it must be very near at hand now. I estimate the lode, as far as shown, to be worth about ¾ ton per fm. In the course of a few days we shall start the men to drive west on the course of the lode, where we shall be better able to judge of its value. The winze, as last reported, had to be suspended owing to the influx of water, which up to now shows no signs of abating; 7.60 metres were sunk during March, making the winze now 21.52 metres

deep. 10 miners were engaged here up to the date of the influx of water in the winze. Næsmark Mine: Barker's shaft has been sunk during March 8.32 metres, making now a total depth of about 41 metres from the adit. The lode has recently contained more ore than for some time past, but still not enough to value. We now propose fixing a pneumatic pump, and commencing to drive north and south on the course of the lode forthwith, or as soon as the necessary work about the pump is completed. Four miners and four assistants engaged here. Surface work and remarks: Excepting for some minor fittings the machinery is about ready to start, and we shall commence dressing forthwith. The quantity of ore mined during March month we estimate at 185 tons 2·0 per cent. ore.—J. D. HOLMAN.

CORTEZ.—The directors have received the following report from Mr. Welsh, the superintendent at the mines, under date of March 24th:—For week ending this date work at the mines has been as follows:—Ore hauled to mill, 144 tons; ore treated at mill 177 tons; assays of which show it averaged 68 ozs. per ton of silver. Shipped 10 bars of bullion, containing 10.968$\frac{15}{100}$ ozs. fine silver, and 5$\frac{65}{100}$ ozs. gold.

DAY DAWN BLOCK AND WYNDHAM.—Mine manager's report for fortnight ending 16th February:—No. 1 shaft—Underlie: This shaft has been sunk a further depth of 6 ft., making total depth below No. 7 plat 59 ft.; the reef is now 3 ft. thick, and is well mineralised, valued at 1 oz. per ton. No. 7 level east: The contractors have driven a further distance of 20 ft., making total distance from shaft 65 ft.; the reef is 3 ft. thick, worth 18 dwts. per ton. No. 7 level west: A contract has been let to drive 100 ft., at 46s. 6d. per ft., of which 9 ft. have been driven for the fortnight; the reef is 3 ft. thick, worth 18 dwts. per ton. No. 6 level west: A fresh contract has been let to drive another 100 ft., at 47s. per ft. No. 6 level east worth 22 dwts. per ton; eight men employed. No. 5 level west: Stoping above is being carried on with four men; the reef is 6 ft. wide, worth 18 cwt. per ton; there are eight men employed on the hanging-wall reef, but the stone has not been taken down yet. The rise to the hanging-wall has been completed, and the reef cut, which is of payable quality. No. 4 level west: The stopes above are yielding good payable ore. No. 2 level west is 2 ft. thick and worth 22 dwts. per ton. No. 2 shaft—Underlie: The contractors have sunk this shaft a further depth of 8 ft., making total depth below 1,003-ft. plat 87½ ft. In 10 ft. more we shall be deep enough to meet the No. 6 level from No. 1 shaft. The country is favourable for sinking. The 630-ft. stopes: The reef will average 4 ft. thick, worth 1 oz. per ton; have seven men employed here. No. 3 shaft: The contractors have sunk this shaft a further depth of 16 ft., making total depth from surface 475 ft.; the country is without change.

DAY DAWN P.C.—Report for fortnight ended February 16th:—The output of quartz is 1,706 trucks, estimated at 858 tons. We have been engaged during the fortnight centreing a portion of the shaft, and relaying the truck road, and I expect to be able to lay the bearers for No. 11 plat and open out No. 11 levels this coming week. The stone in both stopes over this level going east and west is getting very small, and it will be some time before we will get mullock enough to fill up the stopes, and be able to turn back on good stone. The amount of stone hauled from each level is as follows, viz.:—Shaft, 48 trucks; No. 10 level, 372 trucks; No. 9 level, 674 trucks; No. 8 level, 351 trucks; Nos. 6 and 7 levels, 261 trucks; total, 1,706 trucks. No. 2 underlie shaft has been sunk a further depth of 7 ft., making a total depth of 209 ft. from the surface.—T. LESTER.

DENVER (29th March).—Cross-cut south, 1,050 level: This cross-cut continues to advance in hard and harren ground. The 1,050 east drift: The drift has passed through some well-mineralised veinstuff, averaging some 2½ ft. in width for the past week. The end to-day is in considerably harder veinstuff than at the commencement of the week, though the strength of the vein is well maintained.—A. RICKARD.

DEVALA-MOYAR (18th March).—The pyrites winze is now 38 ft. below the deep tunnel, and the lode is increasing in size so rapidly that for the present we are obliged to leave a portion of the hanging-wall standing. We are expecting to communicate the tunnel east of cross-cut with that west of the winze, immediately after which the drills will be employed in stripping down the lode in the side for crushing, the deep tunnel being continued to the east in virgin ground, and the lode in it 3 ft. wide. No. 2 winze sinking in the bottom of the 48 is down 8 ft., and the appearance of the lode all that could be desired, and with 6 tons pyrites to the fm.—J. WILLIAMS.

DON PEDRO.—Mine report for February:—After letting out considerable water retained in the old workings above the 40 fm. cross-cut by clearing, the latter we were enabled to descend 20 ft. in the incline through the stopes by clearing some of the sand with which it is filled before meeting with further interruption from water, and have since resumed clearing the north part of the permanent incline, filled to a height of 15 ft. with sand by the outbursts of water mentioned in the last report, in order to reach and re-open the entrance of the 50 fm. cross-cut for further draining the old workings, which are on the No. 8 shoot of lode, and to ascertain if the cross-cut can now be cleared of the fine jacotinga with which it also is filled. The sand cleared from the incline in the old workings is slightly auriferous, and has been reserved for treatment at the washing strakes. The machinery and pumps continue to work satisfactorily, and have kept the mine drained to the bottom, or 50 fm. level. 30 fm. level: A cross-cut has been commenced at this horizon from Gordon's shaft to intersect and afford facilities for working the No. 6 shoot of lode, and may be extended to other lodes as found expedient. Adit level has received slight repairs where most required, and the water courses have been kept in good order.

EAST AREVALO.—(18th March).—Since my last report the No. 2 level east has been extended 17 ft. 16 ins. At the extreme end of this level we have driven north into the lode 8 ft. 3 ins., which is very kindly, and yielding a small quantity of pay ore. No. 3 east level: The south cross-cut at this level has been driven 9 ft. 6 ins. into the lode, which is of no value. No. 3 east level: The north cross-cut has been driven into the lode 11 ft. 8 ins.; the whole face of the cross-cut is showing ore, but not rich enough to be of any value to us. No. 3 east level: The No. 2 north cross-cut has been driven into the foot-wall 12 ft. 6 ins. My object here is to cut a parallel vein, which is yielding rich metal in a mine to the west of ours. No. 4 level: Here we have east 34 ft. 6 ins. After two weeks further driving, I intend to cross-cut the lode north and south to prove its value. I shall look forward with interest to the development of the lode at this level, as up to this time I have not been able to ascertain its value. Our prospects since our last report has improved, and I anticipate a further improvement in the lode.—Capt. PRIDEAUX.

GARFIELD (23rd March).—Ore from the stopes maintains its usual grade. Lincoln: We have been unable to do much work in the 220-ft. level south, having started an upraise, which is now up 10 ft., to connect with winze No. 6; the ore is on the hanging wall of the upraise, and it has been allowed to remain for the present. Winze No. 8 has been sunk 5 ft., showing a 6-in. streak of fair ore. The average grade of ore from this mine has somewhat improved. The mill: Five stamps have been working regularly and doing good duty. To-morrow we make a shipment of four bars bullion, weighing 533 lbs. (avoir.), of the estimated net value $5,326.75 silver, at 93c.—HOOPER.

GOLDFIELDS OF MYSORE (19th March).—Fortnightly report: The west cross-cut at 165 ft. in bridge shaft has been driven 2¾ ft.; total distance from shaft, 16½ ft.; the end is in country. The west cross-cut from the south level at 105 ft. has been advanced 1½ ft.; total 17 ft.; the end is in country and has now been stopped. The men are now driving south on the quartz lode intersected in the cross-cut, and have driven 2¼ ft., making the south level at 105 ft. 62½ ft. from the shaft; the quartz is 2 ft. wide, and worth about 1½ dwts. The rise in the back of the south level 105 ft. has been risen 2 ft., and is entirely in quartz; worth, by assay, 2 dwts. per ton; the rise is now 3½ ft. up. The north level at 105 ft. has been advanced 2¾ ft.; total distance from shaft, 73¾ ft.; the end is in country, with a few small stringers of quartz. Driving north of middle shaft at 175 ft., an advance of 4¾ ft. has been made; total distance, 76½ ft.; the lode in the end was 2½ ft. wide, and worth, by assay, 4 dwts. per ton. The south level at 175 ft. has been advanced 4¾ ft., making 72½ ft. from the shaft; the end is now being turned to the west to get the quartz lode intersected in the cross-cut. The west cross-cut from the south level 175 ft. has been driven 4½ ft.; a quartz lode has been passed through, about 2 ft. wide, and worth, by assay, 4 dwts.; the end of the cross-cut is now in country. The north level at 108 ft. has been advanced 2¾ ft.; total distance, 138¾ ft.; the lode in the end is 18 ins. wide, and worth, by assay, 4 dwts. A horse of country is now coming in. The end of the south level at 108 ft. has been advanced 7½ ft.; total 309 ft. from shaft. This end is now holed, and the ventilation is much improved. The new shaft south of middle shaft: The east cross-cut at 94 ft. has been driven 12¾ ft., total 31½ ft.; and a north drive from the end of this cross-cut was driven 5 ft. and holed into the end of the south level 108 ft. in middle shaft. The sinking of this shaft will now be proceeded with. The new shaft south of bridge shaft has been sunk 3 ft.; total depth, 76¾ ft. The bottom is in country. When we have sunk a few more feet for a sump, we shall start a cross-cut to the east to prove the lode. Champion lode: Coromaudel shaft has been sunk 2 ft.; total depth 173½ ft., bottom in country; this is one week's sinking only. Driving north from the west cross-cut at 150 ft., an advance of 17 ft. has been made; there is about 6 ins. of low grade quartz in the end. An advance of 15 ft. has been made in the west cross-cut at 150 ft.; total distance 48½ ft. from shaft. The end is in country. Prospect shaft has been sunk 1¾ ft.; total depth, 205 ft. The bottom is in country; the sinking has been stopped for the present. The north drive at 200 ft. has been advanced 4¾ ft.; total 6 ft. There is a small branch of quartz in the end about 4 ins., and worth by assay 1 oz. 14½ dwts. per ton. Prospecting shaft, near Balaghat: The east cross-cut has been advanced 11½ ft.; total 23 ft.; and the west cross-cut 11¼ ft.; total 22½ ft. The ends of both are in country.—J. SAMBORNE.

GYMPIE GREAT EASTERN (21st Feb.)—Fortnightly report.—During the past fortnight the drive north at the 634-ft. level has been extended 6 ft.; total, 43 ft. In this level between the walls there is about 8 ft. of mullock and quartz showing a little gold. The south drive has been extended 12 ft.; total, 72 ft. The reef keeps much the same, showing a little gold. There is a large body of crushing stuff in the stopes above these levels north and south, and some of the faces are showing fair gold. The stopes above the 500-ft. level north and south are showing fair gold, and those above the 364-ft. level on the western reef are all showing a little gold. The winze at the 580-ft. level in the eastern cross-cut to cut No. 1 South Great Eastern reef has been sunk 12 ft.; total, 93 ft. The country is good slate, but there is no reef yet. The gas was laid on at the mill on the 11th inst. Everything about the mine, winding engine and battery, is in good working order. There are 78 men employed—63 at the mine and 10 at the battery.—J. JAMES.

JOSEPHINE.—Extract from superintendent's report for week ending 16th March. The 300-ft. level has been driven east 16 ft.; the quartz is very irregular in size, varying during the week from 4 ft. to 4 ins. This, however, is characteristic of this shoot of quartz. I enclose you Prof. Price's assay taken across the breast, when there was nearly 4 ft. of quartz, showing $22.16 per ton. The following day there were only a few ins., the shoot of quartz though, as a whole, looks very healthy. We have about caught up our developments in the 300 west ground, and I now have two raises going up to open out more ground, and in another week both should be in quartz. A raise is also being sent up from the 400 to 300-ft. level, and shows about 2½ ft. of quartz. The mill will be cleaned up on the 18th, after 12 days' run, crushing about 500 tons, and I hope to realise not less than $4,000 in free gold. During the week we have had very heavy rains.

MESQUITAL DEL ORO.—Mine captain's report dated 15th March.—Work done in the mine during the week was as follows:—Acerada level, east of Sans: Four men; driven 5 ft. 6 ins.; total, 141 ft. 6 ins.; reef 3 ft. thick, but on very low grade ore at present. The 85 level east: Four men; driven 4 ft.; total, 589 ft. 6 ins.; reef 4 ft. thick, of a fair average milling ore. The 137 level east: Four men; driven 4 ft.; total, 572 ft. 6 ins.; reef 5 ft. thick, of rather low grade ore at present. The 137 east rise B.: Four men; risen 4 ft.; total, 23 ft. 6 ins.; reef 6 ft. thick, of good milling ore. The 190 level east: Four men; driven 2 ft. 6 ins.; total, 393 ft.; reef 3 ft. thick, mixed a little with country rock. Drift, west of winze C (137 east) on 190 level: Four men; driven 2 ft. 6 ins.; total from winze, 12 ft.; reef 3 ft. 6 ins. thick, of rather low grade ore, but hope for an early improvement at this point. The 190 east, winze B.: Four men; sunk 3 ft.; total 33 ft. 6 ins.; reef is 4 ft. thick, of a very fair average ore. The 190 level west, south part: Four men; driven 5 ft.; total, 309 ft. 6 ins.; reef 5 ft. thick, of a rather low grade ore at present. The 256 level east: Four men; driven 5 ft.; total, 259 ft. 6 ins.; reef is 4 ft. thick, of an average quality ore. The 256 level west: Four men; driven 10 ft.; total, 207 ft. 6 ins.;

reef is 6 ft. thick, but at present rather low grade ore. The 85 east Sans winze: Four men; sunk 7 ft. 6 in.; total, 14 ft.; reef 2 ft. thick, but poor, but I expect an early improvement. San Miguel Tunnel: 14 men; driven 12 ft. 6 ins.; total, 1,761 ft. Stope B, 137 east: 20 men; reef 6 ft. thick, of good milling ore. Stope No. 1, 190 west: 20 men; reef 5 ft. thick, but at present low grade ore.

MONTE CHRISTO.—The manager reports under date Febrnary 11th :—Main shaft: As stated in my last I had to erect a boiler to supply the Tangye, which was started, but a clutch on the winding drum broke, and has taken some time to repair. The distance sunk siuce the last measurement is 2 ft.; total depth, 271 ft. 6 ins. East drive has been driven 10½ ft. during the fortnight; total distance from shaft, 181½ ft. There is no change in the appearance of the lode up the last 2 ft.; but then a small bunch of stone was struck which has increased in width to about 15 ins. It carries a little gold, bnt is poor. Endeavour shaft is now in thorough working order. In the west end there is some good-looking stone, but it contains very liitle gold. We must drive and sink for a new make of stonc. Norton shaft is now 21 ft. in depth. There are about 4 ins. of stone in the bottom carrying gold, but it is poor, taking size into consideration. The shaft is only about 100 ft. from one out of which several payable crushings were got. Battery: I have commeneed this morning to crush the stone taken out from the West Monte shaft, and expect to give result in next report.

MONTE DEL ORO (2nd April).—Fortnightly report.—Taylor's engine shaft: The 186-ft. level south of the cross-cnt east has now a total length of 213 ft., it being extended 16½ ft. dnring the past fortnight, so that very good speed contiuues to bc made with the driving of this level. Sincc my last report the lodc has varied in width from 12 ins. and 15 ins. to 2½ ft., and it is composed of quartz and slate intermixed. In the 186-ft. level north of the cross-cut west the ground is favourable for driving, cousequently good progress was made in the fortnight, 21 ft. being driven, making the length of the level 31 ft.; the lode, which is composed of quartz and slate, is regular and well-defined. Shaft No. 6: The old workings north of the shaft have now been cleaned out for a distance of 112½ ft., and as yet there are no signs of solid ground. In the hanging-wall small branches of good-looking quartz are met with, which at times are highly mineralised. Shaft No. 6: To the north of this shaft the level has been extended 75½ ft., and there is a small vein of good-looking quartz, which has, however, narrowed to a width of 2 ins. or 3 ins. The country rock is a decomposed granite, and I am hoping the vein of quartz will soon widen again. Shaft No. 2: Although it only contains branches of qnartz, yet the lodc in the intermediate level north of winze No. 1 is still large, averaging 4 ft. in width. Good progress is made in driving the level, its total length being 37½ ft., of which 22½ ft. were driven in the last fortnight.—J. Roberts.

MORUYA (24th Feb.)—Extracts from reports:—This last week I have resumed sinking the vertical shaft; I expect to cut the lode here by sinking it about 6 or 8 ft. deeper. I also intend connecting the underlay shaft with the main shaft preparatory to stoping out the ore. I am happy to say the water in the mine is less. Next week I start with twice the number of hands, so I hope to make much greater progress. The largest bulk of the big lode will have to go through the battery and be dressed, and we shall require an ore refiner. There is a large quantity of ore for treatment, which, under this process, will return considerable wealth.—T. Batt.

MYSORE (19th March).—Tailings machinery: The engines and new pans have been ereeted, and 13 pans and four settlers are now at work; the remaining pans will start in the course of next week. This machinery is working very well, and it is a good strong and complete piece of workmanship. Mining operations: The rock-drills are doing good duty. The 466-ft. level has been driven 40 ft. 8 ins.; total. 552 ft. 9 ins.; the lode is 2 ft. wide, assaying 1 oz. 19 dwts. 14 grs. Driving the 466-ft. level, north of Taylor's shaft on the west branch, 3 ft. were cut; total, 43 ft.; the lode is at present barren. The 400-ft. level north of Taylor's shaft, and the level below, are both suspended. The men that were driving the 400 are put to rise in the back towards the new shaft; the end is, however, at present poor, but in the rise the lode is 3 ft. 6 ins. wide, estimated to be worth 2½ ozs. to the ton. The 296-ft. level north of Taylor's was driven 15 ft. 6 ins.; total, 598 ft. 4 ins.; while the 400 was driven 14 ft. 10 ins.; the total distance from the shaft is 622 ft. 2 ins. The same band of poor rock cut in the 400 appears to disturb the lode in the 296; when the samples were taken the lode was about 2 ft. wide, assaying 1 oz. 12 dwts. 16 grs., uow it is barren. The lode in the rise immediately behind this end continues to be rich for a height of more than 60 ft.; this is dipping north, and it is assumed that we shall shortly get into rich ore again in the end. The 236-ft. level was driven 38 ft. 6 ins.; total, 479 ft. 9 ins.; the lode is 2 ft. wide, assaying 1 oz. 9 dwts. 23 grs. The 296-ft. level south of Plnmmer's shaft, on the west branch, these men are now sinking in the bottom of the level, with a view to hole to the back of the stope; 7 ft. 6 ins. were cut; the lode is 4 ft. wide, assaying 19 dwts. 19 grs. There is no change to notice in the 236 ft. south of Plummer's shaft, and the 173 ft. south of Williams'; 4 ft. 2 ins. were cut in the former, making a total of 221 ft. 10 ins.; in the latter 5 ft. 6 ins. were cut, making a total of 198 ft. 6 ins. McTaggart's shaft: The 152 ft. level was driven south 14 ft. 2 ins., total, 368 ft. 10 ins.; the lode is 1 ft. wide, assaying 1 dwt. 7 grs. The 220 ft. south of Schaw's was driven 3 ft. 4 ins.; total, 59 ft. 10 ins.; the lode is 4 ft. wide, assaying 3 dwts. 6 grs. There is nothing new to report from the cross-cut at the 160 ft. south of Schaw's; total distanee driven 88 ft. 8 ins. Tennaut's shaft: The 180-ft. south of Tenuant's shaft was driven 4 ft. 6 ins.; total, 69 ft.; the lode is 1 ft. wide, assaying 6 dwts. 12 grs. The 180 ft. north of Tennant's was driven 5 ft.; total, 67 ft. 6 ins.; the lode is 1 ft. wide, assayiug 7 dwts. 20 grs. No. 1 stope in the back of the 400 north of Taylor's shaft, the lode is 5 ft. wide, assaying 1 oz. 9 dwts. 14 grs. No. 2 stope in the back of the 400 contains a lode 4 ft. wide, of about the same valne as No. 1. Stoping below the 296 sonth of Plummer's, the lode is 3 ft. 6 ins. wide, worth about 1 oz. to the ton. Sinking Taylor's shaft: In the past fortnight 11 ft. were sunk, makiug a total of 542 ft.; the rock is hard and barren. Sinking below the 466 ft. uorth of Taylor's shaft on the west lode, 5 ft. 5 ins. were sunk; total, 15 ft.; the lodc is 6 ft. wide, assaying 13 dwts. 1 gr. Sinking in the bottom of the 466 ft. north of Taylor's shaft below the Italian stope, the lode is 3 ft. 6 ins. wide, assaying 13 dwts. 1 gr. Rowse's shaft was sunk 12 ft. 10 ins.; total, 91 ft. 10 ins. The rock in this place, though rather troublesome for cutting, has not up to this time been sufficiently compact to enable us to work rock-drills. We shall, however, try again this afternoon, and as soon as the rock-drills can be properly employed better speed may be expected. Sinking Schaw's shaft below the 220 ft., 6 ft.; total, 63 ft. 9 ins.; the lode appears to be gaining in width; it is now 4 ft. 6 ins. wide, assaying 6 dwts. 12 dwts. Tennant's shaft was sunk 5 ft. 6 ins.; total, 219 ft.; the lode is also a little wider now, 2 ft., assaying 9 dwts. 19 grs. The rise in the back of the 296-ft. level: During the last fortnight the men have been engaged cutting down rock left by the old workers; now they have commenced rising in the back of the old workings; the lode is 15 ins. wide, assaying 3 ozs. 5 dwts. 8 grs. Mill sample, 26th February, 2 ozs. 3 dwts. 2 grs.; mill sample 13th March, 2 ozs. 3 dwts. 2 grs.; new mill, 13th March, 2 ozs. 1 dwt. 18 grs.—B. D. Plummer.

MYSORE WEST.—Report for the fortnight ending March 19th :—Walker's: All the machinery is working well. The 300 north: This heading has been advanced 11 ft. 8 ins., making 32 ft. 8 ins. from the shaft; this is still on the "fault" without any quartz. The 300 south: This heading has becu advanced 10 ft. 4 ins., making 31 ft. 8 ins. from shaft; the quartz here is 4½ ft. thick, producing a trace of gold in the assay. The 300 west: This cross-cut has been advanced 4 ft. 9 ins., making 9 ft. 3 ins. west from shaft. Nothing of importance has yet been intersected, and 10 or 12 ft. further driving will be required to prove if any part of the west reef is in this direction. The 225 north: This heading has been advanced 9 ft., making 132 ft. 4 ins. from shaft; the quartz here is 5 ft. thick; at present unproductive. The 225 south: This heading has been advanced 4 ft. 9 ins.. making 113 ft. from cross-cut; the quartz here is 2½ ft. thick, producing a trace of gold in the assay. The 159 north: This heading has been advaneed 18 ft., making 402 ft. 7 ins. from the cross-cut at Walker's; the reef here is divided into strings, and at present unproductive—Capt. Tregay.

MYSORE-WYNAAD CONSOLIDATED.—Report for the fortnight ending March 19th. Engine shaft: The men had a good bit of rock to square down before they could fairly start sinking, and the rock is very hard. The shaft has been sunk 1 ft. 9 ins., making 103 ft. 2 ins. from surface. This is not proper speed; bnt we had a new pare for this work, and they are now getting into their proper drill, and will, I believe, do good work from this time. Central shaft: The 100 cross-cut west exploring for the Mysore West reef has been started from this shaft, and advanced 6 ft. Engines and machiuery: These are all working well.—Capt. Tregay.

NEWEBERHARDT.—The mine manager reports under date March 23rd, as follows :—South drift: There has been assorted and put on the ore dump 10 tons for the week. Assay value of the same $50 per ton. We have had less spar during the last week, and our grade is somewhat better, as well as a raise to 10 tons. North shaft No. 1: The sinking of this shaft has been advanced 7 ft., total depth, 83 ft.; the change reported in my last being somewhat softer, still continues, but no other material change. North shaft No. 2 Drift westerly from the bottom of this shaft has been extended 5 ft.; total length, 71 ft. We still find some quartz mixed in with the lime, but nothing that will do to save. East drift from bottom of Gore incline has been advanced 6 ft.: total length, 186 ft. We are still in qnartzite, bnt it is now very much broken up, more so than at any time siuce we have encountered this quartzite.

NEW LA PLATA.—Mauager's report for month ending February 28th :—The outpnt from La Plata mine for February does not show any material increase in tonnage. The sale value of the ore is, however, $1.100 more, while the royalty received shows an increase of 50 per cent. over January returns. This marked improvement is entirely due to the increased valne of the ore. General: The general outlook has much improved, and although the mine cannot be depended on to give steady returns of $900 from the ordinary lessees, yet with the new concentrating mill at work, I am convinced this return will be exceeded and substantial profits accrue from the mine alone.

NINE REEFS (19th March).—Mining operations: Malleson lode, main shaft, 310-ft. level sonth, has advanced 3 ft., this being the total distauce from the shaft, as this level has just beeu commenced, the object being to have through communication as quickly as possible with the 310-ft. level driving north from Baynard shaft, for the purpose of more economically working some good gold-bearing quartz in the Baynard shaft. The vein in this drivage has not been blasted ont. Morrison's shaft has advanced 3 ft.; a total depth under the 185-ft. level of 42 ft. 6 ins. The portion of the vein being carried in the shaft is abont 6 ft. wide, the assay being 3 dwts. 6 grs. gold per ton. Baynard shaft: The 310-ft. level north has advanced 6 ft., a total distance from shaft of 55 ft. 6 ins. The vein in the first 3 ft. of this drivage is about 5 ft. wide; in the remaining 3 ft., owing to a bend in the lode, all the vein has not been taken down, the assay being 3 dwts. 6 grs. gold per ton. Stopes—No. 1 stope: In the back of the 185-ft. level north of main shaft vein 6 ft. wide; assay, 7 dwts. 19 grs. gold per ton. No. 2 stope: In the back of the 185-ft. level north of main shaft, vein 6 ft. wide; assay, 7 dwts. 19 grs. gold per ton. No. 3 stope: In the bottom of the 185 ft. level sonth of Baynard shaft, vein 4 ft. wide; assay, 13 dwts. 17 grs. gold per ton. No. 4 stope: In the bottom of the 185-ft. level south of main shaft, vein 4 ft. 6 in. wide; assay, 4 dwts. 2 grs. gold per ton. No. 5 stope: In the bottom of the 185-ft. level north of main shaft, vein 6 ft. wide; assay, 1 oz. 2 dwts. 4 grs. gold per ton. No. 6 stope: In the back of the 310-ft. level north of main shaft, vein 6 ft. wide; assay, 9 dwts. 18 grs. gold per ton. No. 2 lode, Vyvyan shaft: 95-ft. level north and sonth from the cross-cut east, south of Vyvyan shaft, has advanced 7 ft., a total distance of 43 ft.; the vein continues to be about 3 ft. wide; the assay, 2 dwts. 14 grs. gold per ton. New shaft: Sinking from surface has advanced 6 ft., the total depth now being 46 ft. In the last few feet of sinking in this shaft we have met with some branches of gold-bearing quartz, one of them about 8 in. wide. We find, however, that this branch again united with the main portion of the vein, and has been removed by the former workers, the shaft being still in old workings. Champion lode: 145-ft. level cross-cut east (246 ft. south of Vyvyan shaft) has advanced 4 ft., a total distance of 25 ft.; no vein has been intersected. The 145 level cross-cut east (70 ft. south of Vyvyan shaft) has advanced 3 ft., intersecting a vein of about 2 ft. wide, 20 ins. of which is gold-bearing quartz; this cross-cut is immediately below the cross-cut at the 95-ft. level that intersects No. 2 lode, and proves the continuation of No. 2 lode to the 145-ft. level. North stope, in the back of the 145-ft. level, north of the Vyvyan shaft; vein, 1 ft. 8 ins. wide; assay, 19 dwts. 14 grs. gold per ton. Milling: The stamps are running well; our blanket

sands, which contain the gold in a concentrated form, are increasing rapidly, but as we can now obtain mercury for their treatment, we hope to extract the gold from them for this month's returns. The assay of the quartz put through the stamps is 9 dwts. 18 grs. gold per ton, the tailings being 3 dwts. 22 grs. gold per ton.—Capt. Bennetts.

NO. 2 QUEEN (14th Feb.)—Fortnightly report.—We have crushed for the Great Britain Gold Mining Company, 275 tons; for the No. 2 Queen (Company's stone), 98 tons; total, 373 tons. Our tributers' stone and some of our own will follow. The rainy season appears to have set in, and I am glad to say our reservoir is now full of water. I have dispensed with our late mill manager, the carpenter, and one pansman by which we shall save 52*l.* a month in wages, and shall endeavour to carry on work both at the mine and mill with Mr. Henderson.—A. G. Charleton.

NORTH MEXICAN (22nd March).—We have enlarged the shaft 10 ft. this week. As regards sinking going on very slowly, it is because the ground is so bad that no sinking can be continued without securing it very well with the timbering. I expect now that the improved whim is being put up to sink faster in the shaft as then we will be able to hoist all refuse quickly. The whim is already in place, and I hope to get the pinion, brake, and bucket next week, and as soon as we receive them will be able to work with more speed.—R. S. Carlisle.

NUNDYDROOG (19th March).—Mining operations: No measurements have been made this week. Webb's shaft is down 403 ft. 6 ins.—the rock is without change—and Taylor's shaft is down 360 ft. 8 ins.; the rock is very hard, and it continues to be quite barren. The men are driving the 370 cross-cut; do not make so good speed as we could wish, but still they appear to be working hard. There is no change in the rock. There are seven places in operation, producing good rich stone. The stope below the 370, and the stope below the 300 each shows a lode 3 ft. wide, assaying 1 oz. 10 dwts. 12 grs., and 3 ozs. 3 dwts. 6 grs. respectively per ton. The intermediate level, and the stope below the 230, contains lodes of quartz 1 ft. 8 ins. wide, assaying 11 dwts., and 1 oz. 7 dwts. 6 grs. of gold per ton. The middle level, and the 166 stope each contains quartz 1 ft. 6 ins. wide, assaying 4 ozs. 6 dwts. 8 grs., and 1oz. 15 dwts. 6 grs. per ton. The rise in the back of the 230 north of Webb's shaft contains quartz 1 ft. 6 ins. wide, worth 1 oz. 18 grs. per ton. Weekly samples from the mill: rough quartz, 2 ozs. 15 dwts. 6 grs.; smalls, 3 ozs. 5 dwts.—B. D. Plummer.

OOREGUM (19th March).—Fortnightly report.—Main shaft: The 250-ft. level south has been driven 13 ft., or 214 ft. 11 ins. from cross-cut west; the lode is 2 ft. 6 ins. wide, and yields, as per assay, 6 ozs. 6 dwts. 7 grs. of gold per ton of quartz. The 250-ft. level north has been driven 13 ft., or 149 ft. 2 ins. from cross-cut west. The rock here is still poor, interspersed with small veins of quartz and carbonate of lime, but of no value. The general appearances of this drift are more encouraging than when last reported on; we think that a great change will soon take place here. The stope in back of the 250-ft. level south of cross-cut west is the same; a sample taken from it gives an assay of 3 ozs. 18 dwts. 9 grs. of gold per ton of quartz. Low's shaft: The 270-ft. level driving north of shaft has been driven 4 ft.; the lode is 1 ft. 3 ins. wide, and gives an assay of 1 oz. 3 dwts. 22 grs. of gold per ton of quartz. The 270-ft. level driving north, south of shaft, 5 ft. have been cut, or 18 ft. 9 ins. from cross-cut west; the lode is 9 ins. wide, and gives an assay of 17 dwts. 10 grs. of gold per ton of quartz. The 270-ft. level driving south, south of shaft, 4 ft. 6 ins. have been cut, or 15 ft. from cross-cut west. The small veins of quartz here are low grade, giving only an assay of 4 dwts. 8 grs. of gold per ton; this drift, also the one driving north will improve as we drive on them. The 200-ft. level driving north, north of shaft, 8 ft. have been cut, or 200 ft. 3 ins. from shaft. The nature of the rock has changed here during the past few days; we think we have passed through the cross-course here, and hope by the next mail day to report something good in this drive. The winze sinking in bottom of the 200-ft. level north of shaft, 4 ft. 6 ins. have been sunk, or 49 ft. 8 ins. below the level. We have a small branch of quartz just coming into it on the footwall, which gives an assay of 10 dwts. 21 grs. of gold per ton of quartz, and looks the same as we have in the 270-ft. level below. The 200-ft. level driving south, south of shaft, 10 ft. 9 ins. have been done, or 155 ft. 7 ins. from cross-cut west; the lode is 3 ft. wide, and gives an assay of 2 ozs. 16 dwts. 14 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 200-ft. level south, south of shaft, 4 ft. 4 ins. have been sunk, or 9 ft. 10 ins. below the level; the lode is 1 ft. wide, and yields, as per assay, 1 oz. 2 dwts. 21 grs. of gold per ton of quartz. Proby'n's shaft has been sunk 4 ft., and is now 31 ft. 9 ins. below the 300-ft. level; the lode is 3 ft. wide, and yields, as per assay, 3 ozs. 1 dwt. of gold per ton of quartz. The 300-ft. level north of shaft, 3 ft. have been cut, or 19 ft. 3 ins. from shaft; the lode is 4 ft. 6 ins. wide, and yields 1 oz. 8 dwts. 7 grs. of gold per ton of quartz. The 300-ft. level south of shaft, 2 ft. 7 ins. have been cut, or 18 ft. 10 ins. from shaft; the lode is 2 ft. wide, and yields 1 oz. 7 dwts. 5 grs. of gold per ton of quartz. The 230-ft. level south of shaft, 2 ft. 9 ins. have been cut, or 97 ft. 4 ins. from shaft; the lode is 2 ft. 6 ins. wide, and yields 1 oz. 5 dwts. of gold per ton of quartz. The 230 winze sinking north of shaft, 3 ft. 2 ins. have been sunk, or 45 ft. 5 ins. below the level; the lode is 2 ft. wide, and yields 10 dwts. 21 grs. of gold per ton of quartz. The 230 winze sinking south of shaft, 3 ft. have been sunk, or 26 ft. 3 ins. below the level; the lode is 3 ft. wide, and yields 2 ozs. 3 dwts. 13 grs. of gold per ton of quartz. The 166-ft. level driving south of shaft, 6 ft. 6 ins. have been cut, or 208 ft. 9 ins. from shaft; the lode is 6 ft. wide, and yields 2 ozs. 16 dwts. 14 grs. of gold per ton of quartz. The No. 2 rise in back of the 166-ft. level south of shaft, 2 ft. 6 ins. have been done, or 6 ft. 6 ins. above the back of level; the lode is 2 ft. 9 ins. wide, and yields 10 dwts. 21 grs. of gold per ton of quartz. The No. 2 winze sinking in bottom of the 166-ft. level south of shaft, 4 ft. 3 ins. have been done, or 22 ft. below the level; the lode is 3 ft. wide, and yields 3 ozs. 14 dwts. 1 gr. of gold per ton of quartz. Stamps: These continue to work well; the same remark applies to all our machinery and pitwork on the mine.—W. Martin.

OSCAR (6th April).—Monthly report for March. Oscar lode: The sinkers were employed assisting the shaftsmen in timbering the shaft, extending skip-road and footways. This work is now completed and sinking resumed. In getting the skip-road straight we had to stope from the footwall a little, and as this was impregnated with quartz, &c., we passed 68 tons through the mill. It did not, however, give a full dwt. to the ton. The 400-ft. level has been driven 8 ft. The matrix has been chiefly hard quartz mixed with fragments of country rock. Total quantity of quartz broken 18 tons, whereof sent to the mill 12 tons, which gave about 1 dwt. to the ton; let to same men at unaltered prices. The No. 3 lode has been driven 17 ft.; the lode is about 5 ft. wide, whereof 70 per cent. has been quartz. In appearance it has been, and is, the best-looking lode we have seen, but although a few stones with visible gold were found in the latter part of last month, the result for free gold is not as good as we could wish. Ground broken, 40 tons; sent to mill, 28 tons, which milled about 2 dwts. to the ton. We are still under the impression that this lode will, in a short time, furnish us with more valuable crushing material. Daw's Mine: Owing to the opening of the new intermediate levels in Daw's shaft the sinking has been considerably hindered, but as these have been driven several feet north and south, it is being continued as before; the lode in bottom of shaft is 4 ft. 6 ins. wide, whereof about 2 ft. is composed of a mixture of quartz and decomposed rock. The level south is still the same as the shaft, but the northern level is pinched, and in comparison with the shaft and south level, poor. We have not crushed any of this stuff, it being too little for a separate trial, but will be milled this month, together with the stuff now being broken. The 370-ft. level south has been driven 30 ft.; the lode has been pinched, the quartz only averaging a few inches. The quartz in one part of the stope is 10 ins. wide, while it varies from this width to only 3 ins. The total quantity broken in stopes, level, and rise, is 420 tons, and taking the quartz at an average of 5 ins. the quantity treated is 38 tons, producing a little over 4 dwts. to the ton. The level north has been driven nearly 22 ft. There has been a good deal of quartz mixed with the stuff. We have also put up a rise 10 ft., and have stoped a little north and south of rise. Broken in level, stope, and rise, 115 tons, which is now being picked over at surface. We are pushing the 270-ft. level ahead. There is a little quartz, but not sufficient to pay for separately from the *débris*. This level was driven last month a little over 14 ft. The 170-ft. level: We have stoped in back of this level 42 tons, whereof 40 per cent. has been mill stuff, or 17 tons which has yielded nearly 3 dwts. to the ton. We have set to the same men in all cases at unaltered prices. From the above we get from Oscar 108 tons, from different places; yield, 5 ozs. 2 dwts. From Daw's, 55 tons; yield, 9 ozs. 19 dwts.—J. Daw, jun.

OURO PETRO (9th March).—Passagem mine: You will have already seen that the 365 ends north-east and south-west were started in January. Driving was continued last month, and the south-west end, which was in poor ground, has greatly improved. A branch of good pyritous and tourmaline ore fully a metre wide is standing across the breast, and I hope soon that the quartzite under will give place to ore. The 315 end south-west has fallen off very much, but the end north-east is full size in fine lode.—H. J. Gifford.

ROCKY BAR (23rd March).—Machinery: All runs well in this department; everything in good repair and working nicely. Mill: Continues to run steadily and smoothly; 15 stamps dropping. The ore milled during the past week shows an improvement over that milled during the fore part of the month.—H. N. Thomas.

SANTA BARBARA.—Cable messages from Rio de Janeiro, under date of the 4th and 9th April.—The message received on the 4th inst. reads by the telegraphic code, as follows:—"Slight damage has occurred to No. 3 stope—repairs will take about one month." The directors have no intimation from what cause the damage has arisen. The message received 9th April advises the amount of produce obtained for the month of March as being 2,430 oits. of gold, the value of which would amount, at 8s. 6d. per oit., to 1,032*l.* 15s. sterling. This low produce may probably be occasioned by the state of the No. 3 stope advised by the above cablegram. It will be recolleeted that this stope is the one from which almost the whole of the returns have been derived during the last few months.

SOUTH-EAST MYSORE (19th March).—Mining operations.—Lavelle's shaft, north end: Ground cut during the past week, 22 ft.; distance from shaft, 245 ft., still leaving 8 ft. before communicating with Roger's shaft. By Thursday the much desired communication will be effected. A more regular and better defined lode cannot be seen; for over 200 ft. in length lode averaging 4 ft. or thereabouts; and this same lode we have in the bottom of Rogers' shaft. From the numerous samples taken from the various parts of the level, and from the stope in the back, it appears that there are portions of the lode very good, while some other portions do not show up quite so good; however, if we take the whole lode as it stands, and put it through the mill, my former estimate of 15 dwts. to 1 oz. per ton will not be far wrong. We have only stoped a very small portion of this lode, and that only in the back. The best assays that we have had were from the level that has not yet be been stoped. As soon as the place is holed I shall put a drill at once stoping to break quartz for the stamps. The coolies, I am sorry to say, have not yet turned up; in consequence, I am compelled to stop the stamps for a few days. Preparations will at once be made to get the water out of the winze, and sinking resumed. Rogers' shaft: Sunk during the past week, 4 ft. 5 ins.; distance from surface, 292 ft. 6 ins. The lode has greatly improved since I last wrote you. I have picked out some quartz at Lavell's showing very well in visible gold, and I can only reiterate my previous statement that for April month I will send you home my promise of gold. I have never seen the mine looking so well as it does now. Stamps: For reasons quite unavoidable we are obliged to stop stamping for a few days. I have done my best to get coolies. I hope by Thursday to start up again, and then when I get my drills at it I shall be all right, even if I have not my full staff of coolies. The Frue-Vanners continue to work well, and doing very good duty now. Machinery at surface and below ground is working very well. I can assure you April month will count a new era in our mining and crushing.—J. M. Rogers.

VICTORIA (LONDON) (27th Feb.)—The following is the return of quartz raised and crushed at the South Clunes United Mines for the four weeks ending 23rd February:—Total quartz crushed, 2,883 tons; total gold obtained, 905 ozs., 9 dwts.; average per ton, 6 dwts.; 6¾ grs. The above shows a falling off in the yield of 2 dwts. 19¼ grs. per ton. Receipts, 3,005*l.* 4s. 9d; payments, 2,822*l.* 14s. 2d.; balance, 182*l.* 10s. 7d.. Receipts for the month are small; on the other hand, mine costs are heavy, owing to the expense of putting separate plungers working at No. 4 shaft. The foregoing mine expenditure includes progression work, 693*l.* 10s. 8d.; machinery and plunger workings, 173*l.* 5s. 8d. Totals, 866*l.* 16s. 4d.

REPORTS OF MEETINGS.

PORT PHILLIP AND COLONIAL GOLD MINING CO., LIMITED.

(In Liquidation.)

SHAREHOLDERS DECIDE TO RE-CONSTRUCT BY A LARGE MAJORITY —A RIDICULOUS TENDER—ATTITUDE OF MR. SCHOFIELD—ENCOURAGEMENT TO SINK DEEPER.

An extraordinary general meeting of the members of the above-named company was held at Winchester House yesterday, for the purpose of deciding whether to sell the property or re-construct the company.

J. H. A. Smith, Esq. (liquidator), presided, and read the notice convening the meeting.

THE POSITION CONCISELY PUT.

The Chairman: Gentlemen, the notice gives you the particulars of the business for which you are met to-day, and in order that you may more fully understand the position, I think it will be as well if I briefly recall to your memory the circumstances which have led to the present meeting. On August 31st of last year the directors convened a meeting that the shareholders might consider the course to be adopted with reference to the position of that company at that time. At that meeting a committee of shareholders was appointed to consult with and advise with the directors on the best course to be taken. That committee pursued its investigations for the space of four or five months, at the end of which time it presented a report to the effect that it was unable to advise the shareholders what they ought to do, that it was a case in which each shareholder must settle for himself what course he felt disposed to pursue. On receipt of that report the directors convened another meeting for January 31st, at which resolutions to wind-up were passed. On the 11th February they were confirmed, and I on that day was appointed liquidator by the shareholders. Following on the resolution for winding-up was another resolution, which bound the liquidator not to dispose of the property, or to part with the shareholder's interest in it until he had submitted to them any offers he might receive, and had also given them an opportunity of deciding whether they would prefer to re-construct the property and work it themselves, or whether they would like to sell it for what it would fetch.

NO TIME LOST.

Immediately after taking office I addressed myself to arriving at such a state of affairs that I might submit alternative proposals. A few technical difficulties faced me upon which counsel's opinion had to be taken, and there was some delay, but from the date of liquidation till now seven weeks have elapsed, during which we have advertised the property for sale for four weeks, settled the list of contributories, and have now met you to-day in order that you may definitely decide upon what course you might adopt. I think we may safely say that no time has been lost, and that as rapidly as possible matters have been brought to their present condition for your decision to-day. The first point you have to decide is as to whether you will sell this property at a price which might be offered by tender. I have extensively advertised the property in the morning and mining papers, and circulated the particulars amongst persons who might likely prove purchasers.

A TENDER REJECTED.

The result has been that I received a letter some short time ago which, not being marked "Tender," I opened in the ordinary course of business, and this letter proved to be the only tender. The gentleman who made the tender has subsequently seen me, and tells me that he put in *pro formâ*, and wishes it to be withdrawn. But I think it my duty to leave it to you, and it will be then your opportunity to move its rejection, as I presume you will do. This is a tender for the sum of 50*l.* for the whole of the property of the company. (Laughter.) Before we proceed with the next point, I think we had better clear this one off, and, therefore, though I do not wish to dictate to the meeting, I will move "that this tender be rejected."

Mr. Linsell: I second the motion.

The Chairman: It has now been moved and seconded that the tender be rejected.

A Shareholder: Who is it from?

The Chairman: I do not think it is necessary to name the gentleman as he wished it withdrawn, but I am in the hands of the meeting. Those in favour, those against. It is carried unanimously that the tender be rejected. Now we come to the alternative propositions. These are to authorise me to dispose of this property on the best terms obtainable, or on such terms of reconstruction as you may please to approve of to-day. As to the first question, you will naturally ask: What possibility is there of disposing of the property, and what are we likely to get if we sell it? Well, gentlemen, you see we are entirely in the dark on the matter, for after advertising more extensively than I should recommend you to do again, we have practically met with no response whatever. However valuable a property may be, it is of no use a man buying it with plant, &c., 14,000 miles away unless he has some one to look after his interests on the spot, and unless he has a sufficient capital to work it. It is possible we may find such a purchaser, but the contingency is rather remote. Therefore we are practically thrown back on the second point—

RE-CONSTRUCTION.

I have had communications from many of the largest shareholders, and the notice as laid before you was drawn in compliance with the request from several of these gentlemen. There are one or two points on which I am not quite in accord, but these are matters of opinion, and I leave it entirely in the hands of the meeting. You will naturally ask what grounds are there for re-construction. You will say—if the old company could do nothing with this property, how can a new one hope to be more successful, and why should we put more money into it? What advantage shall we get by going on, as compared with breaking up the concern, and selling it for what it would fetch? Those are fair and proper questions. Let us deal with the first to begin with. Gentlemen may say—some in fact have said it in their letters—"I am sick of the delay and of the miserable style in which this concern has been going on for the last three or four years, and I want to put an end to this useless expenditure. I do not want to put any more money into it, and I do not want to pay the last one shilling call." I am in sympathy with these gentlemen, but let us look for the moment at the position in which we stand as regards finance. When I took this concern over I found we had in round numbers at the bank on current and deposit account a sum of 2,000*l.*

FINANCE.

There was a bill maturing on the 11th March of 500*l.*, which has since been paid. That brought us up to 1,500*l.* in hand, and the cost paid to the 5th January last. From then till now over three months have elapsed. The six weeks' cost, ending on the 5th January amounted to 549*l.* 16s. 8d., or nearly 100*l.* a week. I imagine the rate per week has been reduced since then, but those are the latest dates to which the accounts have been received in London. I do not think you can calculate on expending less than 75*l.* a week. If we go on on that basis the result will be that something like 1,000*l.* has been spent in the Colony for which the accounts have not been received on this side. We have about 1,500*l.* to deal with. We are saddled with the office rent until Christmas (125*l.*), and several other claims have come in. There will also be the costs of liquidation, so that altogether I do not think we can calculate that we have less than 500*l.* liabilities here. At this moment I take it we are exactly balanced. I expressed myself very strongly at several meetings of the committee, and also at the meetings of the shareholders, that steps ought to be taken to stop useless expenditure, the result of which would be that we should also stop the call of 1s., and any more money being drawn out of the pockets of the unfortunate shareholders. (Cheers.) I shall, therefore, ask you by and by (I want to act entirely in accord with the shareholders) to authorise me to telegraph to-night to stop the pumping.

STOPPING THE PUMPING.

We have been pumping here from August until now without doing one stroke of work, and I imagine we are the laughing stock of the district, for they will say "You are producing water simply for other people's benefit." As soon as we stop the pumping, of course we to a great extent do away with the chance of selling this property to outside persons who would naturally want facilities to inspect the mine in order to arrive at some estimate as to whether it was worth working or not. If we stop the pumping our chances of selling this as a going concern have departed. For ourselves it does not matter. The engineer tells us the water will only rise to the 11th level, and that it can be cleared out in six weeks. Stopping the pumping would mean the saving of the 1s. call, and that is a point which weighs with a great many shareholders. I have pledged myself before, and I do so now, that I will use every exertion to prevent that call being made, but if the pumping be continued, it is utterly impossible to avoid it. Now, is it worth your while re-constructing, and

WHAT IS THE POSITION OF THOSE WHO DO NOT WANT TO GO ON?

The position of those who do not want to go on will be that they will be absolutely free from the company. If we re-construct let us assume that a new company will take over the property from the 31st March. I forgot to say in my estimate that there is a sum of 466*l.* for calls which the directors were unable to collect. How much of that is good I am not in a position to say, but it is not safe to reckon upon it. You find yourselves then entirely clear of the property—those, at least, who are not disposed to go on. You are not called upon to pay any more, and the views of a gentleman who wrote to me—"Never let me hear of Port Phillip again," will be met. On the other hand there are some very

LARGE AND INFLUENTIAL SHAREHOLDERS WHO ARE DESIROUS OF GOING ON.

But yet another section may ask — What possibility is there of our obtaining success if the old company could not do it? The position of the old company was this —they were advised that they must undertake certain work which would involve certain expense. Last August they had only left this 1s. call (4,500*l.*), and it was good judgment on the part of the board at that time to decline to sanction that expenditure with only 4,500*l.* It is true that success with that amount might possibly have been attained, but it is equally true that the gentlemen in charge of the works would not pledge themselves that that amount would do it. In fact they were strongly of opinion that a larger sum should be provided. Therefore the directors acted rightly in asking your opinion as to whether you would incur the risk of that extra shilling. For those who may choose to go on let me give a few facts. On the 14th of June, 1887, Mr. Bland told us that "the shaft has been sunk 110 ft. from the 14th to the 15th level. All the last four fresh veins were struck in the last 10 ft. sunk, showing (this is the important part) that new makes of stone are appearing in depth, which gives further proof, if that were wanting, of the importance of sinking further, especially as the country we are passing through is clean slate."

ENCOURAGEMENT TO GO ON.

On the 17th of July, 1888, the *Melbourne Argus* refers to a concern exactly like ours. There they had had a rich mine which had given 400,000*l.* profit, and after 500 or 600 ft. they got to poor ground, and then had to go to a depth of over 2,000 ft. before meeting with any success. This is the Great Extended of Husler Reef Company. After going on again in precisely the same position as we are they had come into a new make of stone, and are again paying dividends. Nearly 300,000*l.* was paid last year. On the 12th of July, 1888, Mr. Bland writes:—"I think it right to express my long expressed opinion as to sinking the shaft in the hope of finding new makes of stone, which have so successfully been found in other parts of the colony. His estimate is, that for something under 400*l.* per month we would sink 25 ft., that is to say, for 5,000*l.* for 12 months he would sink 300 ft. Company after company there has passed through barren ground, and has then come into rich ground simply as a matter of sinking. We know that there is an amount of speculation in this, and Mr. Bland and Mr. Hewetson are very careful to state that there is no certainty, but they point out a number of similar cases in which although the saddle has been cut out the mines have again given enormous dividends after a period of nothing but expenditure without return. These are facts which it is necessary for you to know in order to enable you to arrive at a proper conclusion. I shall be happy to give you any further information, but, meanwhile, in order to put myself formally before the meeting, I will ask the solicitor to read the resolutions in conformity with the notice which I shall now formally move.

Mr. VERDEN (Kerly, Son and Verden), solicitor to the company, here read the resolutions as follows :—

SPECIAL RESOLUTIONS.

(1). "That the liquidator be, and he is hereby authorised and directed to sell and transfer to a new company, to be incorporated with limited liability under the Companies' Acts 1862 to 1886, all and singular, the lands and hereditaments, mines, mining, water, and other rights, leases, buildings, plant, machinery, stores, ores at surface or underground, bullion, and all other property and effects of this company in the colony of Victoria of every description whatsoever, except cash in hand or moneys due to this company upon the following terms and conditions :— (*a*.) The name of the new company shall be such as the liquidator may approve, and he may assent to the adoption by the new company of the same or a similar name to that of this company, and the nominal capital thereof shall be 50,000*l*. in 200,000 shares of 5s. each, with the usual power to increase and reduce the same. The memorandum and articles of association of the new company shall also be subject to the approval of the liquidator. (*b*.) The consideration for the said sale and transfer shall be the payment of the sum of 20,000*l*., by the allotment to the liquidator, or to his nominees, of 200,000 shares of 5s. each in the new company, credited with 2s. paid thereon, and leaving a liability of 3s. per share and no more, and the payment and satisfaction by the new company of any sums which may become payable to any shareholders of this company who have dissented under the Companies Act, 1862."

(2.) "That the liquidator be, and he is hereby authorised and directed to procure to be allotted to every member of this company requiring the same, as his nominee under the contract hereinafter mentioned, two shares in the new company with 2s. credited as paid thereon, for and in respect of every share held by him in this company. Provided always, that to entitle the members of this company to an allotment of such new shares, application must be made for the same in writing, in the form and manner prescribed by the liquidator, accompanied by a payment of sixpence per share on the number of shares applied for, within 10 days next after notice requiring him to apply for the same shall have been given in the manner in which notices are required to be given to members under the articles of association of this company."

(3.) "That the liquidator be, and he is hereby, directed to dispose of so many of the said 200,000 shares as shall be in excess of the number to which the members of this company would be entitled, if they all applied for the same ; and also of the shares for which applications are not made within the time and on the terms aforesaid, and in making such disposition of the said shares, the liquidator shall not be treated as a trustee for or in any fiduciary relation to the said members or to the new company, but shall have full discretionary power of selling and transferring the same to any person or person, at such price or prices (if any), and on such terms and conditions as such liquidator may think fit, and it shall not be necessary to first offer such surplus shares to the shareholders of this company, and the new company shall be entitled to retain all shares not applied for and taken by the liquidator or his nominees within three months after the incorporation of the new company, if the liquidator shall obtain any premium for the shares to which members of this company, other than such dissentients, would have been entitled, had they applied for the same as aforesaid, such premiums, less the costs and expenses of realisation, shall belong, and be paid, to such members by the liquidator."

(4.) "That the liquidator be authorised to enter into a contract in the form to be submitted to the confirmatory meeting, but with power to concur with the new company in any modification of the same which he may consider necessary or expedient for carrying into effect the arrangement embodied in the aforesaid resolutions."

(5.) "That the liquidator be authorised to enter into a contract with any person or persons for the purpose of obtaining subscriptions or guarantees of subscriptions for any such shares on such terms and conditions as he may think expedient, and also to pay advance or guarantee the costs and expenses of and incidental to the formation and registration of the new company."

BY ALL MEANS RE-CONSTRUCT.

Mr. HENRY CATTLEY STEWART : I second the motion. We have had a very clear and intelligible account from the liquidator. The purpose for which we have met is to consider whether we shall sell the estate or re-construct the company. As far as I am able to understand the matter I do not think there can be any hesitation as to which course we should pursue, because from what has passed already it seems that one gentleman has already made an offer of some small amount, which he would not have done if he had not thought the property worth a great deal more, and it is natural to suppose from that that there is and will be a good mine if we prosecute it. Since our last meeting I happened to meet with an experienced friend, who told me that for years he had been associated with this undertaking, and was perfectly satisfied that if we went down lower we could meet with a suitable reward. He himself was going largely for buying shares in the new company, and he said, "Be sure and lose no time in urging your friends to go on with the re-construction. Under these circumstances I shall vote very warmly for re-construction. I think those persons anxious to be quit of any liability will be doing very well to get out of the concern ; but those persons who are of a more speculative turn of mind, and have unshaken confidence in mining, should, I think, take new shares and go on. For my own part I shall be perfectly willing to take my shares, and I happen to know that there would be no difficulty whatever in placing the whole of the shares that possibly prudent men may not like to take. (Cheers and laughter.)

AN OBJECTOR.

Mr. JOHN SCHOFIELD (a former director) : I object to these resolutions being proposed, in the first instance because the notice distinctly states that the meeting is called for the purpose of authorising the liquidator to accept or reject any tender which may be received for the purpose of buying the property. That you have done. Then it says, "To authorise the liquidator to sell the property on such other terms as may be deemed expedient." I think the next resolution ought to be one authorising the liquidator to sell the property on such other terms as may be agreed. I shall propose a resolution that a price be fixed by this meeting, at which the property shall be sold. I am aware there will be great difficulty in selling here, and, therefore, if it cannot be sold here, let it be sold piecemeal in Australia. When the stamps were pulled down in 1872 some 3,000*l*., or 4,000*l*. worth of gold was recovered from the foundations, and my impression is that a similar result may be anticipated now. That is a much better speculation than to go on spending 25,000*l*. worth on a concern like this. Mr. Smith said the directors acted wisely in not recommending the shareholders to spend more money, but we had no means, and we could not conscientiously recommend them to find 25,000*l*. As to the water rising, it will rise considerably above the 11th level mentioned by Mr. Smith. We are deeper by 600 ft. than any other mine in the neighbourhood, and I ask Mr. Smith to find the letter in which Mr. Bland states that the water cannot rise above the 1,100. In five weeks the water rose to within 23 ft. of No. 11 level, and it took them 12 days to pump 67 ft., and how long will it take you at that rate to pump 1,500 ft., besides which the machinery is not strong enough to undertake it.

The CHAIRMAN : This is a letter, dated 31st Jan., received on the 7th March, 1889, from Mr. Bland, after his attention had again been called to the question of forking the mine if the water were let in :— "I have in my letters constantly reported that a month or six weeks would have cleared the mine of water, and completed any repairs that might have been required." (Cheers.) That was the basis on which my statement was made. (Cheers.)

Mr. SCHOFIELD : I have 3,500 shares, and I do not mean to go on. I will not take shares issued at 17s. paid, charging the property with 75,000*l*., because the law is too uncertain on that point. I propose "that we should sell the property for 2,500*l*." Let us be careful when pulling down the machinery that we secure the amalgam at the foundation. I am totally opposed to re-construction.

Mr. PEEK : I second Mr. Schofield's amendment.

The CHAIRMAN : We are considering now the terms on which you will authorise the liquidator to part with the property. The consideration being in partly paid shares. However, as the order in which the resolutions are proposed, is immaterial if the seconder will agree, I, as the proposer of the original resolutions, will suspend them, and we will put he resolution moved by Mr. Schofield.

Mr. SCHOFIELD said he wished to be added to his resolution the words "If obtainable here, and, if not, on the best terms obtainable in Australia."

MR. SCHOFIELD DEFEATED.

In favour of Mr. Schofield's resolution seven persons voted, and against it 14.

The resolution was therefore lost.

The CHAIRMAN : We will now revert to re-construction, and I shall be pleased to hear the views of the shareholders on that point.

Mr. DIXON : I have the Australian Blue Book in which a mine is mentioned as having gone down 2,040 ft. which paid 20,000*l*. in dividends last year. There is a list of 10 mines given that are over 2,000 ft deep. If some people are tired of Port Phillip why should they stop others who wished to go on. I believe that about 100 forms of tender have been sent out, and the property has been advertised for four weeks without avail. I have an extract here from Mr. Schofield's speech, delivered in last August, in which he says, "His opinion was in favour of re-construction. (Laughter). A large area of the mine was unexplored, and by sinking deeper he thought the result would be such as to recoup the outlay."

MR. SCHOFIELD CHANGES HIS OPINION.

Mr. SCHOFIELD : I will explain why I changed my opinion. (Laughter.) I was under the impression that a series of saddles had been found in the mine at the bottom. The subsequent information sent by Mr. Bland induced me to alter my opinion.

Mr. DIXON : The *Melbourne Age* says : "Prior to operations ceasing towards the latter end of last year several bores were put down from the underground workings, and although indications of reefs were obtained, the London Board appeared to think they did not want further development."

Mr. SCHOFIELD : That is not correct.

Mr. DIXON : This paper was sent to me by Mr. Bland, who is a man of unimpeachable character. I am a director of the Victoria Mining Company, which has property alongside, and Mr. Hewetson, who is our manager, is also assisting Mr. Bland at Port Phillip. For two years they have had the opinion that we ought to go deeper, but the board acted diametrically in opposition to their views. The board did what they thought best, but they did wrong. Mr. Schofield, if he does not feel inclined to go on himself, ought to give the other shareholders the opportunity of doing so.

Mr. SCHOFIELD : I have no wish to prevent you.

The CHAIRMAN said that Mr. Dresden, a holder of 2,000 shares, had just sent up his card to say he was in favour of re-construction.

Mr. VERDEN, answering sundry questions of a legal kind, said : You must bear in mind that in this case the consideration for the issue of these shares is the transfer of the property of the company. That being so, you

SATISFY THE REQUIREMENTS OF THE LAW.

There is a point about the value of the property which Mr. Schofield refers to, and one which we must bear in mind, and I feel that if the shareholders are willing to reduce these shares from 1*l*. to 5s., it will be a safer and better plan in many respects, and amongst other things it will save payment to a considerable amount of registration duty. I have taken the opinion of some of the best counsel in another case within the last few days, and have been advised that the consideration is good, and that there is no liability to those who take them beyond, of course, the amount they agreed to pay—3s. in this case.

Mr. C. H. SMITH : I beg to move an amendment that the shares be 5s. each, credited with 2s.

The CHAIRMAN : The amendment is that the alterations, wherever necessary, be made throughout the resolutions ; so that the scheme should stand in 200,000 shares of 5s. each, credited with 2s. paid thereon, and leaving a liability of 3s.

The amendment was carried, and

The re-construction scheme, as formulated and passed, subject to the alterations arising out of the amendment, was also carried unanimously.

THE QUESTION OF STOPPING THE PUMPS

was then considered.

Mr. C. H. Smith moved, and Mr. Sherwood seconded, "That the pumping be carried on at the expense of the new company."

Mr. Couchman proposed, as an amendment, "That the pumping should be stopped at once."

Mr. Lloyd seconded.

The amendment was lost, and the original motion carried.

The Chairman: Then I am to understand that I am not to stop the pumping? (Hear, hear.)

The proceedings were brought to a close with a vote of thanks to the liquidator for presiding.

SOUTH CONDURROW.

DIVIDEND OF 5s. PER SHARE.

A sixteen weeks' meeting of adventurers in South Condurrow was held on the mine on Thursday—Mr. Charles Clark, of London (the secretary), presiding.

The statement of accounts, read by Mr. Jnmes Negus, showed labour costs, 4,316*l.*; merchants' bills, 1,414*l.*; dues, 299*l.*; total debits, 6,030*l.* The credits were 130 tons 12 cwt. of tin sold, at an average price of 57*l.* 11s. 7d. per ton, for 7,522*l.*, leaving a profit on the 16 weeks' working of 1,525*l.*, and an available balance of 4,091*l.*

REPORT OF AGENTS.

The agents (Captains W. Rich, W. Williams, and H. King) reported:—The lode in Marshall's shaft is about 2 ft. wide, and yields low quality tin stone; this shaft is now 11 fms. below the 108. It is our intention to sink 4 or 5 fms. before cross-cutting north to intersect the main tin lode. The 108 west of Marshall's is extended west 20 fms. in a kindly lode, worth in places 6*l.* per fm. We are rising in the back of this level to prove the lode, and for ventilation. In the 66 end, about 10 fms. west of Marshall's, we have begun to rise towards Pendarves' shaft. The tin lode in the 93 east of King's is worth 7*l.* per fm. In the back of the 70 east the lode has been shifted by another small lode crossing it. We have driven a cross-cut north and intersected the main lode to the north of the fault or heave; the section of the lode referred to is worth 20*l.* per fm. The 60 end east is worth 15*l.* per fm., and the stope in the bottom is worth 20*l.* per fm. The stope in the back of this level is worth 15*l.* The 50 end east is worth 10*l.* per fm. Three stopes in the back of the 50 are worth, respectively, 10*l.*, 10*l.*, and 12*l.* per fm. The 40 end east is worth 10*l.* per fm. Three stopes in the back of this level are worth in the aggregate 33*l.* per fm.

MINE IN GOOD HANDS.

The Chairman, in moving the reception of the accounts and reports, said he had been asked by the chairman of the company, Mr. Marshall, to express the regret he felt in not being present in consequence of an accident. They had, also, to regret the absence of their purser, Mr. Walter Pike, who was also under surgical treatment. If they took into consideration the fact of the low price of tin and the disadvantages connected with the wet winter, he thought the accounts were highly satisfactory. (Hear, hear.) Their aim in this mine had always been to keep things steady and even, and while they worked the mine to as much advantage as possible for present dividends, they were going on steadily with developments. They had become more costly recently, but still they were encouraged by the results they had obtained, and, on the whole, they thought the accounts before them were such as the manangement need not be ashamed of nor the shareholders discontented with. (Hear, hear.) The quantity of tin was a little less than in the corresponding period of last year. The price, of course, was vastly different, because the average price in April last was 93*l.* a ton, whilst they were now receiving about 57*l.* The difference between those two figures would make just 15s. per share, but the profit they had just announced was by no means a despicable one. He was sure that under the management of Capt. Rich their mine was in good hands, and as long as he had it they need not be afraid. (Applause.) The chief point of interest was, of course, the western ground, where they had sunk 120 fms. The ground at present could scarcely be called paying ground, but there was every reason to hope that it would at last fall on to the great flat lode. (Applause.)

Mr. M. H. Williams, in seconding the motion, said he was glad of that opportunity of saying how much obliged they were to the London committee for coming down to see them, and for the opportunity of meeting them once a year. He was pleased to find that, looking at the times and price of tin, that Capt. Rich had been able to provide such a substantial profit for them. (Applause.)

VIEWS OF CAPT. RICH.

Capt. Rich said the valuation of Marshall's shaft might seem to be low, but they must remember that it was not going down in the main tin lode. The shaft had been sunk 120 fms., and an engine put in, and they knew that the cost of that really came out of the profit of the mine. Without boasting, they might say they paid continuous dividends longer than any other mine in Cornwall—for 14 years. They had a great extent of unexplored ground in the western part of the mine, and he hoped it would turn out better than the eastern part; indeed, they had every reason to hope that they would have a good mine there. They had not been so pestered with water as some other mines in the neighbourhood, although they had, of course, had the same rain as the neighbouring county; but they had been able to keep it out with their two engines working. Everything was charged up quite close, but the present price of tin was, on the whole, too low for Cornish mines, and they might be thankful they were able to take up 1,500*l.* profit in 16 weeks. (Applause.)

Mr. George Williams (Teignmouth) said he only came into Cornwall occasionally, but what struck him most at this time was to see the engines going at from seven to nine strokes a minute. He noticed that the engine at South Condurrow was working only 2½ strokes a minute, and that meant, of course, a saving in fuel.

Capt. Rich: Yes, but we have two engines working.

The motion was put and carried.

DIVIDEND.

The Chairman moved that a dividend of 5s. per share be declared. That was almost the exact amount of the profit, and following the course they had been following for about 14 or 16 years—not to pay more than they earned—he thought they should adhere to it. (Applause.)

Mr. George Williams: Then our forward balance is about the same as last time.

The Chairman: Yes, nearly the same—within two or three pounds.

Mr. Williams seconded, and the motion was carried.

Mr. Wickett proposed the re-election of the committee of management. There was no doubt that South Condurrow was a model mine; financially the accounts were a pattern to other mines, and were, indeed, just what mine accounts should be.

Mr. W. H. Williams seconded, and it was carried.

Mr. Wickett remarked that South Condurrow adventurers did not subscribe anything to the Miners' Hospital.

After some discussion, the Chairman promised to bring the matter before the committee in London, and he had no doubt it would receive favourable consideration at their hands.

Votes of thanks to the chairman and the agents concluded the meeting.

GENERAL MINING ASSOCIATION.

A DISAPPOINTING REPORT—IMPROVED PROSPECTS.

A general meeting of the proprietors was held yesterday at the Offices, Blomfield House, London Wall—Mr. J. Duke Hill in the chair.

Mr. E. E. Bigge (the secretary) read the notice calling the meeting. The report and accounts were taken as read.

CAUSES OF THE LESSENED PROFIT.

The Chairman said perhaps some of the shareholders present might consider the report, to a certain extent, disappointing, seeing that the somewhat improved prospects in the coal trade had led to the hope that they would be able to maintain the rate of dividend distributed for 1887. There were three main factors making up the shortcoming of the year. In the first place, owing to the lateness of the winter, they were unable to commence shipping until fully a month later than usual; in the second place, they had been short of labour, owing to many of the colliers having been tempted by very high offers of wages to go to British Colombia for the opening up of some new El Dorado, and, in the third place, just at the busiest time of the year one of their vessels was stranded, necessitating the hiring of another vessel at a greatly increased rate of freight. However, the present year has opened more promisingly. Probably by this time shipping had commenced; most of the miners had returned from British Colombia, and they had learned by telegram that freights had fallen considerably. They were still getting a slightly better price for their coals. The chairman referred with regret to the resignation of Mr. Swann, the late secretary, and said that that gentleman had, since leaving the service of the association, continued to take a great interest in its welfare. He had been to the mines, and would probably go again in the summer. The chairman then moved the adoption of the report and accounts.

Mr. C. Bischoff seconded the motion.

Mr. Willshin referred to the falling off in the profits, and suggested that instead of adding further to the reserve fund, which amounted to 57,000*l.* at the end of last year, they should pay a dividend of 8s. per share instead of 6s. He moved an amendment to that effect.

Rev. Mr. Western seconded the amendment.

The Chairman having promised that the board would seriously consider whether the additions to the reserve fund might not now be suspended,

The amendment was withdrawn.

The report and accounts were adopted, and a dividend of 6s. per share—8*l.* paid—was declared.

The retiring directors and auditors were re-elected, and

The meeting closed with the usual compliment.

THE COLORADO GOLD, SILVER AND LEAD RECOVERY SYNDICATE, LIMITED.

GENERAL REPORT.

The severity and long duration of the winter at Leadville, which is stated to be at an elevation of nearly 11,000 ft. above the level of the sea, have prevented the company's work of recovering silver and lead from the slag heap from being carried on in the manner by which the best returns are expected to be made. A cable, dated the 6th instant, from our manager, informs us that $900 has been deposited for February proceeds, and that the result of a parcel of slag concentrated is very satisfactory. Mr. Argall, under date March 20th, 1889, reports that he is confident there is upwards of $3,000,000 in the slag, and adds, to show his faith in the matter, he will furnish complete plans and estimates, superintend the erection of and run the mill at a scale of remuneration entirely dependent upon results. The directors consider it advisable to provide for contingencies (in view of the strong recommendations of Mr. Argall, the New La Plata Mining and Smelting Company's manager, coupled with those of the manager of this company, to set up concentrating plant) by calling up the remaining portion of the subscribed capital. The amount of each capital is limited to 2s. 6d. per share, and the first of these calls is now payable at Messrs. Barclay, Bevan, Tritton, Ransom, Bouverie and Co., No. 1, Pall Mall East, London, S.W., on Tuesday, the 30th day of April, 1889.—Fras. D. Morley, Acting-Secretary.

Shelley and Co.'s Complete Press Directory.—Of the edition of 1888 we spoke in terms of praise, and can scarcely do otherwise now, seeing that several new and important features have been added which justify the word "complete" embodied in the title. The summary of newspaper law cases is most important. Some recent decisions, if generally sustained, must go far to kill independent criticism, and to leave the public without defence against persons who may seek to profit by their inexperience. The serious consequences of these decisions will be seen anon. Messrs. Shelley and Co. have produced a most interesting and useful work.

DURHAM AND LORD BYRON MINING CO.

ENCOURAGING NEWS FROM THE MINE.

9th January.—I last had this pleasure ou 2nd inst., and am since without any of your favours to reply to. The mail had not come in to-day; I presuue the river is up. Durham Mine: Euclosed find tracing of section of workings up to December 31st. If this is placed over the drawing you have, done by Mr. Bailey, May 31st, you will have a correct map. The part coloured pink shows what was stoped from May 31st to December 31st. It is a large extent of ground, and it is a pity it was not more economised. You will see with pleasure that we have two shoots to go on; the richer is below the 2nd level, but the other to the north is yet unworked above No. 2 to the surface. I estimate that we have some 2,000 tons of stone between Nos. 1 and 2, and 5,000 tons above No. 1. Below No. 2 the shoots are untouched, and the wide one is upwards of 300 ft. long. This shute will probably be cut in the new shaft, a little below No. 3 level; this will be the new shute. I can now look forward with certainty to being able to keep the 10 heads working on Durham stone until No. 3 level is opened up, but I do not anticipate that the northeru shute is so rich or so easily (*i.e.*, cheaply) quarried as the southern. The new winze is down 20 ft., carrying 1 ft. of stone. Durham south lease: The shaft is down 58 ft., with about a foot of stone iu the bottom. Indications are so favourable that I decided to keep a couple of meu on until the water drives us out, when I will get an exemptiou. Byron Mine: I have not yet made any alteration in the work here; we are still sinking. The result of last erushing was very poor, ¾ oz., but it can in a way be accounted for. The first stone the carriers carted to the mill was chiefly large blocks from round the fringe of the paddock; these they took first to avoid shovelling. The blocks were largely mixed with mullock, and came mostly out of the drive north. The stone now going through the mill is shaping better, and I look for at least 1 oz., which will justify the expenditure on the mine. The cost for December is 597*l.* 3s. 7d., and 247*l.* 31s. 4d. One oz. per ton, 26 per cent., and 2¼ tons per head, gives 325 ozs. = 975*l.* Battery: Is now working constantly, and there is plenty of water. I enclose table of duty for December. It is very fair, considering the holidays, waut of water at first and scareity of stone. The pan engine, too, has given a lot of trouble, boiler leaking, &c. I have made every endeavour to get something out, and have not lost an hour that it was possible to work in. Please note the return from the Durham per ton this last crushing (60 tons yielding about 4 oz. to the ton of quartz. It is the best return made hitherto. I attribute this to finer stamping and greater care. I give a great deal of my time, night and day, to the mill. It is here that savings can be effected by better supervision. The stone I have now from the Durham is by no means so good looking as it has been in times past, so the increase iu the yield is more creditable. The dam is now in order, and stands well. It is full, aud does not leak. I intend every dry season enlarging its capacity by deepening it. A good smelting furnace and retort furnace have been erected, also a eottage for the millman. Transport: Teams are just beginuing to come in, but what we want most is still on the road.—W. F. Kirby, General Manager.

THE NEW ZEALAND ANTIMONY CO., LIMITED.

WORK DONE AND CONTEMPLATED—OUTLOOK FOR 1889.

6th April.—The last mail brought a very satisfactory report from Sir William Fitzherbert, the resident director of the New Zealand Antimony Company, on the position and prospects of the mines at Endeavour Inlet. He says that "the large amount of dead work is beginning to show, and if the same dead work had been carried on by the old company during the period it was acting as ageut for the company, you would most probably have been long since in receipt of a steady supply of marketable ore." The mine manager reports (on February 18th) that No. 2 level drive has been extended 50 ft., giving now a total distance of 559 ft. Judging from the trend of the south end of the lode in No. 1, he expects to reach it in No. 2 level, about 70 ft. further on. No. 4 tunnel is now in 450 ft. The manager says: "Considering the time this work has been in hand, the progress made must be considered very good. It has now been driving on a lode for over 200 ft., which still continues in the face, and as we are only now up, vertically, under the furthest point where we got ore in No. 3, it shows that our lodes are lengthening very much as we are getting deeper. This tunnel has yet to be extended 100 ft. to intersect the winze, which is being sunk from No. 3, but I intend to commence stoping out ore over this level as soon as the shoot and tramroads are completed." The winze from No. 3 to No. 4 is now down to the level of No. 4, and a fair lode of antimony has been carried down all the way; in the bottom, at present, the ore is very good. The construction of the shoot from No. 4 to the inclines has been completed, but it has absorbed a large amount of labour and timber also, some of the tressels being over 20 ft. high. The pass at the end of this shoot to connect it with No. 5 level is also well in progress, having already been timbered for half its total leugth. The laying of the uew tramroad will be completed in about a fortnight. The tunnel at the slip is now in 262 ft., aud for the last 20 ft. the meu have been driving on a strong lode of antimony ore averaging from 2 to 3 ft. in width. This ore is of an average quality of 25 per cent., and being of a peculiarly fine grain, can either be dressed to the higher standard or reduced to crude in the new furnaces now being erected. Some very rich veins of ore, however, have been eut through in this level, and the mine manager is now working a eross-cut for the larger lode of the same kind of ore. No. 2 tunnel is in 220 ft. Of this the manager writes:—"This is a point on the company's property in which I have always had great faith, as in the broken country around the mouth of this tunnel the richest and largest blocks of ore we have ever met with were got. Since the tunnel passed through the broken country into the solid formation, no sign of ore was met with until within the last day or two. On Saturday, the tunnel cut through a small leader of very rich ore, and the country generally shows very favourable indications of being in the vicinity of a lode. From general indications, I have great hope of getting a good lode in this part of our property. . . . I am aware that the small output of ore so far has been disappointing to the company, but this must in a very great measure be attributed to the company being led to unwarranted expectations. Less than 12 months ago, it must be remembered, little or nothing was done towards opening up the mine, and those acquainted with mining are aware that 12 months, under the most favourable circumstances, is a very short time to do the work in. If the amount of work we have done in constructing water-races, tramroads, dams, tunnelliug, shaft sinking, &c., is taken into consideration, I think it must be admitted that the work has been well pushed ahead. The long tuuuels are now upon the vicinity of the lodes, and No. 4, as I have previously reported, is actually on the lode. No. 2 being so hard, and consequently much longer reaching No. 1 lode than anticipated, has been very disappointing, as this is the lode from which I expect to raise a large supply of good ore, it having been of a high grade in No. 1. Against this disappointment we have the fact that other lodes are opening of great extent, and there is every prospect that, without reckoning on No. 2, we shall soon greatly increase our output." Siuce taking the mines over, the local mauagement has driven over 2,000 ft. of new tunnels. The managing director sums the result up thus:—"It will take from three to four months to drive sufficicutly on the lode and open up stopes. As a general estimate, Mr. Wearne thiuks that about 7,000 tons of ore, as raised, will be brought to the surface withiu a year from the present time."—W. B. Fabian, Secretary.

THE CARLISLE GOLD MINING CO., LIMITED.

The secretary begs to announce the followiug cablegram received from the manager at the mine:—"During March the mill worked 28 days, and the yield was as follows: Bullion, $13,530; concentrates, &c., $900; total, $14,430. The working expenses for the month were $11,600. There has also been $2,400 expended on development work."

REPORT FOR FEBRUARY.

18th March.—Mill: Lost time due to general repairs of mill engine and pumping machinery. Though running almost full time the crushing has been less, owing to the far greater hardness of the ore milled. Mine—No. 1 east winze: This has been sunk during the month 70 ft. from the surface, and a raise to meet it has been put up about 35 ft. from the first level; we hope to make this connection about the end of March. The winze and raise are entirely in ore, that will average probably $5 to $6 per ton. We have driven about 150 ft. east from block L 13 to intersect a continuation of No. 1 east winze below first level. This winze is at date down 29 ft., the ore being of average grade. The drift is also in fair grade ore, as an average, though for its entire distance it has proved very bunchy. At K 6 a cross-cut has been driven 24 ft. into the hanging-wall portion of the vein, through several small seams of good grade ore, but so interspersed with porphyry as to be, on breaking, too low grade to pay. No. 1 west winze: We are still extracting very good ore from the block of ground west of this winze below point marked X. No. 2 winze below first level: The improvement going westwardly to No. 3 winze, reported in February, has changed, the ore being broken there now is hardly pay ore. In blocks J 16 and 17, we are stoping in the hanging-wall portion of the vein our best ore, but the good ore is so very narrow, and the large body of footwall ore exposed in K 15 and 16, will hardly pay extraction cost. Above the first level we have stoped a large quantity of footwall ore of a better grade than that broken in January. We are, however, compelled to leave this in the stope, or more properly speaking, cave, to enable us to extract the remainder at lowest possible cost. No work has been undertaken in any of the lowest levels, the ore proving of too low grade to pay. There is still quite a large quantity of ore broken above the third level, and which is being milled in admixture with better ores. Buildings: Owning only one-half of the Progress Restaurant, situated some distance from company's property, I accepted an offer of $50 for our interest, giving purchaser usual bill of sale. Teaming: Finding it almost impossible to make any profit on our mule team, I have turned it over with a few extras, all inventoried December 31st last at $2,628 60-100, to M. Cavaness for $3,500, he agreeing that the entire outfit shall remain company property uutil the entire amount, payable in mouthly instalments of $150, has been paid. We have credited teaming account and charged M. Cavaness with $3,500, also credited M. Cavaness with $150, being January payment. This transfer saves us indirectly one man's wages, and we are also guaranteed against any loss or damage to goods in transit from Lordsburgh to Carlisle. I am realising on stores and supplies on haud as much as possible, but find it imprudent to earry too low a stock, more especially of cordwood. I have ample funds on hand for all development work proposed by Prof. Clayton, and should this mouth realise a fair working profit, may be able to make another remittauce with safety.—J. H. Longmaid, General Manager.

NOTICE TO READERS.

Replies to Annual Subscribers will be sent by wire or letter, as may be necessary.

Non-Subscribers must send fee of 5s. 0d., in order to have their enquiries answered in "Mining World," or by wire or letter, as requested.

Primrose (Southampton).—Sell 1 and 3, but keep 2, 4 and 5 for higher prices. Nos. 1 and 4 are about 1s. each.
Anxious (Glasgow).—There is not much chance of your getting your money back. It is rumoured the individual has absconded.
D. F. (Leeds).—You must be careful about investing in these American shares. Send particulars.
Water-gas (Notts.)—Yes, hold for higher prices.
J. Wales.—Yes, worth holding.
Moss.—They will go better.
Wish.—Sell your shares.
Dubious.—Join the re-construction.
O. S. (Winchelsea).—Hold all your shares for better prices.
Mine.—We cannot comply with your request.
G. R. A.—Very speculative. We advise sale.
Anxious Reader.—Do not purchase Ferreira, Salisbury, or City and Suburban. Mysore and Crown Reef good to hold.
Rand Field (A. T.)—You had better sell both.
"1, 2, 3" (Lee).—We see no reason for a further fall, and advise purchase.
Teacher.—Buy a few more and average.
A. Robinson.—Send us the papers as to this matter.
Buenos.—Sell and cut your loss.
Steamer.—Will write on Wednesday, as requested.
P. Moore.—Yes. Etheridge, New Organos and Victory are worth buying.
H. Peck (Lancashire).—We will ascertain and let you know further.
Tale (Willesden).—Have nothing to do with them.
J. W. D.—No. 1: Sell. No. 2: Hold for a few months. No. 3: Unsaleable. No. 4: Good to hold. Thanks for your kind expressions.
P. Steven (Edinboro').—Certainly not; it does not follow because you see an advertisement in a paper that the advertiser is always good to deal with. Yes, you can trust No. 2, and feel sure you are dealing with an honourable man. 3: The fault of not getting your transfer does not rest with him, but with the seller.

We are, this week, obliged to omit our Mining Share Lists, but all changes are notified in the "Mining Market."

The Mining World.

LONDON: SATURDAY, 13th April, 1889.

The "Mining World" is not the property of a Mining Speculator nor under the control of any clique.

TRUSTS.

It will be remembered that when Mr. Goschen imposed a tax of 1*l.* per thousand on the issue of new joint-stock undertakings, he anticipated from this impost a revenue for the year of 110,000*l.*, which would represent a nominal creation of new capital to the extent of 110,000,000*l.* As we know, however, this estimate has been very largely exceeded. In the past three months—the last quarter of the financial year—the new issues represented an aggregate of about 54½ millions sterling, which will have given the Chancellor of the Exchequer a sum of close upon 55,000*l.*, or just about half the estimated outturn of the tax. Of these 54½ millions no less than 25,075,000*l.* is represented by trust investment companies of various kinds, raising the amount of these undertakings, formed within the last 15 months, to over 34½ millions sterling. Such a vast development of the principle, which had previously been adopted only to a very limited extent, has naturally attracted considerable public attention. The reasons why this rapid growth of trust companies has gone on are not far to seek. The Governments of this and other countries have been steadily reducing the interest on their debts, with the result that securities yielding what would have been considered a low rate of interest a few years ago have been gradually appreciating in value, until investors have found it increasingly difficult to get 4 per cent. for their money. To people with large means, of course, 4 per cent. is a satisfactory rate of interest where the security can be thoroughly relied upon; but a large class of capitalists are willing to risk a little in order to obtain a better return for their money. In these circumstances trust companies, when properly conducted, perform a very useful function. Their preferred shares usually carry a fixed interest of 4 per cent., leaving the balance of the profit derived from the investment of the share capital, and from the issue of debentures for division, among the holders of deferred shares.

A trust buying large blocks of shares is, or should be, able to spread risk, and equalise profits in a way that an individual investor, if he has not enormous wealth, cannot do; so that the shareholders in such undertakings have, in a small way, many of the advantages which capitalists of large means possess. We are, of course, presupposing that the trusts are properly managed, and that they are not allowed to degenerate into mere gambling institutions on a large scale, looking for profits from taking advantage of market fluctuations, rather than relying for their income upon the interest obtained on their investments. Some of the companies, we believe, expect to make large sums by the underwriting or syndicating of new issues, a process which has proved highly remunerative to some of the leading financial establishments. This is, however, hardly what we conceive to be the proper function of a trust, for though operations of the kind may frequently prove successful, there is, after all, a greater element of chance in them than such an undertaking as a trust should accept. Apart from this, however, the business seems likely to be overdone, for the number and importance of the trusts already created has had the effect of still further advancing the prices of securities, notably of home railway and other first-class stocks. There will, in consequence, be a greater temptation for those who have the investment of trust funds to speculate with them, so as to make larger profits than the purchase of securities outright, and for permanent holding, would yield. While, therefore, the principle of trusts of the kind we have referred to—as opposed to combinations such as the Salt Union and the suggested syndicates for tinplates, coal, paper, and so on—is a perfectly sound one, shareholders in them will need to keep a tight hand on those who have the disposal of their funds, or, in the matter of interest, the remedy will be worse than the disease.

ALTURAS RE-CONSTRUCTION A COMPLETE SUCCESS.

We understand that the tenders for the surplus shares in the Ellmore Gold Company, *alias* "Alturas," in the hands of the liquidators have been over-subscribed for, and that the premiums received will constitute a handsome bonus in the assets of the company. The success of the reconstruction scheme is now assured, and the company will start with an ample working capital of nearly 30,000*l.*, after clearing off all liabilities. The liquidators, Mr. J. H. A. Smith and Mr. J. W. Biggs, are to be congratulated upon the exceptionally short time they have taken to liquidate the affairs of the old company, and to send the new one on its way rejoicing.

INDIAN GOLD MINING IN THE COLAR FIELD OF MYSORE, INDIA.

By One Who Has Studied It.

This industry is indeed looking up, as the annual and monthly returns shown in the accompanying table testify. It is again my pleasure to congratulate shareholders in Indian gold mining companies on a substantial increase in the returns from these mines for the month of March, as the returns in value for that month exceed those of February by between 3,000*l.* and 4,000*l.*—the total value of the returns for the month (March) in question amounting to no less a sum than over 21,000*l.*, and the total value of the output for the first quarter of this year (1889) amounts to about 55,000*l.*, or a sum about equal to the whole produce from the mines for the year 1887. I have ventured in my former writings to prophesy that the total produce from the Colar field for the year 1889 will most likely *at least* amount to a *quarter of a million sterling*, or quite possibly nearer *half a million sterling*. The returns to hand so far for 1889, I am satisfied, go far to prove the soundness of my prophecy. It cannot but be interesting for a moment to consider from how many and from what shafts the wealth of gold hitherto produced in the Colar field has been obtained. On this matter being investigated it will be found that, with the exception of a sum of about 10,000*l.*, the wealth in question has been produced from *eight* shafts *only*, three of which have been sunk in the property of the Mysore Company, another three in that of the property of the Ooregum Company, and one each in that owned by the Nundydroog and Balaghat-Mysore Companies. Now, there are no less than between 60 and 70 shafts being sunk in this field, very few of which are less in depth than 100 ft. About 50 of them are down to between 200 and 300 ft., and a few to between 300 and 540 ft. deep. The Mysore Company have a shaft down to a depth of about 540 ft., which is the deepest in the field, and the Nundydroog Company have a shaft down to a depth of just over 400 ft. The greater part of the wealth won from the Colar field has been obtained from levels driven between the depths of 300 and 466 ft., so that I believe it very probable, when the 50 shafts above alluded to are sunk another 50 or 60 ft. deeper, an incalculable amount more of wealth will be produced. I am inclined to believe this is being done, and that in a few months more the produce of the Colar field will be enormously increased. *Hitherto*, the gold-bearing zone in this field has been tapped only by some eight shafts, but very shortly now it will be attacked by between 50 and 60 shafts, or say about seven times the present number; and should the extraction of wealth proportionately increase, it will only be a matter of *a very short time* before the Colar field is *annually* producing its *millions of gold sterling*. Dividends of about 20 per cent. have been paid by the Mysore Company for the past three years, and recently the Nundydroog Company has joined the dividend list, to be almost immediately further joined by the Ooregum Company, which company has, during the past 11 months, produced about 26,000*l.* worth of gold. This dividend list will, probably, be swollen by the end of the present year, I believe, by several other companies. We have for this pleasant change, which is coming o'er the face of the dream, to thank perseverance, abundance of labour, and the now general use of rock-drills. When we have fairly got down on the auriferous zone in so many places, which we shall have in a very short time from now, it will not, I believe, be long before the Colar field will proportionately produce annually greater wealth than any other field in the world—neither Australia, California, or the Transvaal being excepted. What the Ooregum Company has so recently done should be a great incentive to other companies in the field, and it is only by perseveringly sinking and driving that such great results can be obtained. I see no cause for any company to hesitate in doing both, as I believe all the companies are now financially sound. The Colar district is now amply proved to be a very rich one, so hence forth I trust that the companies working in it will not flinch from opening it up, with the capital they have at their backs, as it should be opened up. It is my firm belief that there is room for many more companies in this field, and if rumour is correct the company of the Goldfields of Mysore is shortly going to set a good example by starting one or two new companies into life in this field. I do not fear for their future under such protection, as the parent will be able to give her progeny. There is now, I believe, a very brilliant, I might perhaps be more correct in saying a dazzling, future in sight for the Colar mines, and I expect very shortly to see the shares that are now standing at such a heavy discount in market value—several of them being only at 3s. or 4s. per 1*l.* share—at their par value or over; some of these to wit, such as the Indian Consolidated, Colar Central, Mysore-Wynaad, and Mysore West are well worth picking up at their present prices, particularly the shares of the latter company, as it has plenty of capital now—its re-construction being a perfect success; it is down to the 300-ft. level, in which it is now driving, and is likely any day to strike rich ore, especially under its newly-appointed manager, who has been described as a man of great experience and energy. In 1886, when the Colar field had produced altogether only about 60,000*l.* worth of gold, the prices of all the shares of the companies working in that field stood mostly at a high premium, none of them standing below par. (*Vide* Mining World of July 28th, 1888, page 135.) Now, however, after an immense amount of labour and development has since the year 1886 been expended on them, and the mines in the field have produced no less an amount of gold than about 340,000*l.* worth, forsooth! there is visible a heavy depreciation in the value of many of the companies' shares. An enterprising speculator should see his way to making a large fortune by buying up these shares at their present absurdly low prices of 3s. or 4s. per share. An enterprising speculator that I have heard of invested 200*l.* sterling in Mysore shares at 10d. per share in 1883, and the same shares in 1886 he sold for 8*l.* 10s. a-piece, and so, by risking a paltry 200*l.* in 1883 he had in 1886 made the large fortune of about 48,000*l.* Now, although shares are not now to be picked up at 10d. per share, yet some can still be bought at a very low figure, and with a very fair prospect of a most considerable rise in their value shortly. During the month of March last the Mysore Mine yielded no less than 3,249 ozs. of gold, in value about 12,700*l.* This is the largest yield that it has ever made. The market, however, had expected a return of some 3,500 or even as high as 4,000 ozs. for March, and certainly, at the rate of yield it was producing in the former month (February), it was justified, as if the company had had all the stamps at work they might then even have had a return of 6,000 ozs. The explanation for this will be found to be, I expect, that there was sickness in the camp, and from this cause, and the celebration of feasts by the natives, Capt. Plummer was unable to get as much quartz to bank as he had expected, and so was unable to give employment to the whole of the 60 stamps; it is quite possible, however, that this handsome return is only delayed to be announced in May for the April return. I expect to see the Indian Consolidated and Nine Reefs Companies shortly making yields of as many *ounces* of gold as they are at present *pennyweights* per ton, and then the returns of the Colar field will forge ahead with startling rapidity I anticipate. The smallness of the market value of the capital invested in the mines at work in the Colar field will compare with that invested in Australian and Transvaal companies most favourably, as will also the cheapness of labour, ample water supply (freedom from drought), railway accessibility, and climate. In conclusion, I will merely add that never were the prospects of Indian gold mining brighter than they are at present. A truly magnificent future is opening out for the industry.

April 10th, 1889.

* For three months only.

N.B.—The crushings in the Colar Field did not commence until June, 1884.

THE VICTORY MINE AND ITS PROSPECTS.

INTERVIEW WITH MR. ROBERT LARCHIN.

The Victory Gold Mining Company, Limited, was registered on the 23rd March, 1888, to work the mining grants of La Victoria and Altamira. It took over the assets and liabilities of a former company of the same name. Amongst the former were included a valuable 20-stamp mill and a large number of other machinic appliances, but on the eve of success by the old company, operations had to be suspended for the want of funds. The old shareholders were invited to join the new company on equitable terms, and most of them did so.

The company has now been about a year established, and it was time to inquire into what the directors had done towards realising the promises held out in the prospectus. A suitable opportunity to ascertain the state of facts, as they now exist here and abroad, was furnished by the return of Mr. Robert Larchin, one of the board, from a visit to the property, and the interview our representative had with that gentleman elicited the information which follows, and which must prove of interest to the shareholders.

The Victory Mines, said Mr. Larchin, in reply to the first question put to him, are only 15 days from London. To get to them you must go to Bolivar, on the Orinoco, and from thence you travel up the country on the backs of mules or Mexican horses, passing *en route* the old Spanish towns of Guacipati and Callao. The Victory Mines are one and a half hours from El Callao Mine, which first made (that which I think the Victory Miues will sustain) the mining fame of Venezuela. I was six weeks on the spot. One part of my mission was to arrange for the purchase of the surface rights, which I was able to do. The grant is now equal to freehold, so that there is no danger of a collapse from unpaid taxes as was the case with the Panama Company. The title deeds to the whole of the Victory Concession are now in the hands of the company.

The company, Mr. Larchin, has been some time before the public: Why was it not a success before?

After the payment of the purchase-money, insufficient capital was left to equip and develop the miue. For this result I cannot hold the well-meaning report of the late Mr. Ness guiltless. This document stated that there was enough quartz to run 200 stamps for two years. On the strength of this report the directors put up stamps in hot haste, only to find that the supplies of quartz at surface had no tangible existence, although they were known to be abundant if the mine were properly opened out. The directors then set to work to do that which they should have done earlier—deepen the shaft and exteud the levels, but, uufortunately, only to find that they had spent so much at surface that the wherewithal was exhausted. Then came re-construction and delay. Now, I am uot saying there is no surface ore, but it is scattered about so as to be not available under existing couditions. The true policy is that which the directors are now pursuing—to sink the shaft and drive levels and cross-cuts. The shaft is now down 165 ft. sunk on the lode, and there seems to be no doubt that we are at present upon one of its rich pay-shoots. The shaft has been carried down on the underlie of the lode—the lode is 5 ft. 6 ins. in width—and paying ore has been found all the way—the richest being in the bottom. It will give an average of 2 ozs. to the ton; that is, making the test from 1½ tons from near the surface, and similar quantity from the deepest point. These 3 tons, I say, on being put through the mill, gave an average of 2 ozs. to the ton. The lode is richest in the bottom, producing ore that will give 5 ozs. to 6 ozs. to the ton, though the average is 2 ozs. all the way down. The last skip-load of quartz taken out of the mine, and the last specimen I took, gave, on assay, 10 ozs. to 12 ozs. to the ton. I might have picked up any other specimen—this one was taken haphazard as the skip came up. Since I left, Mr. Russell, the manager, reports that in sinking a winze they have opeued up very rich ground. I brought a sample of 4 cwt. to England, which gave 23 ozs. to the ton. In this quantity gold was not visible. The configuration of the couutry is suitable for hydraulicking, but we have no water for that purpose. There are two mountains, with a quebrada, or stream, passing parallel between the two. There are six lodes on the property, and almost the whole surface is covered by immense boulders, which will pay to stamp, for they will probably give 1 oz. to the ton.

What will pay expenses?

One oz. now, because the old inflated prices have gone from Venezuela, never to return. Why, in the palmy days of El Callao the price of rice was 2s. 6d. per lb; it is now 5d., and other provisions have come down in proportion. Labour, instead of being 1*l.* per day, is 10s. Our labourers are West Indian blacks, of the same type as those that produced the big results from El Callao, and they make excellent miners. The extent of the Victory property is about 3 square miles, and is densely covered with forest, yielding abundant fuel close at hand. The importance of this may be judged when I tell you that it cost El Callao Mine 30,000*l.* a year to bring fuel to the mine. Formerly you required to have a mine yielding 4 or 5 ozs. to the ton to pay expenses, but now miues with 1-oz. ore can do very well if administered with economy and efficiency.

What machinery have you, and in what respect are you deficient?

We have a 20-stamp mill all ready on the spot. We have also certain pumping appliances, but supplementary ones are being sent out. One of the great difficulties of the compauy was caused by sending surface pumps, which, when put underground could only be made available to a depth of 150 ft., and were continually breaking. It was impossible to go deeper until fresh pumps were sent out, and these are now on the road. Still we have gone deep enough to prove the lode.

When do you expect first crushings?

They may be proceeding with them at the present time, but for continuous returns we must wait at least another three months until the pumps get out and are placed in position. We have about 100 tons of quartz taken from the lode going down—in fact, the lode is sufficiently developed to keep our 20 stamps going day and night. Without any improvement upon the state of things as it at present exists we see our way to an average return of 2 ozs. per ton, or 2,000 ozs. per month, which would leave a profit of from 5,000*l.* to 6,000*l.*, or at the rate of over 30 per cent. upon the capital of the company. The directors are Adml. Powell, Mr. Whitten, Mr. J. M. Klenck, Mr. S. P. Gilbert, Mr. Blackwood, Mr. Dusseldorf and myself. You see we have not troubled the aristocracy in the composition of our board, but what we lack in ornament we profess to supply in utility. We claim to be a practical board, thoroughly representative of the shareholders, and perfectly understanding the nature of the duties we are called upon to discharge. The responsible manager on the spot is Mr. Russell, who is a perfectly competent and experienced miner, a rigid economist, and devoted to his work. His underground captain (Nicholls) is reputed to be one of the best gold miners in the country, and I thoroughly believe this to be true from what I saw of him. Capt. Nicholls came from South Africa, and he says that if on any property there they had made the discoveries we have made at Victory, "the world would have heard of it in pretty good shape."

You caunot work without water—what have you to say about that?

We have an ample supply drawn from the mine. There is plenty of water there, and hence the necessity for sending out more pumping machinery. In the driest season ever known we have had ample water to run all our machinery, and occasionally this supply can be supplemented from the stream which traverses the property. If we had a river close by we could hydraulic.

With all these assurances of success, have you sufficient capital to bring good results to pass?

The nominal capital of the company is 200,000*l.*, and the amount actually subscribed is 158,919*l.* We have now, for the most part on deposit, 10,000*l.* In addition to that we have all the machinery on the mine and paid for. We have a stamp battery with the latest improvements, with driving machinery, crushers and all the needful appurtenances, made by the celebrated firm of Fraser and Chalmers, of Chicago. We are now sendiug out the additional pumping machinery, as already explained, with other stores. Under these circumstances, in my opiuion, the funds will be sufficient until the stamps are running. Ou the spot they all say we have a mine equal to El Callao, and specimeus of our quartz are eagerly sought after and subjected to rough assays. People have been wondering why it is the directors have not more euergetically worked the property, but they will wonder no more, for a great amount of vigour is being thrown into the work, and the utmost determination is expressed by all concerned to bring dividends to the pockets of the shareholders at the earliest possible date.

How do you staud with the Government?

An enlighteued spirit rules at Bolivar. The Government is giving every facility for mining, as indeed it ought to do, for that is the staple industry of the country, aud is assuming those steady and business-like proportions which bode well for the future of miuing in Venezuela. Some of the properties which were forfeited by the Government of Guzman Blanco have been restored to the rightful owners. Concessions have been granted once or twice for making a railway through the miuing district, but withdrawn. A concession is now in the hands of Paris financiers, the money is deposited, and the line is being re-surveyed by engineers. The telegraph exists now from the town of Callao direct to London *viâ* Caracas. It is a mistake to suppose that the climate is deadly: it is nothing of the sort. It is perfectly good if people will only live according to sanitary law. The fevers so much talked of are no more serious than colds would be deemed here, and competent medical attendance is available. The climate is particularly good at the Victory Mines, owing to the great elevation at which they stand.

Then you are perfectly satisfied with the results of your mission?

Most certainly. I visited the mine before about four years ago, and the impression then produced of its vast possibilities never faded from my mind, but I must frankly admit that I never expected it would be so rich as it at present is in the bottom of the shaft. With sufficient working capital, with our machinery erected aud paid for, with good management on the spot, and an efficient board at home, we have au opportunity of making "Victory" justify its name such as we have never had before.

THE BOARD OF TRADE RETURNS.

These for the past month completing the first quarter of the year, just issued, endorse the favourable impressions as to the revival of trade, compared with the corresponding period of last year. Home exports, valued at 21,381,000*l.* for the month show an iucrease of over

12 per cent., while the total for the quarter exhibits an iucrease of 6¾ per cent. The imports were 32,590,000*l.* or over 11 per cent. increase for the month, and the result for the quarter is an augmentation of near'y 10 per cent. Takiug also the re-shipments the total of 6,004,000*l.* we find has increased 14 per cent. for the month, aud that the increase for the three months is as much as 17¼ per cent., whieh is an important factor in estimating the returns as they carry off the surplus imports, and strengthen the statistical position here, and thereby iufluence values. The salient features in the month's trading are an increase in all the important classes of raw materials and manufactures exported; aud as regards the imports an exceptional decline in "metals." The value of metals imported was 1,936,000*l.*, a decrease of 312,000*l.*, while the imports for the quarter were 6,087,000*l.*, or a decrease of 355,000*l.* The exports were 3,499,000*l.* (including manufactures), an increase of 509,000*l.*, and those for the quarter 9,430,000*l.*, or an increase of 304,000*l.* This result, so far has been rather beneficial to the home mining industry. Copper now shows a comparatively small iucrease iu the import, but a rather large falling off in the export. The imports of regulus and precipitate have increased 26½ per cent. in quantity, against 16¾ per cent. in value, but the unwrought or part wrought metal has declined 7 and 7¾ per ccnt. respectively. The reduction under tiu, however, is heaviest, the decline in imports being double that iu the export, while for the quarter it amounts to 62 per cent., against 53¼ per cent. in value, and the falling off is mainly from the Straits Settlements. The supplies of copper have diminished chiefly from Venezuela, but have increased from the Cape and Chili. Of machinery, steam engines have been shipped more freely, particularly to France, Spain, and South Africa, and mill work, &c., also to the same quarters, as well as Germany, the States, aud South America, the total increase being 23¼ per cent.

The following table gives the results as regards metals, &c. :—

THE TRANSVAAL GOLDFIELDS.—6.

BY A CAPE COLONIST.

IN my previous letters to the MINING WORLD I referred more particularly to the vast changes which are being brought about over the whole of South Africa through the discovery of the Transvaal goldfields, and the effect they will have on railway communication.

I now propose to take these several goldfields more in detail, and deal with them in their order of precedeuce. In poiut of age the Barberton district has the first claim. By the Barberton district I must be understood to include Lydenburg, Marabastadt, De Kaap, Pilgrim's Rest, Mac Mac, and the Devil's Kantoor. As a matter of fact, every one of these localities were known to the South African world as gold-bearing districts years before Barbertou was founded, or ever heard of. In all of them, from about 1866 to 1886, the gold industry was carried on only in a spasmodic sort of fashion. Some enterprising prospector found a few nuggets—for it must be borne in mind that during that period alluvial gold only was sought after—and this getting noised abroad, there would be a very wild rush, and nothiug more would be heard of the matter for three, four, or even five years. I well recollect that somewhere about 1870 there was a considerable sensation caused by the discovery of some good sized nuggets in the neighbourhood of Lydenburg. It was then asserted that beyond doubt a payable alluvial goldfield had been found, and by and by we were informed that hundreds of Australian diggers were coming over. This sort of excitement broke out—much in the same way that a fever breaks out—and we soon got accustomed to these gold scares. As a matter of fact, between 1866 and 1884 a few Australian diggers did find their way here, but long before the real discovery of auriferous reefs in what is now known as the De Kaap, or Barberton, district, most of them returned disgusted to the country from whence they came; some of them became absorbed in the wilds of South Africa; and a few, who could not resist the prospect of coming across something good, stuck to their work until the War of Independence drove them to seek shelter in some one of the villages dotted over the country, and to adopt some other vocation in life. That a few went back when the war was over is well-known, for it was owing to their persistent efforts in the neighbourhood of Barberton which brought about what may be called the first real rush in 1883. Many scores of colonists from Natal and the Cape Colony contracted the gold fever, and they found themselves in the midst of a wilderness of mountains in the De Kaap district, without having the remotest notion of what gold prospecting really meant, and utterly oblivious of the hardships and privations in front of them. Many speedily returned in utter disgust; teut life, hard food, harder work, and frequently a couple of days' starvation was too much for them, and they came back sadder and wiser men. The few who remained (three or four of them were personal friends of my own, who were ultimately well rewarded for 18 months' hardships) may be said to be the actual discoverers of the vast mountain range of gold-bearing reefs in the Barberton or De Kaap district. What that district, consisting of 4,000 square miles, really meaus requires some illustration, and I know of none better than to refer my readers to a bird's eye view of this vast auriferous area, lithographed by Messrs. Maclure and Co., 97, Queen Victoria Street, London, E.C. I cau only give the lithographers, as it was published in Cape Town.

I should here remark that there is a fixed conviction in the minds of many experienced men that an alluvial field will yet be stumbled upon in these Northern goldfields. As an evidence of this I may state that so long ago as the eud of 1873 the creek at Pilgrim's Rest was rushed, and many of the miners left Mac Mac. By this time there were about 500 white men in the two creeks at Mac Mac and Pilgrim's Rest, whieh were now known by their distinctive names, and in February iu the following year there were about 300 or 400 men at Pilgrim's Rest, the claims taken up being scattered over 5 or 6 uiles of country up the creek. Gold, at a high level, was now fouud on the farm Graskop, which is between the two places, indications both of alluvial and quartz being found upon the west side of the mountain. Graskop was afterwards bought by the Government with the intention to locate a township eastwards of the camp; purchase deposits were actually made ou some few grants, but the Goverumeut took no further steps to establish the towuship, which the growth of Pilgrim's Rest and its subsequent history rendered unnecessary. The large amount of heavy labour expended in the creek at Pilgriu's Rest was not without result, for though many toiled without much gain, still some met with success. Mac Mac subsequently became the centre of what is now known as the New Caledonia goldfields, and it was there that in 1873 three diggers found four large nuggets, with a number of smaller ones, collectively weighing 13 lbs. 8 ozs. In 1874 a Natal digger in 100 days averaged 1½ oz. per day, and in that year another digger went to England with 50 lbs. of gold found by himself. In the same year a man named Foster found in Barrington's ground a nugget weighing 87 ozs. Again in 1875 it was well authenticated that nuggets were found in what were called the "terrace claims," which weighed 213, 123, 69, 57, 47, and 29 ozs. respectively. But so unsystematic was the working that from 1873 to 1877 no attempt was made to ascertain the value of the gold output during that period. It has been stated that the total amouut of gold yielded by the Lydenburg fields during that time was 400,000*l.*, but those who have had good opportunities of ascertaiuing have placed the figure at nearer a million sterling. At that tiue no institution was a continuous purchaser of the precious metal, and therefore the amounts declared to be purchased afford no real basis for an estimate of the actual yield. It must also be remembered that the price of cleaned and retorted gold has sometimes ruled as low as 3*l.* 5s. per oz., and never exceeded 3*l.* 13s. Those personally acquainted with the eustoms of a mining population know well that at such values a digger will rarely dispose of more gold than will provide him with the usual necessaries of life, and defray the cost of native labour. When it is remembered that the difference the digger would receive from the sale of a thousand ounces of native gold in this country and the sale of the same in London, would amount to some 400*l.*, it can easily be seen how great is the incentive for each individual digger to reserve his gold. Spreading themselves over this district in 1874 a new rush was annouuced at Waterfall Creek. This creek is situated about 10 miles distance from Pilgriu's Rest, on the farms Lisbon and Berlyn, its waters flowing into the Blyde River, through a deep gorge, on either side of which are old slatey rocks with basaltic iutrusions. Since then vast sums have been spent on these properties by the Lisbon-Berlyu Company, to whom they now belong; but up to this time the enterprise has met with no substantial reward.

(*To be continued.*)

RE-CONSTRUCTION OF FLAGSTAFF.

A MINE that has yielded between a million and a million aud a quarter sterling in silver, will not be lightly abandoned by English shareholders who are nothing if not persevering. The tenacity with which our countrymen cling to a property once acquired has often surprised Americaus who rush into a venture one day, and with equal facility rush out of it the next. That tenacity is exhibited in the case of the Flagstaff Miue, which it is now determiued to re-construct on a basis that will provide it with the working capital, of which for many years it has been destitute. We do the Vincent board no more than justice when we say that they have done wonders, considering that they have had scarcely any money to work with. But in future the bricks are to be made with straw, and the manufacture is not to be attempted without it. Of the success of this re-construction not the least doubt is entertained, and we are glad to know that under the experienced guidance of Mr. Snell it will be proceeded with forthwith, for the simple reason that the season is now approaching wheu mines situated at a great altitude like the New Emma and Flagstaff, can most

efficiently work. At the meeting on Thursday a committee was appointed to aid the directors, and we understand that from their number one or two new members will be added to the board. If, for example, Mr. Hopkins can he secured, it will be a decided aequisition. At the same time the company will retain the experienced serviees of Mr. G. W. Bacon and Dr. Dunhill, whose accumulation of knowledge in regard to Flagstaff affairs must certainly be utilised in the future direction of the company. Professor Vincent has a professional engagement, which, we are informed, will occupy the uext six months of his time, so that we believe his services will not be available. Possibly there will be some change in the management on the spot, but geuerally there is a determined and dogged resolution by the judicious expeuditure of capital to bring Flagstaff to a success, if success is to be attained. A great number of poiuts were raised at the meeting, particularly iu regard to the action of the uortgagee, all of which we regard as utterly unimportant in the face of the cardinal fact that the company is to be re-constructed. The shareholders should support this supreme effort, but whether they do so or not, of this they must rest assured—that all the shares will be taken up.

A COMPANY THAT CAN BE SPARED—WHITE'S ASBESTOS, LIMITED.

Recent experience in regard to the Canadian Asbestos Company does not afford much encouragement to take up shares in similar undertakiugs—particularly those hailing from the same quarter. We seriously ask the directors whether they have considered the statement made iu the first paragraph of their prospectus—that the property for which the British public are asked to give 45,000*l.* has been "proved." There are numerous references to similar undertakings, but the result of a diligent search on our part has failed to produce any evidence, on the basis of past working of the present value of this property. White's Asbestos, Limited, may not be dear at 45,000*l.*, aud the capital may not be too large at 100,000*l.*, but if there is a case to make out for it, it cannot be claimed that the prospectus has doue it. If some of the paragraphs devoted to references to other concerns had been employed iu specifying what has been the past history of this oue, the space of the prospectus would have been far better utilised, aud there might have been some ground upon which to recommend the shares to the public. If the property be as good as described, one can only be astonished at the extreme auxiety of the vendor to part with it. But, at all events, we advise those who are enamoured of the generalisations of the prospectus not to allow their enthusiasm to run away with their discretion. They should peruse with care the agreements referred to in the prospectus, and they should endeavour to ascertain a few particulars as to the previous ownership and history of these so-called "selected and proved" asbestos properties. We can understaud that the properties have been "selected," but we have searched the prospectus iu vain for any evidence that they have beeu "proved."

THREE SPANISH GEMS.

We report this week the meetings of the Linares, Fortuna, and Alamillos Lead Companies. The properties arc to be found in the Liuares district of Spain, and their history has been most remarkable even in the annals of big dividend-paying mines. Since its establishment in 1849 the Linares Company has paid nearly 20 per cent. per annum. Fortuna was established iu 1855, and its dividends have been somewhat larger even than those of the sister company. Alamillos has not been quite so fortunate, its dividends having averaged only about 8 per cent. It is remarkable about these mines that they look as well now, apparently, as they did 40 years ago, when they commenced making their remarkable returns. Linares at one time was paying 50 per cent.—that is 30s. per share per annum upon each 3*l.* share. One geutleman, whom we know, invested a sum of 2,800*l.* iu the purchase of 1,000 of the shares in one of these companies, and in one year his dividend amounted to 1,100*l.*

MR. THOMAS THOMPSON'S CIRCULAR.

The mid-April circular of Mr. Thomas Thompson is a production which will be read with interest by a very wide circle of the public. As usual he has much to say that is of great importance on the question of hydraulic mines, and gives some facts and opinions with reference to Colon and Tetuan shares, which should, if properly appreciated, cause those descriptions to advance considerably beyond their preseut price. It is generally considered on the market that these shares are unduly depressed, and that the investor will be happy presently who has his quiver full of them. On the subject of mines in general, he has many shrewd observations to offer, based upon his lengthened experience of the markets, and notably in regard to South African shares. He believes that in South Africa a goldfield has been found of considerable wealth. He at the same time regards it as one that should be only entered into by the general investor with discrimination. Perhaps to Indian shares he devotes somewhat less than the attention they deserve, but it is unquestionably the fact that in this useful circular Mr. Thompson has managed to embody a vast amount of general information which cannot fail to be useful, and perhaps profitable, if read with the requisite care.

YORKSHIRE WATER-GAS CO., LIMITED.

We understand that the shares of this company have already been dealt in at a premium. Its progenitor—the British Water-Gas Syndicate—is acknowledged to be one of the greatest market successes of a year signalized by high premiums for new issues as well as by the ease with which capital has been found for well-considered and legitimate enterprises. Of course, the ultimate appeal in this case must be to the value of the patents themselves, aud of these we have already expressed a high opinion which maturer reflection would rather lead us to emphasise than to qualify. The Yorkshire Water-Gas Company, with its capital of 151,000*l.*, is the first-born of the British Water-Gas Syndicate, and it may be credited with having secured as sponsors an efficient body of directors, and to have made other official appointments which will give confidence to investors. That water-gas, as supplied by this company, is a formidable rival of coal-gas, is generally recognised in the scientific world, whose opinion is crystallized into the report which Sir Douglas Fox, C.E., has written to the parent syndicate. He speaks of it as having "a great future for manufacturing, heating, and lighting purposes"; and adds, that it can be produced at a cost at present prices of about 4d. per 1,000 cubic feet. Water-gas may be claimed to have passed beyond the region of experiment, and to have entered that of commercial utility.' In Yorkshire, with its large warehouses and manufacturing establishments, and with its teeming population there is a fine field for this company's activity. Applications have already been received from a large uumber of the most important manufacturers in Yorkshire who are anxious to adopt the company's system, and a selection is made from the firms and companies that are now using the company's generators. The services of Mr. A. Wilson have been secured as general manager and chief engineer to the British Water-Gas Syndicate, Limited; and this (Yorkshire) company will have the benefit of his advice and assistance for a term of five years. The purchase price is 101,000*l.*, payable 50,000*l.* in cash and 50,000*l.* in fully-paid up ordinary shares, and 1,000*l.* in 200 fully-paid up founders' shares of 5*l.* each. It is well-known that in the case of the parent company a perfectly fair and just system of allotment was adopted, and in this case that wholesome rule will uot be departed from.

THE NEW CONSOLIDATED MINING CO., LIMITED.

The second report of the directors describes in detail the properties owned by the company on Treasure Hill, Nevada, and in Corsica, and completely sets forth the share interest it has in four other concerns. The only new property the directors have acquired during the past year has been that of the Grand Canon Gold Placer Mining Company of New York, in which they have a large interest at an expenditure of 3,000*l.*, of which the first 1,200*l.* has been remitted. A meeting of this company is to be held on Monday, when it is expected that important decisions will be come to. Considerable value is attached to three at least of the properties—or groups of properties—owned by this company—those in Corsica on Treasure Hill and the Grand Canon of New York already mentioned.

ROBURITE.

The shareholders who assembled at the adjourned meeting on Tuesday last were cheered at the outset by the news that the experiments with roburite in Australia have been perfectly successful; that a syndicate has beeu formed, and that a request has been forwarded for the immediate supply of 10 tons of roburite components with 10 other tons to follows a month later. In Cornwall roburite has also been successfully established. A telegram represents it as being equal to dynamite, and as having a good future in that county. It was after these satisfactory tidings that the shareholders proceeded to transact the business which they failed to finish on the previous occasion. The storm which the Lancashire shareholders, led by the redoubtable Mr. Guthrie, raised at the last meeting turns out to be a veritable tempest in a teapot, which might have been suitably terminated at the outset by an all round consumption of that exhilarating beverage. When the Lancashire committee met the directors, they saw that really they had no case, and, like men of business, they were willing to acknowledge that the board, under most difficult circumstances, had piloted the concern with a considerable degree of ability, and had brought it to the verge of a prosperity which is in a future neither dim nor distant. The board, as to a certain extent re-constituted, may claim to possess the confidence of the whole of the shareholders, and we quite agree with the remarks of one of the speakers, that the experience of the chairman, Sir John Stokes, will be in the future, as it has been in the past, of the greatest value to the company.

THE ZAFRA AND HUELVA RAILWAY.

Messrs. Matheson and Co., of 3, Lombard Street, E.C., invite subscriptions for an issue of 56,000 Three per Cent. First Mortgage Bonds of 20*l.* each, of this company, repayable at par by a cumulative sinking fund, operating by half-yearly drawings from 1st July, 1890. The railway has a length of 180 kilometres, 113 kilometres of which have lately been opened, and the prospectus states that there is no doubt the local traffic alone will yield more than the 400*l.* required to provide for interest and sinking funds on all the bonds. The line connects with railways that pass the wheat-producing province of Estremadura, and gives the growers not only access to the mining districts of Huelva, but also provides them with the shortest route to the Port of Huelva. The price of the issue is 11*l.* 12s. 6d. per bond.

LONDON AND WESTMINSTER BREAD CO.

With a capital of 120,000*l.*, in 24,000 shares of 5*l.* each, the London and Westminster Bread Company has been formed to take over 60 old-established bakers' businesses in various thickly-populated districts of London, and a freehold flour mill, with a capacity sufficient to supply the whole of the shops. The profitable nature of the bread-making industry will be apparent when we remind our readers that the shareholders of the Aerated Bread Company and the Bristol Bread Company are receiving in dividends 25 and 35 per cent. per annum respectively. The net profit of the 60 shops which this company proposes to acquire has been certified by Messrs. Herbert Watkins and Co. (chartered accountants) to be at the rate of 19,501*l.* per annum. The consumption of flour amounts to 1,194 sacks per week; and as the company will possess its own mill, the miller's profit will be saved. Assuming that the consumption of flour remains the same, it is estimated that the miller's profit on the output will yield some 3,800*l.* per annum. The total net profit will, therefore, amount to 23,304*l.* per annum, which is equal to nearly 20 per cent. upon the capital of the company. But this business, it is expected, will materially increase; and a great saving will be effected by the erection of an extensive steam bakery sufficient to supply all the shops. The price to be paid for the various undertakings has been fixed at 103,980*l.*, two-thirds of which will be paid in cash, and the balance in cash or shares at the option of the directors.

THE COLORADO SILVER MINING CO., LIMITED.
